The Fisheries Branch of the Department of Fisheries and Forestry.—Canada's federal fisheries service began with Confederation in 1867 but it functioned as a branch of other departments until 1930, when legislation was enacted to establish a separate Department of Fisheries; in 1969 the Department became the Fisheries Branch of the Department of Fisheries and Forestry. The chief responsibilities of the Branch are, in brief: to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the maximum utilization of the fishery resources; and to develop a proper public understanding of the resources and the industry. Services rendered by the Branch have been revised and broadened with the times. It employs about 2,100 persons, most of them in conservation, protection, inspection and administration duties in fishing areas across the country. The Ottawa headquarters staff numbers about 240.

The Conservation and Protection Service, through a force of Fishery Officers stationed in fishing areas, on patrol aircraft and aboard a fleet of 80 patrol vessels, is concerned with the administration and enforcement of regulations for the conservation of fish stocks and the protection of fisheries.

The Resource Development Service is responsible for the application of technical and scientific means for the cultivation and development of fish stocks by improvement of the freshwater environment of anadromous species, principally salmon and trout, artificial propagation of fish and shellfish in hatcheries, spawning channels, etc., and control of parasites and predators, including the Great Lakes sea lamprey.

The maintenance of quality standards by regular inspection of fish, processing plants and fishery products is the responsibility of the Inspection Service. Additional functions undertaken in 1967 include investigation and extension work in fish handling, processing, storage and distribution. Inspection personnel, through active participation in the international Codex Alimentarius Commission, contribute to the development of world trading standards for fishery products.

The Information and Consumer Service is responsible for informing the fishing industry, fishermen and the general public on activities of the Department through the distribution of printed material, films and filmstrips, and radio and television material. The Consumer Branch of the Service promotes the consumption of fishery products.

The International Fisheries Service is concerned with international consultation and co-operation in fisheries and also with jurisdiction matters, particularly in reference to territorial waters and fishing zones.

The Director of Federal-Provincial Fisheries Arrangements is responsible for co-ordinating discussions with provinces. The Industrial Development Service undertakes a wide range of projects of technical aid and advice to fishermen and the fishing industry, and provides financial support to provinces and the industry for development purposes.

The Economics Service is responsible for the assembly, analysis and interpretation of statistical data on the fisheries, and the conduct of studies and investigations in the primary fisheries and the processing and distribution of fishery products.

Programs of economic aid to fishermen and industry, including the Fishermen's Indemnity Plan, the Newfoundland Bait Service and the Salt Assistance Plan, are administered by the Special Programs Service. The Indemnity Plan, to insure vessels, fixed gear, shore installations and lobster traps, applies in the Maritimes, Newfoundland, Quebec, British Columbia and Ontario.

International Fisheries.—Recognizing the necessity for the orderly regulation of fisheries in international waters, Canada has long been a leading participant in international conferences, conventions and treaties upholding conservation principles. The Fisheries Branch of the Department of Fisheries and Forestry assumes a major responsibility for the negotiation, revision and implementation of international fisheries treaties on behalf of the Government of Canada. The Branch is represented by one of its senior officers on each of seven international commissions established under the following conventions to which Canada is a party:—

- (1) the Convention between Canada and the United States for the preservation of the halibut fishery of the northern Pacific Ocean and Bering Sea;
- (2) the Convention between Canada and the United States for the protection, preservation and extension of the sockeye and pink salmon fisheries in the Fraser River system;
- (3) the International Convention for the High Seas Fisheries of the North Pacific Ocean between Canada, Japan and the United States;
- (4) the Interim Convention on Conservation of North Pacific Fur Seals between Canada, Japan, the Soviet Union and the United States;
- (5) the International Convention for the Northwest Atlantic Fisheries;
- (6) the Convention on Great Lakes Fisheries between Canada and the United States;
- (7) the International Convention for the Regulation of Whaling;
- (8) Inter-American Tropical Tuna Commission; and
- (9) International Council for the Exploration of the Sea.

The first international agreement contracted by Canada as an independent nation was a treaty negotiated with the United States in 1923 for the protection of halibut stocks of the Pacific Ocean. An international commission established under that treaty was given broader regulatory powers in subsequent conventions, most recently in 1953 when its name was changed to the International Pacific Halibut Commission.

The International Pacific Salmon Fisheries Commission has achieved much success toward rehabilitation of depleted salmon stocks in the Fraser River of British Columbia. Discussions were held in 1965 and 1966 between representatives of Canada and the United States to consider revision of the 1956 protocol which brought pink salmon of the convention area within the scope of the Commission's activities. Negotiations also took place during the same period and through 1967 in an endeavour to reach agreement on problems arising from the intermingling of salmon bound for rivers of northern British Columbia and southeastern Alaska.

Protection of the high seas fisheries of the North Pacific Ocean is the objective of the International North Pacific Fisheries Commission established under a convention ratified in 1953 by Canada, Japan and the United States. The Commission conducts co-ordinated scientific research programs and recommends conservation measures to be undertaken by the contracting parties.

Fur seal stocks of the North Pacific and its adjacent seas are protected by the Interim Convention on Conservation of North Pacific Fur Seals which was ratified in 1957 by Canada, Japan, the Soviet Union and the United States, and amended by a protocol in 1964. This convention was preceded by an international treaty signed in 1911 which prohibited the killing of fur seals at sea—a measure which, aided by careful management programs, made possible the restoration of depleted seal herds. At the present time, under the terms of the convention, Canada and Japan each receives annually 15 p.c. of the seal skins taken on the United States-controlled Pribilof Islands, and 1,500 skins from the harvest of the Commander and Robben Islands which are under control of the Soviet Union.

Tanu, the newest and largest of the Department of Fisheries and Forestry Pacific fleet of 40 vessels, will patrol offshore waters to protect them against incursion by foreign fishing fleets. It is also designed and fitted to carry out scientific studies on the high seas and has accommodation for 34 crew and scientists.

The International Commission for the Northwest Atlantic Fisheries (ICNAF) conducts studies and makes recommendations for measures to conserve and develop the fish stocks off Canada's East Coast. The convention establishing the Commission was signed in 1949 and has since been ratified by 14 nations: Britain, Canada, Denmark, the Federal Republic of Germany, France, Iceland, Italy, Norway, Poland, Portugal, Romania, Spain, the Soviet Union and the United States.

A Canadian proposal to bring the conservation of harp and hood seals of the Northwest Atlantic under the ICNAF Convention received final endorsement from member nations in 1966. First steps to initiate an international conservation program were taken at the 1967 meeting, when approval was given to recommendations to shorten the sealing season, effective in 1968, and to undertake an expanded research program. Conservation measures previously adopted voluntarily by participating nations were confirmed, and consideration is to be given to additional regulations and to proposals for establishing international inspection.

The Great Lakes Fishery Commission, set up under the 1955 Great Lakes Fisheries Convention, provides a channel for joint action by Canada and the United States for research into Great Lakes fish stocks and a program to control the parasitic sea lamprey responsible for depleting lake trout stocks.

As a member of the International Whaling Commission, Canada is obligated to submit statistical data on whales caught by Canadian vessels and to conduct scientific studies on whale stocks of special interest to Canada.

In 1967 Canada approved adherence to the Inter-American Tropical Tuna Commission. This Commission was established in 1950 by a convention between the Republic of Costa Rica and the United States with the aim of studying relationships between the populations of yellowfin and skipjack tunas and other kinds of fish taken by tuna vessels in the eastern

Pacific. Membership in the Commission was extended to Panama, Ecuador and Mexico. Because of increasing Canadian interest in the tuna fishery, Canada became a signatory to the convention.

Canada in 1967 became identified as a member of the International Council for the Exploration of the Sea. First established in Copenhagen in 1902, when it was entrusted with co-ordination of international investigations of the seas, particularly those in the eastern North Atlantic Ocean, ICES has in recent years provided considerable scientific support to the Research and Statistics Committee of ICNAF. There are 16 other member states: Belgium, Britain, Denmark, Finland, France, Germany, Holland, Iceland, Ireland, Italy, Norway, Poland, Portugal, the Soviet Union, Spain and Sweden.

Canada has also taken action to become a member of another international commission, the Atlantic Tuna Commission, having deposited its instrument of acceptance with the Director-General of the Food and Agriculture Organization of the United Nations in 1968. A draft convention for the conservation of tuna and tuna-like fishes was discussed at a conference held in Rio de Janeiro, Brazil, in 1966. Canada was one of the 17 nations represented at the conference which considered proposals for the establishment of an international commission to study tuna stocks and to recommend maximum catch levels for the various species. The Commission will be formed when the various nations involved ratify the convention.

Also in 1967, Canada was one of 18 nations represented at a Fisheries Policing Conference held in London, England, to consider regulations designed for safety at sea for vessels of countries fishing the North Atlantic. The conference endorsed a Convention on the Conduct of Fishing Operations in the North Atlantic and North Sea which was referred for ratification by the respective governments.

While co-operating with other nations to conserve high seas fisheries resources through international agreement, Canada acted in 1964 to protect inshore fisheries by establishing a 12-mile exclusive fishing zone on all coasts. The Territorial Sea and Fishing Zones Act proclaimed in that year has since been enforced against all countries except those having traditional fishing rights. Negotiations have been conducted with these latter countries with regard to the application of the fishing zones and to the location of base lines from which they are measured.

As evidence of its support for international consultation and co-operation in fisheries, Canada maintains active membership in the Fisheries Division of the Food and Agriculture Organization of the United Nations and in the Codex Alimentarius Commission which is concerned with world food quality standards.

The Fisheries Research Board of Canada.—The Fisheries Research Board is a research organization established by Act of Parliament (RSC 1952, c. 121) for the purpose of conducting basic and applied research on Canada's living aquatic resources, their environment and their utilization. Its antecedents go back to 1898 and it is thus the lineal descendant of one of the oldest scientific organizations in Canada and one of the oldest government-supported research organizations under the supervision of an independent scientific board in North America.

By its Act, the Board is placed under the control of the Minister of Fisheries (now the Minister of Fisheries and Forestry). The Board proper consists of a permanent chairman, who is appointed by the Governor in Council and who is a member of the Public Service of Canada, and "not more than eighteen other members" holding honorary appointments from the Minister of Fisheries for five-year terms; the Act requires that "a majority of the members of the Board, not including the chairman, shall be scientists, and the remaining members of the Board shall be representative of the Department [of Fisheries] and the fishing industry". The scientific members are drawn principally from universities and research foundations across Canada, to include specialists in disciplines related to the Board's work. The industry members are selected from among Canada's leading business men with an intimate knowledge of fishing and the fishing industry and the Fisheries Branch

of the Department of Fisheries and Forestry representative is usually a senior staff member in Ottawa. Board members have both advisory and executive functions. The advisory functions are delegated in the first instance to regional Advisory Committees who conduct on-the-spot regional reviews and report to the Board on the operations and scientific programs with a view to their improvement. The executive functions are delegated to an Executive Committee elected from Board members and approved by the Minister.

The operations of the Board are highly decentralized, there being only a small administrative, supervisory and publications staff in Ottawa. The responsibilities of the Ottawa office include administration of a grant program to encourage university research in the fields of marine and aquatic science. The Board employs approximately 900 persons, of whom about 250 are scientists.

Biology.—The biological program of the Board is designed to add to fundamental knowledge concerning Canada's vast living marine and freshwater resources. Included here are life history, population and behaviour studies leading to a sound scientific basis for the conservation and management of the commercially important fisheries including those for lobsters, crabs, shrimps, oysters, scallops, clams, marine mammals and other well-known economically important aquatic species of animals, such as salmon, cod, herring and halibut, as well as some marine plants, such as phytoplankton and seaweeds. Also included are studies in fish and shellfish diseases, fish enemies including the ill effects of water pollution, and such basic studies as fish genetics, physiology and behaviour, the latter with a view to improving fish cultural and farming methods and also to improving fish farm and hatchery stocks. Besides these basic studies, new fishing grounds and new species for exploitation are sought and experiments in improving fishing methods are undertaken.

The biological work on the Atlantic Coast is conducted out of research stations located in St. Andrews, N.B., and St. John's, Nfld.; work on arctic fisheries and on sea mammals is directed from a laboratory situated in Ste. Anne de Bellevue, Que.; freshwater work is carried out from a station in Winnipeg, Man.; and work on the Pacific Coast is directed from research laboratories situated in Nanaimo, B.C. The Board operates 18 research vessels for its biological studies, varying from small inshore and lake craft to specially built seagoing ships. The Board acts as Canada's research agent for three international fisheries commissions and two international sea-mammal commissions to which Canada is party.

Oceanography.—Oceanography includes the study of the marine (and freshwater) environment in which aquatic organisms live. This is under continuing study to further knowledge in primary and secondary productivity and the occurrence of ocean and freshwater life of importance to man. Encompassed here also are investigations into the distribution and physical and chemical characteristics of major ocean currents and the physical and biological structure of large ocean areas including the ocean bottom where concentrations of fish and other aquatic life occur. Ocean climate and ocean weather as they affect the distribution of fish and other living organisms as well as the vertical and horizontal distribution of nutrient matter and the cycle of energy and life in the seas are regularly observed and correlated. These studies, as well as special studies of interest to the Royal Canadian Navy, the Department of Transport and the international fishery commissions, are carried out by the Board's two oceanographic groups operating from Dartmouth, N.S., and Nanaimo, B.C., with strong ship support from the Armed Services and the Department of Transport, and co-operation from the Department of Energy, Mines and Resources.

Technology.—Investigations are conducted toward improving methods of preserving, processing, storing and distributing fish products, as well as of utilizing all parts of the fish. These include developments in refrigeration and the use of antibiotics as fish preservatives, improvements in canning, smoking and salting of fish as well as the development of new products for the utilization of abundant species that are not now used for food.

Fundamental studies of the structure and composition of fish proteins, fish oils and fish hormones, of the energy expenditure of migrating salmon and of the nutrition of marine bacteria are under way.

Technological investigations on the Atlantic Coast are carried out at research laboratories situated in Halifax, N.S., and Grande Rivière, Que., and applied work for Newfoundland is carried out at a Technological Unit in St. John's. For inland areas technological work is centred at Winnipeg, Man., and a research laboratory in Vancouver, B.C., undertakes investigation of Pacific Coast problems.

The Fisheries Prices Support Board.—Established under the Fisheries Prices Support Act of 1944 (RSC 1952, c. 120), the Fisheries Prices Support Board is responsible for investigating and, where appropriate, recommending government action to support prices of fishery products where declines are experienced. The basic principle of the legislation is to protect fishermen against sharp declines in prices and consequent loss of income. The Board is responsible to the Minister of Fisheries and Forestry and consists of a chairman, who is a senior officer of the Fisheries Branch of the Department of Fisheries and Forestry and five members chosen from the fishing industry in the various fishing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices other than its purchase policy nor has it any jurisdiction over operations in the fishing industry or the fish trade. Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum amount of \$25,000,000 annually on recommendation of the federal Treasury Board and authorization of the Governor in Council.

Salted fish purchased by the Board during the nine months April-December 1968 totalled \$1,566,000. Most of this fish went to Nigeria but smaller quantities were sent to Jamaica, Guyana, Indonesia and Korea. Additional quantities of salted fish were purchased by the Board for the Canadian International Development Agency for disposal in Nigeria and Biafra. To stabilize the price of Lake Erie yellow perch, the Board bought \$700,000 worth of this species in 1968 and re-sold it to the processing trade. It also purchased 12,000 cases of canned mackerel in the Maritime Provinces, worth \$63,000, to meet the requirements of the World Food Programme. Subsidies paid by the Board on fresh and frozen fish produced in the Maritime Provinces and Newfoundland amounted to \$4,100,000.

The Board co-operates with the Economics Service of the Department of Fisheries and Forestry in the collection and analysis of costs of fishing operations and, in co-operation with the Department of Industry, Trade and Commerce, maintains a continuous review of the markets for various fishery products. A small staff is maintained for administrative activities at headquarters of the Board in Ottawa.

Subsection 2.—The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.—The provincial Department of Fisheries in conjunction with the Newfoundland Fisheries Development Authority, a Crown corporation established in 1953, is concerned mainly with the improvement and development of fishing and production methods. It conducts experiments and demonstrations in new designs of fishing

* Prepared by the respective provincial departments responsible for fisheries administration.

gear as well as the modification of existing types, the construction of multi-purpose fishing craft and the exploration of potential fishing grounds with a view to increasing catching efficiency.

Loans are made to processors for the establishment and expansion of fish processing plants and for deepsea draggers. Aid to fishermen for the construction of modern vessels capable of a greater variety of fishing operations and larger production is provided by loans from the Newfoundland Fisheries Loan Board and bounty payments at the rate of \$160 a ton for newly constructed vessels under the Fishing Ships (Bounties) Act, 1955. The Fishing and Coasting Vessels Rebuilding and Repairs (Bounties) Act, 1958 authorizes financial assistance in maintaining and prolonging the life of the existing fleet. An Inshore Fisheries Assistance Programme provides a maximum bounty of \$10 a foot on boats measuring from 24 to 35 feet and bounties are also paid to fishermen on certain types of synthetic fibre fishing nets and lines. The Coasting Vessels (Bounties) Act, 1959 authorizes the granting, for locally built ships, of a maximum bounty of \$250 a ton for vessels measuring from 15 to less than 100 gross tons, and \$150 a ton for vessels of between 100 and 400 gross tons.

Other services include: advisory services to fishermen on gear and equipment, industrial research, plant construction, plant engineering and economics; assistance to fishermen's unions; weather and ice reports; and search and rescue. The Fisheries Salt Act, 1957 provides for rigid control over the use of fisheries salt.

Sport Fisheries.—The inland waters of Newfoundland, although they provide excellent sport fishing, are not commercially exploited. The lakes and ponds actually remain under the authority of the Natural Resources Branch of the provincial Department of Mines, Agriculture and Resources but, under federal-provincial agreement, these waters, including rivers and streams, are under federal control in matters of conservation and guardianship.

Prince Edward Island.—The sea and inland fisheries of Prince Edward Island are administered by the Federal Government. The provincial Department of Fisheries supplements federal activity and is concerned mainly with development of the fisheries industry. The Department provides technical assistance and, in conjunction with the Fisheries Research Board of Canada and the Fisheries Branch of the federal Department of Fisheries and Forestry, engages in some experimental work.

Financial assistance is made available to fishermen through the Fishermen's Loan Board of Prince Edward Island, a body corporate operating under the provincial Department. The Fishermen's Loan Board operates under authority given by the Re-establishment Assistance Act and regulations thereunder, approved by the Lieutenant-Governor in Council, Jan. 7, 1949, with amendments. Loans are made to fishermen and companies for the purchase of boats, engines and other deck machinery at a subsidized interest rate. Loans for the construction or expansion of processing plants are available through the Industrial Establishments Promotion Act, the Prince Edward Island Industrial Corporation or the Industrial Enterprises Limited.

Sport Fisheries.—Game fisheries are the responsibility of the provincial Department of Fisheries. The streams of the province, mostly spring-fed and fairly constant in flow, provide very favourable conditions for the reproduction of game fish, of which speckled trout is the most important variety. Investigations concerning the production of trout of a size attractive to anglers are being conducted by the Fisheries Research Board of Canada and the Provincial Fish and Wildlife Division at various sites in the province. Unfortunately, many of the formerly fertile and highly productive ponds of the province have disappeared, and the provincial Department is actively concerned with damming and restoring these for the enjoyment of the public.

Nova Scotia.—Although the Federal Government has exclusive jurisdiction over the marine and inland fisheries of Nova Scotia and attends to all phases of administration

related thereto, the Nova Scotia Government operates in several fields where provincial initiative is found to be necessary and appropriate, having regard for the importance of the fishery resources in terms of employment, industry, trade and recreation.

In the commercial fisheries, provincial government interests are the concern of the Nova Scotia Department of Fisheries. The Fishermen's Loan Board is administered by that Department and the Industrial Loan Board by the Nova Scotia Department of Trade and Industry; the first makes loans to fishermen for the purchase of boats and engines and the second makes loans for the construction or improvement of fish processing plants. Fisheries engineers perform inspection and survey duties for the Loan Boards and provide technical assistance and advice to loan applicants and others in the fisheries and allied industries, notably the boatbuilding industry. Instructors conduct courses for fishermen in the care and maintenance of marine engines, in basic navigation and in the design, construction and maintenance of gear. The on-course instruction is supplemented frequently by informal on-the-spot assistance to smaller groups who find themselves in need of technical help with particular problems. The Nova Scotia Department of Fisheries, with the financial and/or technical assistance of the federal Department of Fisheries and Forestry, organizes and conducts explorations of fishing grounds for new resources and the adaptability of new, improved gear and methods.

Sport Fisheries.—In recent years, Nova Scotia, through the Wildlife Division of its Department of Lands and Forests, has spent a considerable amount of money on management and research in certain lakes and streams in the province with a view to aiding the Atlantic salmon and trout fishery. A continuing program of lake and stream investigations was begun in 1961 in order to obtain information useful in the formulation of a fish management program for the future. A system of rearing ponds, capable of producing 200,000 yearling speckled trout annually, has been established on the Medway River in Queens County and the Moser River in Halifax County. Several projects dealing with reclamation, farm ponds, rainbow trout and smallmouth bass are also being conducted. Full-time fisheries biologists are employed by the Division.

The Nova Scotia Travel Bureau, a division of the provincial Department of Trade and Industry, has been promoting saltwater sport fishing by conducting a series of courses for captains contemplating the establishment of charter services, awarding prizes to sportsmen with the largest tuna and bass catches of the season, sponsoring the International Tuna Cup Match and the Intercollegiate Game Fish Seminar and Fishing Match, and publishing a brochure listing charter boats available in the province.

New Brunswick.—Commercial fishing is one of the most important basic industries of New Brunswick, employing about 6,200 fishermen with annual earnings of \$12,000,000 and 3,000 plant workers. The annual marketed value of fish products is about \$48,000,000 of which 90 p.c. is exported to the United States. New Brunswick's commercial fisheries, both tidal and inland, are under the legislative jurisdiction of the federal Department of Fisheries and Forestry; angling in Crown waters is the responsibility of the provincial Department of Natural Resources.

The New Brunswick Department of Fisheries, established in 1963, has four Branches. The *General Administration Branch* is responsible for personnel, accounting and field staff and supervises the regional offices covering the three main fishing areas of the province. It maintains close liaison with various government departments and agencies, both federal and provincial, to assist the fishing industry in the province.

The functions of the *Boatbuilding and Maintenance Branch*, with a personnel consisting of marine engineers, a naval architect and boat inspectors, include the study, modification and approval of plans and specifications of the numerous types and classes of fishing vessels employed in the fisheries of the province as well as the inspection of vessels financed by the Fishermen's Loan Board. New designs are being introduced and the trend to larger, more modern vessels is becoming more prevalent. Combination multi-purpose vessels have proved profitable to both inshore and offshore fishermen. Under the leadership of the ex-

perienced staff of this Branch, New Brunswick fishermen are now operating a fleet geared for diversified operation, permitting the inexpensive and easy conversion from one fishery operation to more lucrative operations throughout the season. A new 600-ton capacity marine railway dry dock was put into operation at Bas Caraquet in November 1968 to service the expanding offshore fishing fleet of northeast New Brunswick. A 200-ton transfer system adjacent to the dry dock provides storage facilities for smaller vessels to lay up for the winter or to undergo major repairs.

The *Exploratory Fishing and Education Branch* continues the experimental and exploratory fishing and fish processing projects that have been carried on for many years in co-operation with the Industrial Development Service of the federal Department of Fisheries and Forestry. Technical and financial assistance are made available to the New Brunswick Department of Fisheries for projects undertaken toward modernizing fishing and processing methods, experimenting with new types of fish-catching equipment and demonstrating its operation to fishermen, and exploring and developing hitherto unexploited or under-exploited species of molluscs, crustaceans, fishes and seaweeds. Results of this extensive experimental work and research studies include the establishment of Queen crab, shrimp, tuna and eel fisheries in New Brunswick. During 1968-69, 14 fisheries development projects were undertaken on a shared-cost basis with the federal Department of Fisheries and Forestry. Of particular interest was the Queen crab development which included the designing and constructing of special equipment. In 1968, 50 vessels fished this deepsea delicacy and several million pounds were processed in eight crab plants. Shrimp exploration was started in the Gulf of St. Lawrence in 1966 with encouraging results; seven plants are now processing shrimps from the Bay of Fundy and the Gulf of St. Lawrence. Other developments such as Irish moss, eels, mackerel, scallops and smelts are also processing very satisfactorily. The Branch operates a modern school of fisheries at Caraquet where, in 1967-68, 179 fishermen took training in the various phases of their trade. The school program includes navigation, administration, marine biology, oceanography, radiotelephone, metal and woodworking, arithmetic and languages and other related subjects and graduates may receive practical training aboard large modern fishing vessels under a joint federal-provincial program of technical up-grading. Following a few weeks of training, apprentices are taken on as regular crew members.

The *Fish Inspection and Marketing Branch*, created in late 1967, is responsible for the administration of the New Brunswick Fish Inspection Act and Regulations. For greater effectiveness and to avoid duplication of personnel, 30 Fish Inspectors of the federal Department of Fisheries and Forestry, Maritimes Area, were appointed to carry out the application of the New Brunswick Act and Regulations. The new Branch is active in promoting the expansion and modernization of existing plants as well as the establishment of additional fish processing plants in the province. Its efforts are aimed at studying existing markets and developing new ones for fishery products at home and abroad in collaboration with other government agencies, federal and provincial. The Branch is also responsible for publicity and information to the industry and the general public.

The *Fishermen's Loan Board of New Brunswick* is a body corporate operating under the jurisdiction of the Minister of Fisheries. It was established in 1946 and is now operating under the Fishermen's Loan Act of 1952 and the regulations of Nov. 1, 1963. Its function is to improve and develop the fishing industry of the province by providing adequate financial assistance to individual fishermen, groups, associations, processing firms and corporations, at a moderate rate of interest to construct modern fishing vessels, make major repairs and purchase engines and equipment. Since its inception the Board has granted over 1,700 loans to New Brunswick fishermen for a total of over \$21,000,000; outstanding loans totalled \$10,000,000 in 1968.

Loans are repayable within a five-year period on small inshore fishing vessels; repayment schedules on large trawlers may extend to 15 years, based on the gross proceeds of the catch. Most of the new fishing vessels being built for fishermen and fish processing firms in the province are financed by the Board. The Board acts as agent for the federal Depart-

ment of Fisheries and Forestry financial assistance program granted to owners of new fishing vessels, which are not eligible for the shipbuilding subsidy granted by the federal Department of Industry.

Sport Fisheries.—Sport fishing contributes substantially to the economy of the province, mainly through the tourist trade. Great Atlantic salmon rivers like the Miramichi, the Restigouche and the St. John are known around the world for their prolific production of this majestic game fish and attract many thousands of tourists to the province each year. Anglers catch as many as 50,000 salmon a year in the Miramichi system alone. Many other species are also sought after by both residents and non-residents in the hundreds of streams, rivers and lakes of the province.

Quebec.—The Quebec Department of Industry and Commerce administers the commercial fisheries of the province. For the benefit of producers and fishermen, it operates a network of 58 cold storage plants for the freezing and preservation of fish and the supplying of frozen bait and ice; the plants have a total daily freezing capacity of 500 tons and a storage capacity of 25,000,000 lb. The Department also owns and maintains about 110 stations in small fishing ports where fish are kept under proper conditions while awaiting collection by truck or boat, and an artificial drying plant with a processing capacity of 3,000,000 lb. of fish annually. A staff of fish wardens, technicians and technologists administers fishery legislation and assists in the application of new techniques for the expansion of the industry. The central administration is located in Quebec City with offices at the principal fishing centres. Fish inspection is carried out by federal inspectors who are given additional powers by the provincial government with respect to local sales.

Educational work among the fishermen and producers is conducted by the Department to teach the latest methods of preparing fish and of producing high-quality products. A Fisheries Training School, operated by the Department of Education at Grande Rivière, gives free theoretical and practical courses in fishery to fishermen of all ages. A fisheries training vessel was built and put in operation in June 1968. La Fédération des Pêcheurs unis du Québec receives encouragement through the Fisheries Division of the Quebec Council of Co-operation subsidized by the Federal Government. Under a maritime credit system, fishermen may obtain loans from credit unions for the purchase of boats and gear. Fish consumption is promoted through advertising campaigns in newspapers and magazines, exhibits at fairs, cooking demonstrations, educational films and the free distribution of fish recipes and publicity leaflets.

The Department adheres to the federal-provincial agreement on the building of dragners and longliners and assumes the building costs on a capital refunding plan. As at Mar. 31, 1968, the fishing fleet consisted of three stern-trawlers (152-166 feet), 14 82-foot steel dragners, eight 89-foot steel combination trawler-seiners, three 87-foot wooden dragners, 86 65-foot and 60-foot wooden dragners, 47 "gaspésiennes" and one clam-digger. The cost of construction of fishing boats since 1952 has been about \$18,000,000 and loans to fishermen have exceeded \$13,000,000.

Biological and hydrographical research is conducted in the Gulf of St. Lawrence, directed by the Marine Biological Station at Grande Rivière, and studies of the biology of freshwater fish of the St. Lawrence River and its tributaries are undertaken at a laboratory located in Quebec City. An aquarium in Quebec City exhibits freshwater and saltwater fish in 60 large tanks.

Sport Fisheries.—Sport fishing in the inland waters of Quebec is under the jurisdiction of the Department of Tourism, Fish and Game, which employs 250 full-time wardens and issues the licences required for sport fishing and hunting. It maintains four hatcheries at strategic points throughout the province for the distribution in public waters of speckled trout, brown trout, rainbow trout and grey trout, splake, ouananiche, maskinonge and salmon.

Excellent fishing may be found in all provincial parks and reserves, except Mont Orford Park. Gaspésian and Laurentide Parks are renowned for trout fishing. Chibougamau Reserve and La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Eight salmon streams are open to anglers—the Petit Saguenay River, the Laval River, the Moisie River, the Matane River, the Cap Chat River, the Ste. Anne River, the St. Jean River and the Matapédia River.

A joint committee composed of departmental officials and the directors of the Federation of Fish and Game Associations makes recommendations to the provincial government concerning legislation required for the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the province.

Ontario.—The fishery resources of Ontario are administered by the Fish and Wildlife Branch, Department of Lands and Forests, under the authority of the federal Fisheries Act, the Fishery Regulations for the Province of Ontario, the Ontario Game and Fish Act and the Regulations connected therewith.

Commercial Fisheries.—The commercial fishing industry in Ontario provides employment for about 3,000 persons directly and for many more indirectly, and produces an annual yield of from 45,000,000 lb. to 55,000,000 lb. of fish. The industry, although widely scattered throughout the province, is centred chiefly on the Great Lakes, particularly Lake Erie. The principal species of fish taken commercially are perch, smelt, whitefish, pickerel, lake trout, white bass, pike, herring, chub, sheepshead, carp, catfish and bullheads, sturgeon, eel, goldeye, rock bass, sunfish and suckers. Over one hundred smaller inland lakes are commercially fished, principally those in the northwestern portion of the province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60-foot tugs, and types of gear vary from gillnets, pound-nets and trap-nets, seines and baited hooks to small hand-operated seines and dip-nets. Fishing methods and equipment have been modernized extensively during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs, such aids as depth-sounding devices, radar, ship-to-shore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use as well as new types of fishing gear. Trawling has proved very efficient in harvesting smelt on a year-round basis in Lake Erie.

Most Ontario fishermen are organized into various local associations. Many of these associations are, in turn, represented by the Ontario Council of Commercial Fisheries which performs important services to the industry. The Ontario Fishermen's Co-operative and its member groups are of importance also in the organization of the fishery in the province.

Sport Fisheries.—Angling in Ontario is rapidly becoming one of the major industries of the province. With an estimated freshwater area of some 68,490 sq. miles, the province is one of the most attractive fishing areas on the Continent. Excellent angling opportunities are available for such prized fish as brook, rainbow, lake and brown trout, walleye, smallmouth and largemouth bass, pike and maskinonge. It is difficult to measure the total value of the sport fishing industry to the province but the annual revenue from the sale of angling licences alone (mainly to non-residents, as residents require a licence for provincial parks only) is in the neighbourhood of \$3,000,000. The management of this valuable resource is administered by a well-trained field staff of conservation officers and biologists located in the 21 forest districts of the province.

Provincial Hatcheries.—Ontario operates 16 hatcheries and rearing stations, the main species reared in these operations being brook trout, rainbow trout, lake trout, smallmouth

and largemouth bass, and maskinonge. A program of modernization of the hatchery system is being undertaken—the Normandale Hatchery in Norfolk County and the North Bay Station have recently been completely renovated.

Fisheries Research.—Research in Ontario is carried on in the Great Lakes and in inland waters. At the South Bay Mouth Station on Manitoulin Island in Lake Huron, Wheatley on Lake Erie, and Glenora on the Bay of Quinte on Lake Ontario, fishery biological stations are operated for the investigation and study of the commercial and sport fisheries on the respective lakes. In Algonquin Park, detailed studies concerning lake trout, smallmouth bass and brook trout are in progress and management techniques are being tested against the background of a creel census which has been continuous since 1936. Studies are also being conducted on walleye, parasitology and limnology. A selective breeding experiment concerning the hybrid of lake trout and brook trout is progressing; the deep-swimming character of the lake trout and the character of maturity at early age of the brook trout are those being selected for combination in the hybrid. Investigations include the study of exotic species of fish for use in the Great Lakes. Kokanee (sockeye salmon) plantings have been made in Lake Ontario and Lake Huron.

Manitoba.—Manitoba has almost 40,000 sq. miles of fresh water and 400 miles of coastline on Hudson Bay and, altogether, about 300 lakes and rivers covering 30,000 sq. miles are commercially fished. Some 3,000 persons are employed in primary commercial fishing and an equal number derive part of their living from fish processing and the supply of materials and services to the industry. The industry is particularly important to people living in remote northern communities where fishing provides a major part of their cash income. These northern lakes produced 8,914,500 lb. or 43 p.c. of the provincial total of 20,840,300 lb. in 1967-68. The southern part of the province contributed 57 p.c. of the total as follows: Lake Winnipeg, 6,379,400 lb.; Lake Manitoba, 2,204,900 lb.; Lake Winnipegosis, 2,980,600 lb.; and other southern lakes, 360,900 lb. The total value to the fishermen in 1967-68 was \$2,529,178 and the value as marketed was \$4,721,417. The average marketed catch for the five years 1964-68 was 28,949,600 lb. worth \$3,952,600 to the fishermen and \$6,628,400 at the wholesale level after processing. About half of the catch is taken during open water and the remainder through the ice in winter.

There are about 24 species of fish caught commercially in Manitoba but those of highest annual value to the fishermen are whitefish, pickerel (walleye), sauger and pike. Over 90 p.c. of the catch is exported, mostly to the United States. A quantity of the less valuable kinds and some processing wastes are used as food on mink ranches and for the making of meal. Capital investment in gear, boats, warehouses, etc., approaches \$3,100,000.

Supervision of commercial fishing operations and the enforcement of the Manitoba Fishery Regulations occupy a staff of Conservation Officers who patrol the province using motor boats during the open-water season, snowmobiles and light trucks during the winter and aircraft in remote areas. The Fisheries Branch of the Department of Mines and Natural Resources, in co-operation with the Department of Health, conducts a systematic program of plant inspection to raise the standard of sanitation and improve the processed product.

A continuing program of biological research is conducted by the Fisheries Branch to provide management information in the interest of a sustained annual yield. Close liaison is maintained with the Fisheries Branch of the federal Department of Fisheries and Forestry and the new Freshwater Institute (Fisheries Research Board of Canada) on the University of Manitoba campus in the effort to develop new fish products and effect more complete utilization of the province's fishery resources.

Fish culture activities include two pickerel hatcheries (Lake Manitoba and Lake Winnipegosis), a whitefish hatchery (Lake Winnipeg), a combination pickerel and whitefish hatchery (Lake Winnipeg), a trout hatchery (Whiteshell Provincial Park), and two spawning camps. Fish to replenish the commercial fishing waters are raised in the pickerel

and whitefish hatcheries, and brook, rainbow and lake trout as well as splake and kokanee salmon are raised in the Whiteshell Hatchery to be planted in sport fishing waters.

Sport Fisheries.—Each year, about 110,000 anglers fish an estimated 1,261,000 angler-days and spend an estimated \$12,000,000 in pursuit of this sport. The popularity of angling in the province is increasing by approximately 5 p.c. a year. The major species taken are walleye, northern pike, perch, lake trout and brook trout. Approximately 45 p.c. of Manitoba's angling takes place in the southeastern corner of the province (Whiteshell and Lac du Bonnet area). About 80 p.c. of the anglers are Manitoba residents, 4 p.c. originate in other provinces and 16 p.c. are from the United States.

Saskatchewan.—Approximately 32,000 sq. miles of water, about one eighth of Saskatchewan's area, provide the basis for a fishery resource that contributes much to the economic and recreational activity of the province. The Fisheries Branch of the Department of Natural Resources, with head office at Prince Albert, administers the fisheries. The Branch has three main Divisions—Management, Research and Fish Culture—which are responsible for planning policies; developing programs to ensure the proper management and utilization of the fishery resource; interpreting and explaining policies, programs and regulations; administering the Acts and Regulations (both federal and provincial); and adapting regulations to meet changing conditions. Its objective is to encourage efficient multi-use of the fishery, taking into consideration the interests of the various groups concerned—commercial fishermen, mink ranchers, anglers and the public generally.

The commercial fishery in Saskatchewan normally averages between 13,000,000 and 15,000,000 lb. annually. Although whitefish makes up about 50 p.c. of the landed catch, lake trout, walleye, tullibee, pike, goldeye, suckers and sturgeon are also taken commercially. In 1966 the production of slightly over 13,700,000 lb. of fish was worth \$1,730,000 to the fishermen and had a market value of \$3,413,231. The central marketing agency for 18 local fishermen's co-operatives marketed about half of the provincial catch. Sixty licensed mink ranchers harvested slightly over 6,000,000 lb. of rough fish, mainly suckers, burbot and tullibee (cisco) and another 1,000,000 lb. of fish was utilized by free Indian and domestic fishing permittees. A commercial harvest of 250,000 lb. of brine shrimp and eggs from several saline lakes were harvested and processed for sale to fish hobbyists.

The Fish Research Division conducts biological surveys on most of the large lakes and on many smaller water bodies and streams in the province to provide information for the development of fisheries management policies and programs. The current program is designed to determine productivity of water bodies, secure information on abundance and relationship of fish species, investigate ecology and assess factors affecting environment of fish, develop techniques to achieve maximum harvest of fish populations without prejudice to continued production, and develop techniques to facilitate rehabilitation and stocking of small water bodies. Limnological and fisheries surveys are continuing on lakes along the La Ronge Highway, along Highway 106, in the Saskatchewan River Delta, on Tobin Lake, and in the Meadow Lake Provincial Park. The long-term creel census on Lac la Ronge is being supplemented by an intensive investigation of the life history and ecology of northern pike. In co-operation with ARDA, a three-year study has been undertaken of the sport fish capability of waters between the International Boundary and the 55th parallel of north latitude.

The provincial hatchery at Fort Qu'Appelle reared over 12,600,000 fish for stocking purposes in 1966. The majority of these fish were obtained from spawn camps conducted in northern Saskatchewan.

Angling licence sales during 1966 were the highest on record with 110,017 licences being sold. Saskatchewan has some of the finest sport fishing waters in Canada as evidenced by an increasing number of sportsmen interested in trophy fishing. Record-size fish taken during the year included a 44-lb. lake trout, a 28-lb.-13-oz. northern pike, a 16-lb. rainbow trout, a 10-lb.-3-oz. walleye and a 4-lb.-5-oz. grayling.

A continuous program of inventory and examination of water bodies containing sport fish is maintained by the Management Division of the provincial Fisheries Branch. During 1966, 119 water bodies were examined. The use of chemicals to eliminate undesirable fish populations in small lakes continues as an important management tool and two lakes have been treated to eliminate stunted fish populations. Recent tests indicate the subsequent stocking of rainbow, brook and splake trout are well established.

Alberta.—Commercial and sport fishing is administered by the Fish and Wildlife Division of the Department of Lands and Forests, under the authority of the Fisheries Act (Canada) and the Fishery Act (Alberta). Production of commercial fish from Alberta's 6,485 sq. miles of fresh water for the year ended Mar. 31, 1968, was 10,437,691 lb. Landed value of the catch was \$874,526 and marketed value amounted to \$1,559,976. Lake whitefish is the most valuable commercially caught fish; it accounted for 59 p.c. of the total marketed value but represented only 23 p.c. of the total landings. Production of tullibee (cisco), primarily used for animal food, dropped 10 p.c. from the previous year but remained in second place in value among the fish marketed. Other species taken, in order of marketed value, were pike, walleye (pickerel), burbot (ling), lake trout, perch and suckers. Of the total quantity taken, 2,106,692 lb. were marketed outside the province and of this amount, 1,126,381 lb. went to the United States.

Sport Fisheries.—Angling licence sales increased from 133,092 in the year ended Mar. 31, 1967 to 136,693 in 1967-68. Fish hatchery facilities in Calgary and the rearing station at Raven produced 3,053,183 trout and kokanee for stocking provincial waters. Rainbow trout accounted for 77 p.c. of the total and brown trout, brook trout, lake trout and kokanee made up the remainder. In addition, 1,724,190 walleye, perch and pike were stocked in various locations where winterkill had removed resident populations or where new introductions were required.

Decentralization of the biological staff was completed during 1967-68 and the six regional biologists are now located in their respective regional headquarters. A fishery research section was created, located in Edmonton and soon to be housed in a new provincial consolidated laboratory building. A three-year project was undertaken, as a part of the Canada Land Inventory program, to classify the waters of Alberta according to their sport fish capability.

British Columbia.—A Fisheries Office, which was organized in 1901-02 and became very active in fish culture work, building and operating fish hatcheries and instituting scientific research into various fishery problems, was superseded in 1947 by the Department of Fisheries which in turn was superseded in 1957 by the Department of Recreation and Conservation. Commercial fisheries are represented today as the Commercial Fisheries Branch of the Department of Recreation and Conservation. Broadly speaking, the administrative and regulative jurisdiction over the fisheries of British Columbia rests with the federal authority. The ownership of the fisheries in the non-tidal waters is vested in the Crown in the right of the province, as are the shell fisheries such as oyster fishing and clam fishing in tidal waters. The province administers these fisheries although the regulations covering them are made under federal Order in Council on the advice and recommendation of the province.

The provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish processing plants under a system of licensing. The commercial harvesting of oysters and marine aquatic plants is regulated by provincial permits and licences. Provision is also made for arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Regulation and administration of net fishing in the non-tidal waters of the province, including commercial fishing and authority for regulation of the game fisheries in non-tidal waters, is vested in the Fish and Wildlife Branch which operates a number of trout hatcheries and egg-taking stations for re-stocking purposes.

The Branch co-operates closely with the Fisheries Research Board of Canada. The biological research into those species of shellfish over which the province has control, principally oysters and clams as well as marine plants, is conducted by the Fisheries Research Board of Canada at the Pacific Biological Station, Nanaimo, B.C., under agreement with the federal and provincial authorities. The object of this research is to encourage the industry to produce better products more economically and to enable the Commercial Fisheries Branch to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis.

PART II.—FURS

Section 1.—The Fur Industry*

The value of raw furs produced in Canada in the 1966-67 season amounted to \$35,103,371, a decline of 23 p.c. compared with the buoyant 1965-66 returns. This decline affected the values of both wild and ranched furs which were off 27 p.c. and 21 p.c., respectively. In 1966-67 ranched furs accounted for 65 p.c. of the value of furs produced and wild furs for the remainder.

Fur Trapping.—The value of the wild fur catch in 1966-67 was \$12,446,008 and, as shown in Table 3, p. 587, the five principal kinds of pelts taken, according to value, were beaver, muskrat, hair seal, wild mink, and fur seal.

Trapping is carried on in all the provinces and territories of Canada. In the 1966-67 season the main producers were Ontario which accounted for 21 p.c., Quebec 14 p.c., Alberta 12 p.c., the Northwest Territories 11 p.c. and Manitoba 10 p.c. Conservation measures and trapping regulations enacted with a view to achieving maximum annual production on a sustained basis, have been of major assistance in maintaining the numbers of fur bearers. Even in the partly settled areas, substantial catches of beaver, muskrat, mink, raccoon, wolf and squirrel are still made each year. In these sectors most of the trappers operate on a part-time basis, combining trapping with wage employment but in the northern areas where opportunities for wage employment are limited, trapping remains an important source of revenue. However, even in the isolated parts of the country the traditional pattern of trapping is changing and natives who formerly spent the winter months, along with their families, on the trapline now congregate with their dependants in settlements. This community-type living has many advantages for the trapper's family such as regular schooling, medical attention and the broader social life of the settlement but one of the undesirable results is that the areas around the settlements tend to be over-trapped and the less accessible areas neglected, with consequent waste of the fur resource. Little success has been achieved from efforts to make trapping more attractive and remunerative. There are too many other easier and more profitable ways of making a living than by undergoing the rigours of the trapline.

Fur Farming.—Almost two thirds of the Canadian fur production now comes from fur farms and mink is by far the most important animal raised. The demand for fox and nutria pelts is very limited but it is interesting to note the growing popularity of chinchilla. This animal, originally from the western slopes of the Andes Mountains in South America, was introduced into Canada in the late 1930s and is now being raised in most provinces.

* Prepared by the Livestock Division, Production and Marketing Branch, Canada Department of Agriculture, Ottawa.

Mink.—Mink accounts for 99.1 p.c. of the value of fur farm production and is raised on farms in all the provinces; the principal producers in order of importance are Ontario, British Columbia, Manitoba and Alberta. The following figures show the growth of the industry:—

Year	Pelt Production	Average Realization	Year	Pelt Production	Average Realization
	No.	\$		No.	\$
1930.....	3,284	10.52	1955.....	786,760	20.07
1935.....	30,558	10.58	1960.....	1,203,853	14.03
1940.....	229,202	9.64	1965.....	1,624,154	17.41
1945.....	255,968	21.51	1966.....	1,804,784	12.41
1950.....	589,352	17.08			

Production increased by 11 p.c. in 1966 over 1965 but, because of a sharply weaker market, the value of the crop was down 21 p.c.

Mink farming is a specialized business calling for a high degree of skill and experience. The successful breeder must have a thorough knowledge of the habits and requirements of his animals. Mink must be fed a carefully prepared diet, tailored to meet the varying demands of the breeding, growing and furring-out seasons. Also, a sound understanding of the complex field of genetics is required for selective breeding programs through which breeding herds may be improved and new colours produced. Diseases of mink have been the subject of considerable research, as a result of which most mink farmers now carry out programs of preventive vaccination for control of the major diseases.

Mink are usually housed in roofed structures with more or less open sides. These sheds may contain up to several thousand animals each, and the regular pattern of the individual pens within the structure facilitates the use of automatic watering and powered feeding systems permitting a single operator to tend many animals. Even so, production costs in the 1960-66 period showed considerable increase and, except for 1965, mink pelt prices have failed to keep pace. One result of the lower profit margins has been an acceleration of the trend toward large producing units and the decline in the number of small operators. In 1950, there were 589,352 mink pelts produced on 2,557 farms, an average of 230 pelts per unit; in 1960, there were 1,203,853 mink pelts produced on 2,331 farms, an average of 516 per unit; by 1966, the number of mink farms had declined to 1,452 but production increased to 1,804,784 pelts, an average of 1,243 per farm.

Chinchilla.—This fur bearer is being raised in most provinces, particularly in British Columbia, Ontario, Alberta and Quebec. Although it adapts well to raising under domestic conditions, chinchilla farming is comparatively new and additional research is required on many aspects of the business. The following figures show the production of chinchilla pelts in recent years:—

Year	Pelt Production	Average Realization	Year	Pelt Production	Average Realization
	No.	\$		No.	\$
1957.....	4,701	13.84	1962.....	11,193	13.56
1958.....	8,336	13.43	1963.....	12,226	14.03
1959.....	8,558	13.17	1964.....	12,846	13.14
1960.....	9,067	13.06	1965.....	17,109	13.18
1961.....	10,559	14.07	1966.....	19,133	11.88

Fox.—In the 1950s, average prices realized for the annual crop of ranched fox pelts ranged from \$7.30 (1956) to \$12.42 (1959) but in the mid-1960s, sparked by a strong demand from Japan, prices increased substantially.

Year	Pelt Production	Average Realization	Year	Pelt Production	Average Realization
	No.	\$		No.	\$
1961.....	1,811	10.00	1964.....	780	43.37
1962.....	1,647	10.00	1965.....	523	53.21
1963.....	830	15.09	1966.....	804	37.35

Encouraged by the higher returns, raisers held over more breeding animals for the 1966 season; at Jan. 1, 1966 there were 918 foxes on 43 farms, compared with a breeding herd of 761 on 40 farms at Jan. 1, 1965. In addition to the 1966 output of 804 pelts, a number of foxes from the 1966 crop were retained as breeders so that, at Dec. 31, 1966, the breeding herd totalled 1,122 animals. Despite the higher prices, breeders have been cautious about expansion. The demand is principally from Japan and there is some question as to whether it will be sustained.

Fur Marketing.—Some Canadian ranched mink are marketed in the United States and fairly substantial quantities of wild furs are sold in London, England, but most of the annual Canadian fur crop is marketed through one or other of the seven fur auction houses located in Montreal, North Bay, Winnipeg, Regina, Edmonton and Vancouver. Canadian furs are highly prized in world markets and buyers from many countries attend the auctions, purchasing for their own accounts or on behalf of firms anywhere in the world.

Pelting on the mink farms starts around mid-November and the first auctions of the new season's pelts are held early in December. Sales of ranched mink continue throughout December and January, in which month furs from the wilds also become available in quantity. The marketing season extends from December each year through to the following June, or until the crop has been sold. In all the producing countries, the new season's ranched mink pelts reach the market within approximately the same period. It is not, therefore, unusual for major auctions to be scheduled by outlets in Canada, the United States and Scandinavia on the same dates. It then becomes of the utmost importance for the respective auctions to publicize their own offerings widely, so as to attract the strongest attendance possible and ensure that adequate purchasing power and competitive bidding is available for their sales. These circumstances are peculiar to the marketing of ranched mink and they place considerable stress on both the auction houses and the buyers in the opening months of the selling season. Marketing the wild fur crop is spread more evenly throughout the season. The slower process of passing furs from the trapper to the fur buyer and on to the auction house is an important factor in the orderly marketing of the furs from the North. Most of the Canadian chinchilla pelts are exported in the raw state to the United States where they are dressed before being offered for sale. The pelts are sold through two outlets in New York and most of the Canadian skins are intersorted with pelts produced in the United States. This arrangement benefits producers in both countries since the resulting larger quantities make it possible for the grading specialists to make up "lots" containing pelts well matched as to size, colour and quality.

Section 2.—Fur Statistics

Subsection 1.—Fur Production and Trade*

Total Fur Production.—Annual figures of raw fur production, available since 1920, are now based on figures of royalties, export taxes, etc., provided by the game departments of all provinces except Prince Edward Island; those for Prince Edward Island are based on returns by fur dealers in that province.

Table 1 shows the fluctuating trend of the fur industry over the past two decades. It should be mentioned that, from 1964 on, the figures include hair and fur seal pelts, which in 1967 had a value of \$2,045,878. The proportion of the total value of pelts sold from fur farms continues upward, reaching 65 p.c. in 1967.

* Prepared by the Agriculture Division, Dominion Bureau of Statistics.

¹ Includes seal pelts.

Table 2 shows the provincial distribution of fur production. Ontario continues to lead the provinces and territories in this respect, accounting for 27.1 p.c. of the total value in the 1966-67 season compared with 26.4 p.c. in the previous season. Increased percentages were also shown by New Brunswick, Quebec, Saskatchewan and Yukon and Northwest Territories.

¹ Totals include pelts and values not allocated to a province or territory, mainly Alaska fur seal and Atlantic Coast hair seal.

Wild Fur Production.—The principal kinds of wild fur pelts taken, according to value, in 1966-67 were beaver, seal, muskrat and mink. These four kinds accounted for 76 p.c. of the total value of wild pelts produced, beaver alone accounting for 38 p.c. The number of beaver pelts produced was somewhat lower than in the previous year and the average value per pelt decreased from \$15.40 to \$12.73. In fact, the average value of every kind of pelt except wildcat and wolverine, was lower in 1966-67 than in 1965-66.

¹ Commonly known as Alaska fur seal; value figures are the net returns to the Federal Government for pelts sold.

Fur Farm Production.—Mink accounts for about 99 p.c. of the total value of fur farm production. In 1967 the number of mink pelts taken continued upward, reaching 1,972,219 with a value of \$22,847,407.

On the whole, there was little change in the number of fur farms operating in 1967 compared with 1966, some provinces reporting small increases and others small decreases. Mink farms decreased in number from 1,469 to 1,364 but the number of animals on those farms at year-end was 652,529 compared with 740,986 a year earlier. Chinchilla farms increased in number from 653 to 938 and the number of animals from 65,316 to 73,079. In 1967, 49 farms raising nutria reported 2,115 animals and 40 farms raising fox had 1,029 animals, both moderate decreases over the previous year.

Exports and Imports.—The Canadian fur trade, both export and import, is mostly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Canadian fur exports consist largely of those produced in greatest abundance, mink being by far the most valuable followed by beaver, muskrat, fox, and seal. Mink, Persian lamb, dressed seal, dressed sheep and lamb, fox, and raccoon make up a large part of the imports. Exports and imports of furs, undressed, dressed and manufactured, to and from Britain, the United States and all countries, are given for the years 1966 and 1967 in Table 6.

Subsection 2.—The Fur Processing Industry

The general term "fur processing" includes the fur dressing and dyeing industry and the fur goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis and the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves. Tables 7 and 8 give selected statistics for these industries on the "total activity" basis (see Chapter XVI on Manufactures) for 1964-66. In 1966, the fur dressing and dyeing industry processed the following major types of pelts: mink (all types) 1,729,076, muskrat 1,119,078, raccoon 504,322 and rabbit 449,978. Comparable figures for 1965 were 1,473,336, 868,811, 850,576 and 234,828, respectively.

Section 3.—Provincial and Territorial Fur Resource Management*

Most of the fur resources of the provinces and territories of Canada are under the administration of their respective governments. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, which are under the administration of the Federal Government. The Canadian Wildlife Service of the Department of Indian Affairs and Northern Development is responsible for all Federal Government interests in wildlife resources except for those related to Indian affairs, which are administered by the Indian Affairs Branch of the same Department. The Canadian Wildlife

* Prepared by the respective provincial and federal departments responsible for fur resource management.

Service co-operates with provincial governments and other agencies concerned and handles federal interests in relevant national and international problems (see pp. 42-45). Provincial fur resource management practices are discussed in the following paragraphs.

Newfoundland.—The wild fur industry in Newfoundland, as elsewhere, has been characterized by short-term instability and long-term decline. In general, the price of furs has declined in the past decade and, since the supply of trappers is partially determined by the profit motive, the number of trappers has also declined. As a result, the fur bearers of the province are now considered to be under-harvested. Because trapping is no longer profitable for the casual trapper and only large harvests and excellent pelt preparation can repay a trapper for his effort, the maintenance of trapping in Newfoundland requires that the resource be divided among a select group of professional trappers.

Research and management of the Newfoundland wild fur industry is at present in progress in an effort to exploit this resource more fully. Approximately one third of the beaver harvest was under trapline management in 1968 and the intention is to expand the system and include other fur bearers as well. One beaver per lodge is the limit, except where no trapline system is employed, and 10 beaver are permitted for each trapper. There is no limit on other fur bearers.

Between \$70,000 and \$90,000 worth of wild fur is harvested annually. The beaver harvest at about 3,000 is the main contributor, followed by otter with an annual catch of about 1,000. Fox, lynx and mink are about equally valuable, the latest harvest of each being valued at between \$6,000 and \$7,000.

Nova Scotia.—Nova Scotia's wild fur bearers include beaver, muskrat, mink, otter, fox, raccoon and weasel and the trapping of these animals provides supplementary income for several thousand persons who harvest from \$100,000 to \$200,000 worth of wild furs each year. The value, of course, depends on the numbers of each fur species available and on fur prices, both being subject to marked variations from year to year.

The beaver, once almost extinct in the province, is now the most available fur bearer taken. A \$2 licence is required by residents to trap a limited number of beavers (five to 20) during the approximately 10-week season beginning Nov. 1. No licence is required to trap other fur bearers, although a royalty must be paid to the province for each pelt exported. These animals may be taken between Nov. 1 and Jan. 15.

Beaver research is at present being carried on in Nova Scotia to increase knowledge of this valuable animal as a preparation for better management of its population. Behaviour, feeding, movement and reproduction studies are being conducted near the Tobieatic Wildlife Management Area in western Nova Scotia, in Cumberland County in the eastern part of the province and in Thomson Station Sanctuary in Queens County. In addition, data on size, age, parasites and diseases are collected from beaver carcasses taken by trappers in all parts of the province.

The Trappers' Association of Nova Scotia, composed of several trappers' associations throughout the province, has been organized so that the men closest to the fur resource may have some say in its wise use and management. It also assists in ensuring proper handling and marketing of the raw furs and in up-grading quality, thus commanding good market prices.

New Brunswick.—The initial investigation under the fur management program under way in New Brunswick concerned the muskrat and was conducted in the estuary of the St. John River, one of the better muskrat areas in the province. Investigation was later extended to other fur bearers, especially beaver. Beaver were protected against trapping for about 20 years until the first open season was declared in 1946. As a result, the beaver has made a remarkable recovery and there has been an open season each year since 1951, the annual take averaging from 7,000 to 10,000 pelts. At present, beaver damage done to farms and woodlots, highways and railways is causing concern.

The trapping of fisher and marten was permitted during the 1964-65 trapping season for the first time since 1946. These animals are found mainly in the northern part of the province but their numbers appear to be increasing and they are gradually working their way southward. During the winters of 1966, 1967 and 1968, a number of fisher were live-trapped in northern New Brunswick and released in the Fundy Mountains in an attempt to re-establish them there. Mink and otter are not abundant but in the fall trapping season the catches average from 1,500 to 2,000 and from 200 to 250, respectively. In 1966-67, 4,108 trapping licenses were issued.

Provincial legislation enables quick changes to be made in trapping seasons; thus, the autumn benefit of available fur may be utilized by a trapper or a closed season established on any fur bearer showing signs of serious depletion in numbers. A summary of trapping laws, which includes information on how the different pelts should be handled to receive the best price, is available from the Fish and Wildlife Branch of the provincial Department of Natural Resources.

Quebec.—The fur trade has been of considerable importance in Quebec since the beginning of New France and the province has remained in the forefront of fur producers. The principal native species, in order of value in 1967-68, were beaver, white fox, muskrat, mink, lynx, seal, otter and marten.

Management of wild fur bearers began in 1932 with the establishment by an official of the Hudson's Bay Company of a privately leased reserve at Rupert House. The administration of this reserve passed to the Hudson's Bay Company and a second concession, at Nottoway, was granted to the Company in 1938. Strict conservation practices were enforced in these two reserves with such success that the provincial government took over their management and has since added steadily to the area of Crown lands set aside for Indian trappers. At present, 12 reserves are under conservation: Rupert House, 7,500 sq. miles (1932); Nottoway, 11,300 sq. miles (1938); Vieux Comptoir, 30,000 sq. miles (1941); Peribonca, 12,600 sq. miles (1941); Fort George, 17,700 sq. miles (1942); Abitibi, 6,000 sq. miles (1943); Great Victoria Lake, 6,300 sq. miles (1948); Mistassini, 50,000 sq. miles (1948); Manouane, 5,000 sq. miles (1951); Roberval, 20,000 sq. miles (1951); Bersimis, 21,000 sq. miles (1951); and Saguenay, 140,000 sq. miles (1955).

A separate system of registered lands for white trappers is operated in the areas of Abitibi East, Abitibi West, Rouyn-Noranda, Témiscamingue, Pontiac and part of Saguenay County. Each leaseholder is granted exclusive trapping rights on his assigned land and each is subject to strict regulation. The trapping of fur bearers, other than beaver, is not restricted on either the reserves or the registered lands except for a general regulation concerning the protection of animals and the fixing of catch limits. Biological research has been undertaken to assess the results of this system.

In 1967-68, the value of the catch of wild furs in Quebec amounted to \$2,078,048—a fraction of the value of the finished product.

Ontario.—Legislation for the management of wild fur bearers had its beginning in Ontario with the setting of seasons in 1860 by an Act of Upper Canada. However, 32 years passed before there was any field staff to enforce the regulations and then began an era of restrictive legislation to protect species threatened by the earlier exploitation. Progress beyond the restrictive enforcement of open and closed seasons has come about only in the past 20 or 30 years. The first steps in this direction involved the setting aside of special Indian hunting areas in which non-Indians were not allowed to trap.

The registered trapline system was introduced in 1935 on a very small scale. This system is based on government recognition of the desirability of full utilization of the resource and the more efficient management that results when one individual enjoys the exclusive right to trap on such an area. In its early stages, surveyed townships were assigned as trapline areas but more explicit trapline boundaries, established in 1947-48, now cover the province and mostly follow natural physiographical features. At the same time,

resident traplines were established in areas of patented land, which means most of southern Ontario; these are blocks of land on which trappers are licensed to trap, providing they make their own written agreements with the landowners. Trapline licences are renewable annually as long as the trapper meets the conditions of the regulations and continues to trap. Trappers may sell the equipment and improvements they have made on their lines and thus have a vested interest in their traplines.

In full realization that fur is a natural resource that cannot in nature be stockpiled, and is harvested on a commercial basis only, the Ontario Department of Lands and Forests has assisted the Ontario Trappers' Association to establish their fur auction at North Bay. This allows the trappers to sell furs on a competitive market and realize their full value.

Much valuable research has been carried out on fur bearers, with present emphasis on beaver and otter. Transplantings have been successfully carried out to speed the recovery of reduced populations, particularly with beaver. A new aging technique was perfected for beaver a few years ago and recently an aerial beaver survey technique has been developed.

Manitoba.—Trapping and trading in furs is Manitoba's oldest industry and the province produces some of the finest pelts on the world markets. The annual value of the wild fur produced averages around \$1,650,000.

When the registered traplines were established nearly 30 years ago, indiscriminate and illegal trapping was eliminated, thus protecting both fur bearing animals and trapline operators. The use of power snow toboggans now enables the trapper to cover his line more thoroughly and in less time and therefore to handle a larger territory. The Department has been striving to enlarge and increase the individual trapline so that trappers may earn more money to compensate for the rising cost of living. The once-scarce beaver has been rehabilitated through years of controlled and managed harvest; there were 38,128 beaver pelts taken between July 1967 and June 1968. A live transplant project has undertaken to re-stock areas where beaver and marten have become depleted. During the past decade new records in the production of muskrat, mink, lynx, fisher and otter have been established.

The wild fur industry is still of economic importance in Manitoba, particularly so for both white and native trappers in the northern areas as well as for many part-time trappers in southern Manitoba. A trapper education program was started in 1957 to improve the general handling of furs by trappers and to achieve a certain measure of standardization in pelt care. This program has shown gratifying results and has been expanded to include improved trapping methods and the use of humane trap sets. A booklet, *The Trappers' Guide*, is available from the Wildlife Branch, or the Conservation Education Section of the provincial Department of Mines and Natural Resources.

Manitoba works in close co-operation with federal and other provincial agencies in the promotion of quality furs by exhibiting collections of representative wild furs at the more important European fairs. A Winnipeg fur auction company, one of the largest in Western Canada, serves as an important fur selling and exporting agency for Manitoba trappers and fur dealers with buyers attending from a number of European fur centres, from the United States and from Eastern Canada. More than \$8,000,000 worth of Manitoba wild furs were exported during the 1966-67 fur season.

Saskatchewan.—Before 1945, little was done to control the trapping of beaver and muskrat in Saskatchewan, other than to establish closed seasons when the fur bearers became depleted from over-trapping, and the lack of a conservation and management policy had a disastrous effect on both the fur resources and the livelihood of trappers. In 1944, the provincial government set up a committee to study trapping problems and the following year the South Saskatchewan Muskrat Trapping Program was instituted. Under this plan, individuals received exclusive rights to trap on definite land locations. Owners and occupants received first consideration, with special priority given to Indians and metis on Crown lands. Muskrat quotas were established to assure continuing populations, and marketing of pelts under government supervision was instituted.

In 1946, under federal-provincial agreement, all Crown lands north of the 53rd parallel were set up as the Northern Fur Conservation Block. Up to \$50,000 a year was to be expended over the following ten years to establish and administer conservation areas, purchase equipment, pay salaries of personnel, transplant live beaver and build dams; the Federal Government agreed to assume 60 p.c. of the cost and the province the remainder. A Fur Advisory Committee, with representation from the provincial Department of Natural Resources and the federal Indian Affairs Branch was set up to supervise the program. Organization of conservation areas was left to the trappers. Five-man councils were elected in all districts, with Indian, metis and white trappers sharing privileges, obligations and responsibilities on an equal basis. Conservation measures and licensing regulations were initiated. In 1956 the agreement was extended for another ten years with minor changes and in 1962 a co-ordinating body was set up by the Fur Advisory Committee to promote better communications and understanding of the fur program. In 1966 the agreement was again extended until 1972. The northern fur conservation program in Saskatchewan has served as an important vehicle to encourage these people to plan and carry out other programs vital to their own well-being.

During the two decades of the province's fur program, security of trappers has been strengthened; fur bearer population has reached a higher general level, particularly of beaver; quotas have put trapping on a sustained-yield basis; poaching has been almost eliminated; higher water levels resulting from the comeback of beaver have improved the habitat for other wildlife; and Indian, metis and white trappers are sharing alike in the self-government of trapping areas and in fur management programs.

Alberta.—Plans have been formulated for the reorganization of the Fish and Wildlife Division of the provincial Department of Lands and Forests. Under the new set-up, a fur management section will be established to work strictly on the fur resources of the province. More meetings will be held with registered trappers to increase the exchange of information between them and the Division's officers and a more intensive program is being initiated to eliminate as far as possible the misuse of trapping areas by certain trappers and, by amalgamation, to form trapping areas into better economic units. The Alberta Government submits pelts to the main fur exhibits in Canada and Europe, a policy that has increased the interest of foreign and Canadian buyers in Alberta furs.

British Columbia.—The British Columbia wild fur resource is administered by the Fish and Wildlife Branch of the Department of Recreation and Conservation. Regulations are derived under authority of the Wildlife Act and resource use is controlled under the registered trapline system, in effect since 1926. Registered traplines are areas of Crown land allotted, for the purpose of trapping wild fur, to trappers who are resident in the province. Registration of a specific trapline is renewable on an annual basis by the trapper, subject to certain requirements of tenure aimed at conservation and sustained yield of fur species. Approximately 3,000 trappers are involved in provincial wild fur production, of whom one half are Indians. The market value of wild fur produced during the fur harvest of 1966-67 was \$671,061, with beaver, marten, squirrel and mink together comprising about 75 p.c. of the total value.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Section 1.—Canada's Mineral Industry*

Canada's Centennial Year, 1967, was one of record production by the mineral industry and was characterized by better-than-average growth of output both regionally and by commodity. Exploration for new deposits and development of properties for production were carried out on a wide scale. The value of production moved up 11 p.c. over 1966 and was one of the largest annual increases of recent years. The metalics sector accounted for about 60 p.c. of the increase, the industrial minerals, including structural materials and non-metallics, for 11 p.c., and the mineral fuels for 29 p.c.

Canada produces 61 different minerals. In point of value, the major minerals are crude petroleum, copper, nickel, iron ore, zinc, natural gas and asbestos; these seven accounted for 69 p.c. of the total output value in 1967. Canada continues to lead the world in production of nickel and zinc; is in second place in the production of asbestos, uranium and molybdenum; and stands high in the production of many other minerals including copper, gold, platinum group, potash, iron ore, lead, sulphur, gypsum, magnesium, silver, cadmium and cobalt.

The Canadian mineral industry is strongly export-oriented, with about 60 p.c. of its output going to foreign markets. It is the country's leading export sector and, since 1950, total mineral and metal exports have grown by 10.3 p.c. a year compared with 7.8 p.c. for merchandise exports as a whole. In 1967 mineral and metal exports were at an all-time high of \$3,470,000,000 compared with \$3,120,000,000 in 1966, and accounted for 31 p.c. of Canada's total merchandise exports. About 58 p.c. went to the United States, 15 p.c. to Britain, 8 p.c. to Japan, and 8 p.c. to countries of the European Common Market; the remainder had world-wide distribution. World markets remained generally strong in 1967 although there was evidence of over-supply and weakening demand for some commodities. Copper supply improved during the first half of the year from the severe shortage position of the previous year but, as a result of a strike against the major copper producers of the United States in July that continued until the end of the first

* Prepared under the direction of Dr. C. M. Isbister, Deputy Minister of the Department of Energy, Mines and Resources, Ottawa, in the following Divisions: Introduction and Subsections 1 and 3 by the Mineral Resources Branch; Subsection 2 by the Mineral Processing Division, Mines Branch; and Subsection 4 by the Fuels Research Centre, Mines Branch. The Statistics in the tables included throughout the Chapter were compiled in the Industry Division of the Dominion Bureau of Statistics.

quarter of 1968, there was again evidence of short supply as the year progressed and consequently prices rose. Nickel remained in short supply and under allocation in export markets during 1967 and there was not much possibility of this position being relieved until 1969 at the earliest. Silver prices rose from the statutory \$1.29 (U.S.) to over \$2.00 (U.S.) a troy ounce after the United States announced restrictions at mid-year on the release of silver from treasury stocks. Most other metal prices remained firm on world markets although there was some weakening of iron ore prices in Europe and Japan because of an abundant supply of good-grade ore from many sources. In the industrial minerals group, prices of asbestos and elemental sulphur were again higher, with sulphur being in a continuing short-supply position. Potash prices were lowered as supply became more readily available.

Canada's mineral output has grown dramatically over the years, particularly in the post-World War II period and has also become increasingly more diversified. Only in recent years has Canada become a large producer and exporter of molybdenum, potash and elemental sulphur and only within the past dozen years have production and exports of petroleum, natural gas, iron ore and uranium been of importance.

1.—Value of Mineral Production, 1886-1967

						1967 ¹	4,403,579,072	215.81

¹ Value of Newfoundland production included from 1949.

The continuing growth of the mineral industry depends primarily upon Canada's competitive position in world mineral markets. Of equal importance is the continuing large-scale investment of capital for exploration and development and the expansion of existing production facilities. Capital and repair expenditures in mining, quarrying and oil wells in 1967 totalled \$1,270,000,000, slightly lower than in the previous year. The mineral industry continued its efforts to increase productivity by designing and operating mines on a large scale, taking advantage of the best mining and processing technology available and thus keeping unit costs to a minimum.

The record rise of \$431,000,000 in value of output in 1967 was due mainly to increases in the metallics and mineral fuels sectors. The largest gain was for copper which increased by 86,000 tons and \$110,000,000 in 1967 over 1966. The increase was attributable to production at the recently opened mine of Texas Gulf Sulphur Company near Timmins, Ont., and to increased output from the Ontario Sudbury district and from British Columbia mines. Nickel output was also substantially higher. There were smaller increases in the output of iron ore, zinc, silver and molybdenum. The value of lead production was unchanged and that of both gold and uranium continued to decline. Conditions in gold mining continued to be bleak in the face of rising costs and a fixed selling price but a reversal of the declining trend in uranium production is expected in 1969 as new sales contracts begin to come into force.

In the industrial mineral sector, output of non-metallics was valued at \$414,000,000 compared with \$363,400,000 in 1966. As in other recent years, the most significant developments in the non-metallic group in 1967 were related to production gains and new

developments for potash and sulphur. Potash production came from three underground mines and one mine operated by solution mining. Several other properties were being developed for production to begin in the years from 1968 into the 1970s. It is expected that Canada will become the world's largest potash producer in the 1970s from the extensive beds that underlie much of the southern third of Saskatchewan. They constitute the largest and highest-grade potash reserves in the world. Elemental sulphur recovered in natural gas processing plants is increasing as natural gas throughput rises. There has been a shortfall for many years between supply and demand of elemental sulphur. Asbestos fibre output at 1,400,000 tons was slightly less than in the previous year; in the Yukon Territory, one mine began production late in 1967 and a new asbestos property was under development west of Timmins, Ont. Output of most other non-metallics did not change significantly in 1967. Structural materials were valued at \$469,200,000 and were used almost entirely for domestic construction requirements.

The production of mineral fuels—crude petroleum, natural gas, natural gas liquids, and coal—was again at a record level, reaching a value of \$1,277,000,000, nearly 11 p.c. higher than the previous record of \$1,151,000,000 in 1966.

2.—Value of Mineral Production, by Class, 1958-67

Year	Metallics	Non-metallics	Fuels	Structural Materials	Total
	\$	\$	\$	\$	\$
1958.....	1,130,160,395	150,354,802	510,768,681	309,455,160	2,100,739,038

1966.....	1,984,672,572 ^a	363,387,717	1,150,611,731	474,108,899	3,972,780,919 ^a
1967 ^p	2,243,392,166	414,006,283	1,276,950,500	469,230,123	4,403,579,072

The volume of mineral production index, which is a means of measuring the mining industry's absolute growth, increased by 6.4 p.c. in 1967, rising to 145.2 (1961=100) from the 1966 level of 136.5; the 1961-67 average annual rate of growth was 6.7 p.c. In comparison, the index of industrial production advanced by 1.9 p.c., rising to 151.7 from the 1966 level of 148.9; the average annual rate of growth from 1961-67 was 7.6 p.c.

3.—Quantity Indexes of Production of the Principal Mining Industries, 1958-67

(1961=100)

Provincial and Territorial Mineral Production in 1967

Ontario in 1967 again led all provinces in value of mineral production with an output worth \$1,193,000,000, 27.1 p.c. of Canada's total. Following in order were Alberta with 22.7 p.c., Quebec with 16.7 p.c., Saskatchewan with 8.4 p.c. and British Columbia with 8.2 p.c. All provinces and territories increased their mineral output in 1967 with the exception of Quebec, New Brunswick, Nova Scotia and Prince Edward Island. The largest increases in dollar value of production were in Ontario where copper and nickel output were substantially greater. Alberta where mineral fuels are the main commodity, Saskatchewan where potash production added significantly to the total mineral output of the province, and British Columbia where copper and molybdenum output increased.

6.—Value of Mineral Production, by Province, 1958-67

NOTE.—Figures from 1899 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

Newfoundland and Labrador.—Iron ore is by far the most important mineral in this province; its value in 1967 was 78 p.c. of provincial output totalling \$259,800,000. Iron Ore Company of Canada increased the annual capacity of its Carol concentrator from 7,000,000 to 10,000,000 long tons and that of its Carol pellet plant from 5,500,000 to 10,000,000 long tons. Other important minerals produced in the province are copper, zinc and lead. Although the Tilt Cove copper mine was closed, the loss of its output

was offset by the start of production at the Gull Pond mine near Badger. Consolidated Rambler Mines Limited completed expansion of its copper mine near Baie Verte. American Smelting and Refining Company, the largest producer of base metals in the province, operated its Buchans zinc-lead-copper-silver mine at normal levels. The total production of non-ferrous metals was valued at \$37,900,000, slightly more than in 1966. Output of asbestos, the principal non-metallic mineral of the province, rose to 63,000 tons from 57,100 tons in the previous year. A plant for the production of magnesium hydroxide and calcined magnesia products from sea water is planned for the Stephenville area.

Prince Edward Island and Nova Scotia.—Prince Edward Island's mineral production is confined to structural materials which had a value of \$1,704,000 in 1967, down considerably from the 1966 figure.

In Nova Scotia, the total value of mineral production at \$79,380,000 was also down from the 1966 total of \$85,417,000. The output of coal, which by value is the province's major mineral product, was about the same as in the previous year but the output of non-metallics, valued at \$12,822,000, was 15 p.c. lower. Gypsum and salt are the main minerals in the non-metallic group; they contributed \$7,100,000 and \$4,725,000, respectively, to the 1967 total.

The year 1967 marked the end of one period and the beginning of another for the Nova Scotia coal industry. During the past two decades, large coal markets were lost to competitive petroleum fuels and coal production costs rose steadily. The period was characterized also by rising financial assistance to the coal industry, mainly in the form of Federal Government subventions to assist the movement of coal to markets. However, in 1967 the Federal Government, in co-operation with the Government of Nova Scotia, established the Cape Breton Development Corporation to acquire, reorganize and manage the coal mining and related interests of Dominion Steel and Coal Corporation, Limited, as well as to help promote and finance the development of industry on Cape Breton Island with a view to redirecting the economy of the island from coal to other forms of economic endeavour. Under the agreement between the federal and provincial governments, the province also assumed complete responsibility for the independent coal mines of Nova Scotia.

New Brunswick.—New Brunswick's mineral output totalled \$89,900,000 in 1967, slightly less than in 1966. Metals accounted for three quarters of total output and the main source of metal production was the five mines of the Bathurst-Newcastle district, whose principal products, in order of value of output, were zinc, lead, copper and silver. One of the five, Nigadoo River Mines Limited, began production from a 1,000-ton-a-day mine and mill late in 1967. The province's first smelter began operations early in the year at Belledune near Bathurst, treating lead and zinc concentrates produced by Brunswick Mining and Smelting Corporation Limited, which operates two large mines. Smelter products are lead, zinc, silver, cadmium and sulphuric acid. Late in the year, facilities were completed at the smelter site for the production of phosphate fertilizers using imported phosphate rock. Production of mineral fuels, nearly all of it coal, was worth \$7,660,000 and that of structural materials \$12,364,000.

Quebec.—Quebec's mineral output declined by \$26,900,000 in 1967 to \$736,000,000. Quebec is the leading province in the production of asbestos, is second to Ontario in the production of copper and zinc, and second to Newfoundland in iron ore production. Copper was mined in many parts of the province and exploration and development of copper properties were carried out in the Gaspé Peninsula and other areas; a new copper mine was opened at Joutel, 50 miles south of Matagami. A major exploration program was in progress at the nickel property of New Quebec Raglan Mines Limited in the Ungava area. Zinc production declined from a value of \$88,500,000 in 1966 to \$70,400,000; annual capacity of the pellet plant at Pointe Noire was increased from

4,900,000 to 6,000,000 long tons. Two lode gold mines were closed during the year as well as the Wakefield magnesite plant which had operated since 1942, and output was interrupted in October at Canada's oldest operating molybdenum mine when a fire destroyed the mill of Molybdenite Corporation of Canada Limited at Lacorne. Many companies joined in the search for uranium mainly in the Johan Beetz and St. Siméon areas on the north shore of the St. Lawrence River and in the Mistassini area northeast of Chibougamau. Production at Quebec aluminum smelters was curtailed as a result of a lower-than-usual growth in world consumption of that product.

Quebec continues to lead all provinces in the production of non-metallics, output in 1967 being valued at \$174,500,000. Asbestos production, the most important in this group, amounted to 1,260,000 tons which was 90 p.c. of total Canadian output; it was valued at \$138,829,000 and came from the Eastern Townships where first production was recorded about 90 years ago. The Asbestos Hill development in the Ungava area was suspended pending a reappraisal of the property but the Chibougamau district plans were under way for an underground asbestos development program to assess fibre grade. Several other non-metallic minerals are produced in Quebec but the only one to have a value of more than \$3,400,000 in 1967 was titanium dioxide, made by the electric smelting of ilmenite at Sorel; its output was valued at \$23,704,000. The production of structural materials totalled \$127,000,000 in 1967, down somewhat from 1966.

Ontario.—In 1967 Ontario's mineral output made its largest annual gain in recent years, rising to \$1,193,000,000, an advance of \$235,000,000 over 1966. Almost the entire increase was in the metallics sector and was accounted for by increased output of nickel, copper, zinc, silver and, to a lesser extent, iron ore.

As for many years, nickel has led all metallics in value of production in Ontario; output in 1967 was worth \$351,900,000 compared with \$269,500,000 in the previous year. The non-communist world's two largest nickel companies—The International Nickel Company of Canada, Limited and Falconbridge Nickel Mines Limited—operated 16 mines, seven mills, three smelters, and a copper refinery, all in the Sudbury area, and International Nickel operated a nickel refinery at Port Colborne. For the recovery of nickel, Falconbridge ships nickel-copper matte to Kristiansand, Norway, from its Sudbury smelter. The two companies continued development of six new mines at Sudbury; International Nickel opened a 22,500-ton-a-day mill and Falconbridge had a new mill under construction.

Copper output rose substantially in 1967 as the Kidd Creek mine of Texas Gulf Sulphur Company completed its first full year of operation; the planned annual rate of production is 50,000 tons of copper, along with other non-ferrous metals. Substantial amounts of copper were produced also from the Sudbury nickel-copper ores, from copper-zinc ores at Manitouwadge and from several other parts of the province. Zinc output rose sharply in 1967 and Ontario became the largest zinc-producing province in the country. Production totalled 273,000 tons valued at \$79,000,000, compared with 82,000 tons valued at \$25,000,000 in 1966. This large increase was mainly accounted for by the production of the new Kidd Creek mine, the planned output of which is 250,000 tons of zinc annually. Silver production in Ontario is derived from silver ores in the Cobalt-Gowganda district, and from base metal mines throughout the province. Output in 1967 rose to 16,000,000 oz. from 11,000,000 oz. in 1966, the increase being largely due to by-product output at the new Kidd Creek mine. Gold production continued to decline and the number of lode gold mines operated decreased from 25 in 1966 to 21. Output of uranium has declined steadily since the peak year of 1959 but estimates of the quantities that will be required for the generation of electric power indicate a much higher rate of production for the years ahead. Exploration for uranium was carried on in Ontario during 1967, particularly in the Elliot Lake and Agnew Lake areas; Kerr Addison Mines Limited announced production plans at a rate of 3,000 tons of ore a day for the uranium

MINERAL REFERENCES

An oil-drilling rig near Fort McPherson, 60 miles north of the Arctic Circle.

The search for minerals has moved into the vast Canadian north-land. Canadian mining, exploration and oil companies, together with the Federal Government, have pooled their technological and financial resources in a gigantic arctic exploration program — for oil in the extremely promising regions of the Arctic Islands and for metals in the Coppermine River area of the mainland.

Geologists off for a day's magnetometer search in the Coppermine region.

deposit at Agnew Lake, 45 miles east of Elliot Lake, with operations scheduled to begin in 1971. Production of iron ore rose moderately in 1967 and was valued at \$95,200,000 compared with \$91,700,000 in the previous year. The Sherman Mine, near Temagami, was prepared for production of iron ore and the early shipment of pellets. Steep Rock Iron Mines Limited began production from its new pellet plant which has an annual capacity of 1,350,000 long tons, and the pellet plant of the Griffith Mine near Red Lake almost ready for production at year-end.

The province's output of non-metallics was valued at \$28,697,000 in 1967. Salt, nepheline syenite, sulphur and gypsum together contributed \$27,870,000 of that amount, structural materials \$191,440,000, about the same as in the previous year, and mineral fuels \$9,778,000; of the latter, natural gas contributed \$5,908,000 and crude petroleum the remainder.

Manitoba.—Mineral output in Manitoba was valued at \$186,592,000 in 1967, 4 p.c. more than in 1966. Of that amount, metallics accounted for \$149,061,000. Nickel was the principal mineral produced in the province, accounting for 70 p.c. of the metallics production and 56 p.c. of the total mineral production. It is produced by The International Nickel Company of Canada, Limited, the largest producer, at Thompson and by Sherritt Gordon Mines Limited at Lynn Lake. The Thompson complex is the world's only fully integrated nickel production facility; the mine, mill, smelter and refinery are being enlarged and three new mines near Thompson are scheduled for production by 1969. Sherritt Gordon operated a nickel refinery at Fort Saskatchewan in Alberta, where nickel and cobalt are recovered. Next in importance to nickel production are copper and zinc, which are recovered from ores mined at Flin Flon and Snow Lake by Hudson Bay Mining and Smelting Co., Limited. Concentrates are smelted by Hudson Bay at its Flin Flon custom metallurgical works. Hudson Bay continued its mine development program near Snow Lake, and Sherritt Gordon carried out further development of the Fox Lake copper-zinc deposit 30 miles southwest of Lynn Lake.

Crude petroleum production was valued at \$13,895,000 in 1967 compared with \$12,956,000 in 1966 and structural materials output, at \$20,644,000, remained about the same.

Saskatchewan.—Total value of mineral output in Saskatchewan in 1967 was \$663,696,000 compared with \$349,304,000 in the previous year. Mineral fuels contributed \$224,386,000 of that amount, non-metallics \$87,218,000, metallics \$44,724,000, and structural materials \$13,368,000. The year was highlighted by continuing expansion of potash production and development of new potash deposits. Three companies—International Minerals and Chemicals Corporation (IMC), Kalium Chemicals Limited, and Potash Company of America—operated at or near capacity and IMC brought its second mine on stream. Already the world's largest potash exporter, Canada is expected to become, within a few years, the world's largest producer as well. A record 2,578,200 tons of potash (K_2O) valued at \$77,346,000 were produced in 1967.

Saskatchewan copper production came from the Flin Flon mine of Hudson Bay Mining and Smelting Co., Limited, on the Manitoba-Saskatchewan boundary, from Anglo-Rouyn Mines Limited at Warden Bay, and from a 350-ton zinc-lead-copper mill at Hudson Lake that was opened in mid-year by Share Mines & Oils Limited. About 2,000,000 lb. of uranium valued at \$10,000,000 were produced by Eldorado Nuclear Limited from the Beaverlodge area in northern Saskatchewan and an expansion program was under way.

Alberta.—The value of mineral production in Alberta rose by \$150,000,000 to \$44,822,000 in 1967, with fuels accounting for almost 90 p.c. of the output and 75 p.c. of the year's increase. Alberta has long been Canada's leading oil-producing province,

contributing about 65 p.c. of the country's total output. Natural gas output also increased in 1967 to \$162,000,000 from \$146,200,000 in 1966; natural gas by-products, not including elemental sulphur recovered from gas, were valued at \$102,300,000 compared with \$94,100,000 in the previous year.

Oil and gas exploration activity was concentrated in the northwestern part of the province, particularly in the Zama Lake area where the same Middle Devonian producing horizons that occur in the Rainbow Lake pools immediately to the south were encountered but the productive zones appear more limited. The Great Canadian Oil Sands bituminous sands project near Fort McMurray was officially opened on Sept. 30. The \$235,000,000-plant is designed to process 100,000 tons of oil sands a day to produce 45,000 bbl. of high-grade synthetic crude oil. This oil is being delivered to Edmonton by pipeline and marketed in refineries in Eastern Canada and in the United States. Oil and gas pipeline construction was actively continued in the province. Most of the increase in elemental sulphur production in Canada came from expanded and new sour gas sulphur recovery facilities in this province. Sulphur recovery in the Great Canadian Oil Sands operations is expected to be about 330 tons a day.

With the exception of sulphur, there is little production of mineral commodities other than mineral fuels in Alberta. Of the \$68,788,000 worth of non-metallics produced in 1967, elemental sulphur accounted for \$66,600,000. Nearly all remaining mineral production was of the five structural materials.

British Columbia.—Mineral production in British Columbia in 1967 totalled \$360,830,000, 9 p.c. above that in the previous year; metallics output was valued at \$213,804,000, mineral fuels at \$78,458,000, and structural materials at \$45,939,000.

The rise in metallics output, which was mainly responsible for the increase in total mineral production, was accounted for to a large extent by increased copper production, which totalled 81,920 tons compared with 52,880 tons in the previous year. Three new mines and expansion of production at two producing mines contributed to the increase. Two large mines were being developed with production scheduled to begin in 1969, and several large low-grade properties were being explored in the province. British Columbia was a leading producer of lead and zinc, with output coming mainly from operations of Cominco Ltd. in the southeast part of the province, which include two lead-zinc mines and metallurgical-chemical plants for the production of refined metals, industrial chemicals and fertilizers. Molybdenum output came from four mines and accounted for 83 p.c. of Canada's total output of this mineral. The newest Canadian molybdenum producer, British Columbia Molybdenum Limited, started mill tune-up late in 1967 and was expected to have an annual output of 4,000,000 to 5,000,000 lb. British Columbia's production of molybdenum is expected to rise further in the years ahead when several large copper-molybdenum deposits, now under development, reach the production stage. Seven iron ore producers shipped 2,114,000 tons, all to Japan. Wesfrob Mines Ltd. opened a copper-iron ore mine and plant in the Queen Charlotte Islands, having an annual rated capacity of more than 1,000,000 tons of sinter and pellet concentrate. One of the two lode gold mines closed in 1967 and gold production was slightly lower.

Asbestos, produced at Cassiar in northern British Columbia, had a production value of \$13,365,000 and accounted for nearly 60 p.c. of the province's non-metallic output; most of the remainder was attributed to sulphur, recovered as sulphuric acid from lead-zinc smelting and from the processing of natural gas. Output of mineral fuels continued its upward trend in 1967, advancing to \$78,458,000 from \$65,928,000 in 1966. Drilling for oil and gas was carried on in British Columbia offshore areas.

Yukon and Northwest Territories.—Mineral output in Yukon Territory, valued at \$9,700,000 in 1967, was derived from the silver-lead-zinc mines of the Mayo district, from a copper mine near Whitehorse, from an asbestos mine west of Dawson, from placer

gold operations at Dawson, and from a small coal mine near Carmacks. The copper mine of New Imperial Mines Ltd. near Whitehorse began production in May at a rate of 2,500 tons a day. Anvil Mining Corporation Limited continued to develop its Faro deposit near Ross River, which contains some 63,000,000 tons of zinc-lead-silver ore; open-pit mining was scheduled to begin in late 1969 and construction of a 5,500-ton mill was under way. Sales contracts were negotiated with Japanese smelters for zinc and lead concentrates. Output by United Keno Hill Mines Limited at Mayo was at a reduced rate, causing the production of silver, lead and zinc in the Yukon to decline to about half the level of 1966. Cassiar Asbestos Corporation Limited began production at Clinton Creek late in 1967 and exploration of asbestos properties in this area is under way by other groups.

Mineral output in the Northwest Territories was valued in 1967 at \$115,071,000 and was accounted for largely by the production of zinc and lead at Pine Point, and gold in the Yellowknife area. Regular shipments of lead and zinc concentrates and high-grade ore were made by Pine Point Mines Limited and a new 3,000-ton-a-day addition to the mill was scheduled for completion in late 1968. One lode gold mine was to be closed at the end of 1967 or in early 1968.

A consortium of 20 companies in financial partnership with the Federal Government, under the name of Panarctic Oils Ltd., will carry out extensive geological and geophysical work in the Arctic Islands and will drill a number of wells in an oil exploration program over the three years 1968-70.

Subsection 1.—Metals

The metallic minerals of greatest dollar value to Canada in 1967 were, in order; copper, nickel, iron ore, zinc, gold, lead, silver, uranium, molybdenum and platinum group metals. These 10 metals, which accounted for 97 p.c. of the total value of metal production in 1967, and several other metals of importance are dealt with separately below.

Copper.—Production from new mines in New Brunswick, Quebec, Ontario, Saskatchewan, British Columbia and Yukon Territory, plus uninterrupted production at the established mines, raised copper output in 1967 to 592,300 tons valued at \$563,513,000, an increase of 86,200 tons and \$109,989,000 over 1966. Production of refined copper increased to 500,020 tons from 433,921 tons in the previous year but consumption declined 38,157 tons to 224,400 tons in 1967. Exports of copper in ores and concentrates increased by 34,088 tons to 128,976 tons; exports of refined copper rose by 85,228 tons to 275,919 tons.

Six smelters for the reduction of copper and nickel-copper ores and concentrates are operated in Canada. In the Sudbury district of Ontario, The International Nickel Company of Canada, Limited operates smelters at Copper Cliff and Coniston, and Falconbridge Nickel Mines Limited produces nickel-copper matte at its Falconbridge smelter. Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man., smelts ores and concentrates from its mines in Manitoba and Saskatchewan and custom ores and concentrates from mines in these provinces. Ores and concentrates from most of the copper mines in Ontario, Quebec and Newfoundland are smelted at the Noranda smelter of Noranda Mines Limited and the Murdochville smelter of Gaspé Copper Mines Limited, both in Quebec. Electrolytic copper refineries are operated by International Nickel at Copper Cliff, Ont., and by Canadian Copper Refiners Limited, a subsidiary of Noranda Mines, at Montreal East, Que.

Copper production in Newfoundland in 1967 was 19,689 tons valued at \$18,732,507, which was 295 tons and \$1,317,113 more than in 1966. Closure of Consolidated Rambler

Mines Limited's Main mine and First Maritime Mining Corporation Limited's Tilt Cove mine was offset by increased production from Consolidated Rambler's East mine and First Maritime's Gullbridge mine.

New Brunswick's copper output decreased to 5,608 tons valued at \$5,335,477 from 7,089 tons valued at \$6,366,203 in 1966. Nigadoo River Mines Limited started production in the fourth quarter from its lead-zinc-copper mine near Robertville.

Production of copper in Quebec was 159,088 tons valued at \$151,355,859, a decrease of 12,911 tons and \$3,098,768 from 1966. More than 25 mines were in operation during 1967, the main centres of production being at or near Noranda-Rouyn, Val d'Or, Matagami, Chibougamau, Murdochville, and Stratford Place. The East Sullivan mine near Val d'Or and the Bruneau mine near Chibougamau were closed during 1967. New mines were opened by Joutel Copper Mines Limited, by Grandroy Mines Limited, and by the Icon Syndicate. Three deposits were under development during 1967, one each in the districts of Chibougamau, Stratford Place, and Gaspé Provincial Park.

Copper was produced in Ontario at more than 30 mines in 1967, the main operations being the 17 nickel-copper mines of the Sudbury district, five copper-zinc and copper mines near Timmins, and three copper-zinc mines near Manitouwadge. Production from the recently opened Kidd Creek mine of Ecstall Mining Limited, a wholly owned subsidiary of Texas Gulf Sulphur Company, near Timmins, and greater output from the Sudbury-area mines of International Nickel accounted for most of the increase of 66,879 tons in Ontario's production, which rose to 269,855 tons in 1967; the value increased by \$75,364,417 to \$256,739,969. Two new mines were opened during the year and seven mines are scheduled to begin production by the end of 1972, which ensures that, for many years, Ontario will maintain a leading position among the provinces as a copper producer.

Manitoba's production of 29,459 tons of copper valued at \$28,027,719 was mostly from the mines of Hudson Bay Mining and Smelting Co., Limited at Flin Flon and Snow Lake and, to a smaller extent, from the Lynn Lake nickel-copper mine of Sherritt Gordon Mines Limited. Hudson Bay operated four mines and continued development of the Anderson Lake and Osborne Lake mines for production in 1968. Sherritt Gordon planned to start production from its Fox Lake copper-zinc mine in 1969 at a rate of 3,000 tons of ore daily. Copper rejects from the International Nickel refinery at Thompson were shipped to Copper Cliff, Ont., for refining.

Copper production in Saskatchewan was from the mine of Anglo-Rouyn Mines Limited at Waden Bay, that of Share Mines & Oils Limited at Hanson Lake, and from the Saskatchewan portion of Hudson Bay's Flin Flon orebody, which straddles the provincial boundary. Production in 1967 was 22,738 tons, 3,177 tons more than in 1966; the value was \$21,632,992, or \$4,067,316 higher. Hudson Bay continued development of the Flexar mine for production in 1968, and Share Mines & Oils explored and developed the Quandt property, near Hanson Lake.

Production in British Columbia increased by 55 p.c. in 1967 to 81,921 tons, valued at \$77,939,139. Three new mines began operation during the year—one at Buttle Lake, Vancouver Island, one at Babine Lake in the Smithers area, and one at Tasu Harbour, Queen Charlotte Islands. Two established producers, Craigmont Mines Limited at Merritt, and Bethlehem Copper Corporation Ltd. in the Highland Valley, had higher production in 1967 than in 1966. Granduc Mines Limited near Stewart, and Brenda Mines Limited near Peachland planned to start production in 1969 at rates of 7,000 tons and 24,000 tons of ore daily. Many large, low-grade copper deposits were explored in British Columbia during 1967.

Production of copper in the Yukon Territory resumed after a lapse of four years when New Imperial Mines Limited started production from its open-pit mine near Whitehorse; 3,675 tons were produced in 1967 valued at \$3,496,395.

9.—Producers' Shipments of Copper, by Province, and Total Value 1958-67

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

Nickel.—Canadian nickel production in 1967 amounted to 250,180 tons valued at \$467,196,000, a 12-p.c. increase in quantity and a 24-p.c. increase in value over 1966. Canada, the world's leading producer, supplied 68 p.c. of the non-communist world's nickel in 1967. A continued shortage of supply in the non-communist world slowed consumption in 1967 to 412,500 tons from 415,000 tons in 1966.

In Ontario, where 76 p.c. of Canada's nickel was produced, International Nickel operated nine underground mines, one open-pit mine, four mills, two smelters, a copper refinery and an iron ore recovery plant in the Sudbury area, and a nickel refinery at Port Colborne. The company continued development of four new mines in the Sudbury area and explored and carried out development on an orebody near Shebandowan. Falconbridge Nickel operated six mines, three mills and a smelter, and continued the development of two new mines and the construction of a new mill in the Sudbury area. Kidd Copper Mines Limited leased and operated the Aer Nickel property near Worthington. Nickel-copper concentrates were shipped to Falconbridge for smelting. At Werner Lake in northwestern Ontario, Consolidated Canadian Faraday Limited (of which Metal Mines Limited, the former operator at Werner Lake, is now a part) continued production at about 600 tons of ore a day and sold a bulk nickel-copper concentrate to International Nickel.

In Manitoba, where 22 p.c. of Canada's nickel was produced, International Nickel operated an integrated nickel mining-concentrating-smelting-refining facility at Thompson and continued development of three new mines. Sherritt Gordon Mines Limited at Lynn Lake produced nickel concentrates for shipment to the company's chemical refinery at Fort Saskatchewan, Alta. Supplementary feed for the refinery was obtained by importing nickel-sulphide concentrates from Australia and nickel matte from New Caledonia.

Two small nickel mines were in production in Quebec in 1967. Marbridge Mines Limited operated a mine and mill near Malartic on a salvage basis and shipped a bulk, nickel-copper concentrate to the Falconbridge Sudbury smelter. Lorraine Mining Company Limited, near Belletre, continued mining and exploration at its nickel-copper mine. A bulk concentrate was shipped to the International Nickel smelter at Copper Cliff for treatment. In British Columbia, Giant Mascot Mines Limited, near Hope, produced a bulk nickel-copper concentrate for export to Japan.

The Canadian price of refined nickel in 1967 was raised to 101.5 cents a pound from 92.15 cents a pound in 1966. In the United States the price was raised from 85.25 cents a pound to 94 cents.

10.—Producers' Shipments of Nickel, by Province, and Total Value 1958-67

Year	Quebec	Ontario	Manitoba	British Columbia	Northwest Territories	Canada

² Includes 162 tons of producers' shipments

Iron Ore.*—Iron ore shipments in 1967 amounted to 36,878,049 long tons, an all-time high valued at \$455,242,942. Newfoundland-Labrador was the largest producing province with an output of 14,526,783 tons, followed by Quebec with 12,962,498 tons, Ontario with 7,501,110 tons, and British Columbia with 1,887,658 tons. Fifteen companies were directly engaged in iron ore mining—one in Labrador, one with mines in both Labrador and Quebec, two in Quebec, six in Ontario and five in British Columbia. In addition, four companies shipped iron ore as a by-product of base metal operations.

The Iron Ore Company of Canada, with operations in both Labrador and Quebec, completed an expansion program to increase annual capacity at its Labrador City concentrator from 7,000,000 to 10,000,000 tons and annual capacity at its pellet plant from 5,500,000 to 10,000,000 tons. Wabush Mines, which operates mines in Labrador, continued the expansion of its concentrator at Wabush from 5,300,000 to 6,000,000 tons annually and of its pellet plant at Pointe Noire, Que., from 4,900,000 tons to 6,000,000 tons. In Ontario, Steep Rock Iron Mines began production at its new 1,350,000-ton-a-year pellet plant. Construction of two pellet plants, by the Griffith Mine at Bruce Lake and the Sherman Mine at Temagami, neared completion at year-end. The plants have annual rated capacities of 1,500,000 and 1,000,000 tons, respectively. In British Columbia, Wesfrob Mines Limited began production at its iron-copper property in the Queen Charlotte Islands; annual rated capacity of its concentrator is 400,000 tons of sinter feed and 550,000 tons of pellet feed. Empire Development Company, Limited and Orecan Mines Limited, both on Vancouver Island, ceased production.

* Quantities of iron ore and concentrates given in the text are in long tons of 2,240 lb.; quantities shown in Table 11 are in short tons of 2,000 lb.

Iron Ore Company of Canada, with direct-shipping ore from deposits on both sides of the Labrador-Quebec border at Schefferville and a concentrating-grade deposit near Labrador City, is the largest shipper of iron ore in Canada, accounting for 38 p.c. of 1967 shipments. Quebec Cartier Mining Company accounted for 22 p.c. and other shippers were Wabush Mines in Labrador; Hilton Mines Ltd. in Quebec; and Algoma Ore Division of the Algoma Steel Corporation, Limited, Steep Rock Iron Mines Ltd., Caland Ore Company Ltd., National Steel Corporation of Canada, Marmoraton Mining Company, and Adams Mine (Jones & Laughlin Mining Co. Ltd.) in Ontario. In British Columbia, five companies shipped iron ore—Brynnor Mines Limited, Jedway Iron Ore Limited, Texada Mines Ltd., Wesfrob Mines Limited, and Zeballos Iron Mines Limited. By-product iron ore producers were Cominco Ltd. and Coast Copper Company Limited in British Columbia, and International Nickel and Falconbridge in Ontario.

Annual iron ore production capacity in Canada at the end of 1967 reached 46,000,000 tons, including 21,400,000 tons of pellet capacity. Upon completion of the Griffith Mine and the Sherman Mine and the expansion of Wabush Mines, pellet capacity will reach 25,000,000 tons in 1968.

Canada is the world's leading iron ore exporter, the four major market areas being United States, Western Europe, Britain and Japan. Exports totalled 31,407,000 tons in 1967 compared with 30,694,000 tons in 1966. The United States is the largest market, although Canadian exports to that country declined 3.2 p.c. to 23,500,000 tons in 1967; shipments to Britain, after declining for two consecutive years, increased by 29 p.c. to 2,870,000 tons; sales to Western Europe rose 36 p.c. to 3,400,000 tons; and exports to Japan fell 3.5 p.c. to 1,630,000 tons. Canadian indicated consumption was 8,796,000 tons, down from 9,363,000 tons in 1966, and imports amounted to 2,400,000 tons, down 45 p.c. Lower domestic consumption reflected reduced iron and steel production and increased iron content of iron ores. Almost all the imported ore came from Michigan and Minnesota in the United States; some was imported from Brazil and Liberia.

11.—Iron Ore Shipments and Production of Pig Iron and Steel Ingots and Castings, 1958-67

(Quantities are in short tons)

Year	Iron Ore Shipments						Production of Pig Iron	Production of Steel Ingots and Castings
	Newfound-land (incl. Labrador)	Quebec	Ontario	British Columbia	Canada

Lead and Zinc.—Production of lead in 1967 totalled 321,563 tons, 7 p.c. more than in 1966 and the highest on record. Refined lead production totalling 190,300 tons, was derived from two plants, one operated by Cominco Ltd. at Trail, B.C., where annual capacity is 183,000 tons, and the other operated by East Coast Smelting and Chemicals Company Limited, a subsidiary of Brunswick Mining and Smelting Corporation Limited at Belledune, N.B., where capacity is 33,000 tons annually. Operations at Belledune

were hampered by start-up problems and production was well below capacity. In June 1967, Noranda Mines Limited purchased control of Brunswick. Exports of lead in ores and concentrates totalled 126,200 tons of contained lead, compared with 112,900 tons in 1966, and went mainly to Japan, Belgium, the United States and West Germany. Exports of refined lead amounted to 132,300 tons, 25,800 tons more than in the previous year. The lead price, f.o.b. Toronto and Montreal, was 14 cents a pound throughout the year.

Zinc production rose in 1967 to a new record of 1,086,600 tons, 13 p.c. more than in 1966 and equivalent to 30 p.c. of the non-communist world total. Canada has been the world's largest mine producer since 1964. Refined zinc output rose from 382,600 tons in 1966 to 396,100 tons in 1967. Canada's four zinc plants all operated at less than capacity, due to start-up difficulties at the Belledune smelter and in response to market conditions in the case of the other plants. Exports of zinc in ores and concentrates, totalling 735,700 tons, went mainly to the United States, Belgium, Japan, the Netherlands and Britain. Refined exports amounted to 297,600 tons and went mainly to Britain and the United States. The Canadian domestic producers' price of zinc dropped from 14.5 to 13.75 cents a pound on May 1 and to 13.5 cents a pound on June 21, where it remained for the rest of the year.

Production of lead and zinc in the Northwest Territories, amounting to 132,500 tons and 200,000 tons respectively, came from Pine Point Mines Limited. Construction continued on the 3,000-ton addition to the mill along with preparation of the nearby Pyramid open-pit mine where production was scheduled to start late in 1968. In the Yukon Territory, United Keno Hill Mines Limited reduced its milling rate to 50,000 tons a year. Anvil Mining Corporation Limited began construction of a 5,500-ton mill at its Vangorda Creek property that is scheduled to start operations in July 1969; annual output is expected to be 90,000 tons of lead and 130,000 tons of zinc in concentrates, which will be shipped to Japan for smelting. At this rate of output, the Anvil mine will be one of the largest lead-zinc mines in Canada.

Lead and zinc production in British Columbia was mainly from Cominco's Sullivan mine and 10,000-ton concentrator at Kimberley. The company operated also the Bluebell mine and 700-ton mill in the Slocan district. Western Mines Limited started production of lead, zinc and copper concentrates at Buttle Lake on Vancouver Island and Anaconda Company (Canada) Ltd. produced copper and zinc concentrates at Britannia Beach. Production ended in November at the mine of Aetna Investment Corporation Limited at Toby Creek. Regular operations were carried out by Canadian Exploration, Limited and Reeves MacDonald Mines Limited near Salmo, and a number of small producers operated intermittently in many areas of the province, shipping high-grade ore or concentrate to Trail.

Hudson Bay Mining and Smelting Co., Limited recovered lead and zinc from the copper-zinc-lead ores of two mines at Flin Flon on the Saskatchewan-Manitoba border and two mines near Snow Lake, Man., and continued the development of new mines near Snow Lake. Share Mines and Oils Ltd. completed construction of a 350-ton mill at Hanson Lake, Sask., 35 miles west of Flin Flon, and began operations in June 1967, shipping zinc concentrates to Flin Flon for treatment. Sherritt Gordon Mines Limited announced plans to bring its Fox Lake mine into production in 1969 at 3,000 tons a day to produce zinc, copper and pyrite concentrates.

In Ontario, Ecstall Mining Limited operated a zinc-copper-lead open-pit and 9,000-ton mill near Timmins and in 1967, which was the first full year of operation, became the second largest mine producer of zinc in Canada, with an output of 225,000 tons. Other Timmins-district producers were Kam-Kotia Mines Limited and Canadian Jamieson Mines Limited, which operated copper-zinc mines and mills. The remainder of Ontario's zinc output came principally from copper-zinc mines at Manitouwadge operated by Noranda Mines Limited, Willecho Mines Limited, and Willroy Mines Limited.

Mine output of zinc in Quebec decreased by 17 p.c. to 242,900 tons in 1967. Lead output, which is small in Quebec, was also well below that of 1966. A decline in the grade of ore mined accounted for most of the reduced output of zinc. Five mining companies associated with Noranda Mines Limited (Mattagami Lake Mines Limited, Orchan Mines Limited, Normetal Mines Limited, Quemont Mines Limited and New Hosco Mines Limited) accounted for 75 p.c. of zinc output in Quebec. Coniagas Mines, Limited closed its Bachelor Lake zinc-lead mine in May and New Calumet Mines Limited placed its lead-zinc mine on a salvage basis. Lake Dufault Mines, Limited near Noranda, Manitou-Barvue Mines Limited near Val d'Or, Cupra Mines Limited and Solbec Copper Mines, Ltd. at Stratford Centre and Mines de Poirier Inc., south of Matagami, operated copper-zinc mines and produced the remainder of Quebec's zinc.

In New Brunswick the largest lead-zinc producer was Brunswick Mining and Smelting Corporation Limited, which operated the No. 12 and No. 6 mines and concentrators and a new Imperial Smelting blast furnace in the Bathurst district. Heath Steele Mines Limited expanded output of zinc, lead and copper concentrates, and Nigadoo River Mines Limited started operating a 1,000-ton lead-zinc-copper mill at Robertville, 25 miles northwest of Bathurst.

In Nova Scotia the small production of lead and zinc was from a mine at Walton operated by Dresser Industries, Inc., which produces barite as well.

In Newfoundland there was increased production over 1966 of both lead and zinc at the zinc-lead-copper mine of American Smelting and Refining Company at Buchans. Consolidated Rambler Mines Limited, Baie Verte, closed its zinc recovery circuit in October but continued milling copper ore.

Gold.—Canadian gold production in 1967 amounted to 2,953,198 oz.t. valued at \$111,483,225, a decline of 11.0 p.c. from 1966. The average price for gold paid by the Royal Canadian Mint in 1967 was \$37.75 per oz.t. (Cdn.), up from \$37.71 in the previous year. Since 1962, the range in value for the Canadian dollar has been set at \$0.916 to \$0.934 in relation to the U.S. dollar and the corresponding Royal Canadian Mint gold price between \$37.46 and \$38.22 per oz.t. Canadian lode and placer gold mines continue to experience serious economic difficulties with costs of recovery maintaining an upward trend. Of the 44 lode gold mines operating in Canada in 1967 there were only four that did not receive assistance under the terms of the Emergency Gold Mining Assistance Act. Three lode gold mines closed in 1967, two amalgamated and three new mines commenced production.

Gold produced from lode gold mines, from base metal ores and from placer mines dropped by 9.4 p.c., 7.8 p.c. and 78.4 p.c., respectively, below 1966 levels. The proportion of gold derived from lode gold mines was unchanged at 81.2 p.c. of the total output, and that from base metal ores and placer mines contributed 18.5 p.c. and 0.3 p.c., respectively, compared with 17.6 p.c. and 1.3 p.c. in 1966. Ontario remained the principal producing province, accounting for 50.5 p.c. of the total compared with 50.0 p.c. in 1966; Quebec and the Northwest Territories accounted for 28.4 p.c. and 12.3 p.c., respectively, and British Columbia accounted for 3.9 p.c. of the total compared with 3.6 p.c. in 1966.

In Ontario, production declined 10.1 p.c. to 1,492,620 oz.t. from 1,660,750 oz.t. in 1966; 21 lode gold mines operated during the year compared with 25 in 1966. In addition, Lake Shore Mines Limited operated its mill until October at Kirkland Lake on the re-treatment of old tailings. One mine—Wilmar Mines Limited—started operations in 1967 and two adjoining operating mines amalgamated—MacLeod-Cockshutt Gold Mines

Limited and Consolidated Mosher Mines Limited—to become MacLeod Mosher Gold Mines Limited. Gold recovered as a by-product from base metal ores was 5.5 p.c. of the provincial total.

Quebec production declined by 10.4 p.c. to 837,772 oz.t. from 935,459 oz.t. in 1966; lode gold output was 6.7 p.c. lower. Eleven gold mines operated in the province in 1967 and two closed—Chimo Gold Mines Limited and Sullivan Consolidated Mines Ltd. Gold recovered as a by-product from base metal ores represented 33.9 p.c. of the provincial total compared with 37.4 p.c. in 1966.

In the Northwest Territories, a 14.5-p.c. drop in production from 424,029 oz.t. in 1966 to 362,675 oz.t. was mainly caused by a decrease in output from Giant Yellowknife Mines Limited and Discovery Mines Limited. Most of the production in the territories is from lode mines.

British Columbia production amounted to 114,708 oz.t. compared with 120,705 oz.t. in 1966. The closure of Cariboo Gold Quartz Mining Company Limited in April resulted in a decrease of 14.8 p.c. in lode gold production. Gold recovered as a by-product from base metal ores represented 53.0 p.c. of the provincial total compared with 46.1 p.c. in 1966.

Combined production for Manitoba and Saskatchewan, most of it from base metal ores, was 5.2 p.c. lower at 101,690 oz.t. compared with 107,243 oz.t. in 1966. Production declined at San Antonio Gold Mines Limited, the only lode gold mine in the Prairie Provinces.

In Yukon Territory, production dropped from 43,466 oz.t. in 1966 to 17,474 oz.t. in 1967 mainly because of the termination of the placer operations near Dawson at the end of the 1966 season by Yukon Consolidated Gold Corporation Limited. This was partly offset by an increase in output of by-product gold, from 850 oz.t. to 8,400 oz.t., at the new copper mine of New Imperial Mines Limited.

In Newfoundland and New Brunswick, all gold was recovered as a by-product of base metal production.

Silver.—Canada's mine production of silver in 1967 rose to a record 36,426,000 oz.t., about 3,008,000 oz.t. more than in 1966. The increase resulted mainly from by-product output at the Kidd Creek base metal mine of Ecstall Mining Limited near Timmins, Ont., which completed its first full year of operation in 1967. Much higher output in Ontario, together with small increases in Manitoba and Saskatchewan, offset declines in the other provinces and the two territories. Ontario was again the leading silver-producing province with an output of 15,583,000 oz.t., 4,600,000 oz.t. more than in 1966. Base metal ores continued to be the main source of Canadian output accounting for more than 85 p.c. of total production. Almost 14 p.c. came from silver-cobalt ores mined in northern Ontario and the remainder was a by-product of lode and placer gold ores.

Canadian production was valued at \$63,095,000 in 1967. The \$16,343,000 increase over 1966 was partly due to increased output but more particularly to higher price. The price of silver in Canada reached an all-time high of \$2.344 oz.t. in November 1967. Reported consumption of silver in 1967 was 14,577,000 oz.t., some 6,727,000 oz.t. less than in 1966, mainly accounted for by substantially reduced requirements for coinage. To conserve its silver inventories and as an interim measure pending conversion to pure nickel coinage in 1968, the Royal Canadian Mint temporarily suspended production of silver dollars and half-dollars, and in September reduced the silver content of all 10- and 25-cent coins from 80 p.c. to 50 p.c.

Canadian Copper Refiners Limited at Montreal East, Que., Canada's largest producer of refined silver, recovered 11,276,000 oz.t. in refining anode and blister copper. The silver refinery of Cominco Ltd. at Trail, B.C., the second largest producer, recovered 5,212,000 oz.t. in the processing of lead and zinc ores and concentrates. Other producers of refined silver, all in Ontario, were Kam-Kotia Mines Limited, Refinery Division, at Cobalt (from silver-cobalt ores and concentrates); International Nickel at Copper Cliff (from nickel-copper concentrates); Royal Canadian Mint at Ottawa (from gold bullion); and Hollinger Consolidated Gold Mines, Limited at Timmins (from gold precipitates). East Coast Smelting and Chemical Company Limited early in 1967 opened a smelting-refining-chemicals complex in New Brunswick which includes, in addition to lead and zinc reduction plants, a silver refinery with a rated capacity of 2,000,000 oz.t. annually.

The three largest primary sources of silver in Canada in 1967 were the zinc-copper-silver mine of Ecstall Mining Limited near Timmins, Ont., the silver-lead-zinc mines in Yukon

Territory about 200 miles north of Whitehorse, operated by United Keno Hill Mines Limited, and the Sullivan lead-zinc-silver mine at Kimberley, B.C., operated by Cominco Ltd. Expressed as the silver content of concentrates produced, Ecstall recovered 7,800,000 oz.t. of silver, United Keno 3,804,644 oz.t., and Cominco Ltd. at its Sullivan mine recovered 3,302,047 oz.t. Other important producers of by-product silver included Echo Bay Mines Ltd. near Port Radium, N.W.T.; Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man.; Noranda Mines Limited (Geco Division) at Manitouwadge, Ont.; International Nickel at Copper Cliff, Ont.; Brunswick Mining and Smelting Corporation Limited near Bathurst, N.B.; and American Smelting and Refining Company (Buchans Unit) in Newfoundland. Some 4,954,000 oz.t. of silver were derived from silver-cobalt ores mined in the Cobalt-Gowganda area of northern Ontario; the largest producer was again Silverfields Mining Corporation Limited with an output of 1,132,622 oz.t.

¹ Includes relatively small quantities produced in Alberta.

Uranium.—The uranium industry has begun a new period of development based on the rapidly expanding demand for long-term supplies of nuclear fuel for the generation of electricity. These requirements are now expected to be in excess of 80,000 tons of uranium oxide (U₃O₈) a year in 1980, thus necessitating a fourfold increase in the non-communist world production capacity over a period of only 13 years. The urgency of the situation is

more fully appreciated when it is realized that there is an average time-lag of some eight to 10 years between the initiation of an exploration program and first production from a successful discovery. Understandably, the pace of exploration activity in both Canada and the United States has quickened and new mine development has become a reality.

In 1967, Canadian uranium producers increased their output for the first time since 1959, producing about 4,100 tons of U_3O_8 . Shipments from the four producers, however, were only 3,724 tons of U_3O_8 valued at \$49,237,508. Much of the excess in production over shipments is being stockpiled for early deliveries under new commercial contracts. Denison Mines Limited operated its Elliot Lake, Ont., mine at better than 50 p.c. of its 6,000 ton-a-day capacity and increased its output by some 29 p.c. Eldorado Mining and Refining Limited (now Eldorado Nuclear Limited) operated its Beaverlodge, Sask., mine at about 80 p.c. of its 2,000-ton-a-day capacity and increased its output by 19 p.c. Rio Algom Mines Limited's Nordic Mine at Elliot Lake continued at full capacity (3,700 tons a day) but experienced a slight drop in output due to lower grades of ore. Stanrock Uranium Mines Limited, at its Elliot Lake mine-water-treatment operation, experienced a significant drop in production, largely because of a change in its solution mining practice.

Deliveries to the United States under contracts negotiated in the 1950s were completed early in 1967. Deliveries to Britain under these contracts are now being made only by Rio Algom, which is delivering at the rate of 1,200 tons of U_3O_8 a year until October 1971. By the end of 1967, Canadian producers had negotiated seven significant new commercial sales contracts for a total of almost 35,000 tons of U_3O_8 with buyers in Britain, Canada, Japan and West Germany. Rio Algom obtained three of the contracts, totalling some 21,300 tons of U_3O_8 ; Denison obtained the largest single commercial contract to date totalling 10,500 tons with Japan; and Eldorado obtained three smaller contracts for a total of 2,800 tons. All are long-term contracts ranging between five and 10 years in length, and prices were not disclosed.

These contracts are probably the first in a series of many long-term contracts to be negotiated by Canadian producers. Japan, West Germany and Britain as well as several other West European countries are potential customers. The United States market, potentially one of the largest markets, is temporarily cut off from Canadian producers by regulations which restrict the enrichment of foreign uranium in USAEC enrichment plants for domestic use. However, it is expected that this restriction will be removed by mid-1973. Although Eldorado Nuclear Limited handled all marketing of Canadian uranium in the past, producers are now at liberty to negotiate their own sales contracts consistent with the Government's policy on peaceful uses announced in 1965.

Canadian exploration for uranium, essentially dormant since 1956, again reached significant proportions in 1967. Although much of the activity centred around the established mining camps of Elliot Lake, Ont., and Beaverlodge, Sask., new areas also became prominent. Particularly noteworthy was the Agnew Lake area, about 45 miles east of Elliot Lake, where a new mine owned by Agnew Lake Mines Limited was being developed. Mine development was carried out also by Rio Algom at its Quirke Lake property near Elliot Lake, and by Eldorado at the new Hab Mine, north of its Beaverlodge operation. Further, Eldorado is expanding its Port Hope, Ont., refinery to produce uranium hexafluoride, used as feed material for the gaseous diffusion, uranium enrichment process. Thus, in an effort to prepare for the expected heavy uranium demand of the 1970s, the Canadian uranium industry has begun expansion in every phase of uranium production from exploration to refining. There is every reason to anticipate that uranium will once again take a prominent place in Canada's mineral industry and that Canada will maintain a leading position in uranium supply as the world moves swiftly into the atomic age.

16.—Quantity and Value of Producers' Shipments of Uranium (U_3O_8), by Province, 1958-67

Molybdenum.—Molybdenum has advanced in the past five years from a relatively minor to an important position among the metals produced in Canada. Production in the early 1960s was in the order of 800,000 lb. annually with a value of \$1,300,000; by 1967 it reached a record 21,200,000 lb. valued at \$37,900,000, of which 17,500,000 lb. valued at \$31,300,000 came from British Columbia and 3,700,000 lb. valued at \$6,600,000 came from Quebec. Canada now ranks second only to the United States among the world producers of molybdenum.

Endako Mines Limited in British Columbia produced 14,300,000 lb. of molybdenum contained in molybdenite concentrates and in molybdic oxide in 1967, making this the second largest molybdenum-producing mine in the world. British Columbia Molybdenum Limited started mill tune-up in November 1967, at its new 6,000-ton-a-day mine and concentrator near Alice Arm; it is expected to have an annual output of 4,000,000 to 5,000,000 lb. a year and will increase the province's molybdenum output by over 20 p.c. Other molybdenum-producing mines in British Columbia in 1967 were Brynnor Mines Limited, Boss Mountain Division, with a production of 3,100,000 lb., and Red Mountain Mines Limited near Rossland. Bethlehem Copper Corporation Ltd. carried out a major mill expansion program and made flow-sheet modifications preparatory to recovering molybdenum as a by-product of its copper operations. Brenda Mines Limited, Lornex Mining Corporation Limited and Highmont Mining Corporation Ltd. all continued exploration and feasibility studies designed to bring molybdenum mines into production.

In Quebec 3,700,000 lb. of molybdenum valued at \$6,600,000 were produced by Preissac Molybdenite Mines Limited, Anglo-American Molybdenite Mining Corporation, Molybdenite Corporation of Canada Limited, and Gaspé Copper Mines, Limited; Gaspé Copper recovers molybdenum as a by-product of copper operations at Murdochville, whereas the other three recover molybdenum as their primary product.

Canada's major markets for molybdenum and molybdic oxide are Britain, Japan, the Netherlands, West Germany, France and the United States.

Platinum Metals.—Production of the platinum metals in 1967, which amounted to 403,300 oz.t. valued at \$34,587,000, was 7,200 oz.t. and \$2,200,000 higher than in 1966 as a result of increased nickel production. Canadian nickel ores contain about 0.025 oz.t. of platinum metals a ton. When nickel matte is electrolytically refined, the platinoids—platinum, palladium, rhodium, ruthenium, iridium and osmium—are precipitated in the electrolytic tanks as a sludge. The sludge is purified and sent to refineries in Britain and the United States for recovery of the platinum metals.

Half of the world's output of platinum metals is from the Soviet Union and most of the remainder is produced in the Republic of South Africa and Canada. World demand remained strong in 1967 and consumption in the non-communist countries exceeded mine production. The deficit was made up by purchases from the Soviet Union and releases from the United States stockpile. An erratic pattern of sales by the Soviet Union caused platinum prices to rise—the official price rose from \$100 to \$125 an oz.t. and the dealers' price from \$160 to \$230 an oz.t.

Aluminum.—Canada ranks third in world aluminum production, after the United States and the Soviet Union. In the non-communist world, 1967 production of primary aluminum was 6,699,000 tons; Canada produced 913,342 tons and exported 760,649 tons. As the production of most countries included in the world total is consumed internally, Canadian exports represent a large proportion of the international trade in aluminum. In Canada, two companies produce primary aluminum. Canadian British Aluminum Limited operates a smelter at Baie Comeau, Que., having an annual capacity of 115,000 tons. Aluminum Company of Canada Limited (Alcan) operates smelters at Arvida, Alma, Shawinigan and Beauharnois in Quebec and at Kitimat in British Columbia. Combined capacity of Alcan smelters was approximately 950,000 tons at the end of 1967. As aluminum production is derived from imported ores and concentrates, production and value of this metal is classed with manufactured products in Canadian statistics. The export price of primary aluminum was 24.5 cents a pound (U.S.) in 1967, unchanged since November 1964. The Canadian price was increased from 26.0 to 26.5 cents a pound in January 1967 and remained at this level throughout the year.

Titanium.—Ilmenite, an iron-titanium oxide, is mined by conventional open-pit methods in the Lac Tio—Allard Lake area of Quebec by Quebec Iron and Titanium Corporation (QIT). The ilmenite is shipped to QIT's beneficiation plant and smelter at Sorel near Montreal. The main products are a slag, rich in titanium dioxide, known as "Sorelslag", and a variety of high-quality irons known as "Sorelmetal". The titania slag is sold to producers of white titanium-dioxide pigments in Canada, United States, Britain and other countries. QIT established an annual production record in 1967 with an output of 537,906 long tons of titania slag (70-72 p.c. TiO_2) and 366,660 long tons of co-product specialty iron. Production in 1966 was 468,547 long tons of titania slag and 315,606 long tons of iron.

Atlas Titanium Limited, Welland, Ont., a subsidiary of Rio Algom Mines Limited, carries out second-stage melting of imported titanium ingots and processes the metal into various mill products for sale in domestic and foreign markets. Atlas titanium baskets are widely used in the nickel-plating industry and its mill products are directed to both military and industrial uses.

Cadmium.—Cadmium output in 1967, expressed as the sum of refined metal and the recoverable cadmium content of exported zinc concentrates, was 4,771,677 lb. valued at \$13,385,156; corresponding figures for 1966 were 3,236,862 lb. and \$8,351,103. The increase of nearly 50 p.c. in the volume of output was due to the start of production late in 1966 at the Texas Gulf Sulphur Company's Kidd Creek mine near Timmins, Ont. Cadmium is recovered as a by-product during the smelting and refining of zinc ores and concentrates. Most zinc ores in Canada carry minor quantities of the metal, being in the order of one half pound of cadmium in each ton of ore on average, but varying from none to $1\frac{1}{2}$ lb. The largest production comes from the Kidd Creek mine, followed by Pine Point Mines Limited in the Northwest Territories, Cominco Ltd. in British Columbia, Hudson Bay Mining and Smelting Co., Limited in Saskatchewan and Manitoba, and the Noranda group of companies in Ontario and Quebec. Refined cadmium is produced at the electrolytic zinc plants of Cominco Ltd., Trail, B.C., Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man., and Canadian Electrolytic Zinc Limited at Valleyfield, Que. The newest producer of metallic cadmium is East Coast Smelting and Chemical Company Limited at Belledune, N.B., which started zinc-lead smelting and by-product recovery of cadmium in 1967.

Cobalt.—Canadian cobalt production in 1967 was 3,300,000 lb. valued at \$6,800,000 compared with 3,500,000 lb. valued at \$7,100,000 in 1966. Cobalt is recovered as a by-product of the smelting and refining of nickel-copper ores of Sudbury, Ont., from nickel ores of Thompson, Man., and from silver ores of Cobalt, Ont. International Nickel recovers cobalt from its refinery operations at Port Colborne, Ont., Thompson, Man., and Clydach, Wales. Falconbridge Nickel Mines Limited produces cobalt at its refinery at Kristiansand, Norway, from nickel-copper matte shipped from Canada. Sherritt Gordon Mines recovers by-product cobalt at its refinery at Fort Saskatchewan, Alta. The Cobalt Refinery Division of Kam-Kotia Mines Limited produces cobalt oxide and speiss as by-products of smelting and refining complex silver-cobalt concentrates from mines in the Cobalt-Gowanda area of Ontario.

Magnesium.—Dominion Magnesium Limited, with mine and smelter at Haley, Ont., is the only producer in Canada; smelting capacity is 11,300 tons annually. Production increased to 8,685 tons in 1967 from 6,723 tons in 1966 and exports of primary magnesium increased slightly to \$3,696,000 compared with \$3,452,000. Imports of magnesium metal and alloys totalled \$1,952,000. Canadian consumption in 1967 was 5,054 tons, including 1,699 tons of imported metal. World production, excluding communist countries, was estimated at 160,600 tons in 1967.

Selenium and Tellurium.—Selenium production in 1967 was 752,200 lb. valued at \$3,467,000, and was 31 p.c. higher than in 1966. Tellurium output was 82,100 lb. valued at \$530,400, 14 p.c. higher. These metals are recovered from the anode muds resulting from electrolytic refining of copper anodes at the plants of Canadian Copper Refiners Limited at Montreal East, Que., and International Nickel at Copper Cliff, Ont.

Columbium.—In 1967, columbium output of St. Lawrence Columbium and Metals Corporation, the only Canadian producer, was 2,207,000 lb. of columbium pentoxide (Cb_2O_5) in pyrochlore concentrates valued at \$2,627,000; its mine is near the town of Oka, 20 miles west of Montreal. In Ontario, several associated companies undertook a program of shaft-sinking and cross-cutting to provide bulk samples for large-scale metallurgical testing on a columbium-pyrochlore property in the James Bay Lowlands area south of Moosonee. Previous drilling indicated a possible 80,000 tons per vertical foot averaging 0.52 p.c. columbium pentoxide.

Vanadium.—Vanadium in the form of vanadium pentoxide (V_2O_5) is recovered from crude oil by Canadian Petrofina Limited at its refinery near Pointe aux Trembles, Que. It is the first plant in Canada to recover vanadium commercially and its production capacity is about 1,000 lb. of V_2O_5 a day. The Athabasca tar sands in northern Alberta contain an estimated 0.024 p.c. of vanadium, part of which could be recovered from the coke residue of the distillation process.

Subsection 2.—Industrial Minerals

Production and value of production of industrial minerals attained record levels in 1967 despite relatively severe cutbacks in the output of cement and gypsum, two of the higher-tonnage industrial minerals. The increase over 1966 of about 6 p.c. in the value of producers' shipments, which totalled \$883,236,000, resulted mainly from higher production of sulphur and potash; shipments of non-metallic minerals were valued at \$414,000,000 and of clay products and other structural materials of mineral origin, at \$469,200,000. New production records were established for several other minerals including nepheline syenite, potash, salt, and sand and gravel. Developments in a number of industrial minerals during 1967 are reviewed below.

Asbestos.—Asbestos production was lower in 1967 than in 1966; the output of 1,401,000 tons valued at \$163,011,000 represented a drop of 5.9 p.c. in quantity and 0.4 p.c. in value. Quebec accounts for about 90 p.c. of the production and British Columbia,

Newfoundland and Ontario for the remainder. Most of the Canadian production is exported, mainly as milled fibre and shorts, to the United States, West Germany, Britain, Japan and other non-communist countries. Canada provides about 40 p.c. of the world's production of asbestos fibre.

Despite the 1967 decline, the industry appears optimistic on a long-term basis, confirmed by the expansion programs recently completed or under way. Asbestos has been an important factor in northern development for a number of years and there are now several active asbestos operations in Northern Canada. Late in 1967 Cassiar Asbestos Corporation began operations at Clinton Creek in Yukon Territory and fibre valued at over \$500,000 was shipped in that year. Exploration of asbestos properties in the region is being undertaken by other groups.

In Ontario, Headman Mines Limited continued development of its Matheson property, and Canadian Johns-Manville on its property near Timmins, operation of these mines was scheduled for 1968. Annual production rate of the latter is estimated at 25,000 tons.

In Quebec, McAdam Mining Corporation plans a development program to assess the fibre grade of an underground deposit in the Chibougamau district. The Asbestos Hill development in the Ungava district of the province has been deferred pending reappraisal.

17.—Quantity and Value of Producers' Shipments of Asbestos, 1958-67

NOTE.—Figures from 1896 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

Year	Quantity	Value	Year	Quantity	Value
	tons	\$		tons	\$
1958.....	925,331	92,276,748	1963.....	1,275,530	136,956,180
1959.....	1,050,429	107,433,344	1964.....	1,419,851	145,193,443

1961.....	1,173,695	128,955,900	1966.....	1,489,055	163,654,863
1962.....	1,215,814	130,281,966	1967 ^a	1,400,708	163,011,249

Potash.—Potash mining is a recent development in Canada, the first output being recorded in 1962, valued at \$3,000,000. Activity in this industry, which is concentrated in Saskatchewan, has since continued at a high tempo. In 1967 production—from two shaft mines at Esterhazy, one at Saskatoon, and a solution mine at Belle Plaine—totalled 2,578,000 tons (K₂O), 29.5 p.c. more than in 1966. The bulk of this output was exported to world markets. Production will be greatly increased when the several new mines and plants come on stream. At the close of 1967, four mines and four refineries were in operation and 10 shafts and six refineries were under construction or due to start. These, when completed, will raise productive capacity from its current level of about 5,000,000 tons of product (KCl concentrate) per year to an estimated 12,000,000 tons per year. Other shafts and plants, and expansions at current operations, as yet unannounced, are expected in the future, possibly in the late 1970s.

Sulphur.—Canadian production of elemental sulphur increased more than 10 p.c. to 2,322,223 tons and all forms of sulphur output amounted to some 3,000,000 tons. Exports of sulphur increased about 15 p.c. in volume to 1,773,671 tons but price increases during 1967 raised the value of exports by almost 30 p.c. to \$58,699,000.

The increase in world demand for sulphur slowed during 1967 and rising production from all sources was expected to balance demand in 1968. Substantial increases in phosphate fertilizer production, together with a less rapid increase in phosphate use resulted in surpluses in phosphate fertilizer supply and the resulting lower rate of increase of sulphur demand.

Despite this expected balance in world sulphur demand and supply in the near term, continued expansion of sulphur production capacity from several sources is steadily making Canada a major source of world sulphur.

A revived interest in the recovery of elemental sulphur from smelter gases, pyrites, crude oils and gypsum and/or anhydrite has been in evidence recently and several potential pyrite-sulphur projects are materializing, particularly at Sudbury.

18.—Quantity and Value of Sulphur Produced from Smelter Gases and in Pyrite and Pyrrhotite Shipments, and of Elemental Sulphur Sales, 1958-67

¹ Recovered from sour natural gas and nickel sulphide ores, zinc sulphide concentrates at Arvida and Port Maitland, iron residue or sinter.

² Includes sulphur in acid made from roasting
³ Excludes pyrite and pyrrhotite used to produce

Salt.—Production of salt during 1967 established a new record at 5,302,000 tons as a result of increased consumption in the chloralkali industry and for ice and snow control on highways. Far greater tonnages of highway salt were exported to northern United States points in 1967 than in previous years. Rock salt is mined in Nova Scotia and Ontario; brine wells are operated in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta. Ontario, with two rock salt mines and with advantageous facilities for export of both rock salt and brine, accounted for 86 p.c. of total output. Technical advances continue toward up-grading the purity of various salt products as salt remains a prime chemical raw material with many uses essential to industrial development.

The Canadian Salt Company Limited is adding a second salt-melting furnace to its fine salt plant at Lindbergh, Alta. The furnace product is crushed, sized and sold for use in water softeners. Two other salt-fusion plants are operated in Canada—at Unity, Sask., and Windsor, Ont. Early in 1968, each of the two major salt producers in Canada announced that production of evaporated salt in Saskatchewan would be increased; the Canadian Salt Company Limited through a new brining and evaporating complex at Belle Plaine and Domtar Chemicals Limited through increased facilities at Unity.

Gypsum.—Gypsum production dropped 14 p.c. to 5,120,000 tons in 1967, its lowest since 1961. Although production in Ontario, Manitoba and British Columbia was maintained at or slightly above 1966 levels, output from the three producing Atlantic Provinces—Nova Scotia, Newfoundland and New Brunswick—was considerably less. Production in Nova Scotia and Newfoundland was down 17 to 18 p.c. In these provinces, it is mined mainly for export to eastern United States, and demand on these markets was reduced because of lower activity in the building construction industry.

The first gypsum-products plant in Saskatchewan was officially opened at Saskatoon in August 1967 by British American Construction and Materials Limited. Crude gypsum for the plant is obtained from a company mine at Amaranth, Man., approximately 400 miles from Saskatoon. At Amaranth, a 10-ft. seam of gypsum is mined at a depth of 125 ft. by the room and pillar system.

Sodium Sulphate.—Production of sodium sulphate (salt cake) derived from alkali lake deposits in the southern part of Saskatchewan increased 4.9 p.c. in 1967 to establish a new high of 425,000 tons. Rising demand for kraft paper, the production of which requires major quantities of sodium sulphate, has stimulated expansion of production facilities in Saskatchewan where seven plants, having a total capacity in the order of 700,000 tons a year were in operation in 1967. An eighth plant, with a capacity of 100,000 tons a year, located 35 miles northwest of Swift Current, will contribute to the output in 1968. The plant consists primarily of a triple-effect evaporation system to remove the water of crystallization from the raw Glauber's salt, which contains 44 p.c. sodium sulphate and 56 p.c. water. This evaporation system has not been used previously in Saskatchewan but is used in many other plants where large amounts of water must be evaporated at low cost.

Nepheline Syenite.—Nepheline syenite was first produced in 1936 and, until Norway also started production much more recently, remained a uniquely Canadian mineral commodity. "Nepheline syenite" is a rock name that applies to a mixture of minerals, essentially the feldspars and nepheline. The presence of nepheline provides the mixture with a higher content of alumina (Al_2O_3) than has either soda or potash feldspar and makes nepheline syenite more desirable than feldspar in certain applications, especially in the manufacture of glass.

The industry is based on a single, large and unusual deposit a few miles northeast of Peterborough, Ont. In 1967, the two producers shipped 406,298 short tons valued at \$4,349,320, about twice as much as a decade earlier. Glass-grade is still by far the main product, but is now accompanied by finer-ground products for use by the ceramic industry in the making of sanitary ware, wall tile and pottery, and by the makers of plastics, foam

rubber and paints as a white filler. The producers also market various lower-grade products, having a higher content of iron, for use by the ceramic industry in such products as sewer pipe, ground-coat enamels and some glazes, in which the discoloration caused by the higher iron content is of no concern.

About three quarters of total production in 1967 was exported. The United States, and principally the glass industry in the northeastern States, provides the largest market but small quantities are shipped to Britain and several countries in Continental Europe and to Puerto Rico, Venezuela, Peru and Australia.

Silica.—Silica (quartz) production in 1967, at 2,200,000 tons valued at \$5,528,000, was slightly below that of 1966. Domestic production is confined to Ontario, Quebec, Manitoba, Saskatchewan, Alberta and British Columbia, and consists mainly of crushed quartzite and sandstone, and sand for use as metallurgical flux. Of the total 1967 production, 65 p.c. was used as flux; 13 p.c. was lump silica for use in silicon and ferro-silicon manufacture and in the production of elemental phosphorus; and 22 p.c. was silica sand for glass manufacture, silicon carbide production, foundry sand and for other purposes.

Canada's two producers of silica sand—Industrial Minerals of Canada Limited, operating a sandstone quarry at St. Canut des Deux Montagnes and a friable quartzite quarry at St. Donat de Montcalm in Quebec, and the Winnipeg Supply and Fuel Company, Ltd., producing from a loosely bonded sandstone deposit on Black Island in Lake Winnipeg—together supply about one third of the domestic market for silica sand. The remainder is imported from the United States, chiefly into Ontario, Quebec and British Columbia for use by the glass industries, in steel and iron foundries, in artificial abrasives manufacture, and for silicate chemicals and other purposes. Current consumption of silica sand in Canada is in the order of 1,000,000 tons a year.

Interest in silica, particularly in silica sand, continues at a high level in Quebec and Ontario. Industrial Minerals of Canada Limited is constructing a \$1,500,000 mineral processing plant at Midland, Ont., as part of a \$3,000,000 development program planned by the company for the Georgian Bay area, which will include mining facilities at a high-grade silica deposit on Badgeley Island, a crushing plant at the mine site and the grinding plant at Midland. Primary products from the crushing plant will be shipped for manufacture of ferro-silicon and silicon metal as well as to the Midland grinding plant for further processing. Products from Midland will go to glass, ceramic, chemical and other industries in Ontario.

Structural Materials

Total construction in Canada in 1967 was valued at \$11,500,000,000, an increase of 2.7 p.c. over 1966. The estimated value of the 1967 production of structural materials (non-metallic minerals) was \$469,230,000, approximately 10.7 p.c. of the total value of mineral production. A decrease of 1 p.c. in the value of construction materials for 1967 compared with 1966 was attributable mainly to a large decrease in cement shipments. The decline in the use of construction materials during 1967 was due to a normal let-down after the very active construction that took place in most of the larger industrial centres across Canada in 1966 in preparation for the celebration of the Centennial.

Sand and Gravel.—The principal uses for sand and gravel are as aggregate in concrete for building and engineering construction and as fill in road construction. Gravel in boulder sizes is used for rip-rap fill and sometimes for armour-stone construction; the normal scalped, over-sized material is crushed to provide crushed gravel and crusher-run fines. Lithologically, sand and gravel deposits are usually composed of material similar to the rock types in which the deposits are found; infrequently, deposits are composed of materials that have been transported some distance from their origin. Exploitation of these low-value-per-ton materials is greatly influenced by the physical characteristics of the sand or gravel, by the location of the deposit with respect to suitable markets and, of great importance, by the specifications established to differentiate quality products.

The 1967 production of natural sand and gravel aggregate in Canada amounted to 221,900,000 tons with a value of \$158,129,000, an increase of 2.1 p.c. and 4.4 p.c., respectively, compared with 1966.

Cement.—The 7,714,000 tons of cement produced in Canada in 1967 represented a decrease of 13.5 p.c. from 1966. The value, at \$146,400,000, constituted 3.3 p.c. of the total value of mineral production.

In 1967 a new cement kiln was installed in each of the two cement plants in British Columbia—Lafarge Cement of North America Ltd. increased the capacity of its plant at Richmond on Lulu Island to 3,500,000 bbl. and Ocean Cement Limited raised the capacity of its Bamberton plant to 4,000,000 bbl. On the other hand, for economic reasons, the Port Colborne plant of Canada Cement Company, Limited, was closed. These changes raised the total rated capacity of the Canadian cement industry by the end of 1967 to 75,270,000 bbl. annually, an increase of about 2.5 p.c. over 1966. With the addition of a 5,000,000-bbl. dry-process kiln to the St. Lawrence Cement Company plant at Clarkson, Ont., and a 2,000,000-bbl. St. Mary's Cement Co., Limited plant at Eowmanville, the total annual capacity of the Canadian cement industry will be 82,270,000 bbl. by the end of 1968.

¹ Standard portland cement, other than white.

² Shipments plus imports less exports. ³ Imports are assumed to be relatively small.

⁴ Includes imported clinker.

Stone.—Stone quarrying and stone products—the two main divisions of the stone industry—had an output valued at almost \$104,500,000 in 1967. Stone quarrying comprises the production of rough blocks and crushed materials from ledgerock deposits and intrusive and extrusive igneous deposits. Dimension stone products, including dressed building, ornamental and monumental stones, flagstone, curbstone and paving block, account for approximately 7 p.c. of the total value of stone production. Crushed stone products, consisting of materials used for concrete aggregate, railway ballast, road metal, rubble and rip-rap, terrazzo, stucco and artificial stone, etc., account for about 78 p.c. of the total value. The remaining 15 p.c. is used in the chemical and allied industries.

¹ Excludes limestone used to make lime or cement.

Clay Products.—Common clays and shales occur in most regions of Canada and are the principal raw materials used for brick and tile manufacture. Deposits of high-quality argillaceous materials used for such products as papers, refractories, high-quality white-ware and stoneware products are relatively scarce in Canada. Consequently, china clay (kaolin), fire clay, ball clay and stoneware clay are mostly imported. The value of production of clay products from domestic clays reached a record \$43,549,000 in 1967.

Table 25 refers to production of such products as brick and tile made from domestic clays. Imports of these products, mainly from the United States, have a low value. Other clay products such as floor and wall tile, sanitary ware, pottery and dinnerware, and electrical porcelain contain a large proportion of china clay and ball clay. The value of white-ware products produced in Canada and using such materials exceeded \$32,000,000 in 1967.

25.—Value (Total Sales) of Producers' Shipments of Clay Products, by Province, 1958-67

Subsection 3.—Petroleum and Natural Gas

The search for petroleum in Canada broadened in 1967 to include a vast area extending from the Canadian Arctic Islands southward to the Pelee Point area of Lake Erie, and from coast to coast. The formation late in 1967 of Panarctic Oils Limited, a government-industry syndicate, ensured active exploration of the Arctic Islands for at least the next three years, including the drilling of a number of deep wells. For the first time, offshore prospects off Canada's West Coast and in Hudson Bay were evaluated by drilling, while a third well was completed off Canada's Atlantic seaboard. However, no commercial successes have resulted to date and the western Canadian provinces remain the primary sources of production and reserves in Canada.

Due in part to increased demand resulting from the disruption of Middle East crude oil supplies, production of liquid hydrocarbons rose 9.5 p.c. to 1,100,000 bbl. daily in 1967; crude oil output amounted to 960,000 bbl. daily, with natural gas liquids making up the remaining 149,000 bbl. Production increased in Alberta and British Columbia but declined in Saskatchewan, Ontario and the Northwest Territories. In the face of record production levels, recoverable reserves of liquid hydrocarbons in Canada were increased 16.9 p.c. to 9,547,792,000 bbl. at the end of 1967, made up of 8,168,924,000 bbl. of crude oil and 1,378,868,000 bbl. of natural gas liquids. Alberta accounted for most of the increase, and now has more than 87 p.c. of the total proved liquid hydrocarbon reserves in Canada.

Net new production of natural gas rose 9.7 p.c. in 1967 to 4,032,000 Mcf. daily, as a result of sharp increases in exports and continuing growth in domestic demand. Proved remaining marketable reserves of gas were increased to 45,682,000,000 Mcf. at the end of 1967, representing a 5.1-p.c. increase during the year.

The total number of wells drilled in Canada declined for the third successive year to 3,021 wells (12,851,897 feet), a 5.2-p.c. decline from 3,186 wells (14,015,164 feet) from 1966. Although exploratory drilling was slightly lower, most of the decline occurred in development drilling.

26.—Quantity and Value of Producers' Shipments of Crude Petroleum, by Province, 1958-67

¹ Includes 3,000 Mcf. produced in Quebec.

² Includes 61,000 Mcf. produced in Quebec.

Alberta.—The Rainbow Lake-Zama Lake region of northwest Alberta remained a major exploratory area, but activity declined somewhat as reservoir performance and further development in the area led to the downward revision of reserves in some pools. In the Zama Lake area in particular, maximum reservoir thicknesses in the Middle Devonian pools are less than half the 800-foot maximum at Rainbow, and reservoirs appear more limited in areal extent. As a result, there was increased exploration for oil in other areas of the province, particularly in southern Alberta.

Exploration in the Rainbow-Zama region proved up substantial gas reserves associated with the oil occurrences in the area. Tentative plans have been made to extend a pipeline to the area by 1971. Significant reserves of sour gas were indicated in the Mississippian Turner Valley formation at Quirk Creek, west of the historic Turner Valley pool, and encouraging shows of sour gas were also obtained in Upper Devonian Leduc reefs in the Chedderville-Strachan area, 85 miles northwest of Calgary.

The Great Canadian Oil Sands Limited's bituminous sand extraction plant was officially opened on Sept. 30, 1967, but output of synthetic crude from the plant had not reached design capacity of 45,000 bbl. daily by the end of the year because of mechanical and mining problems. In the Cold Lake region of eastern Alberta, a number of companies continued to develop thermal recovery methods for the *in-situ* recovery of heavy oil from the thick sandstones in this area.

The total number of wells drilled in 1967 declined 3.3 p.c. to 1,590. Total footage drilled decreased 6.7 p.c. to 7,741,927 feet, development footage declined 6 p.c. to 3,929,662 feet, and exploratory footage declined 7.4 p.c. to 3,812,265 feet.

Saskatchewan.—Exploratory drilling in Saskatchewan in 1967 surpassed the 1966 level but a sharp drop in development drilling resulted in an over-all 15-p.c. drop in total footage drilled to 3,512,988 feet. Exploratory drilling increased to 471 wells (1,808,695 feet) from 438 wells (1,728,786 feet) in 1966 and development drilling dropped from 671 wells (2,427,774 feet) to 494 wells (1,704,293 feet). Exploratory interest has been centred on prospects in the Mississippian and deeper horizons in the southeastern area of the province, and on the Middle Devonian, Winnipegosis formation in a broad area across central Saskatchewan.

British Columbia.—Although the number of development wells in British Columbia decreased in 1967 from 1966, development footage increased by 10 p.c. to 384,692 feet. Exploratory drilling decreased from 134 wells (687,455 feet) to 114 wells (626,144 feet).

A two-mile step-out well to the 1961 Beaver River major gas discovery was successful, and two other Middle Devonian, Slave Point gas successes were reported in northeastern British Columbia, but exploration and development had been retarded by lack of pipeline facilities to this region. However, Westcoast Transmission Company Limited received approval for increased exports early in 1968, and it is expected that pipelines will be extended from Fort Nelson to tap resources there, thus allowing exploitation of shut-in reserves.

Shell Canada Limited completed three offshore wells in the Barclay Sound area off Vancouver Island's west coast, in the early stages of an eight-to-ten-well offshore exploration program. All three were abandoned after encountering only non-commercial gas shows. In November, the Supreme Court of Canada ruled that Canada had jurisdiction over resources off the British Columbia coast. Offshore acreage under federal permits amounted to more than 15,000,000 acres at the end of 1967, down from 18,000,000 the previous year.

Manitoba.—Drilling in Manitoba experienced a strong upturn in 1967, as aggregate footage drilled rose 46 p.c. to 213,660 feet. Most of the increase was in development wells which increased from 57 (144,807 feet) in 1966 to 87 (213,660 feet). An exploratory test, completed on the west shore of Hudson Bay, was encouraging from the viewpoint that the sedimentary section penetrated was thicker than anticipated, but no commercial hydrocarbon accumulation was found. Production of oil in Manitoba rose 7 p.c., a continuation of the upward trend which started with the introduction of secondary recovery techniques in 1963.

Offshore acreage in Hudson Bay under federal permits increased slightly to 53,800,000 acres.

Yukon Territory, Northwest Territories and Arctic Islands.—In these northern areas, total footage drilled, all exploratory, rose slightly from 28 wells (121,620 feet) in 1966 to 40 wells (128,944 feet) in 1967. Exploratory drilling was carried out in the region of the 1966 Pointed Mountain gas discovery, 30 miles north of the Yukon-British Columbia border. The region from the Beaver River area on the Yukon-British Columbia border to Pointed Mountain in the Yukon is expected to be a major source of gas for Westcoast Transmission Company when pipeline facilities are completed.

Late in 1967, a syndicate of 20 private corporations and the Canadian Government formed a company, Panarctic Oils Limited, to pioneer mineral exploration in Canada's Arctic Islands. With initial financing of \$20,000,000, the first three-year program of operations consists of a systematic exploration program, including the drilling of several exploratory oil wells.

Eastern Canada.—In Ontario, the total number of wells drilled increased but total footage drilled declined 4.6 p.c. to 219,246 feet. A total of 146 wells were drilled, of which six were completed as oil wells and 59 were completed as gas wells. Interest centred on Lake Erie following Silurian gas discoveries near Port Burwell and Pelee Point, and all available acreage in Canadian waters was taken under permits by operating companies.

One exploratory test was drilled on Sable Island, 150 miles east of the Nova Scotia mainland. It was drilled to 15,106 feet and obtained encouraging, but non-commercial, gas shows. Shallow drilling was carried out in New Brunswick and a number of companies completed magnetic, seismic and geological surveys to evaluate permits onshore and offshore. Offshore acreage under federal permits amounted to 151,000,000 acres, a substantial increase from 124,600,000 acres in 1966.

Petroleum Refining and Marketing.—Daily crude oil refining capacity continues to increase year by year, the total in 1967 reaching 1,209,000 bbl. Canada is the ninth largest industry in the world in terms of crude treating capacity. Moreover, it is unquestionably one of the most advanced in terms of down-stream refinery units such as catalytic cracking and catalytic reforming.

28.—Crude Oil Refining Capacity, by Region, as at Jan. 1, 1955, 1966 and 1967

In 1967, Canadian refineries received 1,062,000 bbl. of crude oil, of which amount domestic oil accounted for 58 p.c. Imported crude, on an average daily basis, amounted to 447,000 bbl. with 286,000 coming from Venezuela, 47,000 from Iran, 37,000 from Saudi Arabia, 25,000 from Nigeria, 14,000 from Trinidad, 14,000 from Libya, 10,000 from Iraq, 10,000 from the United States and 4,000 from Kuwait. Imports of refined products increased to 187,000 bbl. daily, a gain of 24,000 bbl. daily over the 163,000 bbl. for 1966. Light and heavy fuel oil and diesel oil comprised the major categories of imports.

Domestic demand in 1967 was made up of 1,182,000 bbl. daily of sales to consumers and 81,000 bbl. daily used in the petroleum industry, a total of 1,263,000 bbl. daily compared with the 1966 level of 1,184,000 bbl. Exports of crude oil, all to the United States, averaged 415,000 bbl. daily and refinery product exports amounted to 8,000 bbl. daily.

Natural Gas Processing and Marketing.—Natural gas consumers and gas pipeline companies require gas that contains relatively little non-flammable content and is free of noxious components. Since a large proportion of gas produced in Canada does not meet market specifications, there is a major gas processing industry located mainly in Alberta which extracts ingredients that, in themselves, are valuable. These by-products include the natural gas liquids such as propane, butane and pentanes plus and elemental sulphur. At the end of 1967 there were 120 gas plants operating in Canada—109 in Alberta, five in British Columbia, eight in Saskatchewan and four in Ontario. The addition in 1967 of 1,189,000 Mcf. daily of raw gas treating capacity raised the total to 7,687,000 Mcf. daily.

Of the 1,698,000,000 Mcf. of Canadian gas plus imports of 70,500,000 Mcf. available for consumption in 1967, 513,000,000 Mcf. went to the United States, 695,000,000 Mcf. was sold to residential, commercial and industrial consumers in Canada, and the remainder was used by the industry in pipeline, field or plant use. In total, 932,000,000 Mcf. of gas was consumed in Canada compared with 835,000,000 Mcf. in 1966.

Table 30 shows sales of natural gas in Canada as well as the number of customers. During 1967, natural gas supplied roughly 20 p.c. of Canada's energy requirements.

Subsection 4.—Coal

During 1967 there was considerable optimism in the Canadian coal industry. Production remained about the same as for the previous year but there was a significant increase in the total export of western Canadian coking coal to Japan with prospects good for substantially increasing these exports. Rationalization of the coal industry in Eastern Canada under federal and provincial government policies was undertaken and directed toward more viable coal production in that region. Increased mechanization of production, beneficiation and quality control as well as improvements in coal transport were undertaken by the industry in an effort to supply higher quality products at reduced costs.

The governments continued to sponsor research and development through financial grants to groups across Canada with skills in this area of study. In the research programs so assisted, a reasonable balance was maintained between projects of early and practical value to the industry and those of a basic research nature. Government, university and industry research institutions undertook and continued investigations concerned with mining, processing and utilization of coals. Efforts were concentrated on sulphur and ash reduction and on studies of the coking properties of coals in relation to their preparation for export markets and use in the metallurgical industry.

The operators of bituminous coal mines in Western Canada continued projects for modernizing and expanding their operations. There was a revived and vigorous interest by new companies in opening additional mines as a result of active interest by the metallurgical industry of Japan in the coking coals. This has given rise to substantially improved railway haulage of coals to the coast and improvement of west-coast bulk-loading facilities.

Payments by the Federal Government through the Dominion Coal Board to assist the movement of coal to markets increased to \$35,722,532 in 1967. Subvention assistance amounting to about \$3,500,000 was applied to the export of more than 1,200,000 tons of coal from the Crowsnest area of Alberta and British Columbia. Subventions earned during 1967 under the Atlantic Provinces Power Development Act, 1958 totalled almost \$2,600,000.

Production, Employment and Consumption.—Total coal output in Canada in 1967 amounted to 11,395,754 tons. The average value for all types was \$7.26 a ton at the mine. The number of man-days employed by the industry was 1,981,142 compared with 2,199,678 in 1966, a decrease of 9.9 p.c.

Of the total coal produced in 1967, 59 p.c. was bituminous with an average value of \$10.95 at the mine; subbituminous coal produced in Alberta accounted for 23.4 p.c. with an average value of \$2.06 a ton; and lignite, produced only in Saskatchewan, accounted for 17.6 p.c. with an average value of \$1.80 a ton. Production of bituminous coal was about

the same as in 1966, subbituminous increased 2.9 p.c. and lignite was down 3.4 p.c. Strip mining accounted for 51.9 p.c. of the output. The output per man-day from strip mines was 39,323 tons and that from underground mines 3,514 tons. The over-all output per man day was 22,089 tons.

Consumption of coal in Canada in 1967 was 25,878,083 tons, more than 62 p.c. of which was imported. Of the imported coal, 96.7 p.c. was bituminous coal used mainly in Ontario and Quebec. Imports were 1.9 p.c. lower than in 1966. The production of coke used 5,856,056 tons of coal, of which 94.7 p.c. was imported. Consumption of coal for commercial and household heating decreased 22.2 p.c. to about 1,350,000 tons and consumption by industrial consumers, including thermal-electric power plants, amounted to 15,845,571 tons, an increase of 4.6 p.c. Use of coal in thermal-electric power plants is estimated at 9,100,000 tons, an increase of about 15.6 p.c. over the previous year and representing about 35.2 p.c. of the total coal consumed in Canada. Exports amounted to 1,338,000 tons in 1967, most of it from Western Canada going to Japan and the United States for blending in the manufacture of metallurgical coke. The manufacture of briquettes decreased to an estimated 41,500 tons.

31.—Coal Production, by Province, and Total Value, 1958-67

¹ Includes coal ex-warehoused for ships' stores.

² Coal or coke.

³ Includes small amounts of lignite.

Provincial Production.—Coal is produced in five provinces of Canada and in the Yukon Territory. In 1967 *Nova Scotia* produced 32.8 p.c. of the total Canadian output, although its output was 3.0 p.c. lower than in 1966. High-volatile bituminous coking coal was produced in the Sydney, Cumberland and Pictou areas and non-coking, high-volatile bituminous coal was produced in the Inverness area, all from underground mines. The average value at the mines was \$13.82 a ton and the output per man-day was 2.74 tons. About 58.4 p.c. of *Nova Scotia's* coal production was shipped to other provinces, mainly to Quebec and Ontario to be used for industrial purposes; a small amount was exported to the Island of St. Pierre and the remainder was used locally for steam raising, power generation, household and commercial heating and the manufacture of metallurgical coke.

New Brunswick, where production decreased 6.7 p.c. from 1966, accounted for 7.4 p.c. of Canada's total coal production. Output was high-volatile bituminous (coking) coal mainly from underground and strip mines in the Minto area but also from strip mines in the Chipman and Coal Creek areas; more than 85 p.c. is from strip mines. Average output per man-day from strip mines was 5.47 tons and from underground mines 1.84 tons and the coal had an average value at the mines of \$8.94 a ton. About 8.6 p.c. of the production was shipped to Quebec and the remainder was used in the province, mainly for electric power generation.

Saskatchewan's coal production, entirely lignite from strip mines located in the Bienfait and Estevan areas of the Souris Valley, decreased 3.4 p.c. from 1966; it amounted to 17.6 p.c. of the national output. The average output per man-day was 50.60 tons and the average value at the mines was \$1.80 a ton. This is the cheapest source of coal in Canada. The Estevan area serves the provincially owned Boundary Dam thermal-electric power plant which uses a large share of the total lignite production. More than 30 p.c. of *Saskatchewan's* coal production was shipped to Manitoba and Ontario for industrial, commercial and household use; the remainder was used within the province for similar purposes.

Alberta produced 31.6 p.c. of the nation's coal in 1967. The largest output, about 74 p.c., was from the subbituminous mines, which was 2.9 p.c. higher than in 1966. Production of bituminous coal increased 6.6 p.c. and total production 3.9 p.c. About 72 p.c. of *Alberta's* production was from strip mines and the average output per man-day from these mines was 37.63 tons compared with 5.14 tons from underground mines. The average value at the mine of bituminous coal was \$7.40 a ton and of subbituminous coal \$2.06 a ton. Increasing quantities of *Alberta's* subbituminous coals are being employed industrially,

particularly for thermal-electric power generation. About 89 p.c. of the bituminous coking coals, produced in the Crowsnest area of Alberta, was exported to Japan to up-grade the Japanese coal blends for metallurgical use. Alberta shipped 21.8 p.c. of its coal to other provinces—14.0 p.c. to Saskatchewan, 4.6 p.c. to British Columbia and 2.6 p.c. to Manitoba.

British Columbia's coal output in 1967 increased about 11.0 p.c. and amounted to 10.6 p.c. of Canada's coal production. All of the coal was bituminous and most of it came from the Crowsnest area. The coals range from high-volatile to low-volatile coking coals and production was almost equally divided between underground and strip mines. The average output per man-day was 49.23 tons for strip mines and 5.86 tons for underground mines and the average value at the mine was \$6.24 a ton. About 35 p.c. of the production was exported, most of it to Japan; 10.8 p.c. was shipped to Manitoba and 3.8 p.c. to Ontario.

Yukon Territory produced only about 1,900 tons of coal in 1967 from a single underground mine having an average output of 2.84 tons per man-day. The coal was valued at \$8.26 a ton.

FUELS IN CANADA*

The word "fuel", derived from the archaic French *fouaille*, implies a heat source. Up to the present time, mankind has depended for its survival and development on organic fuels but, with the emergence of nuclear energy for civilian use, inorganic fuel is now assuming economic significance.

Fossil fuels with their main component—carbon—will continue to provide the largest range of products from the pure form to compounds that are useful to man. They may even provide nutrition to man if natural foods become scarce. Although the world is benefiting at present by the upsurge in the availability of hydrocarbons, coal as a carbon source should not be discarded. In fact, all fossil fuels in the future may have to contribute collectively to the energy and chemical needs of the world.

The challenge to the bulk use of fossil fuels seems to be nuclear energy which, as has been predicted, may constitute 18 p.c. of the world's energy by the year 2000, by which time the consumption of energy may be quadrupled from the present level of about 5,000 MM metric tons of coal equivalent. The world's present economic uranium resources are considered to be larger than the total usable fossil fuel resources but they are subject to the principal uncertainty—the efficiency of fuel utilization which at present amounts to only about 1 p.c. of the theoretical potential energy. Nevertheless, nuclear energy may make rapid strides in the fields of generation of electric power, district or large-complex heating, and some types of transportation. Higher extractions of uranium and thorium from lower-grade ores and the development of breeder reactors may ensure that the supply of source materials is adequate.

In Canada, the fortuitous occurrence of ores in strategic and geographically favourable locations together with the creation of nuclear technology gives great impetus to the development of nuclear energy. Canada is spending about 15 p.c. of its federal research budget on nuclear research and has trained many nuclear scientists and engineers and hence may be expected to play a role in the world with its nuclear industry integrated from raw material to final product and with its ability to provide engineering skill to countries that need it.

However, a country of Canada's size, in terms of domestic consumption, has problems of distribution, shifts of population and long lines of communication within the country as well as to markets abroad, even as close as those of the United States. Locations of plants, therefore, require more careful evaluation in comparison with the more settled and densely populated countries. For these reasons it is more difficult to predict the future development of atomic-energy plants for generation of electric power in Canada than in advanced countries, small or large.

* Extracted from the 1968 Melchett Lecture (Institute of Fuel, London, England) entitled "Fuels in a Developing Country", prepared by A. Ignatieff, Fellow of The Institute of Fuel, and Deputy Director, Mines Branch, Department of Energy, Mines and Resources, Ottawa.

Fuels may be described as having four distinct though overlapping functions—provision of direct-heat energy; provision of electric power, so far, by indirect conversion; provision of motive power; and provision of source materials for partial or total chemical conversion. An approximate energy-use balance in Canada has been drawn up, demonstrating the relative impact made by the principal fuels, as shown in the following table.

I.—APPROXIMATE ENERGY USE BALANCE IN CANADA, 1965

NOTE.—All coal figures are on bituminous rank basis. SOURCES: Dominion Bureau of Statistics and the Department of Energy, Mines and Resources.

¹Natural gas losses, process shrinkage, field and pipeline use and gas unaccounted for.

In explanation of the above table, in the *electric-power generation sector* the high efficiency of hydro-electric power plants is reflected in relation to the coal-equivalent calculations. Thermal power plants in Canada use, on the average, the energy equivalent of one pound of coal to generate one kilowatt hour of electric power. The generation figures are gross availabilities at bus bars; line and distribution losses must be taken into account. In the *transportation sector*, UN figures for gasoline and kerosene, including aviation fuel, were used as indicative of oil use in road and air transportation. Diesel oils for railways and marine oils are included in the UN general category of fuel oils. On the other hand, the use of kerosene for lighting and heating is now negligible. Hence the total oil used in Canada in all transportation would be higher than the figure indicated in Table I. In fact, in 1967 oil products used in Canadian transportation have been estimated at 42 p.c. of the total. *Heating and cooking loads* in domestic and commercial buildings are assessed from national figures. Fossil fuels in the *industrial sector* are used for space and process heat and for chemical processing; coal for coke is a sizeable item and is given separately. As regards natural gas, the UN apparently included in the Canadian gas consumption figure the reinjection into wells and losses which, over the years, show a downward trend. Strictly

speaking, only losses should be included and, in that case, the total Canadian energy consumption for 1965 is indicated to have been about 141 MM tons coal-equivalent, as against the UN figure of 150 MM metric tons.

The Status of Fuels and Electric Power in Canada.—Canada is well endowed with energy resources, although they are not evenly distributed. Geography is dominant in the area of energy and fuels as it is in many other aspects of Canadian life. During the past twenty years, the population of the country has grown by about 60 p.c. but energy consumption has more than doubled. The source mix of energy has substantially changed during this period from the dominant position of coal at 60 p.c., oil and natural gas at 30 p.c. and wood and hydro-electric power at the remaining 10 p.c. to today's mix of nearly 75 p.c. provided by hydrocarbons, 15 p.c. by coal, 10 p.c. by hydro-electric energy and less than 1 p.c. by wood.

A great network of collector and trunk lines has been built since the late 1940s to move the hydrocarbon fuels across the country. Without counting looping, the oil pipelines measured 43,400 miles by 1967 and all types of gas pipelines measured 48,210 miles. The latter included one of the longest large-diameter (up to 36 inches) lines in the world running from the Alberta border to Montreal, a distance of 2,200 miles.

The generation of electricity grew by 5 p.c. a year over the past decade. Considerable interconnection of electric transmission systems took place between contiguous Canadian provincial and United States systems, although it will be some time before the national grid, now under study, becomes a reality.

Canada, in fuels, follows a continental export-import policy. Natural gas provides an export supply of approximately 500 MMM cu. ft., oil a deficiency of about 70 MM bbl. and coal a deficiency of about 14,500,000 short tons a year. Small exchanges of electric power are at present maintained but, in future, large blocks may be exported, mainly from Labrador, western Quebec and British Columbia.

Fuels in the Generation of Electric Power.—It is natural that a country exploit first its cheapest source of energy and this in Canada is still hydro-electric power. Until 1950 the contribution from fossil fuels to total generating capacity was less than 10 p.c. but by 1967 it had risen to 9,600,000 kw. or 29 p.c. of a total of 32,900,000 kw.

Coal is still the main contributor to the fuels energy pool of utility and industrial plants in Canada. Where coal is cheaply available, as from certain strip mines, the cost of fuel can be less than one cent per therm, so that coal is important in the generation of electric power. Where hydro power is available, thermal power plants are used as standbys, resulting in relatively low load factors of about 40 p.c. However, with the introduction of larger (100,000 kw.) units, thermal power plants, like nuclear plants of the future, favour base loads. The smaller gas and oil turbine plants operated by both utilities and industries are used principally for peak-load needs. In Canada with its hydraulic resources of about 100,000,000 kw. (not including possible future diversion of watersheds), hydro-electric power will continue to be developed even if the sites are distant from load centres, because of EHV transmission, hydro schemes combined with irrigation, and requirements for large blocks of 2- or 3-mill ($\frac{1}{10}$ cent) kwh. power for electroprocessing. On the other hand, since hydro development is so costly, the trend may increase toward thermal generation of electric power for diversified consumption at 5 to 8 mills/kwh. This would include, of course, nuclear power near load centres and, possibly, small package units in remote locations if the load is sufficient.

That cheap electric power is important to a developing country like Canada, in that it encourages primary processing of natural resources, is demonstrated by Canada's large per capita consumption at 7,360 kwh. (1965), second only to Norway's at 12,567 kwh. The reduction of bauxite, which is not indigenous to Canada, to aluminum illustrates this fact. Most of the electric power generated and used by industry is from hydraulic sources. Some 55 p.c. of the total electricity generated in this country is consumed in

industry and of this about 30 p.c. is used by the mining and metallurgical industries (including iron and steel), the largest use being for smelting and refining of metals. A large segment of the remaining industrial consumption (about 16 p.c. of the total) is used to make pulp and paper for this important export industry.

The above allocation is for the country as a whole. If, however, the consumption is examined in relation to regions and concentrations of population, different figures are obtained. For example, in the Province of Quebec, the ratio of industrial and commercial to residential consumption is as high as five to one, whereas in Ontario, as in the northeast central part of the United States, the ratio is about 2.5 to one.

Comparing some developing countries that have in common with Canada the production and processing of primary resources, the approximate electric-power generation data are given in Table II. Sweden-Canada and South Africa-Australia appear quite similar in relation to electric-power generation as percentage of total energy consumption.

Fuels in Transportation.—In the past two decades, road and air transportation has advanced significantly. Canada has had a decade of successful diesel-engine operation on its railways, subject to extremes of climate. The lower efficiency of steam-reciprocating engines and the cheaper operation of diesel engines were obstacles that could not be overcome even by brave efforts with coal-fired steam, gas or air turbines. In contrast, transportation of oil products can be economic, even if transportation has to be by container or pipeline over long distances and with government imposts to be tolerated. The growth of air transportation is indicated by the fact that its share of intercity passenger miles is now about 36 p.c. of the total for all public transportation and, at the same time, air freight has increased twenty times to approximately 64,000,000 air-ton miles.

Even if the restrictions in the use of internal combustion engines in the great metropolitan complexes should eventually force their replacement by non-oil prime movers the trend toward vast highway networks in lieu of railway building is a logical projection because of the flexibility and economy of the present and, predictably, the future designs of the internal combustion engine. Canada, despite the long-time existence of two transcontinental railways, has recently completed a 4,000-mile transcontinental highway which is now preferred to the railways for the movement of high-value merchandise. Table II gives comparisons in the use of petroleum products for transportation for selected countries and, using the figures of gasoline and kerosene consumption, the percentages of total national energy for this utilization area indicate the growth of oil use in road and air services. These figures are not particularly accurate because of the kerosene fraction, which may have varying uses in different countries, but the error is not serious. The figures for

Canada has an abundance of energy resources—oil and gas, coal, water power and wood—each, with the exception of wood, contributing an essential but changing portion of the country's energy needs. At present about 75 p.c. of the energy source mix is provided by hydrocarbons, 15 p.c. by coal and 10 p.c. by water power. Twenty years ago hydrocarbons provided 30 p.c., coal 60 p.c. and water power the same 10 p.c.

The processing plant at Fort McMurray in northern Alberta has the capacity to extract 45,000 bbl. of oil a day from the Athabasca tar sands, one of the largest of the known oil reserves in the world. Alberta has 87 p.c. of the proved liquid hydrocarbon reserves in Canada. (top left)

A strip coal mine west of Edmonton. Although the production of coal has been on the downgrade, it is still important in the generation of electric power, particularly where it is cheaply available from strip mines, and in the production of carbon for metallurgy. (top right)

Canada's first full-scale nuclear power station, at Douglas Point on the shore of Lake Huron, went into commercial production in 1967. Two other plants, one in Quebec and one in Ontario, will begin operations between 1970 and 1973. (bottom)

Constant research has resulted in the progressive stepping-up of transmission-line voltage. Power is carried the 375 miles from Quebec's Manicouagan-Outardes hydro complex to Montreal at 735,000 volts. (background)

¹ High proportion of kerosene used for non-transportation applications.

Residential and Commercial Heat.—Canada must contend with the special circumstances of a severe winter climate that demands heating of residential, commercial and industrial environments during six months of the year. Considering only domestic and commercial (institutional) heating and cooking needs, the demand is nearly two tons of coal equivalent per capita. Industrial heating is merged with process-heat requirements. The efficiency of fuel use is rising and the proportion of individual space heaters to central or furnace-type heaters has fallen rapidly in the past 20 years. Although district heating has not been developed to any extent, centrally heated multi-building complexes are commonplace. Wood for heating purposes has become insignificant, although wood-waste plants (including small thermal-electric plants) are found where this fuel is cheaply available from the lumber industry.

The striking experience in Canada is the lessening of the use of coal, notably in residential and, to a large extent, institutional use and its substitution by oil and natural gas. Commercial and even industrial heating plants are rapidly being converted, because fluid fuels cost less, generally speaking, than domestic coal, and their handling is much more convenient.

Industrial Heat and Processing.—Canada, while in the main a raw-material producer, has nevertheless reached a high degree of affluence due, in part, to its diverse primary resources and, in part, to a burgeoning secondary industry. In 1967, manufacturers, including chemicals but excluding potash, were in the lead at 34 p.c. of Canadian exports; minerals and metals at 30 p.c. were second, followed by forest products at 21 p.c. and agricultural and fish products at 15 p.c. This is in contrast to 1964 when manufacturers were trailing, emphasizing the importance of diversification to Canada. Canada is, however, in the peculiar situation of being neighbour to a highly technologically advanced country (of ten times Canada's population) already oriented to a supply economy so that there is considerable incentive to trade primary products for intermediate or finished goods. With the lowering or abolishing of tariffs, Canada will be obliged to test the economic viability of enlarging the scale of the present manufacturing base or establishing entirely new secondary processing and manufacturing such as secondary chemicals and synthetics. The obstacles to all secondary industry are the incrementally higher unit capital and operating costs, attributable to relatively short production runs and scaled-down process plants. Choosing the correct processing route in converting raw or inter-

mediate materials to useful products affords the greatest challenge to the scientist and the engineer. In each economic environment there exists a situation that dictates the methodology and the degree of processing of raw-feed stocks.

In dealing with fuels, processing can be divided into two areas: beneficiation or processing of fuels themselves, and using fuels in combination with other materials, as in the field of metallurgy. The value of up-graded products is usually much higher in the latter processing than in the former; thus, a ton of coal or iron ore may have a value of \$10, a ton of coke may cost \$20, yet a ton of ordinary steel would be sold for about \$120. In this conversion, capital investment, skill and energy are the main contributors. Petrochemicals is another such case.

Hydrocarbons.—In the processing of fuels themselves, the oil-refining industry is the focus of the highly skilled chemical engineering required in converting 'crudes' and other feed stocks to intermediate and final products supplying a variety of high-quality products for the needs of transportation, heating, generation of electricity, lubrication and highway paving. Through further processing of refinery feed stocks, the industry produces a multitude of petrochemicals at competitive prices.

In the past two decades, Canada has raised its oil production fiftyfold and its refining capacity fivefold to about 85 p.c. of its national needs, and has become one of the largest per capita oil consumers in the world at 800 gallons per annum. Previously, when topping plants predominated, there was a glut of residuals but with the advent of catalytic cracking and hydrofining plants there has been an increase in higher value products, with residuals controlled to market demand. Major international and North American oil companies have been looking ahead to secure reliable supplies of crude. Lower-grade oil and even coal deposits on the Continent are being investigated against eventual continental depletion. The Athabasca oil sands in northern Alberta represent one such large potential resource, from which a plant is designed to produce 45,000 bbl. a day.

The hydrocarbons group of natural gas and associated liquids is the most readily available for use after simple separation of liquids and extraction of sulphur. Both the liquids and the sulphur provide important credits from the deep wet reservoirs. The present annual production is about 45,000,000 bbl. of liquids and 2,000,000 tons of sulphur, the latter placing Canada as the second largest producer of this commodity. Part of the liquids of the processing plants is added to refinery-feed stocks and the other part is used for field use and for sale as LPG bottled gas. Although natural gas offers one of the more useful source materials for chemical application, its relative cheapness and convenience orient it more toward domestic and industrial heating applications. The use of gas is equally divided between industrial and commercial-residential loads.

Coal.—Coal is in a very different position than oil. Basically, the coal industry offers a single product which must be available at low cost and therefore can be purified only to a minimum level of acceptance. Many Canadian deposits have not been exploited because the costs of transportation to markets would be too high. However, it is interesting to note that the recent demands (not only domestically, but from the United States and Australia and for the Japanese iron and steel industry) point up the relative world depletion of coking coals, of low and medium-volatile rank, available at economic prices. For the past eight years approximately 1,000,000 tons of medium-volatile coal has been exported annually to Japan from Western Canada where no adequate markets for coal existed after the conversion of railway transport to diesel power. These mines showed fortitude by searching for suitable markets for carbon in a wide area of largely metallurgical application such as the smelting of both ferrous and non-ferrous concentrates—and even electrothermal reduction of phosphorus. Three of the companies experimented with low-cost non-recovery types of coke ovens to produce coke or char for these specialized markets.* The

* Carbonization in Canada by J. C. Botham from the Proceedings of the Centennial Symposium on the Science and Technology of Coal, March 1967, Fuels and Mining Practice Division, Mines Branch, Department of Energy, Mines and Resources, Ottawa.

Japanese trade now indicates an annual demand of over 5,000,000 tons of coking coal from Canada over the next decade, and more Canadian coking coal is expected to be exported to western United States.

In Canada, where coal mines are located far from industrial centres, most of the mines do not have carbonization plants. With the disappearance of city gas facilities, carbonization is centred around iron and steel plants where the prime product is coke. Oven temperatures and time cycles are controlled by the coke requirements, hence the quality of the resulting tar varies. Canadian tar production of about 30,000,000 gal. per annum—apart from about 10,000,000 gal. of light ends—has a reasonable market as coal-tar pitch in the large aluminum industry which uses about 100,000 tons of Canadian-produced coal-tar pitch each year and imports about 100,000 tons, mostly from the United States. There is little likelihood that the demand for Canadian tar will grow enough to provide large markets for raw coal.

In Canada there will always be an appreciable demand for carbon from coal for metallurgy. Possibly some non-fuel uses can be developed, such as the manufacture of structural carbons, but, instead of anticipating chemicals from coal distillation, the future for bulk use of coal may be a return, at the right time, to the production of synthetic liquid fuels. North American oil companies are increasing their interest in this regard, particularly in liquid fuels from cheaply strip-mined, low-rank, reactive coals.

Petrochemicals.—Although Canada has produced organic chemicals since about the turn of the century, the Second World War gave impetus to its present petrochemical industry. A Crown company (Polymer Corporation) chose Sarnia in southern Ontario as its location for the manufacture of synthetic rubber, because feed stocks were readily available from local refineries, and soon became the largest producer in the then British Empire. Parallel with this, an ammonia plant for nitrogenous explosives, with hydrogen derived from natural gas, was started in Calgary, Alta. After the War, the availability of low-cost natural gas and oil was the reason for locating Canada's second largest petrochemical centre at Edmonton in Alberta.

Based on refinery feed stocks, the Canadian petrochemical industry has grown to include nearly 80 plants with an investment of about \$1,000,000,000 and a total annual value of products (such as synthetic fibres, detergents and coatings) approximating \$300,000,000, derived mostly from refinery sources worth about \$30,000,000. This gives force to the argument in favour of additional processing. This industry now supplies most of the chemicals that in the past were derived by coal carbonization and its development is a stimulus for the secondary processing industries of Canada.

An ammonia-base fertilizer plant would be based on natural gas rather than on coal if these two fuel sources were of equal availability and cost, because of the lower capital and operating costs of an all-fluid plant. The same is true in many other applications. For example, in heating plants, coal-handling equipment requires a larger capital investment than does handling equipment for natural gas or oil. It is usually also argued that the labour cost of coal-fired plants is higher because, even if fully mechanized, they still require larger operating and maintenance staffs.

Metallurgy.—Metallurgy and fuels are natural "partners", particularly in the ferrous industry, because of its size and the opportunities for fuel use from ore reduction to fabrication of metal. Thus, as an example, in 1964, fuels used directly for energy (in addition to coke in blast furnaces) to produce primary metals and fabrications amounted to over 1,000,000 tons of solid fuels (mostly coal), 10,000,000 bbl. of petroleum products, and about 37,000,000 Mcf. of natural gas. The total value of fuels and electricity used was about \$200,000,000. For non-metallic products this value was nearly \$55,000,000.

The Canadian iron and steel industry, with a flourishing iron ore industry as an adjunct, offers another good example of an integrated segment of the economy somewhat analogous to the uranium industry. The iron ore industry, on a part-ownership basis, now produces 40,000,000 tons a year; the primary iron and steel industry produces about 9,000,000

tons of pig iron and 13,000,000 tons of steel a year, mostly in the market areas of Montreal, Toronto and Sault Ste. Marie, which are close to areas of United States use. The Sydney plant in Nova Scotia has not flourished because of its remoteness from markets.

The Canadian iron and steel industry follows modern but classical methods on the whole. In addition, there is production of iron as a by-product of complex ores that are smelted in electric furnaces. There is also considerable research activity in direct reduction and chemical treatment of the more abundant lean and soft iron ores for the production of highly enriched (metallized) materials.

The use of hydrocarbons is increasing in metallurgy, particularly in iron and steel making. Most iron blast furnaces now use oil or natural gas by 'tuyere injection'. Pyrometallurgy is one of the largest solids-heat process industries—much of it, as yet, stepwise—although continuous steel making is emerging. There remains considerable scope for investigating fuel efficiencies and improving energy balances, not only for the present methods but also for methods in prospect.* Process metallurgy provides the opportunity for collective use of fossil fuels for the production of metals, fertilizers and petrochemicals which can be a boon to Canada provided the economics of raw materials and products are favourable.

Fuels Research.—There are no accurate figures available for the amount spent in research and development on fossil fuels, but a rough estimate indicates that about 5 p.c. of the national research and development expenditure is spent in this area, mostly by the oil industry.

In the processing of *hydrocarbons*, the international oil industry can be relied upon to pursue research mainly to produce commodities at competitive prices and affiliates of the international companies continue to establish research laboratories in Canada and should be encouraged in this endeavour by the provisions of the Industrial Research and Development Incentives Act which gives some federal tax relief for such expenditures.

Research in the *coal* sector is supported co-operatively by industry and government.

Co-operation between government and industry is also practised in applied subjects—in the fuels area, for instance, in carbonization, pipeline transportation and combustion. One example is the co-operative research pursued at the Mines Branch, by the Canadian Carbonization Research Association composed of the principal steel and coal companies. Another example is the Solids Pipeline R & D Association, formed on the research and development work pursued by the Alberta Research Council in Edmonton. This Association is composed of a consortium of industrial companies financially assisted by the federal Department of Industry, Trade and Commerce. Pilot operations with a loop of four-inch pipe 3,600 feet long have been carried out.

Canada is fortunate in having a reasonably good supply of scientists and engineers in metallurgy and in mineral technology generally. When the demand for uranium developed in the 1940s, there were enough skilled chemical metallurgists who, with some training, were able to contribute to the 15 or so hydro-metallurgical plants that were commissioned in less than five years. Again, the existence of advanced technology in ferrous metallurgy, with considerable research being pursued by industry and other groups, has developed a generation of skilled metallurgists in the country. The same is true of non-ferrous metallurgy but not on the same scale for each metal or group of allied metals.

Unfortunately, in the fossil fuel area, no Canadian universities (since McGill's abortive attempt 35 years ago) have set up formal courses in fuel engineering such as are available in Britain and, more recently, in Australia. This is probably due in part to the general North American university approach of including fuel subjects in chemical and mechanical engineering courses. Possibly because of this divided approach, little postgraduate research in fuels is being conducted. The Federal Government assists graduate research in univer-

* *Developments in Iron and Steel Processes and Their Effects on Energy Balance* by J. H. Walsh, Paper 2, Symposium in Extraction Metallurgy, April 1967, The Institute of Mining and Metallurgy, London, England.

sities by grants-in-aid programs now totalling approximately \$40,000,000 a year. These funds are additional to the very substantial amounts contributed to universities through agreements with the provincial governments.

Pollution.—The greatest challenge to organic fuels as both energy sources and reagents for heat processes is the reduction and, hopefully, the prevention of the escape of pollutants, both gaseous and solid, into the atmosphere and the concomitant fouling and corrosion of heating and reactor surfaces. Much is heard today of atmospheric, soil and water pollution. Although water pollution is a serious problem, particularly in water-short regions, this evil can be brought under control but atmospheric and consequent soil pollution are much more serious problems which will be hard to solve quickly to avoid serious effect on the existence and expansion of industry in a region or country. The serious implications are the amounts of toxic gaseous and solid effluents still being discharged into the atmosphere where there are large concentrations of population and industry. In unfavourable meteorological conditions the effects have been comparatively serious at least for a section of the population. Nuclear power plants should, of course, be in full development by the end of the century and should alleviate the situation without creating, it is hoped, new problems. Nevertheless, a broad spectrum of heat processes using carbon will be continued and expanded. Reduction of contaminants and, hopefully, suppression at source and dilution by stack-height design are already the immediate preoccupation of many fuel technologists. However, there is an urgent necessity for close co-operative work between government, industry and urban planners for a methodical and consistent approach to a step-by-step resolution of this problem, together with an education campaign to inform the public.

Section 2.—Government Aid to the Mineral Industry

Subsection 1.—Federal Government Aid

Federal assistance to the mining industry takes the form of the provision of detailed geological, geophysical, topographical, geodetic, geographical and marine data which are of basic importance to the discovery and development of the mineral resources of Canada; the provision, through laboratory and pilot-plant research, of technical information concerning the processing of ores, industrial minerals and fuels on a commercial scale; financial and technical assistance to the gold-mining industry under the Emergency Gold Mining Assistance Act, and certain tax incentives.

The Department of Energy, Mines and Resources.—The federal Department of Energy, Mines and Resources came into being on Oct. 1, 1966. It embraces all of the functions of the former Department of Mines and Technical Surveys, and new functions pertaining to water and energy resources. Apart from its administrative establishments, the Department is made up of four Groups—Mines and Geosciences, Mineral Development, Water, and Energy Development—each headed by an assistant deputy minister and each aiding the Canadian mineral industry in some way.

The *Mines and Geosciences Group* contains four branches—the Mines Branch, the Geological Survey of Canada, the Observatories Branch and the Surveys and Mapping Branch. The *Mines Branch* is a large laboratory and pilot-plant complex carrying out applied and basic research to discover new and better methods of ensuring mine safety, extracting and refining ores and other minerals, and using metals and minerals in industry and defence. Gratifying results have been achieved in the extraction of metals from ores and in the refining of low-grade crude oil, in the automation of grinding circuits and cyanide leaching processes in gold mills and in the leaching of ground or crushed uranium ores by bacteria. In pyrometallurgy—the extraction of metals by heat—applied research is

concentrated principally on the combination of shaft and electric furnaces for smelting iron ore. In petroleum refining, research concerns hydrogenation, catalytic cracking, and catalyst development. This work is highly significant because of the opening-up of unconventional sources such as the Athabasca tar sands and the so-called Colorado oil shales, whose economic importance has been recognized by the Mines Branch for many years. A close tie-in with producers is maintained in mineral processing in which the emphasis is on the concentration of metallic ores and on the processing and improvement of industrial minerals. In the field of mineral sciences, the physical, chemical, crystallographic and magnetic studies being undertaken on sulphide minerals are of fundamental interest. In physical metallurgy, experiments on new alloy combinations continue to yield valuable practical benefits for Canadian industry.

The Mines Branch, on the advice of experts from industry and the universities, also awards an annual series of research grants in mining sciences to Canadian universities. In 1968, the total amount to be distributed was \$100,000.

The *Geological Survey of Canada* maps and studies the geology of Canada and carries out specialized research to enable its geologists to explain the geology of Canada more effectively. It is the major organization engaged in this work in Canada and its studies extend to all provinces and territories. The Survey maintains a close co-operation with provincial agencies. In the provinces, it endeavours, after prior consultation with the provincial government concerned, to fill in the province's geological framework and thus provide a basis for more detailed mapping by provincial geologists and commercial exploration companies. In areas under development, the Survey does more detailed mapping to supply industry with the geological key to the structures of the orebodies. Each year, the Geological Survey sends about 100 parties into many parts of Canada. They conduct broad regional investigations in the Canadian Shield, the Appalachian and the Cordilleran geosynclinal belts, the sedimentary basins of the mainland and the Arctic Archipelago, and in unconsolidated sediments. As the first systematic reconnaissance of Canada is approaching completion, the country's major geological features are reasonably well known and the Survey is giving increasing attention to fundamental research into field and laboratory problems, identified in the reconnaissance phase, to understand the geological evolution of the country. It publishes the results of its research in memoirs, bulletins, papers and maps, and in numerous scientific technical journals.

The headquarters of the Geological Survey is at Ottawa but it has several regional offices and a recently opened Institute of Sedimentary and Petroleum Geology in Calgary to serve the special needs of the western provinces. The Survey each year awards a large number of grants in support of geological research in Canadian universities; in 1968 these totalled \$263,000.

The *Observatories Branch* carries out much geophysical work of interest to the mineral industry. It studies, collects and publishes, in the form of maps and charts, information on the geomagnetic field in Canada. Most of the information published is obtained from airborne geomagnetic surveys, which have ranged over the whole of Canada and across the Atlantic to Scandinavia. In addition, the Branch has a network of nine permanent geomagnetic observatories, as well as temporary observatories in summer at many widely distributed sites. It also operates a network of 26 seismic stations to assist in the study of the earth's interior and to obtain data for its quantitative assessment of seismic risk throughout Canada. In gravity research, another means of studying the composition of the earth's crust, the Branch is systematically mapping variations in the earth's gravity on a regional basis throughout Canada, including the Arctic and the floors of the Gulf of St. Lawrence and Hudson Bay. The results of all gravity measurements to the end of 1966 are available in a new Gravity Map of Canada on a scale of 1:2,500,000, or about 40 miles to the inch.

No mineral development is possible without accurate, large-scale topographical maps. The *Surveys and Mapping Branch*, in conjunction with the Mapping and Charting Establishment of the Department of National Defence, has completed the topographical mapping of the country at the medium scale of 1:250,000, or about four miles to the inch. About 35 p.c. of the larger-scale mapping at 1:50,000 has been completed in the more settled areas and areas of greater economic importance.

The *Mineral Development Group* conducts broad economic and mineral-commodity studies and gathers comprehensive domestic and world data on all minerals, including energy minerals, for the use of government and private industry. It also administers the Emergency Gold Mining Assistance Act (see p. 649), and the Explosives Act, and co-ordinates the Department's foreign-aid work.

Current activities include regional studies of the mineral economy of a number of provinces; assessment of mineral projects in various parts of Canada for which federal support has been requested; and the safeguarding of Canadian mineral interests through participation in international agencies such as the United Nations Lead-Zinc Study Group, the United Nations Steel Committee, the Organization for Economic Co-operation and Development, the General Agreement on Tariffs and Trade, and the International Tin Council. In collaboration with the Canadian International Development Agency and with the support of industry, the Group is setting up training courses for mineral scientists, technologists and economists brought to Canada under the various aid programs, chiefly the Colombo Plan, and is advising on mineral projects undertaken by Canada as an aid to developing countries. The Group publishes an extensive series of reports and other material, and maintains the Mineral Occurrence Index, which is a listing of about 10,000 mineral showings and deposits in Canada that may be consulted by anyone interested. Also of considerable value to the mining industry are the federal-provincial roads programs described in Chapter XIX, Part III, Sect. 2.

The *Water Group* is charged with the Department's responsibility for advising on federal water policies and for co-ordinating the work of federal agencies in water resource management and water pollution. In addition to broad programs of hydrometric, oceanographic and hydrographic work, the Group undertakes and co-ordinates water studies at regional levels, conducts research on the relationships of water and renewable resources and maintains a continuing review of national and regional water policies and programs. The Group is composed of the Marine Sciences Branch, the Inland Waters Branch and the Policy and Planning Branch. Of particular interest to the mining industry are (a) the work being done by geophysicists of the Atlantic Oceanographic Group of the Marine Sciences Branch on the continental shelf off the Atlantic Coast and in the Gulf of St. Lawrence and (b) the study of pollution problems in mining areas, such as in northeastern New Brunswick and on the headwaters of the Saskatchewan River system, by the Inland Waters Branch.

The *Energy Development Group* has broad responsibilities relating to the development of plans and policies for all forms of energy; the development of programs, legislation and agreements to implement those policies; the direction of studies relating to energy sources and requirements; and the co-ordination of policy advice. The Assistant Deputy Minister serves as adviser on over-all plans and policies relating to energy sources and requirements.

The Dominion Coal Board.*—The Board was established by the Dominion Coal Board Act (RSC 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act the Board was constituted a department of government to advise on all matters relating to the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of administering, in accordance with regulations of the Governor in Council, any coal subventions or subsidies voted by Parliament.

* Revised under the direction of Hon. J. Watson MacNaught, Chairman of the Dominion Coal Board, Ottawa

The Board is empowered to undertake research and investigations with respect to:—

- (1) the systems and methods of mining coal;
- (2) the problems and techniques of marketing and distributing coal;
- (3) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
- (4) the position of coal in relation to other forms of fuel or energy available for use in Canada;
- (5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
- (6) the co-ordination of the activities of government departments relating to coal; and
- (7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.

In addition, the Dominion Coal Board Act provides authority in the event of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

The Act authorizes a Board membership of seven, including the chairman. The latter is the chief executive officer, has the status of a deputy minister, spends full time on the Board's business, receives a salary and is in charge of a public service staff. The other members, men of long experience and expert knowledge of aspects and regions of the Canadian coal industry, receive *per diem* payments and travelling expenses while attending Board meetings or while otherwise officially engaged on Board business.

In general, the Board and its staff constitute a central agency through which representations on coal matters are made to the Government from any sector of the industry or the public. Conducting a continuous study of developments and problems within the industry, exchanging information with provincial authorities concerned with coal and with national authorities and agencies in other countries and maintaining a complete file of Canadian coal information, the Board makes recommendations to the Government and reports to Parliament through the Minister of Energy, Mines and Resources.

Since its inception, the Board has worked toward the co-ordination of the activities relating to coal of various government departments and other agencies. Its own responsibilities in research on the mining and utilization of coal have been carried out mainly by the Fuels Research Centre, Mines Branch, Department of Energy, Mines and Resources, although, on occasion, the Board has recommended or commissioned specialized types of research to be conducted outside the government service. As a contribution to the co-ordination of coal research and to the dissemination to the industry of technical information resulting from research, the Board initiated the now annual Dominion-Provincial Conferences on Coal. The Dominion Bureau of Statistics collects much of the statistical information required by the Board.

Government purchases of fuel, which constitute an important outlet for coal, claim a part of the time of the Board's staff in an advisory capacity. Advice on fuel matters is also continuously available to all government departments and agencies. A senior official of the Coal Board is chairman of the Interdepartmental Fuel Committee, which advises on the supply, purchase and utilization of fuel for the Department of National Defence, and of the Dominion Fuel Committee, which is organized along similar lines as an advisory body to other government departments.

The subvention assistance on the movement of Canadian coals, which the Board administers, is authorized by votes of money by Parliament; payments are in accordance with Regulations established by Order in Council. This assistance, which has been provided in varying degrees for the past 30 years, was designed to further the marketing of Canadian coals by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. During the year ended Mar. 31, 1968, a total of 5,323,337 tons of coal was shipped under subvention and \$33,332,465 was paid in assistance. (See also Chapter XXI, Part II, Section 4.)

Emergency Gold Mining Assistance Act.—Under this Act, which came into force in 1948 (RSC 1952, c. 95), financial assistance is provided to marginal gold mines to counteract the effects of increasing costs of production and a fixed price for gold. By enabling gold mines to extend their productive life, the subventions help communities dependent on gold mining to adjust gradually to diminishing support. The application of the Act was extended to Dec. 31, 1970 by an amendment passed on Nov. 28, 1967. The Act is administered by the Department of Energy, Mines and Resources.

An amendment to the Act in 1963, which extended provisions of the Act to Dec. 31, 1967, also introduced a restriction which affects lode gold mines coming into production after June 30, 1965; such mines are eligible for assistance only if the mine provides direct economic support to an existing community, that is, if the majority of the persons employed at the mine reside in one or more of the established communities that are specified in a schedule to the Act. The restriction does not apply to lode mines in production before July 1, 1965 nor to placer gold mines.

The amount of assistance payable to an operator is determined by a formula and is based on the average cost of production per ounce and the number of ounces produced; it ranges from zero to \$10.27 per ounce produced. Gold mines having a cost of production of \$26.50 or less per ounce receive no assistance and those having a cost of production of \$45 or more per ounce receive the maximum rate of \$10.27 per ounce.

Under the current formula, the assistance payable to the operator of a gold mine is computed by adding 25 p.c. to the product of two factors—the “rate of assistance” and the number of “assistance ounces”. The number of assistance ounces is two thirds of the total ounces produced and sold to the Royal Canadian Mint by a mine in a calendar year. The rate-of-assistance factor is two thirds of the amount by which the average cost of production exceeds \$26.50. The rate-of-assistance factor is limited to a maximum of \$12.33 which is reached when the average cost of production rises to \$45 per ounce of gold produced. The average cost of production is determined by dividing the total allowable costs by the total number of ounces produced in the form of bullion from the mine in a calendar year. Only those ounces of gold that have been sold to the Royal Canadian Mint are eligible for inclusion in the assistance-ounces factor. The cost of production includes mining, milling, smelting, refining, transportation and administration costs. Allowances are made for depreciation, pre-production costs and expenditures on exploration and development on the mine property in accordance with the Regulations.

The amounts paid to operators of gold mines to Mar. 31, 1968 for the years 1948-67, inclusive, totalled \$246,360,675 on a production of 55,369,122 oz.t. of gold produced and sold in accordance with the requirements of the Act. The assistance payable for gold produced and sold under the Act in the calendar year 1967 was estimated to be \$15,400,000.

The governors of the central banks of Belgium, Germany, Italy, the Netherlands, Switzerland, the United Kingdom and the United States met in Washington on Mar. 16-17, 1968 to consider problems related to the maintenance of exchange stability. The governors agreed to establish a two-price system for gold. Only gold then held in the official reserves of the seven countries would be bought or sold in transactions with monetary authorities at the existing price of \$35 (U.S.) an ounce. It was agreed that gold in the official reserves would not be sold in any other gold market, nor would gold be purchased from the market by the central banks.

As a consequence of the agreement, Canada may sell newly mined gold only on the free market. The price of gold on the free market is determined by supply and demand.

Following the agreement by the central bankers, the Royal Canadian Mint continued to purchase gold from gold mine operators at a price of \$35 (U.S.). Thus, gold newly mined in Canada continued to be eligible for assistance under the Emergency Gold Mining Assistance Act provided it was sold to the Mint. It should be noted that the amount of assistance payable to a gold mine operator is based on the cost of production of the gold and is not related to its selling price.

Subsection 2.—Provincial Government Aid*

Newfoundland.—The Newfoundland Government, through the Mines Branch of the Department of Mines, Agriculture and Resources, provides several valuable services to those interested or involved in exploration and mining, including: the conduct of a continuing program of mineral assessment designed to encourage development of the mineral resources of the province; the inspection of exploration work carried out on concession areas and the examination of mining operations; the administration of beaches (control of removal of sand and gravel as a conservation measure) and the collection of data relevant to the control of sand removal; the identification of mineral rock specimens submitted by the public and the examination of corresponding occurrences where such is warranted; the dispensing of technical advice, in so far as possible, to those who seek such service (i.e., in hydrological problems and on the availability of quarriable peat moss to be removed by permit); co-operation with the Geological Survey of Canada and other Federal Government agencies; and the preparation and publication of data useful for educational and general informational purposes, including the preparation of mineral and rock sample sets. Geological reports, geophysical maps and compilations of general data pertaining to specific areas are procurable at nominal cost and other information from unclassified files is made available to interested parties. Prospector's or miner's permits are issued by the Mines Branch and mining claims are recorded.

Nova Scotia.—Under the provisions of the Mines Act (RSNS 1954, c. 179), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosseuts, raises and levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour, or the guarantee of bank loans. Any such work must be approved by the Department of Mines. Mining machinery and equipment to be used in searching for or testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation, on payment, of unworked coal lands, the operation of coal mines, and loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the province.

New Brunswick.—The Mines Division of the Department of Natural Resources has three Branches. The *Mineral Resources Branch* administers the disposition of Crown mineral rights including the issuing of prospecting licences, recording of mining claims, issuing of mining licences and leases and other matters pertaining thereto. Detailed and index claim maps are prepared for distribution. The Branch is responsible for general and detailed geological mapping and investigations. Maps and reports are prepared for distribution, mineral and rock specimens are examined for prospectors and preliminary examinations of mineral prospects are made when requested and circumstances warrant. The *Mines Branch* administers the safety regulations governing operations under the Mining Act. All mines are regularly inspected, laboratory facilities are maintained and certain equipment used in mines must be approved. The Branch is responsible also for the collection of mining taxes and royalties and the preparation of statistics on mineral production. The *Water Branch* administers the Water Act, is responsible for the use and allocation of all surface, ground and shore waters and for pollution control measures and implements policy matters as determined by the New Brunswick Water Authority. A Regional Office located at Bathurst, staffed by geologists and inspectors, serves as a recording office for northeastern New Brunswick and another at St. George, staffed by a senior

* Compiled from material supplied by the respective provincial governments.

geologist, conducts regional work and assists exploration companies and prospectors working in the southwestern area. Claim maps and topographical, geological and aeromagnetic maps are available for perusal and distribution.

Quebec.—Through its Director-General of Mines, the Department of Natural Resources is responsible for implementing the Mining Act (SQ 1965, c. 34) and the Mining Duties Act (SQ 1965, c. 35). The directorate includes the following four branches: Geological Services, Mining Services, Laboratory, and Pilot Plant, as well as three divisions: Taxation, Mining Conflicts and Mines Archives.

The Geological Services Branch is concerned with geological exploration, mineral deposits, mapping and hydrogeology. It conducts studies on the geological composition of Quebec territory for the development of mineral resources; following yearly expeditions, detailed reports of the findings and geological maps of different regions are made available for the use of interested persons. A unique system of index plans affords prospectors a precise, quick and valuable technical documentation. The Branch also conducts surveys on underground water and supervises drilling and boring by private companies exploring for hydrocarbons.

The Mining Services Branch is concerned with civil engineering and mining exploration and inspection. It issues prospecting and development permits, grants mining lands for working purposes, and collects fees for mining rights. It is responsible for the inspection of mines, quarries and processing plants to ensure that operations are consistent with regulations and to ensure the safety of mine workers. A trained rescue crew of about 375 members operates as three main groups and nine secondary groups. In addition, all workers in active underground mines are trained in rescue operations. The Department undertakes the construction and maintenance of mining roads as authorized under the Mining Act; it has constructed and paid the full cost of certain highways leading to new mining districts. In addition, to avoid the establishment of slums in the vicinity of mining enterprises, the Department regulates the use of the land and authorizes the building of well-organized residential areas.

Laboratories, operated for the use of prospectors, geologists, engineers and mine operators, include equipment for mineralogy, petrography, the dressing of ore, wet and dry assays, spectrography or X-ray photography. Mineral determinations are made free of charge but the assaying of ore content is subject to a fee; free coupons are issued by the Department to be used by prospectors for payment of assays. The laboratories have patented 12 new processes for the extraction and treatment of minerals and, because of the development of such new metallurgical processes, certain minerals once deemed valueless are now of great commercial importance.

The Taxation Division levies duties on mining operations as stipulated in the Mining Duties Act. The Mining Conflicts Division verifies the existence or the validity of claims as provided for in Part VI of the Mining Act. The maintenance and custody of mining records is the responsibility of the Mines Archives Division.

To provide for the future development of the mining industry, scholarships are granted to students wishing to follow a career in geology, mining and metallurgical engineering, as well as to students in hydrology or other relevant fields of science (hydro-electricity, hydraulics or meteorology). The Department, in co-operation with universities in Quebec and Montreal, gives yearly courses in prospecting and lectures are given by departmental geologists and engineers at various points in the province.

Ontario.—The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the province. The Mining Lands Branch of the Department handles all matters dealing with the recording of mining claims, assessment work, etc., and the preparation of title to mining lands. As a service to the mining public, individual township maps are prepared and kept up to date, showing lands open for staking and recorded and patented claims therein. District Mining Recorders maintain

offices at strategic locations throughout the province. The Geological Branch carries on a continuing program of geological mapping and investigations and prepares, for the use of the public, detailed reports and maps of the areas studied. In co-operation with the Geological Survey of Canada, a program to fly and map the province by airborne magnetometer surveys will be completed this year. In many active areas of the province resident geologists gather and make available to the public information concerning geological conditions, exploration and development within their respective districts. A geologist specializing in industrial minerals investigates methods of treatment and recovery of such minerals and compiles data on the uses, specifications and markets for such products. During the winter months, courses of instruction for prospectors are held in various centres throughout the province.

The Laboratory Branch provides assay and analytical services and conducts mineralogical investigations to aid in the discovery and development of mineral deposits. Its services are available to the mining industry and the public at large. The Temiskaming Testing Laboratory, situated at Cobalt, operates a bulk sampling plant and assay laboratory to assist the producers of the area in marketing their silver-cobalt ores.

The Inspection Branch administers the operating rules of the Mining Act which call for the regular examination of all operating mines, quarries, sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the province. Mine rescue stations in the principal mining sections are operated under the supervision of the Branch and all hoisting ropes in use at mines are periodically tested by a Branch-operated cable-testing laboratory.

Since 1951 the Department has been engaged in a road-building program to give access to mineralized areas and open them for full development. In 1955 this became an inter-departmental project with other interested departments participating through an inter-departmental committee of Ministers which decides on priorities and locations. Actual construction is carried out by the Department of Highways. Under the federal-provincial Roads to Resources Program inaugurated in Ontario in 1959, the provincial government shared equally in the cost of constructing roads to otherwise inaccessible areas (see also the Transportation Chapter, Part III, Section 2). The agreement expired on Mar. 31, 1967.

The Public Relations Branch of the Department carries out a regular publicity and information program and maintains a library of films on mining subjects which are available for free loan to the public. Each year, displays pertaining to mining are prepared and presented at the Canadian National Exhibition and elsewhere in the province.

Manitoba.—The Mines Branch of the Manitoba Department of Mines and Natural Resources offers five main services of assistance to the mining industry: maintenance, by the Mining Recorder's offices at Winnipeg and The Pas, of all records essential to the granting and retention of titles to every mineral location in Manitoba; compilation, by the geological staff of the Branch, of historical and current information pertinent to mineral occurrences of interest and expansion of this information by a continuing program of geological mapping; enforcement of mine safety regulations and, by collaboration with industry, introduction of new practices such as those concerned with mine ventilation and the training of mine rescue crews which contribute to the health and welfare of mine workers; and maintenance of a chemical and assay laboratory to assist the prospector and the professional man in the classification of rocks and minerals and the evaluation of mineral occurrences. Manitoba also aids the mining industry by assisting in the construction of access roads to mining districts.

To encourage the exploration for minerals in Manitoba, the Mineral Exploration Assistance Act was passed in April 1966. This Act provides for the payment of grants to individuals to assist in defraying the cost of exploration within designated areas. If assisted exploration results in the discovery of a deposit, the grant is repayable from the profits of the mine; a grant for exploration that proves unsuccessful is not repayable.

Saskatchewan.—Assistance to the mining industry in Saskatchewan is administered by the Department of Mineral Resources. The *Mineral Lands Branch* of the Department is responsible for administering the Precambrian Assistance Program. This Program, designed to stimulate development and utilization of the mineralized areas of northern Saskatchewan, offers to industry a 50-p.c. rebate of approved exploration expenditures on a specified area or property to a maximum of \$50,000 a year for each individual or company and a maximum of \$150,000 on any one area or property. This Branch is also responsible for making disposition of all Crown minerals and maintains records respecting areas let out by lease, permit or claim. Recording offices, located at Regina, La Ronge, Uranium City and Creighton, assist the public in determining the lands available and accept applications.

Officers of the *Mines Inspection Branch*, under the authority of the Mines Regulation Act, make regular examinations of all mines to ensure proper conditions for the health and safety of the men employed. Safety education, particularly in the form of first aid and mine rescue instruction, is also a part of the work of this Branch. All Branch officers are stationed at the Regina headquarters.

The Precambrian Geology Division of the *Geological Sciences Branch* conducts geological surveys in the shield areas of the province and publishes maps and reports for the information and guidance of the industry. Resident geologists are maintained at Uranium City and La Ronge and at the latter centre a laboratory provides for the storage and examination of core and samples. The Division processes exploration data and assessment work to be made available for inspection by the industry.

Alberta.—Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and pays the cost of training mine rescue crews. The oil and gas industries are served in a similar way by the Oil and Gas Conservation Board. Its regulatory measures, however, are also concerned with preventing the waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the province and has carried forward projects concerned with the uses and development of minerals. The Council has studied the occurrence, uses and analyses of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, and the up-grading and cleaning of coal, and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture. (See also p. 412).

The province from time to time has had commissions examine various aspects of the mining industry when it has considered that their findings would be of assistance in developing such industries. The province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, maintains a detailed supervisory and safety training program concerned with the drilling of oil and gas wells. Of assistance also to mining companies and oil companies are the special reductions provided for in the Alberta Income Tax Act. These follow the parallel provisions in the federal Income Tax Act.

British Columbia.—The Department of Mines and Petroleum Resources of British Columbia provides the following services: detailed geological mapping as a supplement to the work of the Geological Survey of Canada; free assaying and analytical work for prospectors registered with the Department; assistance to the prospector in the field by depart-

mental engineers and geologists; grub-stakes, limited to a maximum of \$800, for prospectors; assistance in the construction of mining roads and trails; and inspection of mines to ensure safe operating conditions.

Section 3.—Mining Legislation

Federal Mining Laws and Regulations.—As of Jan. 1, 1968, the mineral rights vested in the Crown in right of Canada are those situated in the Yukon Territory and the Northwest Territories, those in the islands of Hudson Bay and under Hudson Bay and Hudson Strait, and those under Canada's continental shelves. The Supreme Court of Canada in a recent decision made it clear that, as between Canada and the Province of British Columbia, the Crown in right of Canada owns and has legislative jurisdiction over "lands, including mines and minerals and other natural resources, of the sea bed and subsoil seaward from the ordinary low-water mark on the coast of the mainland and the several islands of British Columbia, outside the harbours, bays, estuaries and other similar inland waters to the outer limits of the territorial sea of Canada, as defined in the Territorial Sea and Fishing Zones Act. . .". The Court also decided that the Federal Government owns and has legislative jurisdiction "in respect of the mineral and other natural resources of the sea bed and subsoil beyond that part of the territorial sea of Canada . . . to a depth of 200 meters or, beyond that limit, to where the depth of the superjacent waters admits of the exploitation of the minerals and other natural resources of the said area".

In addition, the mineral rights of some small and usually isolated areas scattered throughout the provinces are vested in the Crown in the right of Canada. The Department of Energy, Mines and Resources is responsible for the disposition of mineral rights and for the administration and enforcement of regulations relating to minerals in Canada's offshore areas, other than those under Arctic coastal waters, in Hudson Bay, the islands in Hudson Bay, Hudson Strait and the small parcels above mentioned. The Department of Indian Affairs and Northern Development is similarly responsible in the Yukon Territory, the Northwest Territories and the offshore rights under Arctic coastal waters; this Department also acts as adviser to Indian bands in Indian reserves and is responsible for the administration and enforcement of the relevant regulations.

Mineral rights of Indian reserves in the provinces are also vested in the Crown in the right of Canada and are administered by the Indian Affairs Branch of the Department of Indian Affairs and Northern Development. The minerals on an Indian reserve may be developed under the Indian Oil and Gas Regulations or the Indian Mining Regulations for the benefit of the band of Indians having rights to the reserve, only after the band has given approval by referendum. Indian band councils are encouraged to take a share of responsibility in the management of their mineral resources.

Mining exploration is carried out in the Yukon Territory in accordance with the provisions of the Yukon Quartz Mining Act and the Yukon Placer Mining Act; in the Northwest Territories, including Arctic coastal waters, operations are governed by the Canada Mining Regulations 1961 as amended. There are also the Territorial Dredging Regulations, Territorial Coal Regulations and Territorial Quarrying Regulations common to both territories. In the Yukon Territory, mining rights may be acquired by staking claims under the appropriate Acts or Regulations. A one-year lease may be obtained to prospect for the purposes of placer mining, renewable for two additional periods of one year each; a 21-year lease, renewable for a like period, may be obtained under the Yukon Quartz Mining Act.

Under the Canada Mining Regulations, a prospector's licence is required. Staked claims must be converted to lease or relinquished within ten years. In certain areas, a system of exploration by permit over large areas is allowed. Any individual over 18 years of age or any joint-stock company incorporated or licensed to do business in Canada may hold a prospector's licence. No lease will be granted to an individual unless the Minister of the Department involved is satisfied that the applicant is a Canadian citizen and will be

the beneficial owner of any interest acquired under such lease; no lease will be granted to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are owned by Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange and that Canadians will have the opportunity of participating in the financing and ownership of the corporation. Any new mine beginning production after the Canada Mining Regulations came into force in 1961 will not be required to pay royalties for a period of 36 months, starting from the day the mine comes into production. Production date is established as the date determined under the provisions of the Income Tax Act.

An exploration assistance fund for petroleum and other minerals in the Yukon and Northwest Territories was established by the Federal Government in 1966. Initially limited to \$3,000,000 per year, the fund may provide 40 p.c. of the cost of approved exploration programs. Assistance is available only to Canadian citizens or companies incorporated in Canada. Named the Northern Mineral Exploration Program, it is designed to encourage investment from additional Canadian sources previously not attracted to investment in northern exploration operations.

Oil and Gas Legislation.—The Canada Oil and Gas Land Regulations and the Canada Oil and Gas Drilling and Production Regulations, issued pursuant to the Territorial Lands Act and the Public Lands Grants Act, regulate the disposition of oil and gas rights and regulate exploration and development in the Yukon Territory, the Northwest Territories and the offshore areas of the continental shelves, but not under lands within any provinces. Only subsurface rights and those beneath the sea bed are granted. When required, surface rights are negotiated separately. An exploratory permit may be granted and such permit issued on or after Jan. 1, 1968, depending on the area covered thereby, is valid for a term of three, four or six years; a permit is renewable for one-year periods up to six times by the Chief of the Resources Management Division, Resource and Economic Group, Department of Indian Affairs and Northern Development, and further renewals may be granted by the Minister. Leases, which are renewable if oil or gas is still able to be produced, must conform to prescribed land patterns but must not exceed 50 p.c. of the area of an exploratory permit area.

An oil and gas exploratory permit may be issued to any individual over 21 years of age or to any joint-stock company incorporated or licensed to do business in Canada, or incorporated in any province of Canada. No oil and gas lease granted to a permittee will be issued to an individual unless the Minister of the Department involved is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease, or to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are beneficially owned by persons who are Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange, and that Canadians will have an opportunity of participating in the financing and ownership of the corporation.

*Provincial Mining Laws and Regulations.**—In general, all Crown mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves, National Parks and other lands which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments. The exception is Quebec where all mineral lands except those granted to individuals in the townships prior to 1880 are administered by the province; also mining rights on federal lands in Quebec are administered by the province.

The granting of land in any province except Ontario and Nova Scotia no longer carries with it mining rights upon or under such land. In Ontario, mineral rights are expressly reserved if they are not to be included. In Nova Scotia, no mineral rights belong to the owner of the land except those pertaining to gypsum and building materials, and

* Compiled from material supplied by the provincial governments.

the Governor in Council may declare deposits of either limestone or building materials to be minerals. Such declaration is to be based on economic value or to serve the public interest. In such case, the initial privilege of acquiring the declared minerals lies with the owner of the surface rights who must then conform with the requirements of the Mines Act. In Newfoundland, mineral and quarry rights are expressly reserved. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, Quebec and Newfoundland also included certain mineral rights. Otherwise, mining rights must be obtained separately by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum and gas) and quarrying. Provincial mining regulations under these divisions are summarized in the following paragraphs.

Placer.—In most provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

General Minerals.—These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia, the most elaborate laws and regulations apply in this division. In all provinces except Alberta and Saskatchewan, a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some areas but limited in others; a claim of promising ground of a specified size may then be staked. In Manitoba and British Columbia a licence is required only for staking and in British Columbia any number of dispositions may be staked under one licence. A claim must be recorded within a time limit and payment of recording fees made, except in Quebec where no fees are required. Work to a specified value per annum must be performed upon the claim for a period of up to ten years except in Quebec where a development licence may be renewed on a yearly basis; also in Saskatchewan there is no work commitment in the first year of the claim. There is no time limit in British Columbia but \$500 assessment work, of which a survey may represent two fifths, must be performed and recorded before a lease may be obtained. In Quebec, a specified number of man-hours of work must be performed and the excess may be carried forward for renewal of licence. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In Saskatchewan, subsurface mineral regulations covering non-metallics stipulate the size and type of dispositions that may be made in order to maintain the disposition in good standing, provide for fees, rentals and royalties, and set out generally the rights and obligations of the disposition holder.

Fuels.—In provinces where coal occurs, the size of holdings is laid down together with the conditions of work and rental under which they may be held. In Quebec, the search for and development of petroleum and natural gas may be carried out under a prospecting or search permit followed by a working lease; the search permit covers a period of five years and an acreage of not over 60,000 acres, whereas the lease extends over a 20-year period and an acreage not over half the acreage of the permit. In Nova Scotia, mining rights to certain minerals, including petroleum, occurring under differing conditions may be held by different licensees. Provision is sometimes made for royalties. Acts or regulations govern methods of production. In the search for petroleum and natural gas, an exploration permit or reservation is usually required; however, in Manitoba, Saskatchewan, Alberta and British Columbia leases usually follow the exploration reservation whether or not any discovery of oil or gas is made. In Manitoba and Alberta, exploration costs are applicable in part on the first year's lease rental and, in British Columbia and Saskatchewan, credit is given for up to 24 months' rental, having regard to the amount of excess credit established. In other provinces, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area, subject to carrying out drilling obligations and paying a rental, a fee, or a royalty on production.

Quarrying.—Regulations under this heading define the size of holdings and the terms of lease or grant. In Nova Scotia, sand deposits of a quality suitable for uses other than building purposes and limestone deposits of metallurgical grade belong to the Crown; gypsum quarries belong to the owner of the property. Under the New Brunswick Quarriable Substances Act, 1968, quarriable substances (ordinary stone, building and construction stone, sand, gravel, peat and peat moss) are vested in the owner of the land in or on which they lie; the Minister with the approval of the Lieutenant-Governor in Council may designate a shore area lying outside Crown land to be subject to the Act; and no person shall take or remove or cause to be taken or removed more than one half cubic yard of a quarriable substance from Crown land or a designated shore area without obtaining a permit or lease. On Quebec public lands and on those granted to individuals after Jan. 1, 1966, the stone, sand and gravel, like other building materials, belong to the Crown; quarries located on land granted to individuals prior to 1966 remain in the possession of the owners of the surface; the right to exploit all building materials except sand and gravel may be acquired by ordinary staking-out and the right to work sand and gravel beds is set by regulation. In Saskatchewan, sand and gravel on the surface and all sand and gravel obtainable by stripping off the overburden or other surface operation belong to the owner of the surface of the land. In Alberta, sand, gravel, clay and marl recovered by excavating from the surface belong to the owner of the surface of the land.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

Section 4.—World Production of Certain Metallic Minerals and Fuels

Table 34 shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1966. These figures are taken from the *United Nations Statistical Yearbook 1967* which presents production figures for a much more extensive list of mining and quarrying industries.

34.—World Production of Certain Metallic Minerals and Fuels, 1966

NOTE.—Where dashes occur throughout this table they indicate that no figures were given in the *United Nations Statistical Yearbook* either because there was no production or because the quantity was not available.

Section 1.—Electric Power Development

Subsection 1.—Historical and Current Trends in Power Development

Electric power development in Canada has undergone remarkable and sustained growth since the beginning of the century. From a modest 133,000 kilowatts of generating capacity installed at the end of 1900, Canada's installed hydro capacity rose to 23,405,000 kw. by the end of 1967 and thermal capacity to almost 9,600,000 kw.

The facing chart shows the expansion in installed generating capacity in hydro and thermal stations that has taken place since 1920. Thermal-electric power development in Canada was not well documented early in the century but it is apparent that its growth was slow and of relatively minor importance until the late 1940s. The rate of development of hydro facilities, on the other hand, tended to accelerate after the turn of the century when improvements in electric power transmission techniques were introduced and increasing emphasis began to be placed on the construction of large hydro-electric stations.

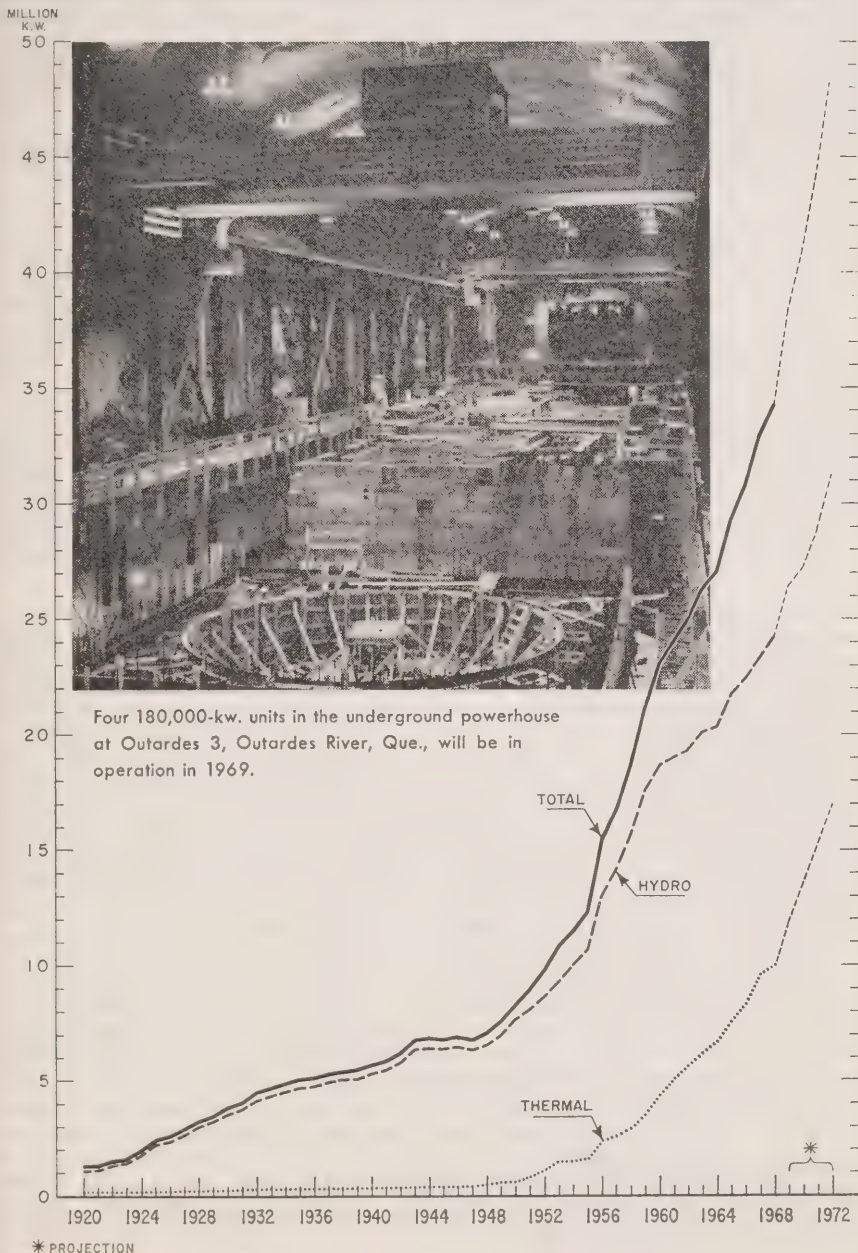

During the prosperous 1920s, demand for electricity became heavier and the rate of installation increased appreciably. Then, under the depressed conditions of the early 1930s, power demand dropped off but did not show up immediately as a drop in the installation rate because of the time lag inherent in hydro-electric power development. The completion of hydro projects initiated prior to the depression period accounted for the continuation of a high rate of capacity installation up until 1935; thereafter, poor economic conditions in the 1935-39 period resulted in a reduced rate.

In the early war years, the tremendous demand for power to drive Canada's war industries accounted for the sharp rise in installation of new generating facilities between 1940 and 1943, but in the later war years construction dropped off so that, from 1944 to 1947, a second flattening occurred in the growth curve. After the War, industrial expansion and rapidly growing residential and agricultural development placed extremely heavy demands on power generating facilities. To stay abreast of these demands required

* Sections 1 and 2 of this Chapter were prepared by the Water Resources Branch, Department of Energy, Mines and Resources, Ottawa; Sections 3 and 4 were revised by the Energy Statistics Section, Industry Division, Dominion Bureau of Statistics, and Section 5 by the various provincial Commissions concerned.

A special article on "Fuels in Canada", which discusses the sources and utilization of energy in Canada, appears in the preceding chapter at pp. 637-645.

GROWTH IN ELECTRIC POWER GENERATING CAPACITY IN CANADA, 1920-72

the installation of new capacity at a rate higher than at any time in Canada's history. These demands also led to the start of an extensive program of thermal plant construction in the early 1950s, since they could not be satisfied from hydro sources alone. In the period 1950-67, the average annual rate of installation of both hydro and thermal facilities was about 1,400,000 kw., with hydro contributing two kilowatts of new capacity for each kilowatt contributed by thermal. However, it is interesting to note that the average increase in thermal generating capacity over the five years 1963-67 has equalled the average increase in hydro capacity.

Table 1 shows the status of installed generating capacity in hydro and thermal stations and the combined total for all stations in Canada as at Jan. 1, 1968.

Current Trends.—Although water power traditionally has been and still is the main source of electric energy in Canada, thermal sources some day will undoubtedly become the main supplier. The choice between development of a hydro-electric power site and construction of a thermal generating station must take into account a number of complex considerations, the most important of which are economic in nature. In the case of a hydro-electric project, the heavy capital costs involved in construction are offset by maintenance and operating costs considerably lower than those for a thermal plant. The long life of a hydro plant and the dependability and flexibility of operation in meeting varying loads are added advantages. Also important is the fact that water is a renewable resource. The thermal station, on the other hand, can be located close to the demand area, with a consequent saving in transmission costs. With the current trend to large steam stations, however, a certain amount of the flexibility of location of thermal stations is lost because such units require considerable quantities of water for cooling purposes, making it essential that they be sited close to an adequate water supply.

The marked trend to thermal development which became apparent in the 1950s can be explained in part by the fact that, by that time in many parts of Canada, most of the hydro-electric sites within economic transmission distance of load centres had been developed and planners had to turn to other sources of electric energy. More recently, however, advances in extra-high-voltage transmission techniques are providing a renewed impetus to the development of hydro power sites previously considered too remote.

Because of the relatively long starting-up time required by large thermal units, thermal stations tend to lack flexibility of operation and can be used most efficiently to meet continuous load conditions. Hydro stations, on the other hand, can put generating units on line with minimum delay and hence are admirably suited to supply power to meet the peak loads which may occur several times each day. By combining the advantages of both hydro and thermal stations in integrated supply systems, power producers are now achieving much greater flexibility of operation.

Another trend in development designed to meet the problem of varying daily loads is the use of pumped storage. An example is the Sir Adam Beck hydro development at Niagara Falls where water taken from the Niagara River above the Falls is carried by tunnel and power canal to penstocks which supply the main generating station on the bank of the Niagara River some distance below the Falls. In off-peak hours, power from the main station is used to pump water from the power canal into a reservoir maintained at a higher level; during peak-load hours, the pumps, which are dual-purpose units, operate as generators and are driven by water released from the reservoir. The pumping-generating units at this development make available an extra 176,700 kw. of generating capacity. A pumping-generating station using the same general principle has been constructed on the Brazeau River in Alberta as part of the 305,500-kw. Big Bend hydro development.

Perhaps the most promising application of the pumping-generating principle is its use in conjunction with nuclear power stations. Nuclear units, in common with the larger conventional thermal units, can be used most efficiently under conditions of continuous operation. Off-peak nuclear power can be used to operate pump-turbine units and the hydro-electric power derived from operating the units as generators is available for use during periods of peak demand.

Subsection 2.—Utilization of Power

In 1967, Canada's generating facilities produced a total of 165,625,000,000 kilowatt-hours of electric energy, after allowing for the energy used in the power stations themselves. Of this total, 132,747,000,000 kwh. was produced in hydro-electric stations and 32,878,000,000 kwh. in thermal stations. Energy imported from the United States exceeded by 187,000,000 kwh. the energy exported to the United States during the year, bringing to 165,812,000,000 kwh. the total energy made available. The diagram illustrates how this energy was used.

Industry uses approximately 55 p.c. of the total electric energy made available in Canada; residential and farm use accounts for 21 p.c. and commercial use 15 p.c. The remaining 9 p.c. is listed under "losses and unaccounted for". Because many power producers do not distinguish in their records between residential and farm customers, the amount of energy used is shown as a combined total. Energy used for street lighting represents less than 1 p.c. of the total energy made available and is included in the "commercial" category.

About 20 p.c. of the total energy made available in Canada is used in the mineral industry, including smelting and refining, 16 p.c. by the pulp and paper industry and 19 p.c. by other industries. Of the latter, the chemical industry and the primary iron and steel industry together consume almost one half. Approximately 75 p.c. of the energy consumed by the mineral industry is used in the smelting and refining of metals.

The incidence of large water power resources in those regions in which the more important mineral deposits have been found has greatly facilitated mining development. Recent examples are the nickel mining and refining complex at Thompson, Man., which uses hydro-electric power generated in the Kelsey plant on the Nelson River, and the iron

ore mining operations in Labrador, supplied by the Twin Falls plant on the Unknown River. Metal mining, a very important division of the Canadian mining industry, is carried on mainly in two physiographic regions, the Western Cordillera and the Canadian Shield. In the Western Cordillera, the mountainous topography and the relatively high amounts of precipitation favour the development of water power. In the Canadian Shield, which is a Precambrian formation stretching in a wide sweep around Hudson Bay from the Mackenzie River basin to the eastern tip of Labrador, heavy glaciation in recent geological times has formed river systems which are comparatively young and are characterized by large numbers of lakes connected by short river sections with numerous rapids and falls suitable for the development of hydro-electric power.

Canada has no known deposits of bauxite but the availability of low-cost hydro-electric power has fostered the establishment of a large aluminum industry which produces one eighth of the world's supply of this metal, most of which is exported from Canada. Further evidence of the value of water power to mining operations is provided by the fact that Canada's asbestos industry, which produces about 40 p.c. of the world's supply of asbestos fibre, obtains the major part of its power supply from hydro-electric sources.

Canada's pulp and paper industry is one of the world's great industrial enterprises. Total mill capacity for the production of newsprint paper is considerably greater than that of any other country in the world, and in total production of wood pulp Canada is second only to the United States. The fact that about 90 p.c. of the manufactured newsprint is exported gives some indication of the importance of the industry to the Canadian economy. By far the larger portion of the energy used in the pulp and paper industry is derived from water power.

Subsection 3.—Water Power Resources, Undeveloped and Developed

Table 2 presents a summary of developed water power in Canada and an estimate of undeveloped water power potential, based on records maintained by the Inland Waters Branch of the Department of Energy, Mines and Resources. Estimates of available power are shown for undeveloped sites only; for developed sites, the total generating capacity actually installed is indicated. It should be noted that the capacity installed at an existing hydro-electric development is frequently in excess of the continuous power available at the site. The relationship between installation and available power is explained on p. 665.

2.—Water Power Resources, by Province, as at Jan. 1, 1968

¹ Power equivalent of flow available 95 p.c. of the time.
the time.

² Power equivalent of flow available 50 p.c. of the time.

³ Power equivalent of arithmetical mean flow.

Undeveloped Water Power Resources.—Table 2 gives estimates of undeveloped power based on different rates of flow: the first column indicates continuous power ordinarily available during periods of low discharge under existing conditions of river flow based on Q95, which is the natural or modified flow available 95 p.c. of the time; the second column shows dependable maximum power based on Q50, which is the natural or modified flow available for at least 50 p.c. of the time; and the third column shows dependable maximum power based on Qm, the arithmetical mean flow. On rivers for which flow records are sparse or non-existent, estimates of flow are made from available information relating to run-off in the same general area. The hydraulic head used in calculating undeveloped water power is based on the actual drop or the feasible concentration of head which has been measured or carefully estimated. Preliminary figures for Quebec supplied by the provincial Department of Natural Resources, however, reflect the net river power potential which would result from development of the entire head available on Quebec rivers whose drainage areas exceed 3,000 sq. miles.

It should be emphasized that the figures of continuous power at Q95 represent only the minimum water power possibilities in Canada because estimates are based upon existing river flow and, for the most part, do not reflect the benefits of streamflow regulation that would result from the development of storage potential. Partial regulation is required in most instances to obtain the continuous power available at Q50. On the other hand, the arithmetical mean flow figures represent the power that would be obtainable if the entire flow in the river could be regulated to provide a continuous flow of constant magnitude. It can readily be seen that, because the latter condition assumes complete regulation, estimates of potential based upon arithmetical mean flow will, if other pertinent factors are neglected, exceed the amount of capacity that might be expected to be installed at the site, particularly where little or no storage is available. However, recent experience in the development of water power sites has indicated that, in fact, the generating capacities installed at many sites are very considerably in excess of what might be dictated by even the arithmetical mean flow. Several major river-diversion possibilities exist, particularly in British Columbia. For this reason, the estimates of potential of British Columbia's undeveloped hydro resources have recently been boosted substantially, mainly because of the inclusion of figures based upon the diversion of rivers which, if they are developed at all, will almost certainly be developed on a combined-river basis.

Developed Water Power Resources.—The figures of installed generating capacity given in Table 2 are based on the manufacturer's rating in kilowatts as shown on the generator name-plate, or derived from the rating where it is indicated in kilovolt-amperes. The maximum economic installation at a power site can be determined only by careful consideration of all the conditions and circumstances pertinent to its individual development. It is usual practice, however, to install units having a combined capacity in excess of the available continuous power at Q50, and frequently in excess of the power available at Qm. There are a number of reasons for this. The excess capacity may be installed for use at peak-load periods, to take advantage of periods of high flow, or to facilitate plant or system maintenance. In some instances, storage dams have been built subsequent to initial development to smooth out fluctuations in river flows. In other cases, deficiencies in power output during periods of low flow have been offset by auxiliary power supplied from thermal plants, or by interconnection with other plants which operate under different load conditions or are located on rivers with different flow characteristics.

Thus, the extent to which the installed capacity exceeds the available continuous power at the various rates of flow is dependent upon the factors that govern the system of plant operation, and varies widely in different areas of the country. In some developments, the difference may amount to several hundred per cent. For this reason, discretion should be used in comparing the figures in the last column with those in the preceding columns, as available continuous power and installed capacity are not directly

comparable. As a rough guide, however, it may be assumed that the power equivalent of the flow at Q50 represents an approximate, if conservative, estimate of hydro generating capacity remaining to be installed in Canada.

Provincial and Territorial Distribution.—The provincial and territorial distribution of undeveloped water power resources and installed generating capacity, given in Table 2, reveals that substantial amounts of water power have been developed in all provinces except Prince Edward Island, where water power resources are meagre. As natural resource development proceeds, the fortunate incidence of water power in proximity to mineral, forest and other resources becomes increasingly apparent. There is little doubt that the existence of large amounts of potential hydro power on northern rivers will prove to be a factor of prime importance in the eventual realization of the natural wealth of Canada's north.

The water power resources of *Newfoundland*, determined on the basis of the limited available streamflow data, are estimated to be of very considerable magnitude. On the Island, although the length of the rivers is generally not great, topography and run-off are favourable for hydro-electric power development. Of the substantial capacity installed, a very large portion serves the pulp and paper industry. In Labrador, the Churchill River and its tributaries, now under development, constitute one of the largest potential sources of water power in Canada.

In *Prince Edward Island* there are no large streams and water power plants are limited in size to those used to operate small mills. The water power resources of *Nova Scotia* and *New Brunswick*, although small in comparison with those of other provinces, are a valuable source of energy and make a substantial contribution to the economies of the two provinces. Numerous rivers in both provinces provide moderate-sized power sites either within economic transmission distance of the principal cities and towns or advantageously situated for use in development of the timber and mineral resources. These provinces are also favoured with abundant indigenous coal supplies.

Quebec is the richest of all the provinces in water power resources, possessing more than 40 p.c. of the total recorded for Canada. Quebec also leads in developed water power, its present installation of 11,009,000 kw. representing about 47 p.c. of the national total. The largest single hydro-electric installation in Canada is the Quebec Hydro-Electric Commission's 1,574,260-kw. Beauharnois development on the St. Lawrence River; also notable are the Commission's 1,015,200-kw. Manic 2 development on the Manicouagan River, its Bersimis I development on the Bersimis River having an installed capacity of 912,000 kw., and the Aluminum Company of Canada Limited's 742,500-kw. Chute des Passes plant on the Peribonca River. The Manic 2 development is part of a major power project which represents a significant advance in the development of Quebec's hydro-electric resources. This project, involving the harnessing of the headwaters of the Manicouagan and Outardes Rivers, will permit the eventual installation of some 5,500,000 kw. on the two rivers; a total installation of 1,550,000 kw. was in service at the end of 1967. Power production in the province is facilitated by the regulation of streamflow by the provincial Department of Natural Resources through the storage dams which it owns and operates. Some of the responsibility for regulation rests with the Quebec Hydro-Electric Commission.

Almost all of the sizable water power potential in *Ontario* within easy reach of demand centres has been developed and planners are looking to the more remote sites as new sources of supply. Improvements in long-distance transmission techniques have brought many of these sites within the economic orbit of demand centres. Several sites are being developed and a number of others are under investigation. Most of the hydro-electric power produced in the province comes from the generators of The Hydro-Electric Power Commission of Ontario, Canada's largest power producing and distributing organization. Ontario's largest hydro-electric generating station is located on the Niagara River at Queenston, where the Sir Adam Beck-Niagara Generating Stations Nos. 1 and 2 and the

associated pumping-generating station have a combined generating capacity of 1,804,200 kw. In addition to the power generated in its own plants, the Commission purchases large amounts of electric power generated outside the province.

Of the three Prairie Provinces, *Manitoba*, with immense hydro-electric capabilities on the Winnipeg, Churchill, Nelson and Saskatchewan Rivers, is the most generously endowed with water power resources. Until recently, hydro-electric generating stations on the Winnipeg River supplied most of the power requirements of southern Manitoba. Manitoba Hydro's high-voltage, long-distance transmission lines, however, will carry ever-increasing amounts of power south from hydro-electric stations on northern rivers to help meet the province's constantly growing power demands. Large water power resources exist in the central and northern parts of *Saskatchewan*, principally on the Churchill, Fond du Lac, and Saskatchewan Rivers. Power from Squaw Rapids on the Saskatchewan River is fed into the transmission network of the provincially owned Saskatchewan Power Corporation, which serves the more settled areas of the province. Before the completion of this development in 1963, these areas had been served by electric power from thermal plants fuelled by coal, oil or natural gas, the hydro-electric power generated in the province being used almost exclusively for mining purposes in northern areas. In *Alberta*, most of the principal hydro-electric developments are located on the Bow River and its tributaries and, from these developments, Calgary Power Ltd. serves most of the southern part of the province. The Big Bend hydro-electric development on the Brazeau River in the headwaters of the North Saskatchewan River was completed in 1967, augmenting the energy from the Bow River plants. Substantial water power resources are located in the northern regions and, although these are somewhat remote from present centres of population, the advent of extra-high-voltage transmission has enhanced the prospect of their development.

British Columbia has many mountain streams that offer abundant opportunity for the development of hydro-electric power. In terms of recorded available water power resources, developed and undeveloped, the province ranks second in Canada and is exceeded only by Quebec and Ontario in the amount of generating capacity installed. Notable for the magnitude of their power potential are such rivers as the Columbia, the Fraser, the Peace and the Stikine. Until recently, however, hydro-electric developments on smaller rivers in the southern areas have satisfied the major load requirements of the province but in 1968 the immense power resources of the Peace River began to supplement the energy supply. Development of the hydro potential of the Canadian portion of the Columbia River is being planned, utilizing the water stored behind three huge storage reservoirs, two of which have been completed. The foremost producer and distributor of electric power in British Columbia is the provincially owned British Columbia Hydro and Power Authority.

Power from present developments in the *Yukon Territory* and the *Northwest Territories* is used almost exclusively to satisfy the needs of local mines and adjacent settlements. Owing to the lack of developed native fuel sources and to transportation difficulties, water power is of special importance in the development of mining areas, such as Mayo in the Yukon Territory and Yellowknife in the Northwest Territories. The Northern Canada Power Commission, a federal Crown corporation, is responsible for the construction and management of public utility plants. In Yukon Territory, most of the resources are located on the Yukon River and its tributaries. The possibility exists of diverting the headwaters of the Yukon River through the Coast Mountains to utilize a high head near tidewater in northern British Columbia but such a development would affect adversely the potential of sites on the main river. Resources in the Northwest Territories have not been surveyed to the same extent as those in Yukon Territory but they are nevertheless known to be of considerable magnitude, particularly on rivers flowing into Great Slave Lake. Of major significance, as well, is the hydro-electric potential of the South Nahanni River, which drains to the Mackenzie River via the Liard River. On the basis of preliminary investigations, it is estimated that, with total regulation and complete use of the head susceptible of develop-

ment, the hydro-electric potential of the South Nahanni River would be close to 1,000,000 kw. Indications are that the rivers draining the district of Keewatin, north of Manitoba, could also contribute materially to the total power potential of the Northwest Territories.

Subsection 4.—Thermal Power Generation

The incidence of immense water power resources in Canada and the brisk pace of their development has tended to overshadow the very considerable contribution being made by thermal energy in the nation's power economy. At the end of 1967, the total installed thermal capacity in Canada was 9,588,000 kw., about 29 p.c. of the total electric generating capacity in the country. The fact that energy produced in thermal plants during the year accounted for only 20 p.c. of the total may be attributed in part to the fact that a considerable amount of the capacity installed is maintained for stand-by purposes. Emphasis on thermal plant construction is likely to become more marked as development of the nation's water power reserves becomes more complete.

Conventional Thermal Power.—Approximately 90 p.c. of all of the conventional thermal power generating equipment in Canada is driven by steam turbines. The magnitude of the loads being carried by steam plants has led to the installation of steam units with capacities as high as 542,000 kw. The remainder of the load is carried by gas turbine and internal combustion equipment. The flexibility of internal combustion engines makes this type of equipment particularly suitable for meeting power loads in smaller centres, especially in the more isolated areas.

Table 1 (p. 662) shows that the Provinces of Prince Edward Island, Nova Scotia, Saskatchewan and Alberta depend on thermal capacity for most of their power requirements and that New Brunswick has slightly more thermal than hydro. For Ontario, where hydro capacity was nearly twice the thermal as recently as 1965, forecasts based on present construction schedules indicate that by the early 1970s total installed thermal capacity will have overtaken hydro.

With the exception of several large plants in St. John's and Grand Falls, most of the thermal-electric capacity in Newfoundland is made up of relatively small units used to supply power to small, often isolated communities. With the wealth of water power readily available in the province, it is not likely that Newfoundland will have need for large thermal stations for some time to come. In Prince Edward Island, almost all the generating capacity is oil-fuelled; in Nova Scotia, most of the energy generated in thermal-electric utility plants is derived from coal and the remainder from petroleum fuels; and in New Brunswick petroleum fuels provide slightly more than half of the thermal-electric energy.

The abundance of Quebec's water power wealth, much of it within economic transmission distance of existing demand areas, has so far limited the application of thermal power to specific local use. However, the growing emphasis on thermal power in other parts of Canada is also beginning to be apparent in Quebec, where thermal capacity will serve not only to help guarantee an adequate power supply in the face of increasingly heavy demands but also to render the almost exclusively hydro-electric base more flexible through integrated operation. Installed capacity at Quebec's largest thermal plant, the Tracy Station near Sorel, was raised to 600,000 kw. in 1968. Quebec's first nuclear station, on the south shore of the St. Lawrence River between Gentilly and Bécancour, is scheduled for service in 1971 with 250,000 kw. of electric generating capacity.

Ontario has more thermal capacity than any other province in Canada; capacity installed at the end of 1967 totalled 3,952,000 kw., which was about 41 p.c. of the national total. The 4,928,300 kw. of conventional thermal capacity and 2,168,000 kw. of nuclear thermal capacity scheduled for service in the period 1968-74 will increase considerably this province's share of the national total. Canada's largest thermal station is Ontario Hydro's Lakeview generating station at Toronto, which has a capacity of 1,500,000 kw.

made up of five 300,000-kw. units, the largest in operation in Canada. This station was expanded to 2,400,000 kw. in 1968. Four units of 500,000-kw. capacity are planned for the Lambton station near Sarnia, installation of which will be completed in 1970.

Manitoba supplements its predominantly hydro-based power supply with a substantial amount of thermal capacity but current emphasis is on development of water power resources. Saskatchewan, until recently, has relied on thermal capacity to satisfy the needs of the more settled areas and hydro-electric power generated in the province has been used almost exclusively for mining purposes in the northern areas. In the past few years, however, development of storage on the South Saskatchewan River has made hydro-electric power available in the southern part of the province and plans for expanding the province's thermal capacity are limited for the present to a 300,000-kw. extension to the 132,000-kw. Boundary Dam thermal station. The incidence of vast fuel resources accounts for the emphasis on thermal power generation in Alberta; the province's largest thermal plants are the 405,000-kw. gas turbine and steam station at Edmonton and the 582,000-kw. Wabamun steam station.

About two thirds of British Columbia's thermal generating capacity is installed in three plants located in the Vancouver area. The capacity of the largest of these plants, the 600,000-kw. Burrard generating station, was to be increased to 750,000 kw. by 1968.

Until recently, most of the power requirements of the Northwest Territories were satisfied from thermal sources but the commissioning of the Twin Gorges hydro station on the Taltson River in 1965 altered the balance in favour of hydro. In Yukon Territory, hydro is the larger contributor. Most of the thermal-electric energy in the Territories is generated by small diesel units.

Nuclear Thermal Power.—Commercial electric power generated from the heat of nuclear reaction became a reality in Canada in 1962 when the 20,000-kw. Nuclear Power Demonstration station at Rolphton, Ont., fed power for the first time into a distribution system in Ontario. The NPD station is the forerunner in a series of large nuclear stations that will shoulder more and more of Canada's rapidly growing power loads.

Research into reactor design and the application of nuclear energy in the electric power field are among the more important responsibilities of Atomic Energy of Canada Limited, a Crown company incorporated in 1952 (see also pp. 397-404). AECL has concentrated its efforts on the development of the CANDU reactor, which uses natural uranium as a fuel and heavy water as the moderator. By using heavy water as the moderator, a high energy yield can be obtained from natural uranium and, since natural uranium is a low-cost nuclear fuel, the cost of fuel is a minor component in the cost of producing power. Natural uranium has the added attraction of being available in commercial quantities in Canada.

The Canadian nuclear power reactor also offers the simplest of nuclear fuel cycles. Sufficient energy can be extracted from the fuel so that the economics of the system do not require a value to be placed on the spent fuel. There is, therefore, no need to carry out costly chemical processing of the spent fuel unless the worth of the remaining contained fissile material becomes sufficiently high to make chemical processing an economic proposition. The spent fuel is an ideal package for simple underwater storage and no large volume of highly radioactive liquids from a chemical processing plant has to be handled and contained.

The NPD station has been used extensively to demonstrate the ability of the system to operate at a high capacity factor and to determine the nature and predictability of outages. Fuel changes while the system is in operation have become routine and a considerable amount of research into the sources of heavy water losses has been carried out. As a result of this research, losses have been cut down and the NPD station is demonstrating that a very acceptable heavy water loss rate is attainable.

At Douglas Point on the shore of Lake Huron, the country's first full-scale nuclear power station went into commercial production in 1967. The station, built with the co-operation of Ontario Hydro, houses a 200,000-kw. CANDU reactor. Experience gained in the design and operation of this reactor has encouraged the development of even larger units and construction of the four-unit, 2,160,000-kw. Pickering nuclear station is under way near Toronto, with in-service dates for the units scheduled for 1971 to 1974.

A further step in the development of the CANDU reactor is the use of boiling light water instead of pressurized heavy water as the coolant. This change offers further reductions in unit energy costs. Quebec's Gentilly nuclear station being constructed on the south shore of the St. Lawrence River near Trois-Rivières will utilize boiling light water in its CANDU reactor. This station is scheduled for service in 1971 with 250,000 kw. of nuclear-electric capacity.

Subsection 5.—Electric Power Transmission

The nature of the loads handled by the small, widely scattered generating systems in the early days of the electric power industry in Canada did not warrant the expense of interconnecting power systems. However, as the demand for dependable electric power increased and improved techniques reduced power transmission costs, the benefits of integrating power systems to achieve reliability of service and flexibility of operation were re-appraised.

The number of amalgamations of small systems into larger operating groups has increased steadily and today most of Canada's generating stations are components of large, integrated and often interconnected power systems operated by power utilities and companies in the various provinces.

Constant research in the field of power transmission has developed techniques that enable power producers to develop hydro-electric sites previously considered beyond economic transmission distances. Most noticeable, perhaps, is the progressive stepping up of transmission line voltages. In Canada, there are a number of transmission lines designed for operation at 500,000 volts. A 574-mile, 500,000-volt line is being constructed to carry power from the Peace River to the lower mainland of British Columbia. In Ontario, a 435-mile, 500,000-volt line was completed in 1966 from hydro-electric plants in the James Bay watershed to Toronto. In 1965, power was carried for the first time at 735,000 volts when the 375-mile transmission line between Quebec's Manicouagan-Outardes hydro complex and the cities of Quebec and Montreal went into operation.

Although at present power is transmitted exclusively as alternating current (ac), Canadian producers are considering the advantages of carrying power at high voltages over long-distance direct current (dc) lines. One such transmission line with a rating of $\pm 260,000$ volts augments an ac line between Vancouver Island and the mainland. Another, in Manitoba, will carry power from the Nelson River area near Hudson Bay 600 miles south to Winnipeg at $\pm 450,000$ volts.

The search for economies in transmission systems has led to changes not only in materials used but also in tower erection and cable-stringing methods. Guyed aluminum V-shaped and Y-shaped transmission towers are being used increasingly in place of self-supporting towers where the terrain is suitable, and erection costs are being reduced by the use of helicopters to transport tower sections to the site and for tower assembly. The use of helicopters for spraying in brush control on the right-of-way and for line inspection and maintenance is becoming more widespread.

At present, domestic interconnections of from 66,000 volts to 500,000 volts exist between systems in Alberta and British Columbia; Saskatchewan, Manitoba and north-western Ontario; the interconnected northeastern and southern Ontario systems and Quebec; and between New Brunswick and Nova Scotia. Important international interconnections exist between British Columbia and the State of Washington; Ontario and the State of Michigan; Ontario and the State of New York; Quebec and the State of New York; and New Brunswick and the State of Maine.

Section 2.—Progress in Construction of Generating Facilities, 1967-68

During 1967, Canada's electric power generating capacity increased by 2,140,190 kw.; thermal capacity, which includes nuclear electric, accounted for 1,224,340 kw. and the remaining 915,850 kw. was installed in hydro plants. In terms of the amount of generating capacity installed in one year in Canada, 1967 shares second place with 1965; the year of greater installation was 1959 when 2,500,000 kw. was placed in service. The new capacity placed in service in 1967 raised Canada's total generating capacity to 33,000,000 kw., consisting of 23,400,000 kw. hydro and 9,600,000 kw. thermal.

Current estimates indicate that 2,800,000 kw. of new generating capacity went into service during 1968, 1,284,000 kw. thermal and 1,516,000 kw. hydro. Including the capacity scheduled for 1968, Canada's power producers had under construction or had scheduled for construction during the next few years a total of 24,800,000 kw. of new capacity, 15,200,000 kw. hydro and 9,600,000 kw. thermal.

Newfoundland.—Newfoundland's electric generating capacity increased by 208,625 kw. during 1967 following installation of 229,500 kw. of hydro capacity and removal from service of thermal capacity totalling 20,875 kw. Hydro capacity totalling 76,500 kw. was scheduled for service in 1968 and another 5,500,000 kw. over the years following.

Construction of the Newfoundland and Labrador Power Commission's Bay d'Espoir hydro development continued during 1967 with 229,500 kw. of hydro capacity coming into service. A similar amount is involved in the second stage of development then under way. A 25,000-kw. gas turbine unit, installed in 1966 to meet power requirements at the Bowater Power Company's plant in Corner Brook pending power becoming available from the Bay d'Espoir hydro development, was removed from service in 1967. Plans of the Churchill Falls Power Corporation Limited for the 5,250,000-kw. Churchill River hydro station in Labrador call for power from the first units to become available in 1972 and installation of other units as demand for power increases; when completed, the station will rank as one of the world's largest hydro developments. A subsidiary, the Twin Falls Power Corporation, is helping to meet interim power needs in the area by adding a 46,800-kw. unit at its station on the Unknown River, a tributary of the Churchill River.

Nova Scotia.—In Nova Scotia, electric generating capacity totalling 27,750 kw. was commissioned in 1967, with 11,200 kw. expected to come into service in 1968 and another 230,000 kw. proposed for installation later.

The capacity of the Nova Scotia Power Commission's Weymouth Falls hydro plant on the Sissiboo River was doubled in 1967 by the addition of a 9,000-kw. unit, and Scott Maritime Pulp Limited began operation of its single-unit 18,750-kw. thermal plant at Abercrombie Point. Construction of the Nova Scotia Light and Power Company's 11,200-kw. hydro-electric station on the Allain River near Lequille was scheduled for completion in 1968. Under construction for service in 1969 at the Commission's Trenton and Point Tupper thermal plants were units of 150,000 kw. and 80,000 kw., respectively.

New Brunswick.—New Brunswick's total electric generating capacity was increased by 97,900 kw. in 1967, 300,700 kw. remained under construction for service in 1968 and another 400,000 kw. for completion later.

A 100,000-kw. unit at the New Brunswick Electric Power Commission's Courtenay Bay thermal plant was brought into service in 1967, raising the plant's capacity to 263,000 kw. At the Commission's Mactaquac hydro-electric development on the Saint John River, six 100,000-kw. units were being installed, the first three to be in service in 1968 and the other three by 1976. The Commission has commenced construction of a new thermal plant at Dalhousie; ultimate capacity is expected to be 500,000 kw. with the first of five units to be in service by late 1969. A 400-kw. unit for the Commission's Milltown hydro development on the St. Croix River was installed in 1967.

Quebec.—In 1967, Quebec's extensive program of power-plant construction added 430,480 kw. of new capacity to the province's already considerable total of almost 12,000,000 kw. Hydro-electric capacity accounted for 261,030 kw. of this total and thermal capacity for 169,450 kw. A total of 181,000 kw. of new capacity was scheduled for 1968, 150,000 kw. of it thermal capacity and 31,000 kw. hydro capacity. On the basis of present scheduling, nearly 5,000,000 kw. of new capacity, most of it hydro, should come into service in Quebec during the years 1969-74.

One of North America's most spectacular engineering projects, the harnessing of the power potential of the Manicouagan and Outardes Rivers, went ahead on schedule during 1967. The project involves the construction of seven hydro plants on the two rivers and the installation of additional capacity at an existing station. The total amount of new generating capacity to be made available by the Manicouagan-Outardes project will be in excess of 5,500,000 kw. At Manic 2, located eleven miles from the mouth of the Manicouagan River, the final unit was brought into service in 1967, raising the total installed capacity to 1,015,200 kw. in eight units. The 184,410-kw. Manic 1 station also was completed in 1967 when the third unit came into service. The largest development in the Manicouagan-Outardes hydro complex is Manic 5, designed for a total generating capacity of 1,344,000 kw. in eight units. The buttressed, multi-arch dam at Manic 5, which was completed in 1967, is over 4,000 feet long and 703 feet high at the highest point above bed-rock, and ranks as one of the highest and most massive dams of its kind in the world. First power is expected in 1970 and completion of the plant in 1972. Last of the Manicouagan plants to come into service in the current program will be Manic 3, with a total generating capacity of 1,120,000 kw. in seven units; initial service is scheduled for 1972 and completion of the plant for 1974.

On the Outardes River, power at Outardes 4 will be generated by four 158,000-kw. units, the first three to be in service in 1968 and the fourth in 1970. The dam at Outardes 4 will create a reservoir with a surface area of more than 250 sq. miles. The underground powerhouse planned for Outardes 3 will house four 180,000-kw. units, three of which were scheduled for initial operation in 1968 and the fourth in 1969. The Outardes 2 plant, adjacent to the Outardes Falls plant, is scheduled for service in 1970 with a total capacity of 453,000 kw. in three units.

Elsewhere in the province, Quebec Hydro is developing two sites on the Quinze Rapids reach of the Upper Ottawa River to supply power to the rapidly developing northwestern region. The Rapides des Îles plant is designed for four 36,630-kw. units; one unit was installed in 1966 and two in 1967 and development of the fourth is dependent upon the magnitude of local power demands. The First Falls plant is designed for 124,200 kw. in four units. One unit was to be installed in 1968 and two in 1969; the fourth unit is unscheduled.

The capacity of Quebec's first large thermal plant, Tracy plant near Sorel, was increased in 1967 by the addition of one 150,000-kw. unit, bringing the station capacity to 450,000 kw.; the fourth and final unit was scheduled for 1968.

Construction of Quebec's first nuclear generating station, rated at 250,000 kw., began in 1966. The Gentilly nuclear station, being built by Atomic Energy of Canada in co-operation with Quebec Hydro, is located at Pointe aux Roches on the south shore of the St. Lawrence River and is scheduled for completion in 1971.

Ontario.—In 1967, Ontario's electric generating capacity was increased by 504,330 kw.; 928,300 kw. was to be brought into operation in 1968 and another 6,841,500 kw. is planned or under construction for service in later years. Most of the new capacity is thermal-electric.

During 1967, the power development program of Ontario Hydro involved construction on six hydro-electric stations, seven conventional thermal stations and two nuclear-electric plants. The Mountain Chute hydro station on the Madawaska River, comprising two units, each rated at 69,700 kw., came into service late in 1967. Additional generating capac-

Ontario Hydro's highly
trained linemen use so-
phisticated techniques
to service 500,000-
kw. lines without turn-
ing off the power.

ity was being installed at Barrett Chute and Stewartville stations on the Madawaska River downstream from Mountain Chute; by 1969, two additional 55,800-kw. units at Barrett Chute will bring that station's capacity to 151,400 kw., and two 45,900-kw. units will increase the Stewartville station's capacity to 153,000 kw. Construction of the Aubrey Falls hydro station on the Mississagi River started in 1966 where two 80,000-kw. units were scheduled for completion in 1969.

Design work is under way for two additional hydro-electric projects initiated in 1967—Wells generating station on the Mississagi River, and Lower Notch generating station on the Montreal River. The Wells station, which will accommodate two 107,500-kw. units, is scheduled for service in 1970. Lower Notch, with a generating capacity of 244,000 kw. in three units, is scheduled for service in 1971.

At Lakeview generating station on the shore of Lake Ontario near Toronto, installation of the final three 300,000-kw. steam units continued in 1967 and 1968. The ultimate capacity of Lakeview, realized in late 1968, is 2,400,000 kw. in eight units. The Lambton station, on the St. Clair River about 14 miles south of Sarnia, will house four 500,000-kw. units to come into service at the rate of two a year in 1969 and 1970. Ontario Hydro installed a number of combustion turbine generators in southern Ontario to serve as standby units and contribute to the provision of an adequate margin of reserve capacity at times of peak load, particularly during the present period of rapid load growth. Site investigations for the Nanticoke coal-fired thermal-electric station are being carried out on the north shore of Lake Erie, the schedule for the new station calling for four 500,000-kw. units to be installed between 1971 and 1974.

In the nuclear-electric field, installation of the 200,000-kw. CANDU unit at Douglas Point was completed in 1967 and work continued on the Pickering nuclear-electric station. At Pickering, four 540,000-kw. units are scheduled for operation one in each year from 1970 to 1973.

Manitoba.—Manitoba's electric generating capacity increased by 23,300 kw. of thermal capacity in 1967. Scheduled for installation in 1968 was 109,250 kw. of hydro-electric capacity. A total of 1,252,950 kw. of hydro capacity and 105,000 kw. of thermal capacity was scheduled for installation after 1968.

Most of the new capacity will be installed on the Nelson River as a result of an agreement signed by the Governments of Manitoba and Canada. The agreement calls for construction of a hydro plant at Kettle Rapids, diversion of flow from the Churchill River into the Nelson River near Thompson, regulatory facilities at the outlet of Lake Winnipeg and transmission facilities from the Kettle Rapids site to Winnipeg. Capacity of the Kettle Rapids plant will be slightly more than 1,200,000 kw., of which 406,000 kw. is expected to be in service by 1971. To accommodate the anticipated demand for power before completion of the Kettle Rapids project, the capacity of Manitoba Hydro's Selkirk thermal plant was expanded to 155,800 kw. in 1967 when two 11,900-kw. units were installed, and Brandon thermal station is being increased by 105,000 kw. to a total of 237,000 kw. The Grand Rapids hydro-electric station on the Saskatchewan River was completed in 1968 when the fourth and final unit of 109,250 kw. was installed. Construction continued on the installation of a sixth 33,750-kw. unit at the Kelsey Generating Station.

Saskatchewan.—In Saskatchewan, electric power generating capacity increased by 35,520 kw. in 1967. Scheduled for 1968 and later were 168,000 kw. of hydro capacity and 300,000 kw. of thermal capacity.

Two 11,840-kw. gas turbine units designed for peaking service at Saskatchewan Power Corporation's Success thermal plant near Swift Current were placed in service in 1967 and a third in 1968. Two 150,000-kw. steam turbines will be added at the Boundary Dam thermal plant at Estevan for service in 1969 and 1970. At the South Saskatchewan River Project near Outlook, three 55,980-kw. generators went into service in 1968; the Prairie Rehabilitation Administration completed construction of the dam and reservoir in 1967, primarily for irrigation purposes, and Saskatchewan Power Corporation is installing the hydro-electric generating facilities. A 100,000-kw. extension is planned for the Queen Elizabeth Power Station near Saskatoon for completion in 1971, by which time the Corporation's generating capacity will be about 1,525,000 kw.—more than double that of 1961.

The Kettle Rapids generating station, now under construction, is the second largest of seven major developable sites on the Nelson River. It will ultimately yield 1,200,000 kw. of power which will travel 500 miles by extra-high-voltage line into the heart of Manitoba's southern network.

Alberta.—Alberta's total installed electric generating capacity increased by 504,905 kw. in 1967; hydro-electric plants accounted for 171,220 kw. and thermal plants for 333,685 kw. No new capacity was added in 1968 but 780,000 kw. was scheduled for subsequent years.

A 161,500-kw. hydro-electric unit, at present the largest in Canada, went into service in 1967 at the Big Bend hydro development of Calgary Power Ltd., raising the capacity of the station to 305,500 kw. At the pumping station associated with the Big Bend plant, a pumping-generating unit with a generator rating of 11,250 kw. was installed in 1967, increasing the total generating capacity to 20,970 kw. in two units. The Company's Wabamun thermal plant was extended and a new 300,000-kw. coal-burning unit installed, boosting the plant capacity to 595,000 kw. Construction of Calgary Power's new 300,000-kw. Sundance thermal plant on the south side of Lake Wabamun continued during 1967 and Great Canadian Oil Sands Limited installed a second 30,500-kw. unit at its Fort McMurray plant. Canadian Utilities Limited is installing a 150,000-kw. coal-fired unit for service in 1969 at the Battle River thermal plant near Forestburg. The City of Edmonton plans to build a new plant consisting of two 165,000-kw. gas-fired units in the early 1970s.

British Columbia.—British Columbia's electric generating capacity increased by 303,225 kw. in 1967, and a further 861,700 kw. was scheduled for service in 1968. New installations scheduled for operation after 1968 will yield more than 1,500,000 kw.

In 1967, Cominco Ltd. completed the installation of the fourth and final unit at their Brilliant hydro-electric plant on the Kootenay River; the new unit, rated at 27,200 kw., increases the station capacity to 108,800 kw. Installation of the fourth 150,000-kw. unit at the British Columbia Hydro and Power Authority's Burrard thermal plant was completed in 1967, raising the total generating capacity of the station to 600,000 kw. MacMillan, Bloedel and Powell River Limited installed a 36,000-kw. steam turbo-generator at the

The W.A.C. Bennett Dam at the Portage Mountain development on the Peace River, B.C. In September 1968, the turning of a switch started power flowing southward from three generators. As the water level in the reservoir rises, five more will be installed with two additional units when required.

Powell River plant raising the plant's total capacity to 50,925 kw., and the capacity of Alcan's Kemano hydro-electric plant was boosted to 812,800 kw. with the addition of an eighth unit rated at 105,600 kw.

Substantial progress has been made in construction on the British Columbia Hydro and Power Authority's Portage Mountain development on the Peace River. The development is planned for ten units with a total capacity of 2,270,000 kw., three of which were in service by the autumn of 1968. Work progressed on the three storage dams being built by the Power Authority under the terms of the Columbia River Treaty, which entitles Canada to one half of the power benefits accruing in the United States from the regulation of 15,500,000 acre-feet of water to be stored in Canada behind the Duncan, Arrow and Mica Dams, and one half of the value of the estimated flood damage prevented in the United States through the operation of the dams for flood control. The Duncan Dam was completed in 1967, ahead of the April 1968 schedule, and Arrow Dam was completed in 1968, also ahead of schedule: Mica Dam, largest of the three, is required to be in operation by April 1973. The Authority is planning the development of the hydro potential of the Canadian portion of the Columbia River.

Yukon and Northwest Territories.—In 1967, a net total of 1,970 kw. of new thermal capacity was added at various locations in the Yukon Territory and 2,185 kw. in the Northwest Territories. Some 2,200 kw. of new thermal capacity began operation in 1968 and another 8,000 kw. of hydro capacity and up to 18,100 kw. of thermal capacity are proposed for installation over subsequent years.

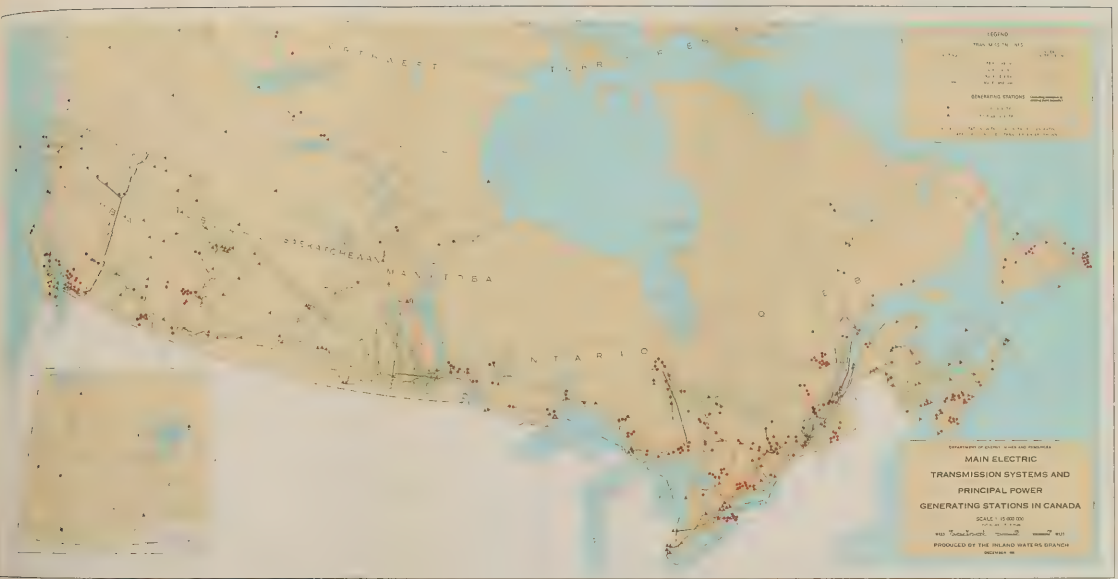

Section 3.—Power Generating Capability and Load Requirements

Power generating *capability*, as covered in this Section, is the measurement of the available generating resources of all hydro and thermal facilities at the time of the one-hour firm peak load for each reporting company, and is not equal to the *capacity* of such generating facilities. For example, a hydro plant may have a capacity of 100,000 kw. but if, at the time of peak load, the water available for generation is only 80 p.c. of the plant capacity requirements, then its capability is 80,000 kw.

Total generating capability has grown at a rapid rate since 1957. The annual rate of increase was 6.7 p.c. in the ten-year period 1957-67 and 5.8 p.c. in the four-year period 1963-67. In comparison, the forecast rate of growth for the years 1967-72 is 9.0 p.c.; thermal generating capability is expected to grow at an average rate of 13.5 p.c. a year in the forecast period compared with 14.5 p.c. in the period 1957-67, and hydro-electric capability is expected to increase at 6.9 p.c. a year compared with 4.7 p.c. in the 1957-67 period. This rate of growth in hydro generating capability in the forecast period is attributable to the large power projects under construction in relatively remote areas which will be completed within the next few years.

Among the provinces, Quebec has the largest generating capability, followed by Ontario, British Columbia and Alberta. Quebec also has the largest hydro-electric generating capability, followed by Ontario and British Columbia, but Ontario has the largest thermal capability followed by Alberta and British Columbia. The first full-scale nuclear power station went into commercial operation in Ontario early in 1967.

The largest absolute growth in generating capability for the forecast years is indicated for Ontario at 6,283,000 kw., followed by Quebec at 3,275,000 kw.; Newfoundland at 2,056,000 kw. and British Columbia at 1,973,000 kw. Ontario will meet most of its increased generating capability by adding 5,312,000 kw. in thermal capability and 971,000 kw.

in hydro capability, the former including 1,533,000 kw. nuclear. Quebec will add 3,090,000 kw. hydro and 180,000 thermal and Newfoundland 1,652,000 kw. hydro and 404,000 kw. thermal.

Firm power peak load is the measure of the maximum average net kilowatt demand of one-hour duration from all loads, including commercial, residential, farm and industrial consumers as well as the line losses. Such load demand increased at the rate of 6.7 p.c. a year from 1957 to 1967 and 7.7 p.c. a year from 1963 to 1967; peak load demand is forecast to increase at the average rate of 7.0 p.c. a year in the period 1967-72. As a result of the rapid increase in generating capability and the somewhat slower but steady increase in the peak loads, together with the slight reduction in deliveries of firm power to the United States, the indicated reserve on net generating capability in the 1957-67 period increased each year from 1957 to 1960 and 1962, 1965 and 1967. The forecast is for increases from 1967 to 1972 with the exception of 1970. The reserve ratio as a percentage of firm power peak load reached a high of 28.2 p.c. in 1960 and fell to 11.4 p.c. in 1966 but is expected to increase to 22.4 p.c. in 1972.

3.—Net Generating Capability, by Province, 1967

Section 4.—Electric Power Statistics

Electric power statistics presented in this Section are based on reports of all electrical utilities and all industrial establishments that generate energy regardless of whether or not any is sold and therefore show the total production and distribution of electric energy in Canada. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electric energy that they have either generated or purchased. Industrial establishments are defined as companies or individuals that generate electricity mainly for use in their own plants.

The current series of electric power statistics dates back to 1956. Earlier reports, entitled *Central Electric Stations*, were concerned solely with the electrical utility industry and hence excluded statistics relating to power produced by industrial establishments for their own use, although power sold by such establishments was included.

5.—Electric Energy Generated, by Type of Station, 1958-67, and by Province 1966 and 1967

Of the total generation in 1967 of 165,624,823,000 kwh., 80.1 p.c. was produced from water power and 19.9 p.c. was generated thermally; the proportions differed markedly among provinces as shown in the following statement.

Province	Hydro	Thermal	Province or Territory	Hydro	Thermal
	p.c.	p.c.		p.c.	p.c.
Newfoundland.....	90.3	9.7	Manitoba.....	98.6	1.4

Quebec.....	97.7	2.3	Yukon Territory.....	90.1	9.9
Ontario.....	72.8	27.2	Northwest Territories....	79.9	20.1

Table 6 gives summary figures of power production and distribution classified by province, and Tables 7 and 8 give figures classified by type of production establishment. Total installed capacity in Canada amounted to 32,965,367 kw. in 1967, an increase of 2,200,343 kw. over 1966. Of the 1967 total, 27,720,754 kw. were accounted for by utilities and the remainder by industrial establishments. During 1966 and 1967, total sales to ultimate customers amounted to 99,773,839,000 kwh. and 107,762,063,000 kwh., respectively, of which 99.8 p.c., in both years was sold by utilities.

Sales to power customers excluding sales to industrial establishments with generating facilities made up 52.1 p.c. of the total in 1966 and 50.5 p.c. in 1967, sales to domestic and farm customers were 32.2 p.c. and 32.5 p.c., respectively, and commercial sales 14.6 p.c. and 15.9 p.c., respectively. Exports to the United States in 1967 amounted to 3,993,888,000 kwh. compared with 4,397,333,000 kwh. in 1966.

6.—Summary Electric Power Statistics, by Province, 1966 and 1967

Average domestic and farm consumption rose from 5,914 kwh. in 1966 to 6,261 kwh. in 1967. Among the provinces, the averages in 1967 varied from a low of 2,981 kwh. in Prince Edward Island to a high of 7,837 kwh. in Manitoba. For domestic and farm customers the average annual bill was \$90.71 in 1967 as against \$83.47 in 1966, an increase of 8.7 p.c.

Although many utilities do not keep records on farm customers separate from other domestic customers, the data reported on farm service indicate that the average consumption rose from 7,720 kwh. per customer in 1966 to 8,548 kwh. in 1967 and the average bill from \$134.22 to \$145.08.

Section 5.—Public Ownership and Regulation of Electrical Utilities

Federal Government regulation of electrical utilities, particularly with respect to the export of electric power and the construction of lines over which such power is exported, falls within the jurisdiction of the National Energy Board (see pp. 961-962).

Power is generated in Canada by publicly and privately operated utilities and by industrial establishments. Table 8, p. 682, giving statistics by type of establishment, shows that 70 p.c. of the total electric power generated in 1967 was produced by publicly operated utilities, 10 p.c. by privately operated utilities and 20 p.c. by industrial establishments. However, ownership differs greatly in different areas of the country. Quebec output at one time was predominantly from privately owned plants but in Ontario almost all electric power has been produced by a publicly owned utility for over 60 years. Figures for 1962 and subsequent years show a much greater proportion of publicly operated electrical utilities since they reflect the provincial take-over of privately owned facilities in both British Columbia and Quebec.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. Neither Alberta nor Prince Edward Island has a provincially operated electric power system. The functions and activities of provincially operated electric power commissions are summarized in the following paragraphs.

Newfoundland.—The Newfoundland and Labrador Power Commission was established by the provincial government in 1954 for the purpose of supplying electric power wherever needed throughout the province, particularly in rural areas. The Commission began large-scale production of electric power in 1967 when the Bay d'Espoir plant began operating and a provincial transmission grid was established. Prior to this, the only means of providing electricity to the isolated areas was through the Rural Electricity Authority and the Power Distribution Districts.

Nova Scotia.—With total fixed assets of \$144,133,409, including \$31,689,425 worth of work in progress, the self-supporting Nova Scotia Power Commission is one of the largest businesses in the province, employing nearly 1,000 people. The Commission was created under the Power Commission Act of 1919 to exploit the limited but useful hydro potential of the province, as investigated by the Water Power Commission of 1915. The first objective was to develop remote sites to supply power and energy at lowest possible cost to new industry, particularly pulp and paper operations, and a few centres of population. The 1937 Rural Electrification Act, however, provided equalization grants and made it possible to carry out the formidable task of bringing power and energy to low-density farm and rural village areas. In the past 30 years the picture has changed markedly, with a progressive industrial climate providing both a stable base and strong opportunities for growth. The Commission's power development program in 1967-68 is outlined on p. 671.

More than 5,680 miles of transmission and distribution lines conduct the energy generated by about 303,000 kw. capability in 26 stations to and from every corner of Nova Scotia. Hydro power now constitutes only a fraction of base load, although it is put to optimum use for peaking purposes. Economical thermal power has risen greatly in importance during the past 10 years and holds most of the answers for the future—with the possible exception of Bay of Fundy tidal power.

New Brunswick.—The New Brunswick Electric Power Commission was incorporated under the Electric Act, 1920. Generating stations owned by the Commission at Mar. 31, 1968 were as follows:—

<u>Plant</u>	<u>Type</u>	<u>Capacity</u>	<u>Plant</u>	<u>Type</u>	<u>Capacity</u>
		kw.			kw.
Grand Falls.....	Hydro	60,500	Grand Lake.....	Steam	104,910

Quebec.—Stream and Reservoir Control.—The Quebec Streams Commission was created in 1910 (SQ 1910, c. 5) and given additional powers in 1912 (RSQ 1925, c. 46) and 1930 (SQ 1930, c. 34); it was authorized to ascertain the water resources of the province, to make recommendations regarding their control and to construct and operate certain storage dams to regulate the flow of streams. In 1955, the Commission was abolished and its powers and attributions transferred to the Hydraulic Resources Department, now the Department of Natural Resources. The rivers controlled by the Commission at the time of transfer, either by means of dams on the rivers or by regulating the outflow of lakes at the headwaters, were: the St. Maurice, the Gatineau, the Lièvre, the St. Francis, the Chicoutimi, the Au Sable and the Métis. The Commission also operated nine reservoirs on the North River, two in the watershed of the Ste. Anne de Beaupré River and one at the outlet of Lake Morin on Rivière du Loup (lower). In 1965, eleven auxiliary reservoirs on the St. Maurice System and two on the Gatineau were turned over by the Department of Natural Resources to the Quebec Hydro-Electric Commission for operation and maintenance.

Storage reservoirs otherwise controlled or operated are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River controlled by the Aluminum Company of Canada; the Onatchiway on the Shipshaw River controlled by Price Brothers and Company Limited; Memphremagog Lake on the Magog River controlled by the

Dominion Textile Company; and Témiscamingue and Quinze Lakes on the Ottawa River controlled by the federal Department of Public Works. Storage reservoirs under the control of the Quebec Hydro-Electric Commission are: Témiscouata Lake on the Madawaska River, Kipawa Lake on the Ottawa River, Lac Dozois on the upper Ottawa River, Lac Cassé in the Bersimis River watershed and Lac Ste. Anne on the Toulouste River, a tributary of the Manicouagan River.

The Quebec Hydro-Electric Commission.—The Quebec Hydro-Electric Commission was established in 1944 (SQ 1944, c. 22) for the purpose of supplying power to the municipalities, to industrial and commercial undertakings and to citizens of the Province of Quebec at the lowest rates consistent with sound financial administration. On May 1, 1963, the Commission acquired control of the following privately owned electrical utilities operating in the Province of Quebec: the Shawinigan Water and Power Company, the St. Maurice Power Corporation, the Quebec Power Company, the Southern Canada Power Company, the Gatineau Power Company, the Northern Quebec Power Company, the Saguenay Electric Company, and the Lower St. Lawrence Power Company. As a result of these transactions, all electricity production, except for facilities operated by certain industrial organizations in their own manufacturing operations, was brought under the control of a single authority. The services of the Commission now cover virtually the entire province except for local distribution of small amounts of electricity by some municipalities, most of which is purchased from the Commission or its subsidiaries.

At the end of 1967 Hydro-Quebec and its subsidiaries had in operation 51 hydro-electric stations (nine of which were under construction) having a capacity of 7,678,721 kw., and 18 thermal-electric stations (one of which was being enlarged) having a capacity of 500,268 kw.—a total capacity in operation of 8,178,989 kw. These facilities permit the balanced distribution of power throughout Quebec and the most efficient use of the water power resources of the province. Power plant construction under way in Quebec during 1967-68 is outlined at p. 672.

13.—Summary Statistics of the Operations of the Quebec Hydro-Electric Commission, 1966 and 1967

Item	1966	1967
Installed capacity.....kw.	7,763,244	8,178,989
Hydro.....kw.	7,417,501	7,678,721
Thermal.....kw.	345,743	500,268
Consolidated system peak load.....kw.	7,388,000	7,542,000
Available energy.....'000,000 kw.	44,013	45,778
Total electricity sales.....\$	313,580,432	353,508,344
Customers, at Dec. 31.....No.	1,581,241	1,646,302
Revenue.....\$	321,496,000	365,703,000
Operating expenditures, incl. power purchases.....\$	200,526,000	210,454,000
Capital expenditures.....\$	317,062,293	291,251,392
Properties and plant at cost.....\$	3,256,597,369 ^x	3,527,376,943
Employees, at Dec. 31, excl. construction personnel.....No.	11,466	11,637
Salaries and wages paid, excl. construction.....\$	86,278,000	91,606,000

Ontario.—The Hydro-Electric Power Commission of Ontario is a corporate entity, a self-sustaining public enterprise endowed with broad powers with respect to the supply of electricity throughout the Province of Ontario. Its authority is derived from an Act of the Provincial Legislature passed in 1906 to give effect to recommendations of earlier advisory commissions that the water powers of Ontario should be conserved and developed for the benefit of the people of the province. It now operates under the Power Commission Act (SO 1907, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified from time to time (RSO 1960, c. 300, as amended). The Commission may have from three to six members, all of whom are appointed by the Lieutenant-Governor in Council. Two commissioners may be members of the Executive Council of the Province of Ontario.

The basic principle governing the financial operations of the Commission and its associated municipal utilities is that electrical service is provided at cost. The Commission interprets cost as including payments for power purchased, charges for operating and maintaining the power supply facilities, and related fixed charges. The fixed charges represent interest on debt, provisions for depreciation, allocations to reserves for contingencies and rate stabilization, and the further provision of a sinking fund reserve for retiring the Commission's capital debt. While the enterprise from its inception has been self-sustaining, the province guarantees the payment of principal and interest on all bonds issued by the Commission and held by the public. In addition, the province has materially assisted the development of agriculture by contributing under the Hydro-Electric Distribution Act toward the capital cost of extending rural distribution facilities.

The entire provincial area served is regarded for financial and administrative purposes as a unit, but there is no electrical connection between the Commission's facilities in north-western Ontario and those serving customers in the remainder of the province. Statistics are therefore presented for two operating systems, the East System and the West System; the systems respectively serve the areas east and west of a line extending north from Lake Superior to the Albany River, a line that roughly conforms with the boundary dividing Thunder Bay District from the Districts of Algoma and Cochrane.

In addition to administering the enterprise over which it has direct control, the Commission, under the Power Commission Act and the Public Utilities Act, exercises certain regulatory functions, particularly with respect to the group of municipal electrical utilities which it serves. In order to provide convenient and expeditious service in this dual function of regulation and supply, the Commission subdivides its province-wide operations into seven regions with regional offices located in seven major municipalities.

The Commission is concerned primarily with the provision of electric power by generation or purchase and its delivery to the electrical utilities for resale in municipalities having cost contracts with the Commission. The Commission also supplies power in bulk, although not under cost contract, to direct customers, including industrial customers whose requirements are so large or so unusual as to make service by the local municipal utilities impracticable, mines, industries in unorganized territories, and certain interconnected systems.

In addition to these operations, which represent about 90 p.c. of its energy sales, the Commission delivers electric power to retail customers in rural areas and in a small group of 28 municipalities served by Commission-owned local distribution facilities. Retail service throughout the province is provided for the most part, however, by the municipal electrical utilities, which supply ultimate customers in most cities and towns, in many villages, and in certain populous township areas. The municipal electrical utilities are owned and operated by local commissions.

During 1967, the Commission's investment in fixed assets at cost increased by \$235,743,588 and at the end of the year amounted to \$3,361,203,761. Assets, after deducting accumulated depreciation, were \$3,443,349,418. In that year, 355 associated municipal electrical utilities engaged in the retail distribution of electricity purchased power from the Commission. The assets of these utilities, after deducting accumulated

depreciation, amounted to \$1,067,514,191, of which \$439,046,394 represented the equity acquired in the Commission's systems by the municipal utilities operating under cost contracts.

The Commission's power development program as at Dec. 31, 1967 is given in Table 14 and is also outlined at pp. 672-673.

¹ Dependable peak capacity—the amount of power which resources can be expected to supply at the time of the system primary peak requirements, assuming that all units are available and that the supply of water is normal. This capacity will vary from time to time in accordance with changing conditions. The capacity of a source of purchased power is based on the terms of the purchase contract.

¹ Sum of the maximum 20-minute coincident peak loads (primary plus secondary) of each of the systems operated by the Commission, given in terms of net output of the sources of supply to each system for the last month of each fiscal year.

Manitoba.—Manitoba Hydro is the primary developing, generating and distributing power agency in the Province of Manitoba. The corporation came into being Apr. 1, 1961, following amalgamation of the two former provincial government utilities engaged in the generation and distribution of electric power.

Manitoba Hydro operates six hydro-electric generating stations, two thermal-electric generating stations and 19 small diesel-electric generating plants. The combined generating capability is 1,224,500 kw., hydro installations accounting for 934,000 kw., thermal installations for 278,000 kw. and diesel installations for 12,500 kw. Four hydro stations are located on the Winnipeg River near Winnipeg, one is on the Saskatchewan River, 285 miles north of Winnipeg, and one is on the Nelson River, 450 miles northeast of Winnipeg. All six hydro stations and the thermal generating stations at Selkirk and Brandon are electrically interconnected to a common network known as the Manitoba Integrated System. Diesel installations are used to provide power to isolated northern communities where extension of hydro-electric transmission facilities are not feasible.

Manitoba Hydro serves over 600 communities and 226,821 consumers in rural Manitoba and suburban Winnipeg through a network of 35,930 miles of transmission and farm distribution lines. In addition, Manitoba Hydro supplies part of The Winnipeg Hydro-Electric System power requirements within the corporate limits of Winnipeg. Power plant construction in Manitoba in 1967-68 is outlined at pp. 673-674.

Saskatchewan.—The Saskatchewan Power Corporation was established in 1949, and operates under the provisions of the Power Corporation Act (RSS 1965, c. 40, as

amended); it succeeded the Saskatchewan Power Commission which had operated from 1929. The original functions of the Corporation included the generation, transmission, distribution, sale and supply of hydro and steam electric energy. Since 1952, the Corporation has been authorized to produce or purchase and to transmit, distribute, sell and supply natural or manufactured gas.

During 1966, the Corporation served approximately 1,000 urban-size communities in retail sales, and served the cities of Saskatoon and Swift Current, the town of Battleford and the hamlet of Waskesiu in bulk sales. As at Dec. 31, the Corporation served 263,900 retail customers and 45,303 customers located in communities supplied with power through bulk sales, a total of 309,203. The retail customers included 192,776 urban customers and 71,124 classified as rural, mainly farm meters. During 1967, 3,705,977,000 kwh. were supplied to its system, of which 3,499,296,000 kwh. were generated in Corporation plants and 206,681,000 kwh. were purchased in bulk. At the end of the year, the Corporation had invested, at cost, \$427,317,000 in electric system assets out of a total of \$600,571,000 in plant-in-service in the combined electric and natural gas systems.

The hydro-electric generating station at Squaw Rapids produced 27.7 p.c. of the gross generation in 1967. At year-end, the Corporation also owned and operated six steam generating plants—two each at Saskatoon and Estevan, and one each at Regina and Moose Jaw, the latter operated only during the peak months. Steam supplied 65.7 p.c. of total system requirements and three internal combustion gas dual fuel plants—the Kindersley, the Swift Current, and the Regina B—supplied most of the remainder. System capability in operation was assessed at 913,000 kw. with 537,000 kw. in steam plants, 280,000 kw. in hydro and 96,100 kw. in gas turbine and internal combustion units. The Corporation owned and operated 74,722 miles of transmission and rural lines (excluding urban distribution). Power plant construction in Saskatchewan in 1967-68 is outlined at p. 674.

¹ November 1962 figure.

Alberta.—The generation and distribution of electric power in Alberta is handled by a combination of several municipally owned urban systems and three investor-owned companies serving the greater part of the province. The regulatory authority over the investor-owned systems is the Public Utilities Board, which has jurisdiction over the distribution and sale of electricity. The Board, which controls franchises and rates, has power to hold investigation upon complaint either by a municipality or by a utility company, and following such investigation may fix just and reasonable rates. The Alberta Power Commission controls all phases of system development, including the provincial grid system.

Power plant construction in Alberta in 1967-68 is outlined at p. 675.

British Columbia.—The British Columbia Hydro and Power Authority is a corporation and an agency of the Crown in right of the Province of British Columbia. The Authority operates an extensive system of public utility services. Electric energy is generated, transmitted and distributed throughout areas of the province containing more than 90 p.c. of the population. Natural gas is purchased and distributed in Greater Vancouver and in the Fraser Valley eastward to Hope and liquefied petroleum gas-air is distributed in Greater Victoria. The Authority operates three transportation services: an urban passenger transportation system serves Greater Vancouver and Greater Victoria; an interurban passenger transportation system serves Greater Vancouver, the Fraser Valley eastward to Hope, between Vancouver and Victoria and between Vancouver and Nanaimo (via ferries of the British Columbia Ferry Authority); and a rail freight system serves Greater Vancouver and the Fraser Valley eastward to Chilliwack.

Of the Authority's total electric power requirements of 12,361,000,000 kwh. for the year ended Mar. 31, 1968, 8,295,000,000 kwh. or 67.1 p.c. were produced by hydro-electric stations and 2,795,000,000 kwh. or 22.6 p.c. by thermal plants; of the remainder, 419,000,000 kwh. were purchased and 852,000,000 kwh. were received from the United States as Canada's share of downstream power benefits resulting from early completion of the Columbia River Treaty storage project at Duncan Lake. Kilowatt-hours of electricity sold during the year (11,084,000,000) were 10.8 p.c. higher than during the previous year. Impressive rates of increase in kilowatt-hours consumed were recorded for all categories of customers during 1967-68. Residential consumption moved up 8.8 p.c., general consumption 15.6 p.c., and industrial and bulk power 8.8 p.c. At Mar. 31, 1968, the number of customers served with electricity by the Authority totalled 583,133, an increase of 28,104 during the year. The average annual rate for residential customers rose from 1.48 cents to 1.68 cents a kilowatt-hour, and the average annual residential consumption rose from 6,016 kwh. to 6,222 kwh.

Power plant construction in British Columbia in 1967-68 is outlined at pp. 675-676.

Northwest Territories and Yukon Territory.—The Northern Canada Power Commission, formerly the Northwest Territories Power Commission, was created by Act of Parliament in 1948 to supply electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1950, the Act was extended to include the Yukon Territory. The Commission has authority to construct and operate public utility plants in the Territories and, subject to approval of the Governor in Council, in any other parts of Canada.

The Commission has hydro-electric power developments on the Yukon River near Whitehorse and the Mayo River near Mayo in the Yukon Territory, and on the Snare River northwest of Yellowknife and the Taltson River northeast of Fort Smith in the Northwest Territories. Diesel-electric plants are operated at Fort Simpson, Fort Resolution, Fort McPherson, Aklavik, Cambridge Bay and Coppermine, N.W.T., Dawson, Y.T., and Field, B.C., and utility plants comprising power, central heat and water and sewerage services at Inuvik and Frobisher Bay, N.W.T., and at Moose Factory, Ont. Operation of diesel plants at Chesterfield Inlet and Baker Lake, N.W.T., was undertaken by the Commission in 1968, and a gas turbine power plant was commissioned at Norman Wells in that year.

The Whitehorse Rapids power development, in service since 1958, supplies the Department of National Defence and the Department of Public Works at Whitehorse, most of the power for the city of Whitehorse, and a copper mining operation located within a few miles of Whitehorse. A 225-mile transmission line is being constructed (completion 1969) to supply the Anvil Mining Company property in central Yukon. The two Snare River hydro developments, placed in service in 1948 and 1960, supply power to the gold mines in the Yellowknife area and to the town of Yellowknife; these two hydro plants are operated by remote control from Yellowknife. The Mayo River plant has supplied power to mining properties in the Elsa and Keno areas and to the communities of Mayo and Keno City since 1952. The Taltson River Hydro project commissioned in late 1965, which is to date the largest Canadian power development north of the 60th parallel, supplies the lead-zinc mining operation at Pine Point, and the communities of Fort Smith and Pine Point; the plant is operated by remote control from Fort Smith.

Installation of total energy systems, providing on-site electricity for all requirements, is coming into prominence in hotels, apartments, shopping centres, office buildings, institutions and industrial plants. Cost reduction results from the utilization of heat wasted in normal generator operation for such purposes as heating and air conditioning.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Section 1.—Developments in Manufacturing

Subsection 1.—Annual Census of Manufactures, 1966

Although 1966 was a year of some slackening in the business expansion which began in 1961, employment in the manufacturing industries showed its second largest annual increase of the 1961-66 period. The total number of employees in manufacturing rose 4.8 p.c. over 1965 compared with a rise of 5.3 p.c. in 1965 over 1964, which was the highest gain of the period. These increases brought total employees in 1966 to 1,646,024.

The manufacturing industries' shipments of goods of their own manufacture reached a total of \$37,303,500,000 in 1966, 10.1 p.c. above 1965. Value added by manufacture increased 9.5 p.c. to \$16,352,000,000 and value added (total activity) advanced 9.3 p.c. to \$17,260,000,000. Among the provinces, Ontario showed the largest percentage gain in total employees but the Prairie Provinces had the three highest rates of increase in value of shipments of goods of own manufacture.

Higher capital expenditures in the economy, despite the decline in new residential construction, gave a stimulus to some industries during 1966. Consumer expenditures were higher but accounted for the lowest percentage of the gross national expenditure in several years. Exports of motor vehicles and parts continued to rise under the Canada-United States Agreement on Automotive Products but offsetting factors combined to cause production of new passenger cars, which had increased sharply in 1965, to decrease slightly. Domestic shipments of passenger cars dropped nominally, reflecting a pause in the upward surge of consumer spending on new cars.

Employment changes made by all industry groups in 1966 are shown in Table 1. It should be noted that fluctuations are subject to the effects, generally minor, of reclassification of establishments.

Employment in the transportation equipment industries was 8.5 p.c. higher than in 1965. This group accounted for 15.1 p.c. of the over-all employment increase in manufac-

* Prepared in the Manufacturing and Primary Industries Division, Dominion Bureau of Statistics.

turing, the largest contribution. In second place the largest contribution was made by the electrical products industries, although this group showed the largest relative gain in employment at 9.7 p.c. These two groups contained the two industries making the largest contributions to higher over-all employment—the aircraft and parts manufacturers which reported 6,145 more employees, a gain of 22.2 p.c., and communications equipment manufacturers which reported 4,996 more employees, a gain of 14.9 p.c. Marked increases were registered in the exports of products typical of both these industries in 1966. The numerical increase in employment by aircraft and parts manufacturers was of the same order as that shown by motor vehicle manufacturers the year before. Although motor vehicle manufacturers reported a nominal decline in employment in 1966, motor vehicle parts and accessories manufacturers, reflecting effects of the Agreement on Automotive Products, increased their employment by 8.7 p.c. Another transportation equipment industry—miscellaneous vehicle manufacturers—although small in size, registered the second highest relative gain over 1965 of any industry; it reported a 62.9-p.c. increase in number of employees, most of them probably employed in the manufacture of snow-mobiles.

	All Industries.....	1,570,299	1,646,024	75,725	100.0	100.0

Employment in the furniture and fixture industries increased 8.0 p.c., contributing the third largest relative increase in 1966. More than half of the rise originated in the large household furniture industry, although the smaller office furniture industry showed a higher relative gain. Fourth in relative increase was the miscellaneous manufacturing industries group, reflecting, particularly large relative and numerical increases by plastics fabricators, *n.e.s.*

Of the various industry groups, seven showed, in 1966, their largest year-to-year percentage increase in employment of the 1961-66 period. These were the food and beverage industries, the rubber industries, the furniture and fixture industries, the paper and allied products industries, the electrical products industries, the petroleum and coal products industries and the miscellaneous manufacturing industries. The textile industries, wood industries and knitting mills groups showed their lowest year-to-year percentage change of the 1961-66 period in 1966. Although higher newsprint exports contributed to the growth of the paper and allied products industries, as noted, a decline in United States housing construction affected Canadian lumber exports which was reflected in employment in the wood industries.

In addition to the seven industry groups showing their highest annual gain in 1966, four other groups—printing, publishing and allied industries, primary metal industries, transportation equipment industries, and chemical and chemical products industries—in which the 1966 increase exceeded 0.1 p.c., had percentage increases in total employees above the average annual rate for the 1961-66 period. These relationships are summarized in Table 2.

EMPLOYMENT IN THE MANUFACTURING INDUSTRIES, 1946-66

2.—Percentage Changes in Total Employees, 1961-66

(Industry groups ranked by average growth rate)

Rank	Industry Group	Year-to-Year Percentage Change					Average Annual Percentage Change

Subsection 2.—Developments Since 1966

Although 1966 was, at the time of writing, the latest year for which results from the annual Census of Manufactures were complete, certain preliminary data for 1967 and 1968, compiled from monthly surveys of the manufacturing industries, were available. Tables 4 and 5 show the value of shipments of goods of own manufacture, by province and by industry group, for those two years, with annual census data for earlier years included for comparison.* Preliminary figures indicate that the value of such shipments rose by 5.5 p.c. in 1968.

*DBS publication, *Inventories, Shipments and Orders in the Manufacturing Industries* (Catalogue No. 31-001).

4.—Value of Shipments of Goods of Own Manufacture, by Province, 1961 and 1965-68, with Percentage Change, 1967-68

Metal fabricating industries.....	1,510.6	2,466.8	2,763.7	2,762.0	2,821.6	+ 2.2
Machinery industries.....	658.3	1,235.4	1,464.2	1,433.7	1,456.6	+ 1.6
Transportation equipment industries	1,845.8	3,865.0	4,238.4	4,736.2	5,332.7	+12.6
Electrical products industries.....	1,208.3	1,902.5	2,186.6	2,211.9	2,301.9	+ 4.1
Non-metallic mineral products industries.....	676.0	1,038.0	1,121.4	1,051.3	1,147.0	+ 9.1
Petroleum and coal products industries.....	1,219.2	1,430.6	1,495.3	1,561.6	1,666.3	+ 6.7
Chemical and chemical products industries.....	1,435.8	1,973.3	2,174.2	2,238.8	2,339.7	+ 4.5
Miscellaneous manufacturing industries.....	600.5	868.7	985.0	1,070.9	1,130.6	+ 5.6
All Industries.....	23,439.0	33,889.4	37,303.5	38,533.4	40,648.7	+ 5.5

A nominal increase in total employees in the manufacturing industries in 1968 is indicated by estimates based on monthly surveys made by the Labour Division of DBS.* The figures are broken down only between durable and non-durable manufacturing industries and are as follows:—

Item	1967	1968	P.C. Change 1967-68
	'000	'000	
Durables.....	794.6	783.7	-1.4
Non-durables.....	829.5	845.6	+1.9
ALL MANUFACTURING INDUSTRIES.....	1,624.1	1,629.2	+0.3

Indexes of industrial production by industry group, that is, measures of the growth of the physical volume of output of these industries, are compiled by the National Accounts, Production and Productivity Division of DBS. They have recently been converted to the revised (1960) standard industrial classification and calculated with a 1960 weight and reference base.† Data for 1961-68 are shown in Table 6, and indicate that the physical output of the manufacturing industries increased by 4.6 p.c. in 1968 over 1967, compared with an increase of only 0.3 p.c. in 1967 over 1966 and an average growth rate of 7.6 p.c. a year for the 1961-67 period and of 5.1 p.c. a year for the 1946-67 period.

* DBS publication, *Estimates of Employees by Province and Industry* (Catalogue No. 72-008).

† DBS publication, *Index of Industrial Production* (Catalogue No. 61-005).

6.—Indexes of Volume of Manufacturing Production for Major Industry Groups, 1962-68

(1961=100)

Industry Group	1962	1963	1964	1965	1966	1967	1968 ^a

Electrical products industries.....	120.1	129.4	144.5	162.3	184.9	182.0	189.5
Non-metallic mineral products industries.....	112.8	115.9	127.5	135.9	143.1	135.9	137.7
All Manufacturing Industries	110.5	118.0	129.2	141.0	151.2	151.7	158.7

Subsection 3.—Exports of Manufactured Goods

Exports of manufactured goods in 1966 were apparently equal to about 18 p.c. of the value of shipments of goods of own manufacture by the manufacturing industries in that year. The proportion in 1967 was 20 p.c. and in 1968, 24 p.c., using preliminary estimates of total manufacturers' shipments. Manufacturers do not regularly report shipments on the basis of their destination but it is believed that the domestic exports of fabricated materials and of end products together approximate total exports of Canadian manufactures. Exports of end products approximate exports of finished manufactured goods, although the classification includes a very small amount of non-manufactured goods. The following statement shows exports of fabricated materials and end products compared with total shipments of manufacturers in 1961 and 1965-68 (some figures do not add due to rounding):—

<i>Item</i>	<i>1961</i>	<i>1965</i>	<i>1966</i>	<i>1967</i>	<i>1968</i>
	(\$'000,000)				
Domestic Exports of—					
Fabricated materials.....	2,916.4	3,923.5	4,217.0	4,417.3	5,027.9
End products.....	706.4	1,606.3	2,455.1	3,487.4	4,649.6
Manufactured Goods (approx.).....	3,622.9	5,529.8	6,672.1	7,884.7	9,677.5
Shipments of goods of own manufacture.....	23,439.0	33,889.4	37,303.5	38,533.4	40,661.2

The marked rise in the apparent relative importance of manufactures in Canada's exports has been influenced by the recent sharp increase in exports of automotive products under the Canada-United States Agreement on Automotive Products and by an upward trend, beginning earlier, in exports of a variety of highly manufactured goods.

Section 2.—Input and Profit Ratios

Statistics on the manufacturing industries are collected on an establishment basis for some purposes and on a company basis for other purposes. An establishment is a reporting or accounting unit corresponding roughly to the popular conception of a plant or mill. A company may own a number of establishments in a variety of industries—for example, some engaged in mining and others in manufacturing.

Table 7 shows the ratio to gross output of various input items as compiled from the annual Census of Manufactures. These ratios relate to establishments and exclude the activity of any establishments that the same companies may own in other industries. On the other hand, the profit ratios shown in Table 8 relate to companies and include all establishments of the companies involved regardless of what the principal activity of a particular establishment might be;* for instance, the mining, merchandising or other non-manufacturing establishments of a company mainly engaged in manufacturing would be included. For this reason and certain technical considerations, the profit ratios are not comparable with the wage and other ratios in the establishment table. (See the 1968 Canada Year Book, Chapter XVI, Sect. 1 on "Technology, Markets and Costs in Manufacturing", pp. 689-694.)

* DBS publication, *Corporation Profits* (Catalogue No. 61-003).

7.—Analysis of Gross Output (Total Activity), by Industry Group, 1966

(Ranked according to value added expressed as percentage of gross output)

NOTE.—Gross output (total activity) can be calculated for any industry by adding cost of fuel and electricity, total cost of materials, supplies and goods for resale and value added (total activity).

Rank	Industry Group	Cost of Materials, Supplies and Goods for Resale	Cost of Fuel and Electricity	Value Added, Total Activity					Total
				Wages and Salaries			Other	Total Value Added	
				Wages	Salaries	Total

Section 3.—Statistical Data for the Manufacturing Industries

Subsection 1.—Major Historical and Current Statistics of Manufacturing

Statistics on manufacturing in Canada have been collected since 1870, originally in connection with the decennial or quinquennial censuses for the period 1870 to 1915 and, since 1917, through the annual Census of Manufactures. Although every effort has been made to maintain comparability in the statistics since 1917, as shown in Table 9, changes in coverage of industries, type of data collected and the method of its treatment have inevitably introduced discontinuities or lack of comparability in certain components. One such major change in concept occurred in 1952 when the gross value of products was replaced by the value of factory shipments. More recently, the introduction of the revised standard industrial classification in 1960 and the new establishment concept in 1961 led to a break in continuity with previous years. An indication of the effects of these revisions in classification and concept is given in Table 9 where statistics for the 1957-59 period are given on both the 1948 standard industrial classification and manufacturing activity concept and the revised (1960) standard industrial classification and new establishment concept. Under the latter concept, a manufacturing establishment (i.e., one whose major activity is manufacturing) is the smallest reporting unit capable of reporting all of the following: materials and supplies used, goods purchased for resale as such, fuel and power consumed, number of employees and their pay, inventories, and shipments or sales.

The introduction of the total activity concept in 1962 and its application to 1961 data produced a considerable amount of data on non-manufacturing activities of manufacturing industries and has resulted in the transfer of statistics on some items, such as office and administrative workers and working owners and partners, from manufacturing to total activity. Table 10 sets out summary statistics for manufacturing activity and total activity for 1961-66. It should be noted that the 1961 data in Table 10 are not directly comparable with those for the same year in Table 9.

9.—Summary Statistics of Manufactures, 1917-61

NOTE.—Figures for intervening years from 1918 to 1949, not included in this table, are given in the 1962 Year Book, p. 616. Statistics of manufacturing from 1870 have been published but between that year and 1917 figures are not on a basis comparable to the series given below; statistics for significant years appear in the 1943-44 Year Book, p. 363. Figures of the non-ferrous metal smelting industries were first included with manufactures in 1925.

Year	Estab- lish- ments	Employees ¹	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture ²	Value of Shipments of Goods of Own Manufacture ³
BASIS: INDUSTRIAL CLASSIFICATION IN USE PRIOR TO 1960						
	No.	No.	\$'000	\$'000	\$'000	\$'000

BASIS: REVISED STANDARD INDUSTRIAL CLASSIFICATION AND NEW ESTABLISHMENT CONCEPT						
	No.	No.	\$'000	\$'000	\$'000	\$'000
1957.....	33,551	1,340,948	4,778,040	11,698,789	..	21,452,343
1958.....	32,446	1,272,686	4,758,614	11,630,825	9,454,954	21,434,815
1959.....	32,075	1,287,809	5,030,128	12,339,558	10,154,277	22,830,827
1960.....	32,852	1,275,476	5,150,503	12,451,637	10,371,284	23,279,804
1961.....	32,415	1,264,946	5,231,447	13,127,708	10,682,138	24,243,295

¹ Includes working owners and partners.

² For 1924-51, inclusive, the value added by manufacture is computed by subtracting cost of fuel, electricity and materials from gross value of products; for 1952 and 1953 the deduction is made from value of factory shipments and for 1954 and subsequent years from the calculated value of production. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available.

³ Prior to 1952, gross value of products.

⁴ A change in the method of computing the number of employees in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted.

⁵ Newfoundland is included from 1949 but figures for the fish processing industry for 1949 and 1950 are not available for that province and are not included.

10.—Summary Statistics of Manufactures, 1961-66

NOTE.—Based on the revised standard industrial classification and new establishment and total activity concepts. Figures in this table include poultry processors, book publishers, electroplating establishments, dental laboratories, and prescription branches in the ophthalmic goods manufactures industry, not included in Table 9.

Year	MANUFACTURING ACTIVITY ¹							
	Estab- lish- ments	Production and Related Workers			Cost of Fuel and Elec- tricity ²	Cost of Materials and Supplies Used	Value of Shipments of Goods of Own Manu- facture	Value Added
		Number	Man- Hours Paid	Wages

¹ Conceptually identical to previous years.

² Cannot be reported separately for manufacturing and non-manufacturing activities but related substantially to manufacturing activity.

³ Included with administrative and office employees in Table 9.

⁴ Includes production and related workers, administrative and office employees, sales, distribution and other employees; excludes working owners and partners.

⁵ Includes supplies used in both manufacturing and non-manufacturing activity.

⁶ Includes shipments of goods of own manufacture, value of shipments of goods purchased for resale and other operational revenue.

⁷ Value of total operational revenue less total cost of materials, supplies, fuel and electricity used and goods purchased for resale in the same condition; all adjusted for inventory changes where required.

11.—Summary Statistics of Manufactures, by Industry Group, 1965 and 1966

NOTE.—Based on the revised standard industrial classification and new establishment and total activity concepts.

1 Value of production, rather than shipments of goods of own manufacture, is shown.

Subsection 2.—Distribution of Manufacturing by Province and by Census Metropolitan Area

Distribution by Province

Ontario and Quebec together accounted for 81.7 p.c. of the value added by manufacture in Canada in 1966—Ontario for 52.9 p.c. and Quebec for 28.8 p.c. British Columbia was responsible for 8.2 p.c., the Prairie Provinces for 6.6 p.c., and the Atlantic Provinces for 3.5 p.c. In Ontario, value added by manufacture averaged \$1,242 per capita of the population, in Quebec \$814, in British Columbia \$719, in the Prairie Provinces \$321 and in the Atlantic Provinces \$286; these averages compare with a national average of \$817.

One of the most significant developments in manufacturing technology applies to the coating of metals. Prepainted aluminum coiled sheet, here shown coming off the coating line at a Kingston, Ont., plant, can be stamped and formed without detriment to the coating. It is in growing demand, especially for building and transportation applications.

13.—Summary Statistics of Manufactures, by Province, 1965 and 1966

NOTE.—Based on the revised standard industrial classification and new establishment and total activity concepts.

Distribution by Metropolitan Area

Seven Census Metropolitan Areas accounted for slightly more than half of the shipments of goods of own manufacture of the Canadian manufacturing industries in 1966. The two largest, by a substantial margin, were Toronto and Montreal. The Toronto Census Metropolitan Area was only slightly larger than the Montreal area in terms of establishments and number of employees, with a somewhat wider margin in terms of shipments of goods of own manufacture, salaries and wages, and value added (total activity).

Together the two centres accounted for approximately one third of Canadian totals for the statistics mentioned, as shown in Tables 15 and 16. Their preponderance is illustrated by the fact that Montreal had almost four times as many employees in manufacturing establishments as Hamilton, the next largest Census Metropolitan Area in terms of all these statistics except number of establishments. The Montreal area had more than three times as much shipments, salaries and wages and almost three times as much value added (total activity).

PERCENTAGE OF TOTAL CANADIAN SHIPMENTS OF GOODS
OF OWN MANUFACTURE ACCOUNTED FOR
BY SELECTED CENSUS METROPOLITAN AREAS, 1966

There is a marked variation between the order of the largest Census Metropolitan Areas in terms of number of establishments from rankings obtaining for the other statistics mentioned. In 1966, Vancouver was in third place in terms of establishments and Winnipeg in fourth place, whereas in terms of shipments these areas ranked, respectively, fourth and sixth.

These rankings are influenced by the type of industry predominating in the areas. Hamilton Metropolitan Area as a centre mainly specialized in heavy industry, having large primary iron and steel mills in the city of Hamilton, has a larger average size of establishment than other metropolitan areas measured by virtually any statistic. It has only one eighth as many establishments as Montreal, although for the other measurements it has one quarter or one third as much as Montreal. Windsor Census Metropolitan Area, with its important establishments in the transportation equipment industries, had only 1.2 p.c. of the number of manufacturing establishments in Canada but had 3.1 p.c. of value added (total activity).

The employment statistics used represent only employees classified to manufacturing establishments as such. Canadian and provincial totals for the manufacturing industries also include employees classified to head offices, sales offices and auxiliary units. Such reporting units are not counted in regular tabulations of the statistics of the manufacturing industries for particular sub-provincial areas, although a special distribution is published by Census Metropolitan Area.* Such employees located in non-manufacturing reporting units are heavily concentrated in a few large centres. In only one or two cases, however, could the ranking of the Census Metropolitan Areas shown here be affected and for some areas the relevant employees and salaries and wages are confidential, so that such head office data have not been included.

* Census Metropolitan Areas are aggregations of municipalities and parts of municipalities, grouped mainly for purposes of the Census of Population; in a few instances Census Metropolitan Areas as used in the Census of Manufactures differ because of the practice of aggregating whole municipalities only. There are, of course, urban areas which, in terms of population or manufacturing activity, are larger than the smaller Census Metropolitan Areas shown.

15.—Relative Importance of Census Metropolitan Areas in Canadian Manufacturing Industries, 1966

(Areas ranked by value of shipments of goods of own manufacture)

NOTE.—Excludes Sudbury Census Metropolitan Area, data for which are confidential. Census Metropolitan Area data shown exclude head offices, sales offices and auxiliary unit data (included in Canada total).

¹ Classified as a Census Metropolitan Area commencing 1966. C.M.A. is indicated.

Gyroscopes and accelerometers used in airborne inertial navigation systems are assembled in a super-clean room where surgical procedures keep the delicate products free from even the most minute contaminants.

The versatility of Canadian furriers' art is displayed in this striking black and white mink coat, a pinnacle in the world of fashion.

Lead alloy being applied to a heavy armored submarine cable at a Montreal plant. This length, one of the largest and longest ever made in North America, now lies under the Bosphorus, a narrow strait that joins the Black Sea and the Sea of Marmara, and so links the continents of Europe and Asia.

Subsection 3.—Size of Manufacturing Establishments Based on Employment and Shipments

Size Based on Employment

About one half (53.0 p.c.) of all persons employed in Canada's manufacturing industries in 1966 worked in establishments employing 200 or more persons and about one fifth (20.5 p.c.) worked in establishments employing 1,000 or more. There were 153 establishments employing 1,000 or more in 1966 compared with 142 in 1965 and 108 in 1961.

Size Based on Shipments

The average size of a manufacturing establishment in terms of shipments of goods of own manufacture was \$1,118,000 in 1966, about 59 p.c. greater than in 1961. This small average size, however, is influenced by the large number of very small establishments which account for only a minor share of the total shipments. Establishments with shipments of \$1,000,000 or more contributed 87 p.c. of all shipments of goods of own manufacture from the manufacturing industries.

Subsection 2. Contracts Awarded and Building Permits Issued.....	735
SECTION 3. HOUSING.....	738
Subsection 1. Government Aid to House-Building.....	738
Subsection 2. Housing Activities, 1967-68.....	741
Subsection 3. Housing Statistics of the 1966 Census.....	746

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

This Chapter provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment, together with summaries of other available statistics for the construction industry. Section 1 shows the amounts spent by each of the various industrial or economic sectors. Section 2 brings together a number of summaries of related series on construction activity—value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed, contracts awarded and building permits issued. Government aid to house-building, construction of dwelling units and housing statistics of the Census are covered in Section 3.

Section 1.—Capital Expenditures on Construction and on Machinery and Equipment†

A study early in 1969 indicated that capital expenditures in Canada by business establishments, institutions, governments and for housing would be \$17,046,000,000 during 1969. This total represents an increase of almost 9 p.c. over the \$15,678,000,000 estimated for 1968. Within the total, new construction is expected to rise by about 9 p.c. and outlays for new machinery and equipment are estimated to be about 8 p.c. higher than in 1968.

The capital program planned for 1969, if accomplished, would represent the first significant year-to-year increase in investment in Canada since 1966. In both 1967 and 1968, total capital outlays rose by only about 2 p.c. and, if allowance is made for price increases, the physical volume of investment activity probably declined in each year. Although the rate of gain indicated for 1969 is more moderate than those occurring in the years from 1964 to 1966, investment spending will be rising at least in line with the growth expected for the economy as a whole.

*Except where otherwise noted, prepared (April 1969) in the Business Finance Division, Dominion Bureau of Statistics.

†Capital expenditure figures for 1967 and earlier years are final and those for 1968 are preliminary and subject to revision at a later date. Capital expenditures for 1967 and 1968, as well as intentions for 1969, appear in greater detail in the publication *Private and Public Investment in Canada, Outlook 1969*, available from the Queen's Printer (Catalogue No. 61-1205).

1969.....	11,034	—	6,012	—	17,046	—	—	—

Increases in capital spending are planned in almost all major sectors of the economy in 1969. Plans of business involve a rise of almost 8 p.c. in outlays over those of 1968. Social capital spending by institutions and government departments is also expected to increase by nearly 8 p.c., while outlays for housing are likely to be more than 12 p.c. greater than those of the preceding year.

The most important change from trends in recent years is in the business sector where the increase of 8 p.c. now planned follows two consecutive years of decline in business investment. The gains expected in social capital spending in 1969 are little different from those that occurred in 1968, while the 12-p.c. rise in outlays for housing is considerably less than the pronounced increase of 21 p.c. recorded in the preceding year.

The breakdown of capital spending plans by region reveals that in each major region in Canada outlays in 1969 will be larger than those occurring in 1968. These increases range from 3 p.c. in Quebec and the Prairie Provinces and 7 p.c. in British Columbia to 11 p.c. in the Atlantic Provinces and almost 16 p.c. in Ontario. Within the Atlantic and Prairie regions considerable variations exist among the individual provinces. Present plans suggest that there will be some decline in investment in Prince Edward Island while that in New Brunswick is likely to increase by 21 p.c. with lesser increases in Nova Scotia and Newfoundland. Similarly in the Prairies, capital spending in Saskatchewan is expected to be 8 p.c. below the 1968 level but increases of 7 p.c. and 9 p.c., respectively, are planned in Manitoba and Alberta.

The spending sectors that contribute to the expected strengths and weaknesses vary considerably from region to region. The only area of investment likely to rise significantly in all regions, and indeed in all provinces, is house-building. In Ontario and the Atlantic Provinces, the regions where the most rapid growth is expected, significant increases are planned in business investment—more than 20 p.c. in Ontario and over 10 p.c. in the Atlantic region; a more moderate rate of 5 p.c. is planned in British Columbia but in Quebec and the Prairie Provinces such investment is expected to remain at about the 1968 level. Within business investment a substantial increase in the construction of stores and other commercial buildings is expected in all regions except Quebec. In the Atlantic Provinces this is supplemented by a rising level of expenditures for utilities, particularly electric power facilities. In Ontario, too, utilities investment is expected to be substantially higher but the major impetus to business investment in that province comes from sharply expanded capital plans by manufacturers. In British Columbia, in addition to the strength in commercial construction, manufacturing investment is expected to increase significantly.

The lack of growth during 1969 in business investment in the Prairies results from reduced capital spending in the commodity-producing industries which offset increases in commercial construction and utilities. In Quebec, no significant increases or declines are planned in any of the major categories of business investment.

Social capital outlays are expected to increase most sharply in regions where business investment is showing little growth. Such outlays are likely to rise by 14 p.c. in the Prairies, 12 p.c. in British Columbia and 8 p.c. in Quebec. In both Ontario and the Atlantic Provinces, social capital spending for institutions and government facilities are expected to be only slightly greater than in 1968.

2.—Summary of Capital and Repair Expenditures, by Economic Sector, 1967-69

NOTE.—Actual expenditures 1967; preliminary actual 1968; intentions 1969.

It should be noted that, in the smaller provinces in particular, individual projects or special conditions in one segment of industry may have an important bearing on the year-to-year trend in total investment. For example, declining outlays for potash mines account for most of the reduction in Saskatchewan investment while the increased strength in Alberta stems from an expansion of activity in petroleum and gas fields. If conditions change in such industries as the year progresses or if new projects are started or existing ones postponed or stretched out, actual spending in individual provinces may vary markedly from present plans.

Details of some of the above economic sectors are given in Table 3. The value of construction work performed, together with statistics of contracts awarded and building permits issued in recent years, is covered in Section 2 of this Chapter. Housing is treated separately in Section 3.

¹ Includes privately operated social and welfare institutions.² Mainly expenditures of real estate companies engaged in developing, owning and leasing properties, and may include outlays for multi-purpose developments with such facilities as theatres, stores, hotel accommodation, etc.³ Includes services to business, certain recreational and personal services and such miscellaneous services as trade and exhibition associations.

A summary of the capital expenditures in each province for the years 1967 to 1969 is given in Table 4. Such expenditures represent gross additions to the capital stocks of the province and are a reflection of economic activity in the area, although the actual production of these assets may generate major employment and income-giving effects in other regions.

Section 2.—Construction Statistics

Subsection 1.—Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures that appear in Section 1. The data represent the estimated total value of all new and repair construction performed by contractors, by labour forces of utility, manufacturing, mining and logging firms, and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry. Table 5 shows the value of new and repair construction work performed during the period 1958-67 and Table 6 shows the value of such work performed by contractors and others in the years 1964-67.

5.—Value of New and Repair Construction Work Performed, 1958-67

NOTE.—Actual expenditures 1958-66; preliminary actual 1967.

¹ Includes related structures employed in production of petrochemicals.

Principal statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table 8. The statistics given for Canada as a whole may be considered as relatively accurate but those for individual provinces and

by class of builder are approximations only. All estimates given for cost of materials used are based on ratios of this item to total value of work performed, derived from annual surveys of construction work and applied to the total value-of-work figures. Estimates of labour content are similarly based but, in addition, are adjusted to include working owners and partners and their withdrawals. Although the ratios were calculated in some detail by type of industry, still further refinements are required. There are also some difficulties in obtaining the precise location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However, if used with these qualifications in mind, the table provides useful estimates.

8.—Labour Content, Cost of Materials and Value of Work Performed in Construction, by Province and by Employer, 1966 and 1967 with Totals for 1963-67

NOTE.—Actual expenditures 1963-66; preliminary actual 1967. Comparable figures from 1953 are given in the corresponding table of previous Year Books beginning with the 1957-58 edition.

Subsection 2.—Contracts Awarded and Building Permits Issued

In this Subsection, statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only as far as the work thus provided for is completed and duly reported in the capital expenditure surveys. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done.

9.—Value of Construction Contracts Awarded, 1947-67

(Source: Southam Building Guide)

NOTE.—Figures for the years 1926-46 are given in the corresponding table of the 1962 Year Book, p. 682.

Building Permits.—The estimated value of proposed construction is indicated by the value of building permits issued. Figures of building permits issued are collected from more than 1,400 municipalities across the country and are available for individual municipalities, for metropolitan areas, for provinces and for economic areas in Quebec, Ontario and Manitoba.

The total value of permits issued for construction work in 1967 was \$4,067,833,000, an increase of 9.5 p.c. over the 1966 figure. Residential construction as a whole increased by 20.8 p.c., due mainly to a 21.7-p.c. increase in the value of permits issued for new residential construction. Industrial construction decreased 10.3 p.c. and commercial construction 8.1 p.c. but government construction rose 14.2 p.c., resulting in an over-all increase of only 1.0 p.c. for non-residential construction. All provinces recorded increases in 1967 except Newfoundland and Prince Edward Island which declined 8.4 p.c. and 13.4 p.c., respectively. Table 11 shows the value of building permits issued in each of 50 municipalities in 1967 compared with 1966.

11.—Estimated Value of Proposed Construction as Indicated by Building Permits Issued in 50 Municipalities, 1966 and 1967

NOTE.—Comparable figures from 1956 are given in the corresponding table of previous Year Books beginning with the 1962 edition.

Section 3.—Housing***Subsection 1.—Government Aid to House-Building**

Federal Assistance.—The role of the Federal Government in housing has expanded progressively since the introduction of the first continuing statute in 1935. Although the Government originally entered the housing field in 1918 when it made money available to the provinces for re-lending to municipalities for housing purposes, the first general piece of federal housing legislation was the Dominion Housing Act passed in 1935. This was followed by the National Housing Acts of 1938 and 1944, culminating in 1954 with the present National Housing Act, defined as “an Act to promote the construction of new houses, the repair and modernization of existing houses and the improvement of housing and living conditions”. Central Mortgage and Housing Corporation (CMHC), a Crown agency incorporated by Act of Parliament in 1945, administers the National Housing Act and co-ordinates the activities of the Federal Government in housing. The Corporation has the authority and responsibility for a variety of functions affecting housing in its long-term outlook as well as in its immediate requirements. It is empowered to act as an insurer of mortgage loans, as a lender or investor of public funds, as a guarantor and as an owner of property and other assets. It also acts as a research agency in fields associated with housing and assists provinces and municipalities in many aspects of urban growth. In general, the Government, through the successive Housing Acts, has attempted to stimulate and supplement the market for housing rather than assume direct responsibilities that rightfully belong to other levels of government or that could be borne more effectively by private enterprise. In each case the aim has been to increase the flow of mortgage money and to encourage lenders to make loans on more favourable terms to prospective home owners.

The volume of house-building in Canada since 1935 has been spectacular. Close to half of the country's present stock of approximately 5,500,000 houses have been built since the first covering legislation was enacted; about one third of these were financed in one way or another under the Housing Acts.

Under the terms of the National Housing Act, 1954 and its subsequent amendments, the Federal Government is active in many ways.

* Prepared (November 1968) in the Information Division, Central Mortgage and Housing Corporation, Ottawa.

Loan Insurance.—Insured mortgage loans may be made for both home-ownership and for rental housing. They are normally available from approved lenders to individual home-owner applicants, to builders constructing houses for sale or for rent and for some special groups, such as co-operative housing associations and farmers. Insured loans are also available for the purchase, improvement, refinancing or sale of existing home-ownership and rental housing in designated urban renewal areas. Loans for existing housing in other areas are available only to purchasers wishing to occupy and improve such dwellings.

The maximum interest rate on insured loans is governed by a formula which permits the rate to fluctuate in accordance with changing yields on long-term government bonds. Under this arrangement the maximum rate is automatically reviewed each quarter to maintain its level at $2\frac{1}{2}$ p.c. above the bond yield. Lenders may charge less than the prescribed maximum.

Upon application, the borrower pays CMHC a fee of \$35 per unit to help defray expenses incurred in the examination of plans and specifications, in the determination of lending values and in compliance inspections during construction. An approved lender requires evidence that a home owner or home purchaser is providing 5 p.c. of the value of the house from his own resources. For the home owner this equity may be in the form of cash or a combination of cash, land and labour; for the home purchaser it may be in cash or labour. The regulations require that gross debt service—the ratio of repayments of principal and interest plus municipal taxes to the income of the borrower—should not exceed 27 p.c., although instances involving higher ratios may be considered on their merits. The borrower pays an insurance fee which is added to the amount of the loan and is repaid over the term of the mortgage; the fee ranges from $1\frac{1}{4}$ p.c. to $2\frac{1}{2}$ p.c. of the loan, according to type of unit and time of mortgage advances.

Loans for new home-ownership may be up to 95 p.c. of the first \$18,000 of lending value plus 70 p.c. of the remainder to a maximum loan of \$18,000. For rental housing, loans may be for 90 p.c. of lending value based on a maximum of \$18,000 per dwelling unit. Loans for existing home-ownership and rental housing in urban renewal areas may be for 85 p.c. of lending value, subject to the same maximum amounts as for new housing. Loans for existing houses outside urban renewal areas may be 95 p.c. of the lending value, up to a maximum amount of \$10,000. The repayment period may be up to 35 years for new home-ownership and rental housing and for existing home-owner dwellings outside urban renewal areas. A maximum period of 25 years applies to existing houses in renewal areas.

Direct Loans.—CMHC may make direct loans for both home-ownership and rental housing where, in the opinion of the Corporation, loans are not available through approved lenders. Loans are made to any eligible home-owner applicant but direct loans to builders are normally subject to a requirement that the houses be pre-sold to satisfactory purchasers. By the end of 1967, direct lending by the Corporation totalled approximately 3,376,000. The amount that may be advanced for this purpose out of the Consolidated Revenue Fund is \$4,600,000,000.

CMHC, with Government approval by Order in Council, may make loans to limited dividend companies and non-profit corporations to assist in financing the construction of low-rental housing projects or in the purchase of existing buildings and their conversion into low-rental housing projects. In addition to self-contained units, developments undertaken may include hostel or dormitory accommodation for the elderly and low-income individuals. Loans may be up to a maximum of 90 p.c. of the lending value established by CMHC. The period for repayment may not exceed the useful life of the project and in any case may not be for more than 50 years. The interest rate is established by Order in Council. Plans and specifications for such projects as well as financing and operating arrangements must be approved by the Corporation.

Since December 1960, the National Housing Act has provided financial assistance for the elimination or prevention of water and soil pollution. CMHC is authorized to make a loan to a province, municipality or a municipal sewerage corporation for the purpose of assisting in the construction or expansion of a sewage treatment project. The

loan may not exceed two thirds of the cost of the project and the maximum repayment term is 50 years from date of completion. The interest rate is prescribed by the Governor in Council. The agreement covering the project contains a condition whereby 25 p.c. of the loan principal and 25 p.c. of the accrued interest will be forgiven for projects completed to the satisfaction of CMHC on or before Mar. 31, 1970. Where construction is not completed before that date, 25 p.c. of the loan advanced or warrantable by construction progress at that date, plus 25 p.c. of the accrued interest on advances, may be forgiven.

Long-term loans are available to a province or its agency, a municipality or its agency, a hospital, a school board, a university or college, a co-operative association or a charitable corporation for the purpose of assisting in the construction of a student housing project, or the acquisition of existing buildings and their conversion into a student housing project. In all cases the government of the province concerned must approve the loan. CMHC may lend up to 90 p.c. of the project cost, subject to maximum amounts as follows: houses and self-contained apartments \$18,000 per unit, and hostels \$7,000 per person accommodated. The term of the loan may not exceed 50 years. The interest rate is prescribed by the Governor in Council.

Guarantees.—CMHC is authorized to give a limited guarantee to banks or approved instalment credit agencies in return for an insurance fee paid by the borrower on loans made for additions, repairs and alterations to existing houses and apartments. A home improvement loan and the balance owing on any existing NHA home improvement loan on the property may not exceed \$4,000 for a one-family dwelling or \$4,000 for the first unit of a duplex, semi-detached or multiple-family dwelling, plus \$1,500 for each additional unit. Loans are repayable in monthly instalments over a period not exceeding 10 years at a rate of interest similar to that applicable to home-ownership loans.

Public Housing.—Under the National Housing Act and complementary provincial legislation, the Federal Government and the government of a province may enter into a partnership agreement to build rental housing for families and individuals of low income or purchase and rehabilitate existing housing for this purpose. Projects may include hostel or dormitory accommodation in addition to self-contained units. The Federal Government pays up to 75 p.c. of the capital costs and the provincial government the remainder, although the latter may call upon the municipality concerned to bear a portion of the provincial share. Rents for units in federal-provincial projects are related to the tenant's family income and size of family and operating deficits are shared on the same contractual basis as the capital costs.

As an alternative method of producing public housing, the CMHC is empowered to make long-term loans to a province, or to a municipality or public housing agency with the approval of the province, for the provision of housing accommodation. Projects may consist of new construction or existing buildings and include dormitory and hostel accommodation as well as self-contained family units. Loans may be up to 90 p.c. of the total costs as determined by CMHC and for a term as long as 50 years but not in excess of the useful life of the development. The maximum that may be borrowed for a house or for a fully serviced apartment is \$18,000, and for hostels or dormitories \$7,000 for each person accommodated. The interest rate is set by the Governor in Council.

Federal grants may be made covering up to 50 p.c. of losses incurred in the operation of public housing projects, for a period of up to 50 years but not exceeding the useful life of the project.

Urban Renewal.—Federal grants and loans are available under the Act to assist provinces and municipalities undertaking programs of urban renewal. CMHC, with Federal Government approval, may arrange with a municipality to undertake a study to identify blighted areas, determine housing requirements and provide data upon which an orderly program of conservation, rehabilitation and redevelopment can be based. The federal contribution may be as much as 75 p.c. of the cost. The legislation also authorizes federal contributions equal to one half of the costs of preparing an urban renewal scheme.

etting out proposals for urban renewal action, a similar cost-sharing arrangement for the implementation of a scheme, and loans up to two thirds of the provincial or municipal share of the cost of carrying out an urban renewal scheme. Loans may be for 15 years at an interest rate prescribed by the Governor in Council. To encourage the improvement and conservation of housing meeting minimum standards of construction, loans are available for the sale, purchase or refinancing of existing housing in urban renewal areas not designated for demolition.

Land Assembly.—The Federal Government and the government of a province may enter into an agreement to provide for a land assembly project which involves the development of raw land for housing purposes. The Federal Government pays up to 75 p.c. of the cost and the provincial government the remainder. The latter may call upon the municipality concerned to bear a portion of the provincial share. In addition, loans may be made to assist proponents of public housing projects to acquire land for future projects, the maximum loan being 90 p.c. of the cost of acquisition and development.

CMHC Building.—The Corporation may construct and administer housing and certain other buildings on its own account and for other government departments and agencies. Its responsibilities include the provision of architectural and engineering designs, the calling of public tenders and the administration of construction contracts—including any necessary on-site surveying and engineering. On such contracts, the Corporation carries out full architectural and engineering inspections.

Research.—CMHC is concerned with building technology in the formulation of standards for housing construction, in the use of suitable materials and in the development of new building techniques. The Corporation has no laboratory facilities but has direct experience of performance in the field and seeks the advice of specialists in various agencies and departments of the Federal Government in such matters. Research into the factors affecting housing is concerned with the measurement of the demand for new housing, the volume of new housing built and the supply of mortgage money for house construction. The Corporation also co-ordinates and publishes statistical information on housing. Funds provided under the National Housing Act support the activities of the Canadian Housing Design Council, the Community Planning Association of Canada and the Canadian Council on Urban and Regional Research.

Other Federal Legislation.—The Farm Credit Act, 1959 provides for federal long-term loan assistance for housing as well as for other farm purposes (see pp. 473-474); the Veterans' Land Act, 1942 provides a form of loan and grant assistance to veterans for housing and other purposes (see p. 329); and the Farm Improvement Loans Act, 1944 (see pp. 471-472) provides for guarantees for intermediate- and short-term loans made by approved lending agencies to farmers for housing and other purposes. These three statutes are concerned only incidentally with housing.

Provincial Assistance.—All provinces have complementary legislation providing for joint federal-provincial housing and land assembly projects and, in addition, most provinces have enacted separate legislation with respect to housing. Details of such assistance may be secured from the provincial government departments listed in the Directory of Sources of Official Information included in Chapter XXVII under the heading of "Housing".

Subsection 2.—Housing Activities, 1967-68

Following the low levels of production of 1966 and faced with an uncertain economic outlook, house building in 1967 rebounded with a volume of residential construction in excess of any previous year. Construction was started on 164,123 self-contained family housing units or 29,649 units more than in 1966. Activity in the more specialized field of hostel accommodation provided additional facilities under the National Housing Act for some 11,000 elderly persons and students, an advance of 83.4 p.c. over the previous year.

The greater flexibility of the National Housing Act interest rate, the active return of the chartered banks to mortgage lending, and some easing in the capital market were among the leading factors that combined to produce the largest annual increase of house construction in nine years. Another reason for the accelerated activity was a massive investment of Federal Government funds in direct support of the private mortgage market and its assistance to widely varying housing programs. More than \$1,000,000,000—the largest annual amount in the history of federal participation in housing—was committed to the up-grading of quantity and quality of housing stock and toward improving urban environment. In that year, too, much more stress was placed on the social purpose of housing.

House-building during the first nine months of 1968 continued at an accelerated rate, indicating starts in excess of 190,000 for the year, or 25,000 more than in 1967. There was greatly increased activity on the part of the approved lenders—loans aggregating \$649,927,000 had been approved, related to the construction of 48,875 new units; for the same period of 1967, the totals were \$265,450,000 and 20,542 units.

CMHC direct lending in the private sector during the first nine months of 1968 was considerably less than in 1967, reflecting the Federal Government's policy of directing its major effort toward the provision of social housing. By the end of September direct lending amounted to \$213,871,000 for 13,335 units; comparable figures for 1967 were \$614,676,000 for 39,952 units.

¹ Excludes the Yukon and Northwest Territories.

Operations under the National Housing Act.—NHA mortgage loans amounting to \$1,014,833,000 were approved in 1967 for the provision of 68,945 dwellings, compared with loans of \$671,280,000 approved for 46,366 dwellings in 1966. Direct lending by CMHC surpassed the volume of insured loans by approved lenders operating under the Act: loans by the federal agency had a value of \$673,874,000 against \$671,280,000 in 1966. Loans made available through private lenders in 1967 amounted to \$355,793,000 for 27,154 dwellings. Trust companies remained the largest source of private funds, approving loans

for 12,979 units; insurance company loans represented 6,594 dwellings; and chartered bank loans amounted to \$84,990,000, representing 5,982 units.

Borrower and House Characteristics.—The average income of purchasers of NHA-financed houses in 1967 was \$8,008 or, in terms of family income, \$8,769. These incomes were 10.7 p.c. higher than the corresponding averages for purchasers in 1966 and appeared to be in line with the general increase in incomes in 1967. As in previous years, relatively few purchasers of NHA houses were drawn from the lower third of the range of family incomes. In 1967 only 1.4 p.c. of the borrowers had family incomes of less than \$5,000 compared with 4.8 p.c. in 1966.

The average age of purchasers of NHA houses was about 34 years in 1967, little changed from earlier years. In 1967, just over one half of the purchasers had two or more children and 32.5 p.c. had previously been home owners.

The average price of NHA-financed houses purchased in 1967, including many started in the previous year, was \$19,442. On these houses, purchasers provided down-payments averaging \$4,312 and undertook monthly payments of \$143.16 for mortgage principal, interest and taxes; compared with 1966, these represented increases of 8.6 p.c. in price, 22.0 p.c. in down-payment and 10.3 p.c. in monthly charges. The proportion of monthly charges to income increased from 21.4 p.c. to 21.6 p.c.

As in other years, most of the NHA-financed houses purchased in 1967 were bungalows, which type represented 77.2 p.c. of the total compared with 72.0 p.c. in 1966. The proportion of split-level dwellings decreased from 17.9 p.c. to 17.6 p.c. and that of two-storey dwellings from 9.8 p.c. to 6.6 p.c. Of these dwellings, about 84.6 p.c. had three bedrooms and the remainder had four or more.

Loans to Non-profit Corporations and Limited-Dividend Companies.—In 1967, 81 loans in an aggregate amount of \$30,600,000 were approved to non-profit corporations to assist in the construction of 1,112 self-contained units of low-rental housing and hostel accommodation for 3,776 persons. With the exception of a small number for special groups, all loans were for projects for elderly persons.

Home Improvement Loans.—There was a slight decline in the volume but a slight increase in the value of NHA-guaranteed bank loans for home improvement purposes in 1967. Loan approvals during the year numbered 16,631 for \$35,200,000 as against 18,042 and a value of \$35,900,000 in 1966. At the end of 1967, the outstanding debt on such loans was reported by the banks at \$76,200,000 compared with \$75,300,000 a year earlier. The Home Improvement Loan Insurance Fund increased by \$300,000 during the year to reach \$3,500,000 at Dec. 31, 1967.

Loans for Student Housing Projects.—Loans totalling \$71,160,000 were approved in 1967 for 43 student housing projects providing accommodation for 10,782 students, an increase over 1966 activity when assistance was authorized for developments to house 7,670 students. Loans approved in 1967 were distributed provincially as follows:—

Province	Loans		Students to be Accom- modated
	No.	\$'000	No.
Newfoundland.....	1	1,775	93
Prince Edward Island.....	1	720	153
Nova Scotia.....	4	3,993	716
New Brunswick.....	1	516	152
Quebec.....	3	4,470	757
Ontario.....	14	41,708	5,943
Manitoba.....	3	1,693	299
Saskatchewan.....	5	1,072	270
Alberta.....	3	5,792	1,204
British Columbia.....	8	9,421	1,195

From December 1960, when university housing loans were first authorized, to December 1967, 185 loans totalling \$250,160,000 were approved for the construction of residences for 44,691 students. The statutory limit that may be advanced for such loans is \$350,000,000.

Loans for Municipal Sewage-Treatment Projects.—During 1967, 140 loans amounting to over \$26,594,000 were authorized to assist municipalities to undertake sewage-treatment projects, distributed provincially as follows:—

Province	Loans		Province	Loans	
	No.	\$'000		No.	\$'000
Newfoundland.....	—	—	Ontario.....	54	19,836
Prince Edward Island.....	—	—	Manitoba.....	14	1,449
Nova Scotia.....	4	151	Saskatchewan.....	9	179
New Brunswick.....	2	236	Alberta.....	12	748
Quebec.....	34	4,620	British Columbia.....	11	1,757

From December 1960, when assistance for sewage-treatment projects was authorized, to December 1967, 1,256 loans totalling \$234,609,000 were approved.

Mortgage Marketing.—Sales of NHA-insured mortgages amounted to \$68,000,000 in 1967 compared with \$88,300,000 in 1966. Because of heavy pressure on the market for long-term funds, auctions were not held by the Corporation during 1966 or 1967; total sales by the Corporation to the end of 1965 totalled \$308,600,000. Under Sect. 11 of the National Housing Act, holders of NHA mortgages may obtain loans from the Corporation. Loans outstanding at the end of 1966 totalled \$10,600,000. In January, the Corporation acquired the mortgages securing two loans totalling \$4,900,000. The \$5,600,000 balance of the carryover was repaid during the year, together with ten new loans totalling \$12,600,000.

Urban Renewal.—Activity under the urban renewal provisions of the National Housing Act accelerated in 1967. During the year, the Corporation approved contributions totalling \$663,329 to 38 municipalities to undertake urban renewal studies: three in Nova Scotia, one in New Brunswick, five in Quebec, 11 in Ontario, three in Manitoba, 14 in Saskatchewan and one in British Columbia. In 1966, 43 grants totalling \$697,000 were approved for urban renewal studies.

Federal contributions totalling \$642,000 were approved during 1967 for the preparation of 35 urban renewal schemes: one in Nova Scotia, 11 in Quebec, nine in Ontario, one in Manitoba, two in Saskatchewan, two in Alberta and nine in British Columbia. Also, nine schemes were approved for implementation supported by a federal contribution of \$48,300,000. Together these involved the rehabilitation of 691 acres and the displacement of 4,540 families, and the estimated total cost was \$130,000,000. Locations and acreages were: one in Newfoundland of 186 acres, two in Nova Scotia of 24.1 acres, one in Quebec of 300 acres, three in Ontario of 132 acres, and three in British Columbia of 14.4 acres. By

far the largest approval was the project "La Petite Bourgogne" involving the redevelopment of 300 acres in downtown Montreal and a federal contribution of \$26,000,000, in addition to which light loans amounting to \$9,400,000 were made to municipalities concerned.

Public Housing.—During 1967 approval was given for federal-provincial housing projects located in Corner Brook in Newfoundland; Glace Bay, Halifax and New Waterford in Nova Scotia; Battleford, Prince Albert, Estevan, Fort Qu'Appelle, Humboldt, Kerrobert, Meadow Lake, Moose Jaw, Moosomin, Saskatoon and Weyburn in Saskatchewan; Taber in Alberta; and Vancouver and Saanich in British Columbia. These projects will provide 1,330 dwellings and the federal contribution will be \$15,600,000. To the end of 1967, approval had been given for 14,318 rental units under federal-provincial arrangements. Of these, 11,878 are to be subsidized at rents related to the income of tenants and the remainder will be leased at fixed rents related to dwelling size and at levels sufficient to recover capital costs and to meet operating expenses. The federal 75-p.c. share of the deficit of the subsidized units in 1966, paid in 1967, was \$2,300,000.

Under arrangements with the Provinces of Nova Scotia and Prince Edward Island, assistance may be given under the National Housing Act for co-operative house-building. In 1967, projects were approved for 168 units in Nova Scotia, bringing the total approved since the inception of the program in 1953 to 1,499 units. Since 1960, 119 units have been approved in Prince Edward Island.

In April 1965, agreement was reached between the Federal Government and the Province of Saskatchewan for a joint program to provide housing for metis and enfranchised Indians in sparsely settled regions of northern Saskatchewan. During 1967, 58 units were approved, bringing to 94 the total number approved under this experimental program. The units are located at Air Ronge, Beauval, Buffalo Narrows, Cumberland House, Green Lake, Île à la Crosse, La Loche, and Turnor Lake. The federal contribution for 1967 was \$163,000.

Loan-Assisted Projects.—In 1967, 88 loans amounting to \$104,000,000 were approved for 7,657 units: 160 in Marystown in Newfoundland, 44 in four projects in Nova Scotia, and the remainder in Ontario. The estimated annual 50-p.c. federal contribution toward operating losses for the projects was \$2,800,000. One loan approved during the year to assist in the construction of a public housing project at Ear Falls in Ontario did not involve a federal contribution toward operating losses; federal contributions were approved toward operating losses on two existing projects in Toronto, originally financed under the non-profit section of the Act.

Land Assembly.—Under the federal-provincial arrangements, 24 land assembly projects for 2,323 residential building lots were approved in 1967, located in Burin, Fortune, Grand Bank and Harbour Breton in Newfoundland; Windsor, Kitchener, Sudbury, Hamilton (2) and Timmins in Ontario; Allan, Canora, Colonsay, Humboldt, Indian Head, Lloydminster, Nipawin, Redvers, Rosetown, Shellbrook, Delisle and Melville in Saskatchewan; and Yellowknife in the Northwest Territories (2). During 1966, 2,119 lots were approved for development and approval was also given for the acquisition and ultimate development for housing purposes of 2,866 acres of land. In 1967, eight loans were approved, amounting to \$113,298, to assist in the acquisition of land for future public housing purposes. These were all in Ontario in the municipalities of Barrie, Brockville, Fort Frances, Leamington, Newmarket, Stratford, Timmins and Welland.

Subsection 3.—Housing Statistics of the 1966 Census

Because of the abbreviated nature of the 1966 Census, only two housing questions were included on the questionnaire, one relating to structural type of dwelling and the other to tenure. Tables 18 to 20 provide a comparison of structural type and tenure of occupied dwellings for the provinces and Census Metropolitan Areas. Tables 18 and 19 show the proportionate increase or decrease during the intercensal period, and Table 20 shows the percentage distribution.

From Table 18 it may be seen that the number of occupied dwellings in Canada increased from 4,554,493 in 1961 to 5,180,473 in 1966, or by 13.7 p.c. This rate of increase exceeded the 9.7-p.c. increase in population over the same period. The most marked increase for Canada, as a whole, was evidenced in the number of apartments and flats which rose from 1,151,098 to 1,516,419, or 31.7 p.c. Although single detached dwellings still predominated in all provinces with the exception of Quebec, the over-all rate of increase for single homes was much lower at 8.6 p.c.

Although, traditionally, Quebec has had a much higher percentage of apartments or flats than any other province—49.0 p.c. in 1961 and 51.8 p.c. in 1966—this type of dwelling in that province showed a rate of increase of only 23.2 p.c. as compared with one of 66.4 p.c. in British Columbia and 65.4 p.c. in Newfoundland. On the other hand, although the proportion of single dwellings in Quebec to the total remained steady at 39.5 in 1966 compared with 39.3 in 1961, the greatest proportionate increase in single homes for all provinces was in Quebec at 17.4 p.c.

The tendency toward apartment living was reflected in a drop in the proportion of owned dwellings and an increase in that of rented homes in each province.

Tables 18 and 19 giving data for the Census Metropolitan Areas indicate that, for the most part, the provincial patterns were similar in these large urban centres.

Data relating to specific housing characteristics are summarized for 1951 and 1961 in the 1967 Year Book at pp. 723-729 and are detailed in Volume II (Part 2) of the 1961 Census (Catalogue Nos. 93-523 to 93-534). Housing data in similar detail will be available from the 1971 Census.

Section 1.—The Government in Relation to Labour

Subsection 1.—The Canada Department of Labour and the Federal Department of Manpower and Immigration

The Canada Department of Labour

The Canada Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department also assumed the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds. Since that time the Department has been charged with the administration of new legislation and has taken on new functions. Its work fell broadly into two main areas—industrial relations and manpower supply—until Jan. 1, 1966, when all manpower activities were transferred to a new Department of Manpower and Immigration (see p. 752).

The legislation now administered by the Canada Department of Labour in the industrial relations area applies to employers, workers and trade unions under federal jurisdiction. The Department is responsible for conciliation procedures in industrial disputes, the investigation of complaints of unfair labour practices, refusals to bargain and violations of legislation, the processing of applications for the certification and decertification of trade unions and the conducting of representation votes. It determines wage rates and hours of work in Federal Government contracts for construction or supplies, and promotes joint labour-management consultation. It also administers legislation to prevent discrimination

* Except as otherwise noted, this Chapter has been revised under the direction of the Deputy Minister of the Canada Department of Labour, Ottawa.

in employment based on race, religion, colour or national origin and to provide for equal pay for female employees. In 1965, the Canada Labour (Standards) Code became law. The Code establishes minimum standards of wages, hours of work, vacations with pay and paid general holidays in industries under federal jurisdiction. To ensure safe working conditions for all employees in industries and undertakings coming under federal jurisdiction, the Canada Labour (Safety) Code was passed by Parliament at the end of 1966 and was proclaimed in effect Jan. 1, 1968.

Since 1947, the Canada Department of Labour has encouraged and assisted in the establishment of labour-management committees in industry and services. With considerable expansion in this work in 1966, the service was reorganized and became a separate Branch of the Department, namely, the Labour-Management Consultation Branch. There are now 2,466 (February 1969) active committees whose efforts are directed to such subjects as improving work methods, safety, operating efficiency, plant maintenance, eliminating waste, maintaining good morale, promoting educational and training activities, and joint consultation on operational changes brought about by technological change.

Research, involving regular and special surveys and analyses of economic and social trends affecting the labour force, is an important part of the Department's work carried out by the Economics and Research Branch. It studies wages and working conditions, union organization, collective bargaining, industrial relations, labour standards and safety. Through the Women's Bureau, it investigates the problems of women in the labour force. It operates a plan of workmen's compensation for seamen on Canadian ships and arranges workmen's compensation for Federal Government employees. In addition to the publication of statistical reports and the results of research studies, the Department publishes the monthly *Labour Gazette*, maintains records of labour legislation in the provinces and in other countries and operates a labour lending library. It provides liaison between the International Labour Organization and the federal and provincial governments and is responsible for the administration of Canadian Government annuities (see p. 788).

The Department of Manpower and Immigration*

The fundamental purpose of the Department of Manpower and Immigration is to further the growth of Canada by promoting the effective allocation of manpower resources and by developing the labour force in response to the changing needs of the national economy. These goals are pursued by facilitating the match of people to employment opportunities in ways that improve productivity and help individuals achieve their full capacity. Two main channels are used for the achievement of these goals: (1) the counseling, placement and, when necessary, the training and/or relocation of members of the labour force; and (2) the introduction of new persons through immigration.

Operations Canada.—The operations of the Department within Canada are described by the term "Operations Canada" which distinguishes these field activities from the activities of Head Office and Overseas Offices. Operations Canada embraces five Regional Headquarters and the Canada Manpower Centres (CMCs) and Canada Immigration Centres (CICs) under their administration. The Director General of Operations reports to the Deputy Minister of the Department; Regional Directors, responsible for both manpower and immigration activities, report to the Director General of Operations.

The objectives of Operations Canada are:

1. *To provide, through strategically located Canada Manpower Centres, the facilities by which employers may find workers, and workers find jobs, efficiently and satisfactorily.* Inherent in this statement is the concept that each CMC must strive to provide to its community a high quality of professional service in manpower matters.
2. *To help workers develop their maximum potential in their individual contribution to the economy, and to obtain jobs that match their skills, capabilities and needs.* Workers are advised where and how they may obtain suitable employment or how they may improve their chances of getting and holding better jobs. The latter consists of assisting the worker to identify a realistic occupational goal and to develop a plan for achieving it through training or other preparation.

* Prepared by the Information Service, Department of Manpower and Immigration, Ottawa.

3. *To help employers meet their labour needs and to advise them on the supply and most effective utilization of manpower.* This activity consists of assisting employers in the recruitment of workers with the skills and abilities needed for current job vacancies, providing employers with up-to-date occupational labour-market information for use in their planning, and advising them on employment matters generally.
4. *To help in preparing the on-coming Canadian manpower supply for effective entry to and participation in the labour market.* This involves developing and maintaining close working relationships with organizations responsible for the education and training of youth, and co-operating with them in their efforts to equip students for productive employment.
5. *To help those already in the labour force to adapt to economic and technological change and become established or re-established in employment.* The aim is to help workers and employers utilize the opportunities arising from change and to minimize adverse effects on the individual worker. This involves encouraging and assisting in co-operative pre-planning by employers and workers, the use of training and retraining and, where necessary, the vigorous use of mobility and placement programs.
6. *To help reduce seasonal and cyclical fluctuations in employment.* To serve this objective, a variety of programs are carried out by many different government departments. The Department of Manpower and Immigration has a general responsibility for promoting and co-ordinating the application of stabilization measures.
7. *To provide services for the reception at destination, settlement and placement of immigrants.* Newly arrived immigrants are received by Canada Manpower Centre personnel and those participating in the labour force receive immediate counselling toward effective placement.

In addition to the above, Operations Canada includes activities having to do with the processing of the international travelling public (admissions) and the enforcement of the Immigration Act and Regulations within Canada.

Manpower Division.—Under the Assistant Deputy Minister—Manpower, the Manpower Division provides functional support for the manpower areas of Operations Canada and consists of three units: the Activities Development Branch, the Manpower Utilization Branch, and the Programs Branch.

The *Activities Development Branch* deals with the demand side of the labour market, providing guidelines in the following main areas: regulations with employers to develop the utilization of Departmental services, particularly employment services; specialized information on industrial needs; and organization of Canada Manpower Centres to give effective service to employers. The Branch also directs the operations of the Manpower Consultative Service which administers Federal Government assistance to industry in matters relating to manpower dislocations resulting from technological and other changes.

The *Manpower Utilization Branch* is concerned with the supply side of the labour market. It formulates policies and guidelines for the provision of employment services to workers through Canada Manpower Centres, and promotes the use of these Centres; develops aptitude and achievement tests for use in counselling and selection of persons for jobs; advises on the use of methods for matching jobs and workers; and advises on the manpower utilization of special groups such as youth, handicapped, women, immigrants and migrants, and indigenous peoples. The Branch administers the Vocational Rehabilitation of Disabled Persons Act under which the Federal Government shares equally with participating provinces in the costs of vocational rehabilitation services to disabled persons, and also the Operation Retrieval program designed to bring Canadian employment opportunities to the attention of Canadians studying abroad and to bring to the attention of employers in Canada the qualifications of these students. Through its section on older workers, the Branch studies developments in the field of aging which relate to employment and carries on a continuing educational program designed to create a more favourable employment climate for middle-aged and older workers.

The *Programs Branch* deals with the major programs that facilitate the matching of labour-market supply and demand. It administers the occupational training for adults program which provides for the training or retraining of adults in schools and in industry to meet the requirements of the labour market, and also the manpower mobility program which facilitates the movement of workers to jobs.

Subsection 2.—Federal Labour Legislation and Provincial Labour Legislation

Federal Labour Legislation*

Fair Wages Policy.—The Fair Wages Policy applying to all Federal Government contracts was first set forth in a Resolution of the House of Commons (1900) and later incorporated in an Order in Council and amended from time to time. Wages and hours on contracts for construction are now regulated by the Fair Wages and Hours of Labour Act (RSC 1952, c. 108), as amended by an Act to amend the Fair Wages and Hours of Labour Act, effective Apr. 1, 1967 (RSC 1967, c. 24), and by the Fair Wages and Hours of Labour Regulations. Hours of work on construction contracts are limited to eight a day and 48 a week, except in exceptional circumstances approved by the Minister or in such cases as the Governor in Council may prescribe; hours worked in excess of eight in a day or 40 in a week must be paid for at an overtime rate at least equal to one and one half times the rates required under the contract; wages to be paid are those current for the type of work in the district or, if there are no current rates, fair and reasonable rates as determined by the Minister of Labour; in no case shall the rates be less than the minimum hourly rate prescribed by or pursuant to the Canada Labour (Standards) Code.

Wages and hours of work on contracts for equipment and supplies are regulated by Order in Council PC 1954-2029. The hours of such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed.

The Fair Wages and Hours of Labour Regulations and Order in Council PC 1954-2029 both contain a clause prohibiting discrimination against any person in matters of employment because of that person's race, national origin, colour or religion, or because he has made a complaint or given information with respect to such alleged discrimination.

The Industrial Relations and Disputes Investigation Act.—This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations in effect since March 1944 and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries, both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However, the Act provides that provincial authorities if they so desire may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively and that trade unions may be certified as bargaining agents for employee groups. Trade unions and employers are required, upon notice, to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act, which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made

* The Act establishing the Canada Labour (Safety) Code (SC 1966-67, c. 62), proclaimed in effect Jan. 1, 1968, provides for the consolidation, under the title "Canada Labour Code", of the Acts described under this heading, with the exception of the Fair Wages and Hours of Labour Act and the Fair Wages Policy Order.

for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity. The conditions that must be observed prior to strike and lockout action are set down in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes. The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith. The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents and the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Canada Department of Labour.

Canada Fair Employment Practices Act.—This Act, which came into effect on July 1, 1953, prohibits discrimination in employment based on race, colour, religion or national origin. It applies only to industries within federal jurisdiction—those covered by the Industrial Relations and Disputes Investigation Act (see above). This law prohibits acts of discrimination by employers; discrimination by trade unions in regard to membership or employment; the use by employers of employment agencies that practise discrimination; and the use of advertisements or inquiries in connection with employment that express, directly or indirectly, any limitation, specification or preference as to race, colour, religion or national origin.

Female Employees Equal Pay Act.—This Act came into effect on Oct. 1, 1956 and applies to employers and employees engaged in works, undertakings or businesses coming within federal jurisdiction. The Act, in its principal provision, prohibits an employer from employing a female for any work at a rate of pay that is less than the rate at which a male is employed by that employer for identical or substantially identical work.

Canada Labour (Standards) Code.—This Act received Royal Assent on Mar. 18, 1965 when the administration and general provisions of Part V came into effect. The Act provides, in Parts I to IV which came into force on July 1, 1965, minimum standards with respect to hours of work, minimum wages, annual vacations and general holidays in industries under federal jurisdiction; the Annual Vacations Act 1958 was repealed.

The standard hours of work are eight a day and 40 a week, with maximum hours of 48 a week. Overtime pay at not less than time-and-one-half is required for all hours worked in excess of the standard hours. Permits are required in order to work more than 48 hours a week. Where the nature of the work necessitates irregular distribution of hours of work, the hours may be averaged over a period of two weeks or more.

The minimum wage is \$1.25 an hour for all persons 17 years of age or over and the minimum wage for persons under 17 years of age is \$1.00 an hour. Special rates may be set for persons receiving on-the-job training and for disabled or handicapped persons.

Employees are entitled to a two-week vacation with pay after one year of employment, with vacation pay calculated at 4 p.c. of wages. The general holidays are eight in number and every employee is entitled to a holiday with pay on each of them, or substitutes for them. Pursuant to an amendment to Part IV of the Code, the Multi-employer Employment (Longshoring) Regulations have been passed to provide for the granting of pay in lieu of general holidays to longshoremen in multi-employer employment who previously could not qualify for general holiday benefits because they did not have sufficient employment with one employer.

The Code has special and transitional provisions. Any person may make a submission (under Sect. 51) for deferment or suspension of Part I (Hours of Work). The Minister may grant deferment or suspension where it can be shown that the application of Part I is or

would be prejudicial to the interests of the employees or detrimental to the operation of the business. The Minister's order to defer or suspend may be for a period up to but not exceeding 18 months from the date of the order, and the order may or may not contain conditions on hours. A further deferment or suspension may be made by the Governor in Council but only after there has been an inquiry, and the order of the Governor in Council must contain conditions on hours of work. Regulations have been enacted to carry out the purposes of the Code.

Canada Labour (Safety) Code.—This Code, which received Royal Assent in late 1966 and was proclaimed in effect as of Jan. 1, 1968, is the first general safety legislation to be passed by the Parliament of Canada. Its primary purpose is to ensure safe working conditions for all employees in industries and undertakings under federal jurisdiction. The main features of the Code are that: (1) it provides for all the elements of a complete industrial safety program; (2) it sets out the general obligation of employers and employees to carry out their duties in a safe manner and authorizes the making of regulations for dealing with the problems of occupational safety; (3) it does not override but complements other federal laws and provincial legislation, thus strengthening the safety movement; (4) it authorizes the use of advisory committees and special task forces to assist in developing the program, all to be done under continuous consultation among federal and provincial government departments, industry and organized labour; and (5) it provides for research into causes and prevention of accidents and for an extended program of safety education.

Provincial Labour Legislation

Because of the authority given by the British North America Act to the provincial legislatures to make laws in relation to local works and undertakings and in relation to property and civil rights in the province, power to enact labour legislation is largely the prerogative of the provinces. Since it imposes conditions on the rights of the employer and employee to enter into a contract of employment, labour legislation is, generally speaking, law in relation to civil rights. Under this authority, the provincial legislatures have enacted a large body of legislation affecting the employment relationship in such fields as working hours, minimum wages, the physical conditions of workplaces, apprenticeship and training, wage payment and wage collection, labour-management relations, workmen's compensation and other matters. In each province a department of labour or department of labour and manpower (the designations vary) is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines. The workmen's compensation law in each province is administered by a workmen's compensation board appointed by the Lieutenant-Governor in Council.

Minimum Wages.—As a means of ensuring adequate living standards for workers, all provinces have enacted minimum wage legislation. These laws vest in a minimum-wage-fixing board or the Lieutenant-Governor in Council authority to establish minimum wages for employees. In most provinces minimum wage orders now cover almost all employment except farm labour and domestic service. Minimum rates set by the orders apply throughout the province except in Nova Scotia, Quebec and Saskatchewan. Both Nova Scotia and Quebec are divided into two zones for minimum wage-setting purposes. In Saskatchewan, minimum rates vary between urban and rural areas. Except in Newfoundland, Nova Scotia and Prince Edward Island, the same rates are set for both sexes. The British Columbia Board issues a separate order for each industry or occupation and a general order for employees not so covered. In the other provinces, general orders are issued, supplemented by special orders in some cases.

Hours of Work.—Five provinces have general hours-of-work laws. Those of Ontario, Alberta and British Columbia set limits on hours of work. Hours are limited in Alberta and British Columbia to eight a day and 44 a week, and in Ontario to eight a day and 48 a week. The Manitoba and Saskatchewan Acts regulate hours through the requirement that one and one half times the regular rate must be paid if work is continued after specified

limits. The Manitoba law requires payment of the overtime rate after eight and 48 hours for men and eight and 44 hours for women. The Saskatchewan Act requires payment of the overtime rate after eight and 44 hours. Some exceptions are provided for in all five Acts. Apart from general hours-of-work laws, other statutes regulate working hours in some industries.

Regulation of Wages and Hours in Certain Industries.—Industrial standards legislation is in effect in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta. These laws provide that a schedule of wage rates and hours of work agreed upon by a representative group of employees and employers in an industry or trade may, upon approval by the government, be given statutory effect by Order in Council, with the result that such wage rates and hours become the minimum terms of employment for the entire industry or trade in the area. An advisory committee, usually equally representative of employers and employees, is established to assist in enforcing a schedule. This legislation is used fairly extensively in the building trades, the clothing industries, barbering and a few other industries. In Newfoundland, Nova Scotia and New Brunswick, schedules have been issued only for certain construction trades in some areas. In Ontario, schedules for the garment trades, the fur industry and the hard furniture industry apply throughout the province and a substantial number of schedules apply to various construction trades and to barbering in specified areas.

Under the Quebec Collective Agreement Decrees Act, certain terms of a collective agreement, including those dealing with hours and wages, may be made binding on all employers and employees in the industry concerned in a defined area, provided the parties to the agreement represent a sufficient proportion of the industry. The standards made binding under this procedure are contained in a decree, which has the force of law. Approximately 100 decrees applying to construction, the garment trades, barbering and hairdressing, commercial establishments, garages and service stations, and other industries and services are in effect, covering close to 250,000 employees. Of these decrees, 15 apply throughout the province.

The Construction Industry Wages Act in Manitoba provides for the setting of minimum rates of wages and maximum hours of work at regular rates for employees in the construction industry, on the recommendations of a board equally representative of employers and employees, with a public member as chairman. Under this Act, annual schedules set the regular work week and hourly rates of wages for various classifications of workers in the heavy construction industry, in the Greater Winnipeg building construction industry, and in rural building construction.

Annual Vacations and Public Holidays.—All provinces except Newfoundland have annual vacations legislation applicable to most industries. In Prince Edward Island and New Brunswick, workers are entitled to a vacation of one week after a year of service; in Ontario, workers are entitled to a vacation of one week after each of the first three years of employment, and of two weeks after the fourth and each subsequent year. In Nova Scotia, Quebec and the four western provinces, the annual paid vacation required by law is two weeks after a year of service and, in Saskatchewan, three weeks after five years of service.

The Provinces of Alberta, British Columbia, Manitoba, Nova Scotia, Ontario and Saskatchewan have enacted legislation of general application dealing with public holidays. The number of holidays named varies from five to eight, and the provisions for payment also vary.

Anti-discrimination Laws.—Nine provinces have adopted fair employment practices laws forbidding discrimination in hiring and conditions of employment and in trade union membership on grounds of race, colour, religion or national origin. In addition, in British Columbia and Ontario, discrimination in employment and trade union membership on grounds of age is prohibited. Eight provinces have equal pay laws that forbid discrimination in rates of pay solely on the basis of sex, and the Quebec statute respecting discrimination in employment forbids discrimination in employment on the basis of sex.

Accident Prevention.—Factory or industrial safety Acts in most provinces establish safeguards for the protection of the health and safety of workers in factories and other workplaces with respect to such matters as sanitation, heating, lighting, ventilation and the guarding of dangerous machinery. Long-established laws regulating the design, construction, installation and operation of mechanical equipment, such as boilers and pressure vessels, elevators and lifts and electrical installations, have been revised in recent years in line with technological changes, and legal standards have been set in new fields involving hazards to workers and the public, such as the use of gas- and oil-burning equipment. This legislation also prescribes standards of qualification for workers who install, operate or service such equipment. Laws requiring safety standards to be observed in construction and excavation work are in force in most provinces.

Labour Relations.—In all provinces, there is legislation similar in principle to the federal Industrial Relations and Disputes Investigation Act, designed to establish equitable relations between employers and employees and to facilitate the settlement of industrial disputes. These laws guarantee freedom of association and the right to organize, establish machinery (labour relations boards) for the certification of a trade union as the exclusive bargaining agent of an appropriate unit of employees, and require an employer to bargain with the certified trade union representing his employees. Except in Saskatchewan, they require the parties to comply with the conciliation procedures laid down in the Act before a strike or lockout may legally take place, and they provide also that every collective agreement must contain provisions for the settlement of disputes arising out of the agreement, and prohibit strikes and lockouts while an agreement is in effect. All prohibit defined unfair labour practices and prescribe penalties. In most provinces, certain classes of employees who are engaged in essential services, such as policemen and firemen, are forbidden to strike and, in lieu of the right to strike, have recourse to final and binding arbitration. There are provisions relating to hospital disputes in six provinces.

Young men now entering the construction equipment maintenance and diesel service field in Ontario are required to undergo five years of apprenticeship training before gaining professional mechanic status, including 32 weeks of in-school instruction and the remainder on-the-job training. The provincial government pays the salaries of instructors and has a subsidy payment schedule for workers taking the course, in which it has federal assistance.

Certification of Qualified Tradesmen.—All provinces have apprenticeship laws providing for an organized procedure of on-the-job training and school instruction in designated skilled trades, and statutory provision is made in most provinces for the issuing of certificates of qualification, on application, to qualified tradesmen in certain trades. In some provinces, legislation is in effect making it mandatory for certain classes of tradesmen to hold a certificate of competency.

Changes in 1968.—One of the significant developments in provincial labour legislation in 1968 was the enactment in Ontario of a new labour code, the Employment Standards Act. It provides minimum standards of hours of work, overtime pay, minimum wages, holiday pay and annual vacations with pay and ensures equal pay for equal work for male and female workers employed in the same establishment. The main changes were the introduction of premium pay at the rate of time and one half the regular rate for overtime beyond 48 hours in a week and for work performed on seven specified holidays, the enforcement of the equal pay provisions through regular inspection, and a new wage collection procedure empowering the collection of unpaid wages up to a maximum of \$1,000 per claim.

There were a number of changes in minimum wages. Prince Edward Island, which had a province-wide rate applicable to men only, introduced a general minimum wage order for women, setting a minimum rate which takes effect in three steps over a period of one year. Nova Scotia dropped its provision for inexperienced workers' rates and made a change in its zoning system, setting minimum rates for two geographic zones instead of three. In Saskatchewan, hourly rather than weekly rates were set, as in other provinces. General minimum wage rates were increased in five provinces. In Ontario, the minimum rate was increased to \$1.30 an hour, the highest general minimum in Canada.

The minimum rates in effect at the beginning of 1969 for experienced workers in certain cities are shown in Table 1.

**1.—Minimum Wage Rates for Experienced Workers in Certain Cities,

¹ 40 hours in shops. ² 54 hours in food processing industry. ³ 54 hours in hotels and restaurants,
laundries, theatres and amusement places. ⁴ 55 hours for seasonal workers in the hotel, motel, tourist resort,
restaurant and tavern industry; 60 hours for seasonal workers in fruit and vegetable processing. ⁵ 90 cents an
hour for male workers in food processing plants.

Annual Vacations and Public Holidays.—In Quebec, the annual vacation to which workers are entitled after a year of employment was extended from one week to two weeks, effective Jan. 1, 1969. In line with this change, vacation pay was increased from 2 p.c. to 4 p.c. of earnings. In Ontario, provision was made in the Employment Standards Act for premium pay for work done on seven public holidays. The holidays are Christmas Day, New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day and Thanksgiving Day. An employee who works on any of these holidays must be paid a minimum of one and one half times his regular wage rate. If New Year's Day, Dominion Day or Christmas Day falls on a Sunday, the following day is to be considered a holiday for purposes of overtime pay.

Anti-discrimination Measures.—Prince Edward Island adopted a Human Rights Code prohibiting discrimination on grounds of race, religion, religious creed, colour, or ethnic or national origin in regard to public accommodation, rental practices, employment and membership in trade unions. The equal pay provisions of the Equal Pay Act, now repealed, were also included in the Human Rights Code, requiring employers to pay female employees the same rate of wages as male employees when they are required to do substantially the same work in the same establishment.

The equal pay provisions of the Ontario Human Rights Code were transferred to the Employment Standards Act and expanded to prohibit discrimination against either sex in the payment of wage rates. Under the amended provisions, the employer is required to pay equal wages to men and women for the same work performed in the same establishment, the performance of which requires equal skill, effort and responsibility and which is performed under similar working conditions. Differences in rates of pay based on a seniority system, a merit system, or a system that measures earnings by quantity or quality of production do not constitute discrimination within the terms of the Act.

Ontario amended the Age Discrimination Act, which forbids discrimination by employers and trade unions against persons between the ages of 40 and 65 because of their age. The amendment prohibits job advertising that expresses a limitation or specification based on age.

Industrial Safety.—The Prince Edward Island Workmen's Compensation Board issued comprehensive industrial safety regulations, applicable to all industries within the scope of the Workmen's Compensation Act. Preparatory to the initiation of a system of boiler inspection by the Prince Edward Island Department of Labour, amendments were made to the Steam Boiler Act and up-to-date boiler and pressure vessel regulations were put into effect.

Amendments were made to the New Brunswick Industrial Safety Code. These included a provision stating that, where possible, noise levels in places of employment must be kept below 90 decibels.

As a result of amendments to the Ontario Industrial Safety Act, the approval of plans and specifications of factories and other buildings by an engineer of the Department of Labour is now required before construction or alterations may be begun and a copy of the approved plans must be kept on the construction site. For the more effective enforcement of the Act, the maximum fine that may be imposed for a contravention of the Act was increased from \$1,000 to \$5,000. In Quebec, regulations respecting the handling and use of explosives on construction sites were updated, and new regulations were issued aimed at the protection of workers using plaster spray machines.

Workmen's Compensation.—Amendments to the Workmen's Compensation Acts in six provinces brought about a number of important changes, including extensions of coverage, increased ceilings on annual earnings, a reduction in the waiting period in two provinces, and increases in dependants' pensions and allowances.

In Nova Scotia, the fishing, dredging and sealing industries were brought within the general provisions of the Act, effective from Jan. 1, 1970.

The maximum annual earnings on which compensation may be paid were raised from \$5,000 to \$6,000 in Nova Scotia, from \$6,000 to \$6,600 in Saskatchewan, and from \$6,000 to \$7,000 in Ontario. In New Brunswick, the ceiling was raised from \$5,000 to \$5,500 for the year 1969 and to \$6,000 thereafter. The waiting period was reduced from four days to three in Nova Scotia and from three days to one in Ontario.

The maximum allowance for funeral expenses was raised from \$300 to \$400 in Nova Scotia and Ontario and from \$300 to \$500 in New Brunswick. A widow's pension was increased from \$75 to \$125 a month in Ontario, and from \$110 to \$115 a month in Saskatchewan. In Saskatchewan, the provision under which the pension reverted to \$75 a month after the age of 70 was deleted. In Ontario, the lump sum payment to a widow was increased from \$300 to \$500.

Monthly allowances to dependent children were raised in Ontario, Prince Edward Island and Saskatchewan. In Nova Scotia, compensation is now to be paid to the end of the school year in which a child attains the age of 18, rather than to the child's 18th birthday, as formerly. In Saskatchewan, at the discretion of the Workmen's Compensation Board, payment of compensation to children continuing their education may be extended to age 21 instead of 19, as before.

In British Columbia, a further 2-p.c. increase in widows' and children's benefits went into effect on Jan. 1, 1968, in accordance with the formula under which these payments are tied to the Consumer Price Index.

Labour Relations.—In British Columbia, the Mediation Commission Act was enacted, establishing a new system of mediating industrial disputes. In place of the former system of conciliation officers and *ad hoc* conciliation boards, the Act established a Mediation Commission, an independent agency separate and apart from the Department of Labour, to investigate and assist in resolving labour-management disputes and to recommend fair and reasonable terms of settlement. In cases where the Cabinet considers that a dispute adversely affects the public interest and welfare, the Commission's recommendations may be made binding. Where an order is made referring a dispute to the Mediation Commission for a binding decision, no strike or lockout may occur or, if one is in progress, it must be terminated within 24 hours. The Mediation Commission is empowered to establish research facilities to provide economic and statistical data which, it is hoped, will be accepted by both parties in a labour dispute.

Amendments to the Nova Scotia Trade Union Act gave the Labour Relations Board power to terminate a strike or lockout which is illegal under the Act or a collective agreement or one caused by a jurisdictional dispute. The Board is authorized to try to settle such disputes but in any case may issue a cease and desist order which must be complied with. Other amendments were designed to expedite the certification process in the construction industry.

A number of amendments were made to the Alberta Labour Act, one of which gave the Minister of Labour authority to dispense with second-stage conciliation. Where he does so, the conciliation commissioner's recommendations take the place of the award of a conciliation board. The Prince Edward Island Labour Relations Board was empowered to deal with complaints of unfair labour practices. Amendments to the Saskatchewan Trade Union Act dealt with the rights of successor unions and made provision for the continuance in force of a collective agreement until a new agreement is signed or the employees are on a legal strike.

The Newfoundland Labour Relations Act was amended to validate a collective agreement covering workers on the Churchill Falls project in Labrador and to make provision for future contracts of the same type.

With a view to making available an increased number of competent arbitrators for the arbitration of grievance disputes, the Ontario Legislature established the Ontario Labour-Management Arbitration Commission, a seven-member body equally representative of employers and employees. Quebec enacted a law providing for collective bargaining for its provincial police. Legislation in Saskatchewan governing teachers' salary negotiations was revised to provide for area bargaining, instead of bargaining by individual school boards.

Section 2.—The Labour Force*

Since 1946, reliable information for analysis of employment in Canada, at the national level and for the five major regions, has been provided through a labour force survey. Between November 1945 and November 1952, quarterly surveys were undertaken and since then the survey has been carried out on a monthly basis. The sample used in the survey has been designed to represent all persons in the population, 14 years of age or over, residing in Canada, with the exception of residents of the Yukon and Northwest Territories, Indians living on reserves, inmates of institutions and members of the Armed Forces. Interviews are carried out in approximately 30,000 households chosen by area sampling methods across the country.†

In the labour force survey, persons are classified on the basis of their activity during the week prior to the survey interview week. This week is called the reference week. The main divisions in the classification are:—

Labour Force.—The civilian labour force is composed of that portion of the civilian non-institutional population, 14 years of age or over who, during the reference week, were employed or unemployed.

Employed.—The employed include all persons who, during the reference week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; (c) had a job, but were not at work, because of bad weather, illness, industrial dispute or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the reference week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed.—The unemployed include all persons who, through the reference week: (a) were without work and seeking work, i.e., did not work during the reference week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force.—Those not in the labour force include all civilians 14 years of age or over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school; keeping house; too old or otherwise unable to work; and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed or, if they looked for work, as unemployed.

The estimates derived from the labour force survey, which are based on a sample of households, are subject to sampling error. Somewhat different figures might be obtained if a complete census were taken and this difference is called the sampling error of the estimates. In the design and processing of the labour force survey, extensive efforts are made to minimize the sampling error; in general, the percentage of error tends to decrease as the size of the estimate increases. A statistical measure of the sampling error is given in DBS monthly publication *The Labour Force* (Catalogue No. 71-001).

* Prepared in the Special Surveys Division, Dominion Bureau of Statistics.

† A comprehensive description of the survey is given in DBS publication *Canadian Labour Force Survey—Methodology* (Catalogue No. 71-504).

Characteristics of the Civilian Labour Force, 1959-68.—The period 1959-68 was one of rapid expansion in the Canadian labour force, particularly the last five years. Whereas the total population rose by 22.9 p.c. between 1959 and 1968, the total labour force increased by 26.9 p.c. Consequently the participation rate, that is the labour force as a percentage of the population of working age, rose from 53.8 to 55.5. This rate, equalled in 1967, was the highest on record.

In the decade under review, as in the entire postwar period, the male participation rate has been declining; in 1968 the rate was 77.0 p.c. compared with 81.0 p.c. in 1959. This drop in the male participation rate can be attributed to a large degree to reduced participation among younger and older men. The participation rate for those 14-19 years of age dropped from 43.6 p.c. to 39.1 p.c.; for those in the 20-24 age group the reduction was from 91.0 p.c. to 84.4 p.c.; and for those 65 years of age or over the rate was reduced from 31.0 p.c. to 24.4 p.c. A factor contributing to the reduction in labour force participation of younger men has been the increase in the number of those who have deferred their entry into the labour market by remaining at school longer. In 1967-68, there were about twice as many boys enrolled in secondary schools and almost two and one half times as many young men registered at Canadian universities as in 1958-59. A factor that has contributed to the reduced labour force participation of older men has been the increase in private industrial pension plans, making earlier retirement possible. For example, the survey of working conditions, conducted by the Department of Labour, shows that in manufacturing in 1959 there were approximately 737,000 persons employed in reporting establishments having a private pension plan. In 1967, the latest year for which figures are available, the number was about 988,000.

More than compensating for the decline in male labour force participation has been the accelerated entry of women into the labour force. Between 1959 and 1968 the absolute increase in the labour force was actually much greater for women than for men. Of the total increase of 1,677,000, women accounted for 922,000. Women 20-64 years of age experienced a substantial increase in their participation rates. Between 1959 and 1968,

PARTICIPATION RATES BY AGE GROUP AND SEX, ANNUAL AVERAGE, 1946-68

the rate for those 20-24 years of age rose from 46.5 p.c. to 58.4 p.c.; for the age groups 25-44 and 45-64 the increases were from 27.0 p.c. to 36.4 p.c. and from 25.1 p.c. to 35.4 p.c., respectively. There was little change in the participation rates for younger and older women.

An important contributing factor to the rapid expansion of the female labour force has been the tendency for married women to remain in or re-enter the labour force after marriage. In 1968, married women comprised 54.7 p.c. of the female labour force compared with 44.3 p.c. in 1959. During the 1959-68 period their participation rate rose from 18.0 p.c. to 29.6 p.c.

Total employment was higher in 1968 than in 1959 by 1,667,000, or 28.4 p.c.; male employment was higher by 783,000, or 17.9 p.c., and female employment by 884,000, or 58.7 p.c. Agricultural employment was 154,000 lower at the end than at the beginning of the period. This is a continuation of a long-term trend in evidence throughout the postwar period. Non-agricultural employment, however, increased by 1,822,000, or 35.2 p.c.

In 1968, total employment was higher than in 1959 in all regions; the Atlantic region increased by 23.7 p.c., Quebec 28.5 p.c., Ontario 28.8 p.c., the Prairie region 22.0 p.c., and British Columbia 44.0 p.c.

In 1961, two new systems of coding industry and occupation data were introduced, the 1960 Standard Industrial Classification and the 1961 Census Occupational Classification. Data prior to 1960 were coded according to the old classifications and are therefore not comparable; for this reason, Tables 4 and 5 showing the distribution of the employed by industry and by occupation cover the period 1961-68 only. An important development of that period has been the continuing increase in the proportion of persons employed in the service-producing industries and the corresponding decline in the goods-producing industries. Transportation, trade, finance and service together accounted for 60.3 p.c. of total employment in 1968 compared with 55.4 p.c. in 1961. Conversely, the goods-producing sector, which includes agriculture, primary industries, manufacturing and construction, accounted for 39.6 p.c. of total employment in 1968 compared with 44.4 p.c. in 1961.

The most significant changes occurred in service whose share of total employment rose from 25.3 p.c. to 30.4 p.c. and in agriculture whose share dropped from 11.2 p.c. to 7.2 p.c. during the period. There were also changes between 1961 and 1968 in the proportions of persons employed among the different occupational groups, most of which were minor. Two notable exceptions were the increase in the proportion of persons employed in professional and technical occupations from 9.9 p.c. to 13.0 p.c. and the relative decline in employment among farmers and farm workers from 11.3 p.c. to 7.3 p.c.

There was an uneven regional distribution of unemployed persons in 1968. The Atlantic region, which contained only 8.1 p.c. of the total labour force, accounted for 12.3 p.c. of the unemployed. The situation was very much the same in Quebec and in British Columbia where the corresponding percentages were 28.1 and 38.0, and 10.1 and 12.3, respectively. Conversely, Ontario and the Prairie region, with 37.1 p.c. and 16.6 p.c., respectively, of the labour force accounted for only 27.2 p.c. and 10.2 p.c., respectively, of the unemployed. This uneven distribution, which also prevailed during the whole 1959-68 period, was reflected in the regional unemployment rates. In 1968, the annual average unemployment rates were as follows: Atlantic 7.3 p.c., Quebec 6.5 p.c., Ontario 3.5 p.c., the Prairies 3.0 p.c., and British Columbia 5.9 p.c. Throughout the decade, unemployment rates for the Atlantic region, Quebec and British Columbia were substantially above the national average.

Section 3.—Employment Statistics*

Subsection 1.—Statistics of Employment, Earnings and Hours

Monthly records of employment have been collected from larger business establishments since 1921. At that time a survey was instituted to provide employment index numbers which would serve as current economic indicators. In 1941 the survey was extended to provide information on payrolls and per capita wages and salaries and in 1944 it was further extended to provide data on hours of work and hourly and weekly wages. Also during the war period, separate records for men and women employees were established. Beginning with the January 1966 issues of *Employment and Average Weekly Wages and Salaries* and *Man-Hours and Hourly Earnings*, the data compiled are on a revised basis. A historical series (Catalogue No. 72-504) provides, on the revised basis, monthly and annual data from 1961-65. The revision has involved the publishing of employment indexes on the time base 1961=100 in place of the time base 1949=100. All data are compiled on the 1960 standard industrial classification instead of the 1948 standard industrial classification.

The survey now covers sectors of the following major industry divisions: forestry; mining (including milling); manufacturing; construction; transportation, communication and other utilities; trade; and finance, insurance and real estate. Also included are certain branches of the service industry, mainly hotels and restaurants, laundries and dry-cleaning plants, and recreational and business services. The survey excludes agriculture, public administration and community services such as health and education. The coverage corresponds closely, therefore, to the business sector of the economy. Since the survey covers only firms employing 20 or more persons in any month of the year and excludes several industries, the employment records are published in the form of index numbers (1961=100).

The monthly employment statistics relate to the number of employees drawing pay in the last pay period in the month. Data are requested for all classes of employees with the exception of homeworkers and casual employees working less than one day in the pay period. Owners and firm members are also excluded. The respondents report the gross wages and salaries paid in the last pay period in the month, before deductions are made for income tax, unemployment insurance, etc. The reported payrolls represent gross remuneration for services rendered and paid absences in the period specified, including salaries, commissions, piece-work and time-work payments, and such items as shift premiums and regularly paid production, and incentive and cost-of-living bonuses. The statistics on hours relate to the straight and overtime hours worked by those wage-earners for whom records of hours are maintained, and also to hours credited to wage-earners absent on paid leave during the reported period. If the reported period exceeds one week, the payroll and hours data are reduced to weekly equivalents.

Employment.—Table 7 shows that, over the five-year period 1963-67, the industrial composite index of employment rose by 17.4 p.c.; service increased by 44.6 p.c., construction by 22.5 p.c., manufacturing by 16.1 p.c., trade by 21.5 p.c. and finance, insurance and real estate by 17.1 p.c. The increase in manufacturing was particularly significant in view of the fact that this industry accounts for over 40 p.c. of industrial employment as measured by the employment survey. During 1967 mining, trade, and transportation, communication and other utilities also showed some improvement while forestry, construction and manufacturing showed decreases, although that for manufacturing was very slight.

* Prepared in the Employment Section, Labour Division, Dominion Bureau of Statistics.

7.—Annual Average Index Numbers of Employment, by Industrial Division, 1963-67, and Monthly Indexes 1967

NOTE.—These indexes are calculated as at the last pay period of each month, on the base 1961=100.

Weekly Wages and Salaries.—Average weekly wages and salaries have increased substantially in the years for which current payroll statistics have been collected, rising from \$23.44 in 1939 to \$96.34 in 1966 and \$102.76 in 1967. The upward movement gained momentum after the end of the War and average annual increases from 1946 to 1952 were more than twice as great as those between 1939 and 1946. After 1952 the rate of increase, in terms of year-to-year percentage changes, fell slightly below that recorded during the war years, particularly between 1959 and 1962, when average earnings rose at rates of about 3 p.c. per annum. Over the next four years the rate increased moderately and earnings in 1967 were 6.7 p.c. higher than in 1966.

¹ Mainly hotels, restaurants, laundries, dry-cleaning establishments and recreational and business services.

Hours and Earnings of Hourly Rated Wage-Earners.—The monthly survey of employment and payrolls covers statistics of hours of work and paid absence of those wage-earners for whom records of hours are maintained, together with the corresponding totals of gross wages paid. These wage-earners are mainly hourly rated production workers; information on hours is frequently not kept by employers for ancillary workers nor, in many industries and establishments, for any wage-earners. Salaried employees are excluded by definition from the series. As a result of these exclusions, data are available for fewer industries and workers than are covered in the employment and average weekly wage and salary statistics.

During the period 1963-67, there was little change in average weekly hours but average hourly and weekly wages rose substantially. For the most part, upward wage-rate revisions in all industries were responsible for the increases. Technological changes, which in many cases involve the employment of more highly skilled workers at the expense of those in the lower-paid occupations, also contributed to the advance of average hourly earnings. From 1963 to 1967, average weekly wages rose 21.8 p.c. in manufacturing, 26.9 p.c. in mining and 39.6 p.c. in construction. Average hourly earnings increased 23.1 p.c. in manufacturing, 26.8 p.c. in mining and 39.3 p.c. in construction. In construction, 1967 average hourly earnings of \$3.12 and average weekly wages of \$128.76 represented increases of 11.4 p.c. and 9.1 p.c., respectively, over the 1966 levels.

Subsection 2.—Earnings and Hours of Work in Manufacturing*

Since 1946 an annual survey of earnings and hours of work in manufacturing has been conducted using (since 1948) the last week of October as the survey week. Information is collected during this normal or representative working week of the year, following generally the same concepts, definitions and coverage as in the larger establishment monthly employment survey. If strikes or other unusual working conditions distort the norm for this week, a more suitable week is substituted. Over the whole period, earnings and hours of work in manufacturing have been reported by sex and category and since 1951 figures have been available for clerical and related workers as distinct from other salaried employees. In addition, the distribution of employees by weekly earnings has been collected periodically since 1950 and the distribution of wage-earners by hours worked or paid for was collected each year from 1946 to 1949 and periodically thereafter.

However, Tables 15 and 16 give figures for 1963-67 only, since at this point there was a break in continuity with previous years. The new establishment concept introduced in 1961 drew into the manufacturing universe some activity reports, such as sales branches, which formerly reported to other industries; these are now coded to manufacturing when they form part of an establishment, the principal activity of which is manufacturing. The survey was not carried out in 1961 and 1962 and revised figures are available only from 1963. Also, it should be noted that the 1967 survey data were collected and compiled on the revised (1960) standard industrial classification basis which classifies the manufacturing industries into 20 major industrial groups, replacing the 17 groups of the 1948 classification system. The new classification is used in Tables 17 and 18.

* More detailed information is given in DBS annual report *Earnings and Hours of Work in Manufacturing* (Catalogue No. 72-204).

15.—Average Earnings of Male and Female Employees in Manufacturing, Survey Week 1963-67, and Percentage Increases over Previous Year

NOTE.—Survey week is the last week of October. This survey was not conducted in 1961 and 1962 (see p. 776).

¹ The durable group includes wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products and non-metallic mineral products; the non-durable group includes all other manufacturing industries.

Subsection 3.—Estimates of Employment*

Estimates of employees by province and industry are produced by adding together data from the long-standing employment and earnings survey of larger establishments, from a sample survey of smaller establishments, and from special surveys in the non-commercial sector. These estimates are available from 1961 on a monthly basis.

The estimates of employees are more reliable indicators of changes in total employment than the large-establishment employment indexes released in the publication *Employment and Average Weekly Wages and Salaries*. However, the design of the sample survey does not permit the publication of extensive geographic and industrial detail and the large-establishment employment indexes are the only source of current information of this type.

* More detailed information is given in DBS monthly publication *Estimates of Employees by Province and Industry* (Catalogue No. 72-008).

Subsection 4.—Estimates of Labour Income*

Wages and salaries, as shown in Table 20, include living allowances, bonuses, commissions and "tips" and are measured prior to deductions of all kinds (income tax, employees' contributions to the unemployment insurance fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e., free board and lodging) made to or on behalf of residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the unemployment insurance fund.

* More detailed information is given in DBS monthly publication *Estimates of Labour Income* (Catalogue No. 72-005).

20.—Wages and Salaries, by Industry, and Supplementary Labour Income, 1963-67, and by Month 1967

NOTE.—Based on the unrevised standard industrial classification. Figures are unadjusted for seasonal variation. (Millions of dollars)

Section 4.—Wage Rates, Hours of Labour and Other Working Conditions

Statistics on occupational wage rates by industry and locality, with standard weekly hours of labour, are compiled by the Canada Department of Labour and published in the annual report *Wage Rates, Salaries and Hours of Labour*. The statistics are based on an annual survey covering some 35,000 establishments in most industries and apply to the last normal pay period preceding Oct. 1. Average wage rates of time workers and average straight-time earnings of piece workers and other incentive workers for selected occupations are shown separately in the report but are combined in the calculation of industry index numbers shown in Table 21. Predominant ranges of rates for each occupation used are also given; overtime pay is excluded.

The index numbers of Table 21 measure changes in wage rates for non-office employees below the rank of foreman. They do not, however, provide a basis for comparing the level of wages in one industry with that in another. Information on concepts and methods of developing these statistics is given in the annual report.

21.—Index Numbers of Average Wage Rates for Certain Main Industrial Groups, 1961-67

(1961=100)

NOTE.—Figures for years prior to 1961 are not available on the 1961 base; indexes for 1956-65 on the 1949 base are given in the 1967 Year Book at p. 763 and indexes back to 1901 on the same base appear in the Department of Labour publication *Wage Rates, Salaries and Hours of Labour 1965*.

Table 23 gives summary data on working conditions of plant and office employees in manufacturing industries and all industries for the years 1965-67. The percentages in this table denote the proportions that employees—plant or office—of establishments reporting specific items bear to the total number of all such employees in all establishments replying to the survey; they are not necessarily the proportions of employees actually covered by the various items. Further details and additional information are given in the annual report *Working Conditions in Canadian Industry*, compiled and published by the Canada Department of Labour and based on a survey at May 1 each year of some 35,000 reporting units.

Wages of Farm Labour.—The information on farm wages is provided by volunteer farm correspondents located in all provinces except Newfoundland. The rates presented in Table 24 are average wages paid to all farm help regardless of age and skill. Because the rates reported may cover a wide range of skills, of types of work and of ages of hired workers, the value of the resulting data is considered to be an indicator of trends rather than a measure of absolute wage levels. No attempt has been made to have the wage rates reflect such perquisites as separate housing accommodation, fuel, electricity and food which, under some conditions of hiring, are supplied by employers to their hired farm help.

24.—Average Daily and Monthly Wages of Male Farm Help as at Jan. 15, May 15 and Aug. 15, 1966-68

NOTE.—Figures from 1940 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

Section 5.—Pension Plans*

Very few pension plans in Canada have been in existence for more than 25 years and most of the older plans were established by governments, banks and railways. The greatest growth in pension plans and coverage began during World War II and continued through the postwar years. By 1960 there were 9,000 pension plans in Canada covering some 1,800,000 persons and over the next seven years the number increased by over 75 p.c. to an estimated 16,000 plans in 1937 covering some 2,700,000 persons.

Up to 1948 most plans were of the insured type, being underwritten by either an insurance company or the Government Annuities Branch of the Canada Department of Labour. The trust fund arrangement then began to grow in popularity and is now the dominant instrument for funding pension benefits measured in terms of membership and assets held. In 1967 contributions to trustee pension funds alone amounted to \$748,000,000, accounting for over 75 p.c. of all contributions to private pension plans excluding government plans having no invested assets. Funds of this magnitude represent a major medium for personal savings and the investment of these funds exerts a considerable influence on the capital market.

Table 25 shows the distribution of pension business for the years 1963-67, excluding the public service superannuation funds of the Federal Government and of six provincial governments which are nominal funds only, having no invested assets.

Most trustee pension plans use the facilities of corporate trustees (trust companies) who invest the contributions, accumulate the earnings and pay benefits to the plan members. Trustee pension plan funds are also managed by individual trustees or pension fund societies. The designated trustee, corporate or individual, must invest the contributions in accordance with the trust agreement which sets forth the rights and duties of the trustee. Many of the small funds invest in the "pooled funds" of trust companies which combine the assets of many pension funds, thus providing the diversification of investments usually available only to larger funds.

* Prepared by the Pension Plans Section, Labour Division, Dominion Bureau of Statistics.

Federal Government Annuities.—Since 1908 the Federal Government has sold annuities and industrial pension plans under the Government Annuities Act (RSC 1952, c. 132). The purpose of the introduction of this legislation was to encourage people to save for old age but since the need for government service in this form has decreased in recent years, reduction of the program became justified and the employment of salesmen to solicit business was ended on Nov. 30, 1967. Annuities are still available under the Act to those who ask for them. At Mar. 31, 1968 there were 101,987 annuities being paid amounting to \$59,042,042 annually. There were 1,398 pension plans in force providing portable pensions to 181,864 employees, and there were 81,067 individual deferred annuities being purchased. The amount in the Government Annuities Account was \$1,326,098,138.

Section 6.—Unemployment Insurance*

During the depression of the 1930s the need for a nation-wide unemployment insurance program became recognized. In 1935 the Employment and Social Insurance Act was passed by the Federal Parliament but was subsequently declared invalid by the Privy Council. Later, by consent of the provinces, an amendment to the British North America Act was obtained empowering the Federal Parliament to legislate on unemployment insurance and in 1940 the Unemployment Insurance Act was passed, making provision for a compulsory contributory unemployment insurance program at the national level and also for the establishment of a national employment service to operate in conjunction with and ancillary to the unemployment insurance operations. The Act came into effect on July 1, 1941; amended on several occasions, it was replaced by a new Unemployment Insurance Act, effective Oct. 2, 1955.† On Apr. 1, 1965, the operation of the National Employment Service was transferred to the Department of Labour and on Jan. 1, 1966 to the Department of Manpower and Immigration (see pp. 752-753).

Legislation provides for a compulsory insurance program administered by the Federal Government, and requires employers to join with their insurable employees and the Government in building up a fund. This fund is held in trust by the Unemployment Insurance Commission for the payment of benefit to eligible unemployed persons. The Act is administered by a Commission of three persons appointed by the Governor in Council, of whom one is the Chief Commissioner; one Commissioner, other than the Chief Commissioner, is appointed after consultation with employer organizations and the other after consultation with employee organizations.

The Unemployment Insurance Act applies to all persons employed under a contract of service‡ except: the Canadian Armed Forces; the permanent public service of the Federal Government; provincial government employees except where insured with the concurrence of the government of the province; certified permanent employees of municipal or public authorities; hunting and trapping; private domestic service; private-duty nursing; teaching; workers on other than an hourly, daily or piece rate earning more than \$7,800 a year effective June 30, 1968, unless they elect to continue as insured persons; employees in a charitable institution or in a hospital not carried on for purpose of gain except where the institution or hospital consents to insure certain groups or classes of persons with the concurrence of the Commission. All persons paid by the hour, day, or at a piece rate (including a mileage rate) are insured regardless of amount of earnings.

The amount of the employee contribution is determined by the employee's weekly earnings; an equal contribution is required from the employer. The Federal Government contributes one fifth of the aggregate employer-employee contribution and defrays administrative expenses. Contributions became payable on July 1, 1941. Benefit became payable on Jan. 27, 1942 and by Mar. 31, 1968 a total of \$5,803,000,000 had been paid.

The following statement shows the current weekly rates of contribution and benefit effective June 30, 1968. The weekly contribution is based on actual earnings in the week, irrespective of the number of days worked. The benefit rates are calculated on the average weekly contributions for the last 30 weeks in the 104 weeks preceding claim. In order to qualify for regular benefit, a claimant must have at least 30 weekly contributions in the last 104 weeks prior to claim, eight weekly contributions since the start of the last preceding regular benefit period or in the last year prior to claim, whichever is the shorter period, and 24 weekly contributions since the start of the last preceding benefit period, or in the year prior to the claim, whichever is the longer period.

* Prepared by the Unemployment Insurance and Manpower Section, Labour Division, Dominion Bureau of Statistics, statistics of unemployment insurance are compiled and published by the DBS from material supplied by the Unemployment Insurance Commission.

† Copies of the 1955 Act incorporating subsequent amendments are available from the Queen's Printer, Ottawa (Catalogue No. YX92-222/50).

‡ Commencing Apr. 1, 1957, coverage was extended to persons engaged in fishing, notwithstanding the fact that such persons are not employees of any other person but are usually self-employed; commencing Apr. 1, 1967, coverage was extended to employees engaged in agriculture and horticulture.

WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT, IN EFFECT FROM JUNE 30, 1968

NOTE.—Weekly rates in effect from Oct. 2, 1955 to June 30, 1968 are given in the 1962 Year Book, p. 738 and the 1967 edition, p. 769.

The Act contains a special provision whereby the regular contribution requirements are relaxed somewhat during a 5½-month period commencing with the first week of December each year. Under this provision, claimants unable to fulfil the contribution requirements for regular benefit may draw "seasonal benefit" if they have at least 15 contribution weeks during the fiscal year, or, failing this, if they terminated regular benefit since the previous mid-May.

Statistics on the Operation of the Act.—In order to assess the impact of changing economic conditions on the insurance program, provision is made for collection of current operational data, such as claims filed and processed and payments made. This information is published monthly in the *Statistical Report on the Operation of the Unemployment Insurance Act* (Catalogue No. 73-001). Current claims and payment data are useful for administrative purposes and are also a source of information to the public regarding financial and other aspects of the program.

Persons wishing to draw benefit must file either an initial or a renewal claim. Where it is necessary to compute entitlement to benefit, an initial claim is taken, otherwise a renewal. In the main, initial and renewal claims combined are an approximation of recorded separations from employment during a month. However, if a claimant exhausts his benefit and wishes to be reconsidered for further benefit, an initial claim is required. Such claims, accounting for approximately 15 p.c. of the monthly volume in 1967, are not new cases of unemployment. The count of claimants at the month-end indicates the extent to which claimants maintain contact with local offices of the Commission.

¹ Month-end average.

In addition to the monthly data published on the operation of the Unemployment Insurance Act, annual tabulations are compiled regarding persons employed in insurable employment and benefit periods established and terminated. These data are published in the annual report *Benefit Periods Established and Terminated under the Unemployment Insurance Act* (Catalogue No. 73-201). Data on persons insured under the Act are obtained from a 10-p.c. sample of insurance books and contribution cards renewed at June 1 each year. Included are persons engaged in insurable employment as well as persons on claim at that date.

Benefit.—The duration of regular benefit is related to the contribution history—one week's benefit for every two weeks' contributions in the past 104 weeks with a maximum of 52 weeks. However, contributions more than one year old cannot be used if they have already been taken into account in computing previous rights. Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or any institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be imposed if an employee is discharged by reason of his own misconduct or leaves employment voluntarily without just cause or refuses suitable employment.*

Table 29 distributes regular benefit periods terminated by province and shows average weeks and average dollar benefit paid on these terminations. A claimant establishes a *regular benefit period* when he submits his claim in the prescribed manner and proves he has fulfilled the minimum contribution requirements. The duration of benefit and the weekly rate authorized, comprising total entitlement, are then calculated and the claimant's benefit may be drawn upon during successive intervals of unemployment. His benefit period terminates either when he has exhausted the amount authorized or when 52 weeks† have elapsed since he established, whichever comes first.

* This list should not be considered exhaustive; more detail may be obtained from the Unemployment Insurance Act and Regulations.

† Under the Training Allowances Act, 1966, the benefit period of an insured person may be extended if he (or she) is in receipt of a training allowance. The benefit period is extended by the amount of time the person is undergoing training, but in no event can the benefit period extend beyond 156 weeks.

Section 7.—Employment Injuries and Workmen's Compensation

Fatal Employment Injuries.—Data on fatal employment injuries, compiled by the Canada Department of Labour, are obtained from provincial Workmen's Compensation Boards, from the Canadian Transport Commission and other government authorities, and from press reports. Of the 1,150 fatal injuries to industrial workers that occurred during 1967, 291 were the result of collisions, derailments and wrecks—166 involving trucks or automobiles. There were 248 deaths caused by victims being struck by different objects, and 204 deaths were the result of falls and slips—51 of these into rivers, lakes, seas or harbours. The classification of "caught in on or between objects, vehicles, etc." accounted for 98 deaths, and inhalations, contact, absorptions, ingestions and industrial diseases accounted for another 91. There were 82 deaths caused by conflagrations, temperature extremes and explosions, 46 by over-exertion, 45 by contact with electric current, and one by striking against or stepping on an object. The remaining 44 were the result of various miscellaneous accidents.

Workmen's Compensation.*—In all provinces legislation is in force providing for payment of compensation to workmen who are injured by accident arising out of and in the course of their employment or who are disabled as a result of a specified industrial disease. To be entitled to benefits, a workman must be employed in an industry covered by the Act at the time of the injury. Compensation is not payable, however, where the disability lasts less than a stated number of days (varying from one to four in the provincial Acts), or if the injury is due to the workman's own misconduct. A workman who is entitled to compensation has no right of action against his employer for injury sustained during employment.

The Acts provide for a compulsory system of collective liability on the part of employers. Industries covered are divided into classes or groups, according to hazard. Employers are required to contribute to the Accident Fund at a rate fixed in accordance with the accident experience of the class or group. Each class is liable for the costs of all accidents occurring in that class.

* See also pp. 760-761.

The laws apply to enumerated employments but the range of industries covered by each Act is very wide. The principal exceptions are farm workers (who are not covered except in Ontario), domestic servants, casual workers, employees of financial, insurance and professional undertakings, employees of non-profit religious or charitable organizations, and workers in certain service industries in most provinces, for example, barber shops and beauty parlours. Small undertakings, i.e., those with fewer than a specified number of employees, are exempted from the Act in some provinces. Excluded employments may generally be brought under the Act on the voluntary application of the employer.

Benefits for disability are based on 75 p.c. of earnings, subject to an annual ceiling. Where disability is permanent, a life pension is paid, irrespective of future earnings. Medical benefits are provided without limitation, regardless of a waiting period, and rehabilitation services are available where necessary. Where death results from an employment injury, fixed monthly payments are made to dependants.

A federal Act provides for compensation for accidents to Federal Government employees according to the scale of benefits provided by the Act of the province in which the employee is usually employed. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the federal Merchant Seamen Compensation Act.

¹ Injuries requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the several provinces.

² Includes, except where noted otherwise, payments to compensate loss of earnings, medical aid payments, cost of rehabilitation and hospitalization (not including capital expenditures) and pensions paid (not pensions awarded) for temporary and permanent disabilities; the Quebec compensation include: pension: awarded as well as pensions paid.

³ Excludes payments by employers who make direct compensation to their employees; such employees come under Schedule II of the Ontario and Quebec Workmen's Compensation Acts.

Section 8.—Organized Labour*

Subsection 1.—Union Membership

Union membership at the beginning of 1968 stood at almost 2,010,000. This figure represented 31.5 p.c. of the non-agricultural paid workers in Canada, the highest percentage since 1959, and 25.4 p.c. of the over-all labour force. The increase in membership over the same date of 1967 was 89,100 or 4.6 p.c.

34.—Union Membership in Canada, 1940-68

1946.....	832	1954.....	1,268	1961.....	1,447	1968.....	2,010

¹ Figures for years up to and including 1949 are at Dec. 31; figures from 1951 are as at Jan. 1.

² Newfoundland included from 1949.

Membership in unions affiliated with the Canadian Labour Congress (CLC) at the beginning of 1968 totalled 1,572,000, a rise of more than 8 p.c. over the previous year. CLC affiliates reporting substantial membership gains during the year were: the Auto Workers with an increase of 36,300; the Steelworkers with an increase of 15,000; the Canadian Union of Public Employees, 10,000; the Machinists, 8,600; and the Building Service Employees, 6,000.

The Confederation of National Trade Unions (CNTU) reported a total of 201,300 members, an increase of less than 2 p.c. over the previous year. The largest gains were registered by the Fédération nationale des services (Service Employees' Federation) with an increase of 7,000 members and the Fédération Canadienne des métallurgistes et des mineurs (Metallurgists and Miners' Federation) with an addition of 5,500 members; most of the latter increase was the result of a merger.

Of the 2,010,000 union members reported in the 1968 survey, two thirds were in international unions. The 108 international unions included 91 affiliated with both the CLC and the AFL-CIO, five were affiliated only with the AFL-CIO, three with the CLC only, and nine were not affiliated with any central labour body.

There were 54 national unions active in Canada, with 590,000 members; 21 of these unions, affiliated with the CLC, accounted for 15.9 p.c. of total union membership in Canada. The 12 federations of the CNTU accounted for another 9.6 p.c. There were, in addition, 21 unaffiliated unions with a total membership of 77,000.

Direct charters from the CLC were held by 143 local unions with a total membership of 15,600. Local unions holding direct charters from the CNTU numbered 50 with a membership of 7,600. Membership of the 193 local unions chartered by central labour bodies comprised 1.2 p.c. of all trade union members in Canada. Independent local organizations reported 51,000 members, or 2.5 p.c. of the total.

* A special article on the "History of the Labour Movement in Canada", prepared by Dr. Eugene Forsey, Director of Research of the Canadian Labour Congress, appears in the 1967 Canada Year Book at pp. 773-781.

35.—Union Membership, by Type of Union and Affiliation, as at January 1968

The United Steelworkers retained its position in 1968 as the largest union, with 145,000 members in Canada. Next in size was the United Automobile Workers, followed by the Canadian Union of Public Employees. Fourteen unions reported membership of 30,000 or more in the 1968 survey; these unions, which accounted for 47 p.c. of all union members in Canada, are listed below, with their affiliations, in order of their relative size in the current year; their relative positions in 1967 are also shown.

Relative Positions in 1968	Union and Affiliation	1968 Membership	Relative Positions in 1967
1	United Steelworkers of America (AFL-CIO/CLC).....	145,000	1
2	International Union, United Automobile, Aerospace and Agricultural Implement Workers of America (AFL-CIO/CLC).....	127,000	4
3	Canadian Union of Public Employees (CLC).....	116,000	2
4	Public Service Alliance of Canada (CLC).....	97,800	3
5	United Brotherhood of Carpenters and Joiners of America (AFL-CIO/CLC).....	77,900	5
6	International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Ind.).....	52,500	6
7	International Brotherhood of Electrical Workers (AFL-CIO/CLC).....	51,800	8
8	International Association of Machinists and Aerospace Workers (AFL-CIO/CLC).....	51,300	9
9	International Woodworkers of America (AFL-CIO/CLC).....	49,800	7
10	Fédération nationale des services (CSN), Service Employees' Federation (CNTU).....	43,400	11
11	International Brotherhood of Pulp, Sulphite and Paper Mill Workers (AFL-CIO/CLC).....	40,700	10
12	Canadian Brotherhood of Railway, Transport and General Workers (CLC).....	34,800	12
13	Laborers' International Union of North America (AFL-CIO/CLC).....	31,800	13
14	Syndicat des fonctionnaires provinciaux du Québec (CSN), Quebec Government Employees (CNTU).....	30,000	14

A complete list of the individual international and national unions, with number of locals and membership in Canada, is carried in the annual Department of Labour publication, *Labour Organizations in Canada* available from the Queen's Printer, Ottawa, price 75 cents.

Subsection 2.—Wage Developments under Major Collective Agreements, 1968

The Canada Department of Labour obtains data on wage settlements under collective agreements on a quarterly basis. The agreements covered are limited to negotiating units of 500 employees or more in all industries, with the exception of construction. The base-rate for a negotiating unit is defined as a straight-time hourly wage rate for the lowest paid

qualified workers, usually unskilled or semi-skilled workers, although some contracts govern only skilled workmen. Thus, the wage data are not necessarily representative of the average increases enjoyed by the workers in the negotiating unit as a whole. On the other hand, the data on numbers of agreements and workers refer to all occupational groups in the negotiating units.

Wage-rate data given in Tables 36 and 37 indicate that on Dec. 31, 1968, approximately 1,000,000 workers were covered by 530 major collective agreements in negotiating units with 500 or more workers in industries other than construction. The average base-rate rose 14.9 cents, or 6.6 p.c., during the 12-month period ended Dec. 31, 1968, compared with an increase of 14.8 cents and 7.0 p.c. during the preceding 12-month period. During 1968, the consumer price index rose 4.1 p.c. and during 1967 it rose 4.0 p.c., so that, deflating the wage increases by the consumer price index increase, the average hourly base-rate increased in real terms by 2.4 p.c. during 1968 and by 2.8 p.c. during 1967.

36.—Employees Covered by All Collective Bargaining Agreements in Negotiating Units Covering 500 or more Employees in Industries other than Construction, in Effect December 1968.¹

¹ Includes public administration and defence; hospitals, education, welfare, religion and other community service; National Capital Commission; and domestic service.

Additional data are available from the Canada Department of Labour on wage settlements under agreements newly settled during quarterly periods, including number of agreements settled, number of employees affected and duration of contracts. The agreements covered are again limited to negotiating units of 500 employees or more in all industries except construction. Details are not given here but for 1968 as a whole, 294 contracts were settled. For three of these, data are not included in the analysis as they referred solely to incentive or piece rates; the remaining 291 settlements affected the wage-rates of about 700,000 workers. On the average, the 291 settlements provided an annual percentage increase in the straight-time hourly base-rate equal to 8.0 p.c. over the lives of the contracts, compared with 8.7 p.c. for the year 1967.

Settlements during the year 1968 of one-year duration provided for increases averaging 7.3 p.c.; those of two-year duration for increases of 8.4 p.c. and 6.2 p.c. for the first and second years, respectively; and those of three-year duration of 12.0 p.c., 7.5 p.c. and 5.1 p.c. for the first, second and third years of the contract. These increases compare with those in 1967 as follows: one-year agreements, average increases of 9.7 p.c.; two-year agreements, average increases of 11.9 p.c. and 6.9 p.c.; and three-year agreements provided for average increases of 9.0 p.c., 7.9 p.c. and 5.1 p.c. for the first, second and third years of the contract.

Section 9.—Strikes and Lockouts

Statistical information on strikes and lockouts in Canada is compiled by the Economics and Research Branch of the Canada Department of Labour on the basis of reports from Canada Manpower Centres of the Department of Manpower and Immigration. Table 38 covers strikes and lockouts lasting ten or more man-days. The developments leading to work stoppages are often too complex to make it practicable to distinguish statistically between strikes on the one hand and lockouts on the other. However, a work stoppage that is clearly a lockout is not often encountered.

The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. Duration of strikes and lockouts in terms of man-days is calculated by multiplying the number of workers involved in each work stoppage by the number of working days the stoppage was in progress. The data on duration of work stoppages in man-days are provided to facilitate comparison of work stoppages in terms of a common denominator. They are not intended as a measure of the loss of productive time to the economy.

38.—Strikes and Lockouts, by Industry, 1967 with Totals for 1963-67

Note.—Comparable statistics, except for 1961, are given in the corresponding table of previous Year Books; the latter are available in the Canada Department of Labour annual publication *Strikes and Lockouts in Canada*.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

The physiography, the climate, the dispersion of the people and even the history of Canada present unusual difficulties and challenges in the organization, the operation and the regulation of its transportation services. Considering the physical aspect only, the country extends 4,000 miles from east to west—a formidable barrier of time and distance—and added to this, the grain of the country is decidedly and perversely north-south, so that regions of the country are separated from one another—by water, as in the case of the Island of Newfoundland, Prince Edward Island and Vancouver Island; by rough, rocky, forest terrain as in the New Brunswick-Quebec border region and in the area north of Lakes Huron and Superior between the heavily populated sections of Ontario and Quebec and the prairie region of the mid-west; and by the mountain barrier between the prairies and the Pacific Coast. Furthermore, in much of the relatively flat inland areas of Canada, the many lakes and rivers, the exposed rocks, the marshlands and, in the North, the permafrost are problems for all modes of transportation. The St. Lawrence-Great Lakes waterway into the interior of the Continent is a redeeming feature but even this had to be transformed by man before it could become a commercial shipping route.

The achievement of efficient and low-cost transportation in the face of these many problems has been one of Canada's most important goals, for a good transportation network is a necessity of the country's existence. However, the tremendous investment required for the provision of such a network in this vast country is not supported by the intensity of demand to be found in more densely populated countries. Thus, the relatively small market in relation to the investment is a continuing problem that is being faced by study and research in many fields and by careful but nevertheless imaginative development. The latter includes new types of vehicles for Canada's northern terrain, truck interlining, inter-modal container services, pipelines, the high-speed "turbo-train", continuously coupled unit trains, and new forms of urban transit. Much attention is also being given to the harmonization of transport regulations and operation as an essential part of this general endeavour.

Considering the transportation picture as a whole—passenger and freight, commercial and private—Canada is fortunate in not having to depend too heavily on any one type of movement. Certainly, in passenger transportation the private automobile dominates short-distance movement but growing urbanization is sustaining urban transit (bus and subway) at high traffic levels. For intercity journeys, the private automobile is again the major factor but air, rail and bus services are very important. Freight transportation is also characterized by a balanced use of the various transportation facilities. The dominant economic factor in present-day Canadian transportation is competition.

The following figures show the relative importance of the various forms of transport in terms of passenger-miles and freight ton-miles operated (local car traffic, urban bus and truck traffic, subway traffic and certain other transport movements are excluded). Although these measures do not take into account such factors as the value of the service or the costs of providing it, they are nevertheless good indicators of the general position of each mode.

PART I.—RAIL TRANSPORT*

Since Confederation the railways of Canada have been the principal transport facility throughout, and beyond, the nation. The two great transcontinental systems, supplemented by a major north-south line on the West Coast and a few regional independent railways, are the only carriers able to transport large volumes of freight at low cost in all weather by continuous passage over Canadian transcontinental routes.

The two nation-wide railway companies control a wide variety of Canadian and international transport and communications services. The government-owned Canadian National Railway System is the country's largest public utility and operates the greatest length of trackage in Canada. It is the only railway serving all 10 provinces and has completed a branch line to serve the Great Slave Lake area of the Northwest Territories. In addition, it operates a highway service, a fleet of coastal steamships, an extensive express service, a chain of large hotels and resorts, and a scheduled air service connecting all major cities across the country and Canadian with other North American and European and Caribbean points. The Canadian National, jointly with the Canadian Pacific Railway Company, operates a national telecommunications system that employs modern microwave, high-speed teletype and private wire networks, telex, data and weather facsimile transmission and movement of telegrams to any point in the world. The Canadian Pacific Railway Company is a joint-stock corporation also operating a transcontinental railway, an express service, a domestic truck and bus network, a fleet of inland, coastal and ocean-going vessels, a chain of year-round and resort hotels and a domestic and foreign airline service (see p. 858).

The Pacific Great Eastern Railway, owned by the British Columbia Government, operates over an 800-mile route from North Vancouver to Fort St. John in the Peace River area of northeastern British Columbia, with several northern branch lines recently

* The statistical data in this Part were revised in the Transportation and Public Utilities Division, Dominion Bureau of Statistics; more detailed information is given in the annual reports of the Division. A special article on operational and technological changes in rail transport appears in the 1965 Year Book at pp. 755-761.

completed or under construction. Interline barge and rail connections at Vancouver provide a complete service to any railway point on the Continent. The PGE is fully dieselized and controlled by an intricate microwave system from its Vancouver offices.

Government Aid to Railways.—In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was usually a bonus of a fixed amount for each mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way. As the country developed, objections to the land-grant method became increasingly apparent and aid was given more frequently in the form of a cash subsidy for each mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues came later and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government. During the era of railway expansion before 1918, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure through funds raised by the issue of new bonds with Federal Government guarantee. Railway bonds guaranteed by the Government of Canada at Dec. 31, 1967 amounted to \$1,196,694,500.

As discussed on pp. 875-876, the National Transportation Act (SC 1967, c. 69), administered by the Canadian Transport Commission, expresses a national transportation policy for Canada aimed at the development of "an economic, efficient and adequate transportation system making the best use of all available modes of transportation at the lowest total cost". The new law is expected to provide the railways with greater freedom to meet the competition with which they are faced and to develop as an integral part of today's complex transportation system.

Under the Act, the 1966 level of Federal Government rail subsidy of \$110,000,000 a year will decline by \$14,000,000 a year until it disappears at the end of 1974. The Crows Nest Pass rates on grain and flour from Western Canada and the rates under the Maritime Freight Rates Act remain in force. The so-called "bridge subsidy" paid under the Railway Act to the major railways for operation of lines through the light-traffic territory in the Lake Superior District ceased at the end of 1966 but the reduction in freight rates made possible by the bridge subsidy remains in force. However, commencing on Mar. 23, 1968, the railways were permitted to make successive annual increases for a period of three years to the freight rates over the territory formerly covered by the bridge subsidy, to yield additional operating revenues in the first year of \$3,000,000, in the second year of \$2,000,000, and in the third year of \$2,000,000.

Track Mileage.—Construction was begun in 1835 on the first railway in Canada—the short link of 14.5 miles between Laprairie and St. Johns, Que.—but only 66 miles were in operation by 1850. The first great period of construction was in the 1850s when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870s and 1880s. In the last period of extensive railway building (1900-17), the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

There has been little change in total track mileage since the 1920s. The mileage peak was reached in 1959 and, except for an increase in 1967 resulting from the inclusion of mileage operated by the Cartier Railway in Quebec, there has since been a gradual decline, new construction being more than offset by abandonment of unprofitable lines. In recent years, the development of a number of large projects in districts far removed from transport facilities and the opening up of the Northwest Territories have necessitated the

building of branch lines. Five such lines, totalling 118 miles, were completed by the CN in 1968; in Ontario, a 68-mile line to serve an iron mine in the Red Lake area; in Manitoba, a 12-mile line from Stall Lake to a copper-zinc mine at Osborne Lake; in Saskatchewan, an 18-mile line from Watrous to a potash plant near Guernsey, and an eight-mile line to a pulp mill at Prince Albert; and, in Alberta, a 12-mile line from a point near Fort Saskatchewan to a fertilizer complex near Redwater. All of the main track for the 235-mile line to give access to Alberta's northern resources was laid by the end of 1968, and three bridges completed. In British Columbia, the first leg of the Takla Lake extension to the PGE—75 miles of track between Odell, 30 miles north of Prince George, and Fort St. James—was opened to traffic in August 1968. Clearing of the right-of-way for the remaining 73 miles was under way.

1.—Railway Track Mileage Operated, 1900-67

NOTE.—Figures of total mileage of first main track operated for 1835-1959 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

¹ Defined as a single track extending the entire distance between terminals, upon which the length of the road is based.

² Includes 190 miles of track of the Cartier Railway which began operations in 1963 but was not included in the statistics until 1967.

³ Newfoundland included from 1950.

⁴ Excludes joint track amounting to 58 miles in 1964, 55 miles in 1965, 74 miles in 1966 and 143 miles in 1967.

Rolling-Stock.—Table 2 shows the numbers of the various types of freight and passenger equipment in operation in 1959, in 1966 and 1967 revealing a generally downward trend over the period; however, these figures do not reflect the offsetting trend toward larger, more efficient cars and locomotives or the steady improvement in speed of movement facilitated by modernized handling and terminal services. Each year hundreds of units, particularly freight cars, are converted and modified to make them suitable for specific types of traffic or are replaced by special-purpose equipment designed for distinctive hauling jobs. The average capacity of all freight cars was 55.7 tons in 1967 compared with 51.1 tons in 1959. Also, although the number of diesel-electric locomotives in service has remained fairly static over this period, it should be noted that an extensive program of power up-grading has been followed by the railway companies. The combined tractive effort (the force exerted by powered equipment measured at the rim of the driving wheels) of all locomotives in 1967 averaged 56,425 lb. as compared with 53,368 lb. in 1959.

¹ Includes 17 locomotives, 9 passenger cars and 589 freight cars of the Cartier Railway; rolling-stock for this railway was not included before 1967. ² Road freight units. ³ Includes those of non-rail industrial firms such as oil, chemical and railway car leasing companies which furnish freight cars to, or on behalf of, any railway line.

Traffic, Employment and Finance Statistics.—Statistics presented under this heading are for the Canadian National Railways, the Canadian Pacific Railway Company and 21 other common carrier lines whose gross revenues are \$500,000 or more annually. Excluded are the British Columbia Hydro and Power Authority Railway line and the Cartier Railway, and lines with annual revenues of less than \$500,000 annually, whose operations account for about 1 p.c. of the total.

Table 3 gives traffic and employment statistics for the above railways for the years 1963-67 and Table 4 gives similar data for the Canadian National and Canadian Pacific railways separately for 1966 and 1967.

¹ Includes traffic handled by more than one railway.

The total tonnage of freight carried by all common carrier railways (including national loadings and receipts from United States connections) has increased steadily over the past few years. In 1967, mine products accounted for 43.7 p.c. of the total; the increase of 11.9 p.c. in mine products loadings over 1966 was attributable mainly to the inclusion of Cartier Railway operations in Quebec. The minerals carried in largest volume in 1967 were iron ore, other ores and concentrates and bituminous coal. Of the total of 210,475,044 tons of freight carried (excluding freight handled by more than one railway and in inter-

New methods and facilities speed the movement of freight.

Containers, here being transferred from flat cars to trucks, carry goods from source to destination without disturbance, using a multi-modal system involving land, sea and air transport.

New terminals at Montreal and Toronto, equipped with such mechanical innovations as in-floor towlines, hydraulic unloading devices, conveyor systems and powered sorting rings, move large volumes of goods quickly and efficiently with a minimum of manual handling.

mediate switching), manufactured products accounted for 31.4 p.c., agricultural products for 14.0 p.c., forest products for 10.0 p.c., animal products for 0.7 p.c. and less-than-carload lots for 0.3 p.c.

5.—Commodities Hauled as Freight by Railways, 1963-67

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways. Freight carried by the Cartier Railway is included in 1967.

Tables 6 to 12 give information on capital liability and capital investment in road and equipment, and on operating revenues, expenses and net income of all common carrier railways operating in Canada, except that of the Cartier Railway which is not available. A Uniform Classification of Accounts has been in operation for the Canadian National and the Canadian Pacific Railways since Jan. 1, 1956 and for other common carrier railways since Jan. 1, 1957. In transportation statistics, a distinction is made between expenditures and expenses. In the following data, the term 'expenses' is used as defined in the Uniform Classification of Accounts and refers to the expenses of furnishing rail transportation service and of operation incident thereto, including maintenance and depreciation of the plant used in such service.

6.—Capital Liability of Railways, 1958-67

Capital Structure and Financial Statistics of the Canadian National Railway System.—In view of the interest in Canada's publicly owned railway, the capital structure of the Canadian National Railway System is given separately in Table 8 and financial details in Table 9. The original financial structure of the CNR and the steps taken through the Capital Revision Acts of 1937 and 1952 to alleviate the burden of interest undertaken by the company on its formation in 1923 are described in the 1955 Year Book, pp. 840-847. Briefly, the Capital Revision Act of 1937 wrote off all loans that had been made to cover deficits and also unpaid interest on loans, and certain loans made for the purpose of additions and betterments were converted to equity capital, relieving the CNR from paying fixed charges on this amount. Under the 1952 Capital Revision Act, 50 p.c. of the company's interest-bearing debt was changed to preferred stock on which, after settling income taxes, a dividend of 4 p.c. is paid on earnings. Also, for a term of 10 years ended Jan. 1, 1962, the Railway was not obliged to pay interest on \$100,000,000 of its long-term debt. The Government is authorized to buy additional preferred stock annually in amounts related to the company's gross revenues. As a consequence, the proportion of total capitalization represented by equity capital in shareholders' account was raised from 34.5 p.c. at Dec. 31, 1951 to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced. By the end of 1967, the proportion represented by equity capital in shareholders' account was 50.5 p.c.

8.—Capital Structure of the Canadian National Railway System as at Dec. 31, 1958-67

The financial details presented in Table 9 are those of the Canadian National Railway System, including both Canadian and United States operations. Revenues and expenses include those of express and commercial communications and highway transport (rail) operations. In conformity with the requirements of the Uniform Classification of Accounts adopted Jan. 1, 1956, tax accruals and rents are charged to operating expenses.

9.—Total Revenue, Operating Expenses, Net Revenue, Fixed Charges and Deficits of the Canadian National Railway System (Canadian and United States Operations), 1958-67

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

¹ Includes appropriations for insurance fund.

² Contributed by or paid to the Government of Canada.

Revenues, Expenses and Net Income.—Railway operating revenues and expenses of all common carrier railways operating in Canada (except the Cartier) continue to rise, both reaching peak levels in 1967; increases over 1966 amounted to 2.6 p.c. and 5.0 p.c., respectively, and, because the increase in expenses was lower than that in revenues, net earnings increased.

Of the total operating expenses in 1967 amounting to \$1,443,956,115, those connected with the transporting of persons and property, such as station, yard and terminal services and employees, wharves, fuel, etc., accounted for 38.5 p.c.; equipment maintenance for 21.9 p.c.; road maintenance for 18.8 p.c.; rents and taxes for 7.1 p.c.; expenses connected with traffic soliciting, such as advertising and information, ticket and freight offices, etc., for 2.8 p.c.; and miscellaneous expenses, including incidentals, dining and buffet services, grain elevators, etc., for the remaining 10.9 p.c. These proportions have remained fairly constant in recent years.

19. —Operating Revenues and Expenses of All Railways, 1958-67

NOTE.—Operating revenues and expenses from 1875 are given in previous editions of the Year Book beginning with the 1916-17 edition. These data cover all common carrier rail operations in Canada and therefore do not agree with those presented in Table 11 which represent only 23 of the larger lines.

¹ Included in freight revenues.

Railway Accidents.—Accidents shown in Table 12 (for all common carrier railways operating in Canada) include all those in which railway trains were involved and accidents on railway property; all passengers injured are included but, for employees, only those who were kept from work for at least three days during the 10 days following the accident are recorded. The classification of accidents used in reporting other DBS statistics treats collisions between motor vehicles and trains as motor vehicle accidents. Therefore, care should be exercised when compiling total accidental deaths of all kinds or when comparing results of accidents of different kinds, such as train and motor vehicle.

PART II.—ROAD TRANSPORT*

Highways and motor vehicles are herein treated as related features of transportation. An introductory Section summarizes provincial regulations regarding motor vehicles and motor traffic.

Section 1.—Provincial Motor Vehicle and Traffic Regulations†

NOTE.—It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The source of information for detailed regulations for each province and territory is given at pp. 816-817.

The registration of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations common to all provinces and territories are summarized as follows.

Operators' Licences.—The operator of a motor vehicle must be over a specified age, usually 16 years (17 in Newfoundland and 18 for class A licence in Alberta), and must carry a licence, obtainable in most provinces only after prescribed qualification tests. Such licence is renewable annually in Saskatchewan and in the Yukon Territory and the Northwest Territories; in Alberta and British Columbia it is renewable every five years; in New Brunswick and Manitoba it is renewable every two years; in Quebec operator and chauffeur permits expire on the holder's birthday in the odd-numbered year following the issue or renewal thereof; in Prince Edward Island it is renewable every two years and expires at the end of the licensee's birth month; in Newfoundland and Ontario a licence is

* Except as otherwise indicated, the material in this Part has been revised in the Transportation and Public Utilities Division, Dominion Bureau of Statistics.

† Revised according to information received from the respective provincial authorities concerned.

issued on a three-year basis and expires on the licensee's birth date; and in Nova Scotia a licence is issued on a three-year basis and expires at the end of the licensee's birth month. Special licences are required for chauffeurs in all provinces except Newfoundland. In most provinces, a motorcycle operator is required to pass a special examination and have his driver's licence endorsed authorizing him to operate such vehicle or, if he has no driver's licence, he may be issued a licence to operate only this class of vehicle. In Alberta a person under 16 but not under 14 years of age may be issued a licence to operate a scooter, which is defined as a motor vehicle with a speed limit not exceeding 30 miles an hour.

Motor Vehicle Regulations.—All motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the rear of the vehicle (one only for the rear of trailers; in New Brunswick two licence plates are issued for all vehicles other than commercial tractors, trailers and motorcycles; in Prince Edward Island, Quebec, Manitoba and Alberta, one plate is issued for motorcycles, to be mounted on the rear; in Saskatchewan, motorcycles and snowmobiles carry one plate on the rear and truck tractors carry one plate on the front).

In most provinces, in event of sale the registration plates stay with the vehicle but in Quebec, Manitoba, Saskatchewan and Alberta the plates are retained by the owner. In Nova Scotia, vehicles pass from owner to owner by due process of law and title must be secured before issue of plates and permit. A change of ownership of the vehicle must be recorded with the registration authority. However, exemption from registration is granted for a specified period (usually at least 90 days, except in Quebec where the maximum is three months; in Ontario where it is six months for vehicles from other provinces and three months for vehicles registered outside Canada; in Manitoba where residents may use registration plates from other jurisdictions for 90 days and visitors are exempt from registration provided the vehicle is not used for business purposes; in Saskatchewan where an out-of-province student may extend the period of exemption from registration requirements for the whole school year, provided the vehicle is properly registered in its home jurisdiction; in Alberta where non-residents may operate vehicles currently registered in their home province or state of the United States for a period not exceeding six months and in British Columbia where it is one month or six months for tourists). Regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes and stipulate that equipment include non-glare headlights, a proper rear light, a muffler, a windshield wiper, a rear-vision mirror, and a warning device. In Ontario, under a 1968 amendment to the Highway Traffic Act, a certificate of roadworthiness is required for a vehicle sold on the second-hand market before a permit is issued for its operation.

Traffic Regulations.—In all provinces and territories, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. The speed limit in Prince Edward Island, Quebec and Yukon Territory (unless otherwise posted) is 60 miles an hour in daytime and 55 at night; in Manitoba, the basic speed limit is 60 miles an hour in daytime and 50 at night unless otherwise posted—speed limits may be raised to 70 miles an hour or modified in semi-built-up areas; in Alberta it is 60 in daytime and 50 at night, with the exception of a few selected sections of four-lane highway where higher speeds may be posted; in Nova Scotia the limit is a "reasonable and prudent" speed, with a maximum of 60 miles an hour except where 65 miles an hour is authorized; in New Brunswick maximum speeds vary from 50 to 60 miles an hour depending on type of highway; and in Ontario maximum speeds vary from 50 to 70 miles an hour, depending on type of highway. In the other provinces the maximum speed permitted is normally 50 miles an hour; in Saskatchewan and British Columbia where higher speeds are in effect they are posted. In the Northwest Territories, the highway limit is 60 miles an hour for all vehicles, day or night, except as otherwise posted, and in municipalities it is 30 miles an hour except as posted. Slower speeds are required in cities, towns and villages (in Nova Scotia and British Columbia when passing schools and public playgrounds), at road intersections, railway crossings or at other

places or times where the view of the highway for a safe distance ahead is in any way obscured. In most provinces, truck speed limits are at least five miles an hour below automobile speed limits, although in Manitoba and Saskatchewan they are the same as for passenger vehicles. In all provinces and territories, accidents resulting in personal injury or property damage in excess of \$100 must be reported to a police officer (in Nova Scotia to the Registrar of Motor Vehicles or to a police officer; in Quebec to a police officer or to the Motor Vehicle Bureau) and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

Driver Licensing Controls.—All provinces and territories impose penalties for infractions of driving regulations, ranging from fines for minor infractions to suspension of the operator's driving permit, impounding of licence or imprisonment for more serious infractions. In most provinces penalties have been linked to a driver-improvement program, the aim of which is to correct faulty driving habits, not to take drivers off the road. The most common driver-improvement program includes the demerit-point-system.

Safety Responsibility Legislation.—Each province has enacted safety responsibility legislation (sometimes referred to as financial responsibility legislation). In general, these laws provide for the automatic suspension of the driver's licence and motor vehicle registration of a person convicted of a serious offence (impaired driving, driving under suspension, dangerous driving, etc.). It also provides for the automatic suspension of a person's driving licence and registration of the owner whose uninsured vehicle is involved directly or indirectly in an accident resulting in damage in excess of \$100 or injury or death to any person (in Alberta the amount is \$200). In Saskatchewan and Alberta, if a Judgment is rendered for damages against the driver or owner, the driver's licence and registration remain suspended until the Judgment is satisfied and proof of financial responsibility for the future is filed. In British Columbia proof of financial responsibility for the future is not required if suspension is for accident only. In Saskatchewan, the Yukon Territory and the Northwest Territories uninsured motor vehicles may be impounded following an accident of any consequence, i.e., an accident resulting in personal injury or death, or property damage in excess of \$100 (\$200 in Saskatchewan). In the Province of Quebec, pursuant to the Code of Civil Procedure, the plaintiff may seize before Judgment the motor vehicle which has caused him damage whatever the amount of property damage whether covered for third-party insurance or not. In Ontario, Manitoba and Alberta, the non-resident motorist is not required to carry or produce any form of proof of insurance. In Manitoba, proof of insurance must be supplied at the time of registration but if such insurance expires or is cancelled registration of the vehicle is not suspended unless the vehicle is involved in an accident.

In the Yukon Territory and the Northwest Territories, proof of insurance must be supplied before vehicle licence is issued, and when the insurance expires or is cancelled vehicle licence plates must be returned to the Registrar of Motor Vehicles. By order, the Northwest Territories Commissioner may exempt certain areas from the insurance requirement.

Unsatisfied Judgment Fund.—Legislation has been enacted in all provinces except Saskatchewan, and in the Yukon Territory, usually in the form of an amendment to the motor vehicle laws of the province or territory, providing for the establishment of a fund, frequently called an Unsatisfied Judgment Fund (in New Brunswick, the Unsatisfied Judgment Fee; in Ontario, the Motor Vehicle Accident Claims Act; in Alberta, the Motor Vehicle Accident Claims Fund; and in British Columbia, the Traffic Victims' Indemnity Fund), out of which are paid Judgments awarded for damages arising out of motor vehicle accidents in the province which cannot be collected in the ordinary process of law. In Newfoundland, Prince Edward Island, Nova Scotia, Quebec and British Columbia the fund is maintained by insurance companies. In all the other provinces, except Saskatchewan where insurance is compulsory, the funds are obtained by the annual collection of a fee from the registered owner of every motor vehicle or from every person to whom a

driver's licence is issued. The fee usually does not exceed \$1 per annum; in New Brunswick the fee is \$3 a year; in Ontario a fee of \$25 is paid by the uninsured motorist (in the absence of the fee being paid the uninsured, if apprehended, is liable to a fine) and, in addition, the fund is subsidized by a \$1 annual charge from each licensed driver; in Alberta \$20 is collected from each uninsured owner of a motor vehicle at the time of registration or transfer; and Manitoba collects an additional \$25 from each uninsured owner at the time of registration.

A feature of this legislation, which is contained in some provincial statutes, is the provision for the payment of Judgments in hit-and-run accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles (the Minister of Finance in Newfoundland and the Administrator of the Motor Vehicle Accident Claims Fund in Alberta); any Judgment secured against the responsible authority is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one Judgment. In Newfoundland and Nova Scotia, the limits are \$10,000 for one person, \$20,000 for two or more persons injured in one accident and \$5,000 for property damage. In Nova Scotia and New Brunswick, the limit is \$35,000 in respect of any one accident. In Prince Edward Island and Quebec, the limit is \$35,000 for all damages in the same accident, subject to a deduction of \$200 from all damage to the property of others; damages resulting in bodily injury or death are, up to \$30,000, payable by priority over damages to property and the latter are, up to \$5,000, payable by priority over the former out of the amount of any insurance or other guarantee of indemnity. In British Columbia, the limit is based on the single amount of \$50,000 for any one accident with the provision that not more than \$5,000 may be paid on a property damage claim until injury claims up to \$45,000 have been satisfied; the \$35,000 limit exists for hit-and-run accidents but does not apply to payments for property damage. In Alberta, the limit is \$35,000 for death or personal injury to one or more persons and \$5,000 for damage to property, subject to a limit of \$35,000 in any one accident; where in one accident claims result from bodily injury to or death of one or more persons and loss of or damage to property, claims arising out of bodily injury or death have priority over claims arising out of loss of or damage to property to the amount of \$30,000, and claims arising out of loss of or damage to property have priority over claims arising out of bodily injury or death to the amount of \$5,000, subject to a deduction of \$50. In Manitoba, the limit based on one accident is \$35,000, with Judgments arising out of bodily injury or death having priority to the extent of \$30,000 over claims resulting from loss of or damage to property; and Judgments arising out of loss of or damage to property having priority to the extent of \$5,000 over Judgments resulting from bodily injury or death; the maximum amount payable for a single Judgment resulting from loss of or damage to property is \$3,000, subject to a deduction of \$200.

In Ontario, the Motor Vehicle Accident Claims Act passed in 1962 replaced the Unsatisfied Judgment Fund which had been in effect since 1947. The new Act was streamlined to adjust promptly and efficiently all those claims incurred by the uninsured motorist. Claims could be adjusted much the same as by the insurance companies. The limits under the Act are \$35,000, inclusive of \$5,000 for any property damage claim. Many small claims are handled by the Ontario Department of Transport, subject to a \$50 franchise clause in respect to property damage, but the procedure is such that claims can be settled under Sect. 5 of the Act without resort to litigation. Sect. 6 covers Judgment cases and Sects. 11 and 14 cover the hit-and-run cases in which a Judgment is necessary and property damage is not payable.

Sources of information on provincial motor vehicle and traffic regulations:—

Newfoundland

Administration.—The Minister of Finance, St. John's.

Legislation.—The Highway Traffic Act, 1962 (amended 1964).

Prince Edward Island

Administration.—The Provincial Secretary, Charlottetown.

Legislation.—The Highway Traffic Act (SPEI 1964, c. 14).

Nova Scotia

Administration.—Registry of Motor Vehicles, Department of Highways, Halifax.

Legislation.—The Motor Vehicle Act (SNS 1967, c. 191, as amended) and the Motor Carrier Act (1967, c. 190, as amended).

New Brunswick

Administration.—Motor Vehicle Branch, Department of Provincial Secretary, Fredericton.

Legislation.—The Motor Vehicle Act (RSNB 1955, as amended).

Quebec

Administration.—Motor Vehicle Bureau, Department of Transport and Communications, Parliament Bldgs., Quebec.

Legislation.—The Highway Code (RSQ 1964, c. 231, as amended) and the Highway Victims Indemnity Act (RSQ 1964, c. 232).

Ontario

Administration.—Ontario Department of Transport, Toronto.

Legislation.—The Highway Traffic Act (RSO 1960, c. 172, as amended), the Public Vehicles Act (RSO 1960, c. 337, as amended), the Public Commercial Vehicles Act (RSO 1960, c. 319, as amended), and the Motor Vehicle Accident Claims Act (SO 1961-62, c. 84, as amended).

Manitoba

Administration.—Minister, Department of Transportation, Winnipeg.

Legislation.—The Highway Traffic Act (SM 1966, c. 29) and The Unsatisfied Judgment Fund Act (SM 1965, c. 89).

Saskatchewan

Administration.—Highway Traffic Board, Saskatchewan Power Bldg., Regina.

Legislation.—The Vehicles Act, 1965.

Alberta

Administration and Legislation.—The Motor Vehicle Accident Claims Act (SA 1964, c. 56) and the Highway Traffic Act (SA 1967, c. 30) are administered by the Motor Vehicle Branch, Department of Highways, Edmonton. The Public Service Vehicles Act (RSA 1955, c. 265) and the Rules and Regulations are administered by virtue of authority vested in the Highway Traffic Board, Department of Highways, Edmonton.

British Columbia

Administration and Legislation.—Enforcement of the Motor Vehicle Act, the Commercial Transport Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the various municipal police forces. The Motor Carrier Act is administered by the Public Utilities Commission, the Motor Vehicle Act by the Superintendent of Motor Vehicles and the Commercial Transport Act by the Minister of Commercial Transport, Victoria, B.C.

Yukon Territory

Administration.—Commissioner of the Yukon Territory, Whitehorse, Y.T. Information regarding regulations may also be obtained from the Registrar of Motor Vehicles, Government of the Yukon Territory, Whitehorse, Y.T.

Legislation.—The Motor Vehicles Ordinance (Revised Ordinances 1958, c. 77, as amended).

Northwest Territories

Administration.—Commissioner of the Northwest Territories, Yellowknife, N.W.T.

Legislation.—The Vehicles Ordinance (1967, c. 9, second session).

Section 2.—Highways, Roads and Streets

Highways and Roads.—The populated sections of Canada are well supplied with highways and roads. Access to outlying settlements is provided to some extent by roads built by logging, pulp and paper, and mining companies, although these are not generally available for public travel. At the same time, great areas of Newfoundland, Quebec, Ontario, the Prairie Provinces, British Columbia and the Territories are very sparsely settled and are virtually without roads of any kind.

At the end of 1967 the reported mileage of highways and rural roads was 449,561 miles, a figure that includes all roads under provincial jurisdiction, federal roads and local roads under municipal jurisdiction other than the roads and streets in census metropolitan areas and urban centres of more than 1,000 population. Mileage for the latter is given separately under the heading of "Urban Streets".

1.—Highway and Rural Road Mileage classified by Type and by Province, 1967

¹ Includes federal administrative costs re Trans-Canada Highway amounting to \$170,000 in 1966-67 and \$276,000 in 1967-68.

*Reminiscent of earlier days, traffic
on country roads is not always on
wheels.*

Multiple expressways carry heavy traffic in the Toronto and other densely populated areas and, despite the problems created by long distances between centres and by a climate that adds to the difficulties of construction and maintenance, motor vehicles are everywhere served by good highways and roads.

Federal-Provincial Road Assistance Programs.—There are various programs existing between the Federal Government and the provinces relating to highway and road construction, the co-ordination of which is the responsibility of the federal Minister of Transport who reports to Parliament on federal road policy. When major programs of assistance have been decided upon, their implementation is undertaken either by the Department of Public Works or by the sponsoring Department.

The Trans-Canada Highway.—The original federal-provincial agreement for construction of the Trans-Canada Highway is given in outline, together with data on specifications and route across the participating provinces, in the 1951 Year Book, pp. 631-634. Construction progress and changes in legislation are reported in subsequent editions.

Under the Act, which became effective Dec. 10, 1949, agreements covering the Federal Government's participation in the cost of construction were entered into with each of the provinces. Construction standards were set and the date of completion fixed. The shortest practicable east-west route was to be designated by each province within its own borders, in agreement on terminal points with adjoining provinces, and those sections within the National Parks were to be the responsibility of the Federal Government. Later amendments to the Act increased the extent of federal financial participation and extended the period in which construction costs might be incurred under the Act to Dec. 31, 1970.

Although construction was still going on in a number of sections, the closing in 1962 of the last major gap—in the Rocky Mountains—made it possible for the first time to drive the entire length of the 4,827-mile route.* The Trans-Canada Highway was officially opened on Sept. 3, 1962. Provincial mileages are approximately as follows: Newfoundland, 510; Prince Edward Island, 71; Nova Scotia, 300; New Brunswick, 385; Quebec, 388; Ontario, 1,453; Manitoba, 309; Saskatchewan, 406; Alberta, 282; and British Columbia, 552. Length through the National Parks totals 140 miles.

Up to Mar. 31, 1968, contractual commitments for new construction on the Highway amounted to \$1,157,201,448, of which the federal share was \$785,723,042. Federal payments to the provinces for prior, interim and new construction totalled \$718,536,463. Paving to specified standards had been completed over a distance of 4,728 miles and 841 bridges, overpasses and other structures of more than 20-foot span had been or were being constructed.

Northern Roads.—In the past decade it has become increasingly apparent that if Canada is to benefit from supplying a large part of the world's increasing demands for minerals, a well-planned road network in the Yukon and Northwest Territories is imperative. In 1965, after thorough planning and detailed research, the Federal Government announced the Northern Road Network Program, calling for the construction of roads in the Territories to cost \$10,000,000 a year for a 10-year period. This period, in turn, is part of a 20-year plan intended to bring all resource-potential areas covered by the Program within 200 miles of the nearest permanent road. This will gradually reduce the dependence of the North on seasonal transportation for bulk shipments, reduce the cost of holding large inventories and, as the program progresses, bring the cost of living in northern communities more in line with that in other parts of Canada and also stimulate the growth of the tourist industry.

Types of roads and the proportion of federal assistance under the Program are as follows:—

Communication and Network Roads—highways, major roads and secondary and local roads to provide a primary network in the Territories, including trunk highways, secondary trunk roads and airport roads; construction and 85 p.c. of maintenance costs will be paid by the Federal Government.

Tote Trails—low-standard roads to provide temporary, seasonal or year-round access to the property of a company exploring or developing a natural resource; up to 50 p.c. or \$20,000 of the cost may be contributed by the Territory concerned.

* The total given in the 1968 Year Book was 4,860 miles. Variations in length of route from year to year are caused by straightening sections or by-passing built-up areas.

Initial Access Roads—low-standard roads to provide the same service as Tote Trails but where the contribution under the Tote Trail category would be insufficient because of length of road or difficulty of terrain; federal assistance may be up to 50 p.c. of the cost or 5 p.c. of expenditures on the exploration or development project.

Permanent Access Roads—from the nearest permanent road to the location of a resource development that has been brought to the preproduction stage; federal assistance may be up to but not exceed (a) 66⅔ p.c. of the total cost, (b) 15 p.c. of the capital invested by the company before start of production, or (c) \$40,000 per mile, whichever is the least.

Resource Development Roads—leading from the nearest permanent area in which two or more resource projects have reached the production stage; all construction costs are to be paid by the Federal Government but expenditures will not be undertaken unless it is proven that the projects to which the road leads can be operated commercially for many years.

Area Development Roads—low-standard roads into or through an undeveloped region of favourable natural resource potential; construction is the responsibility of the Federal Government.

Roads to Public Airports (land or water)—to connect airports with the nearest road network or local road; construction and 85 p.c. of maintenance will be paid by the Federal Government.

In the Yukon Territory under this Program, approximately 1,215 miles of roads constructed at a cost of about \$39,000,000 were in use in 1967-68. In the Northwest Territories about 707 miles of roads (excluding service roads in Wood Buffalo National Park) built at a cost of about \$37,000,000 were in use by March 1968. As new roads are built, roads built earlier to service mines (now worked out) are abandoned. Work progressed on the extension to the Mackenzie Highway to Fort Simpson; approximately 30 miles of a 62-mile contract let in 1967 were completed by the end of 1968 and a 67-mile contract to be let in early 1969 should complete the highway to Fort Simpson by 1970. A smaller road system exists in the Fort Smith area, including the Fitzgerald-Bell Rock portage road and the park administrative roads in Wood Buffalo National Park. Total length of this road system is 274 miles.

In the Yukon Territory, a 142-mile area development road from Ross River to Carmacks was open to traffic in late 1968. In addition to opening up a potentially rich resource area, this road is of special interest to tourists since it provides a route from Watson Lake on the Alaska Highway to and through Carmacks and Dawson, and onward to the Alaska border where it connects with the State of Alaska Highway System. Recently, the Federal Government has agreed to improve existing routes or build new routes to tidewater at either Haines or Skagway in the Alaska Panhandle, a distance of almost 400 miles, to facilitate shipment of lead-zinc concentrates to Japan. Surveying is under way on the extension of the Dempster Highway in the Yukon Territory; 78 miles of this route to Fort McPherson in the Northwest Territories are in use.

Construction and Improvement of Trunk Highways in the Atlantic Provinces.—This program was started in 1964 with a commitment of \$10,000,000 from the Atlantic Development Fund, to be allocated on the basis of \$3,000,000 to each of Nova Scotia, New Brunswick and Newfoundland and \$1,000,000 to Prince Edward Island. In 1965 and 1967 the Federal Government approved special appropriations of \$30,000,000 and \$25,000,000 to the Atlantic Development Board, with the same 3-3-3-1 allocation to obtain. Expenditures approved and funds disbursed by the Board under the program up to Mar. 31, 1968, were \$65,000,000 and \$39,600,000, respectively.

Urban Streets.—Information on urban streets is obtained from the local administrations of all areas with populations of over 1,000, all areas located within census metropolitan areas, improvement districts with over 1,000 population and rural municipalities with over 15,000 population. Brief statistical data are given in Table 3; more detail may be obtained from DBS annual report *Road and Street Mileage and Expenditure* (Catalogue No. 53-201).

Section 3.—Motor Vehicles

Motor Vehicle Registrations.—Registrations continue to increase year by year, a record of 7,495,203 being reached in 1967. Of that total, 5,876,691 were passenger cars—one for every 3.5 persons. Registrations by province are given in Table 4 and types of vehicles registered by province in Table 5.

4.—Motor Vehicles Registered, by Province, 1958-67

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures from 1904 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

Apparent Supply of Automobiles.—The apparent supply of automobiles in Canada in any year is computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor vehicle sales are given in Chapter XXI on Domestic Trade and Prices.

Provincial Government Revenue from Motor Vehicles.—The taxation of motive fuels, motor vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government revenue. In every province, licences or permits duly issued by the provincial authorities are required for motor vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. In 1967 the average cost per motor vehicle for operating taxes and licences was about \$141.

The more important sources from which provincial revenue from motor vehicles is derived are shown in Table 7. Motive fuel tax rates are given in the Public Finance Chapter, Section 2, Subsection 2 on Provincial Taxes; Federal Government revenue from excise and sales taxes is given in the same Chapter, Section 3, Subsection 3 on Revenue from Taxation.

¹ Operators' licences are issued for different periods in different provinces; see p. 813 for provincial regulations.

² Includes other items not shown such as transfer of motor vehicles, garage and service station licences, and fines for infractions of motor vehicle laws.

³ Included with other motor vehicles.

⁴ Included with miscellaneous revenues and therefore in total.

⁵ Included with passenger automobiles.

⁶ Not complete.

Sales of Motive Fuels.—In order to estimate the total amount of motive fuel purchased in Canada for use in motor vehicles on public streets and highways, it has been necessary to eliminate from the total the amount of motive fuel used for other purposes. Thus, from the total or gross sales, including imports and exports, the following are subtracted to obtain net sales: tax exempt sales to the Federal Government and other consumers, exports, and sales on which refunds were paid. Net sales are thus defined as sales on which a tax or taxes have been paid in full and are considered to approximate the actual amount of motive fuel purchased in Canada for use on public streets and highways. As shown in Table 8, consumption of taxable gasoline, which is used almost entirely for automotive purposes, rose 4.9 p.c. in 1967 and net sales of diesel oil 6.1 p.c.

Household Goods Movers and Storage Operators.*—Statistics of household goods movers and storage operators, summarized in Table 10, were first presented separately in 1960; before that date, they were included either with motor carriers—freight or with warehousing, depending upon the predominant source of operating revenues of the companies concerned.

* Statistics are given in more detail in DBS annual report *Moving and Storage, Household Goods* (Catalogue No. 53-221).

Passenger Buses.*—The operations of companies predominantly engaged in passenger bus service are summarized in Table 11. Data refer to the for-hire segment of the industry. Only firms engaged in intercity and rural operations and having an annual gross revenue of \$6,000 or over are covered. Operators predominantly involved in the provision of school bus service are not included nor are airport servicing and urban transit bus operators.

11.—Summary Statistics of Intercity and Rural Passenger Bus Companies, 1963-67

NOTE.—Only carriers with an annual gross revenue of \$6,000 or over are included.

There are two subway systems in operation in Canada; the Toronto subway was officially opened on Mar. 30, 1954 and the Montreal subway went into public use on Oct. 17, 1966.

Motor Vehicle Traffic Accidents.—There were 452,759 motor vehicle traffic accidents reported in 1967 compared with 426,105 in the previous year. Deaths from such accidents continue their upward trend, numbering 5,281 in 1966 and 5,429 in 1967 as against 3,260 in 1957. Statistics for 1967, reported by place of occurrence, are given by province in Table 13 but it should be noted that, although motorists are required by law to report accidents, complete statistics of these accidents are not available for all provinces. According to DBS vital statistics data, reported on a different basis, there were 5,412 deaths from motor vehicle traffic accidents in 1967.

PART III.—WATER TRANSPORT*

The Canada Shipping Act.—Legislation regarding shipping is consolidated in the Canada Shipping Act (RSC 1952, c. 29). Under the Act and its amendments, the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping.

Section 1.—Shipping Facilities and Traffic

Subsection 1.—Shipping

All Canadian waterways including canals, lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that Canadian shipping must compete with foreign flag shipping.

Within the region from approximately Havre St. Pierre on the St. Lawrence River upstream to the head of the Great Lakes, the carriage of goods or passengers from one Canadian port to another Canadian port, commonly known as the coasting trade, is restricted to ships registered in Canada. Elsewhere in Canada, the coasting trade is open to all Commonwealth ships.

Canadian Registry.—Under Part I of the Canada Shipping Act, ships in excess of 15 tons net register and pleasure yachts in excess of 20 tons net are required to be registered; ships of lower tonnage may be registered voluntarily, otherwise they are required to be operated under a Vessel Licence if powered by a motor of 10 hp. or more. Sect. 6 of the

* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services and marine services by the Department of Transport and the National Harbours Board; the St. Lawrence Seaway by the St. Lawrence Seaway Authority; part of the financial statistics by the Department of Public Works; shipping subsidies by the Director of Subsidized Steamship Services, Water Transport Committee, Canadian Transport Commission; and canal traffic and statistics of shipping by the Transportation and Public Utilities Division, Dominion Bureau of Statistics.

Act restricts ownership to British subjects or bodies corporate incorporated under the law of a country of the Commonwealth or of the Republic of Ireland and having their principal place of business in those countries. Under the British Commonwealth Merchant Shipping Agreement, all Commonwealth ships are given the general designation 'British Ship', and a ship that should be but is not registered is not entitled to the privileges accorded to British ships. Ships in the planning stage or in course of construction may be recorded before registry by a Registrar of Shipping at one of the 75 Ports of Registry in Canada.

1.—Vessels on the Canadian Shipping Registry, by Province, as at Dec. 31, 1965-67

The freight movement through a large port takes a number of different forms. These include cargoes for or from foreign countries and cargoes loaded and unloaded in coastwise shipping, i.e., domestic freight moving between Canadian points. There is, as well, the in-transit movement in vessels that pass through the harbour without loading or unloading and the movement from one point to another within the harbour, which in many ports amounts to a large volume.

Shipping statistics, which cover traffic in and out of both customs and non-customs ports, do not include freight in transit or freight moved from one point to another within the harbour. Table 4 shows the principal commodities loaded and unloaded in foreign and coastwise shipping at the 12 ports handling the largest cargo volumes in 1967. These ports handled 66.7 p.c. of all Canada's international shipping and 45.8 p.c. of the coastwise trade. The specific commodities shown are those transported in volume and often in bulk form.

4.—Principal Commodities in Water-Borne Cargo Loaded and Unloaded at Ports Handling the Largest Tonnages in 1967

NOTE.—Only commodities totalling over 50,000 tons are listed.

Subsection 2.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for handling of general cargo, and special equipment for bulk freight of all kinds. Facilities

may include cold storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, vessel repair docks.

Nine of the principal harbours of Canada are administered by the National Harbours Board and 11 other major harbours are administered by Harbour Commissions, which include municipal as well as Federal Government appointees. In addition, there are some 300 public harbours under the direct supervision of the Department of Transport, administered under rules and regulations approved by the Governor General in Council. Harbour masters are appointed by the Minister of Transport for these harbours, their remuneration being paid from fees levied on vessels, under the terms of the Canada Shipping Act.

Throughout the country there are several thousand wharves and breakwaters administered by the Department of Transport under the Government Harbours and Piers Act. These facilities are for the accommodation of cargo ships and commercial fishing craft and are under the general supervision of the Department of Transport District Marine Agents. Wharfingers, whose remuneration is determined as a percentage of wharfage fees collected, are appointed for the direct supervision of these public wharves and floats. They are designed to accommodate the smallest fishing or pleasure craft or the largest ocean-going vessels, according to local requirements. At many ports, in addition to public harbour works operated by the administering authority, there are extensive dock and handling facilities owned by private companies including railway, lumber, pulp and paper, coal, steel, iron ore, petroleum, grain, fish and other industries moving large volumes of bulk materials.

In 1967, the harbours of Canada handled more than 240,000,000 tons of cargo in 246,000 vessel arrivals and departures in international seaborne and coastwise shipping.

National Harbours Board.—The National Harbours Board, a Crown corporation established in 1936, is charged with the administration and operation of the following properties: port facilities such as wharves and piers, transit sheds, grain elevators, cold storage warehouses, terminal railways, etc., at the harbours of St. John's, Halifax, Saint John, Chicoutimi, Quebec, Trois-Rivières, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier and Champlain Bridges at Montreal. Facilities at the larger harbours are listed in Table 5, and summary traffic statistics for 1966 and 1967 in Table 6. Operating revenues and expenditures are given in Table 20, p. 854.

5.—Facilities of the Larger Harbours Administered by the National Harbours Board, as at Dec. 31, 1967

NOTE.—The facilities at these ports include those under the control of other agencies as well as those of the National Harbours Board.

Subsection 3.—Canals

The canals and canalized waters of Canada under the jurisdiction of the Department of Transport, together with those under the jurisdiction of the St. Lawrence Seaway Authority, comprise a series of waterways providing navigation for 1,875 miles inland from salt water.

Those included under the two classifications—Seaway canals and Department of Transport canals—are listed in Table 7 with their locations, lengths and lock complement. In addition to these, the federal Department of Public Works administers the St. Andrew's Lock (length, width and draught, respectively, 215, 45 and 17 feet) on the Red River at Selkirk, Man., and the lock at Poupore, Que. A few small locks are operated by provincial authorities.

During 1967, 98,773,574 tons of freight and 21,046 vessels passed through the canals as compared with 110,702,534 tons of freight and 23,466 vessels during 1966. In addition to freight and passenger vessels, thousands of pleasure craft are locked through the canals. Vessels locking at Sault Ste. Marie during 1967 carried 165,111 passengers as compared with 178,482 in 1966.

**7.—Lengths of Channels and Dimensions of Locks under the Control of the

Totals	40,570,941	129,467,732	170,038,673	40,468,976	110,723,466	151,192,442

Cargo traffic through the Canadian lock and United States locks at Sault Ste. Marie during 1967 totalled 90,338,583 tons; the record to date was established in 1953 when 128,489,170 tons were reported through the lock systems. Of this volume, by far the greater portion travels through the American side, where the three wider and longer locks accommodated all but approximately 972,334 cargo tons in 1967. In terms of tonnage, three commodities—iron ore, wheat and coal—dominate all others in lake traffic, and in 1967 made up over 89 p.c. of movements through the Sault Ste. Marie locks. Iron ore shipments alone, at 63,596,042 tons, comprised 70 p.c. of the total and wheat shipments amounted to 9,283,731 tons, indicative of important sales abroad. A relatively small volume of wheat moves directly to foreign lands aboard ocean-going vessels, most of it being carried by the laker fleet to elevators along the St. Lawrence River to await later shipment to receiving countries. Bituminous coal shipped through the Sault Ste. Marie locks during 1967 amounted to 7,350,062 tons, reflecting a continuing, impressive consumption of this commodity in the Great Lakes region.

Canadian Use of the Panama Canal.—The use of the Panama Canal as a transport facility for the movement of goods from one Canadian port to another is of relatively minor importance. Of the total of 5,059,000 long tons of cargo leaving the West Coast of Canada in the year ended June 30, 1967 and passing through the Panama Canal, only 6,000 long tons were destined for eastern Canadian ports. Similarly, of the 1,043,000 long tons of cargo leaving eastern Canadian ports and passing through the Panama Canal, 4,000 long tons were destined for western Canadian ports. The total tonnage passing through the Panama Canal and arriving in Canadian West Coast ports from any origin, Canada or elsewhere, amounted to 1,027,693 long tons in the year ended June 30, 1967; the total from any origin arriving at eastern Canadian ports after having passed through the Panama Canal was 613,117 long tons.

Subsection 4.—The St. Lawrence Seaway

Events leading up to the beginning of the St. Lawrence Seaway project and the progress made during the years of its construction are covered in the 1954 to 1959 Year Books. The 1956 edition (pp. 821-829) gives detailed information on Great Lakes-St. Lawrence waterway traffic immediately prior to the beginning of construction on the project and the 1960 Year Book (pp. 851-860) relates the story of the Seaway during the second year of its operation. The following article reviews the first decade of Seaway development and operations.

THE FIRST DECADE OF THE SEAWAY*

When the St. Lawrence Seaway was first opened to navigation in 1959, it was generally agreed that the first ten years of its operations should be considered a period of development. Now, with that ten years behind, it seems appropriate to review those developments—in the expectation that some reasonable assessments may be made of the trends in cargo traffic, of the broad impact of the Seaway on the Great Lakes community which it serves and of the prospects for the future.

The Traffic

The report of the first Tolls Committee, submitted to the Federal Government in 1958, established an objective of 50,000,000 tons of cargo for the Montreal-Lake Ontario section to be reached in the initial ten years. The fact that this level was all but attained by 1968 is not only a remarkable achievement in itself but is also a tribute to the prophetic powers of those who set this objective more than a decade ago.

Cargo tonnage through the old 14-foot St. Lawrence system had approximated 12,000,000 tons a year during the late 1950s. In 1959, during the first season of navigation on the 27-foot-deep Seaway, cargoes rose to over 20,000,000 tons and then, despite some hesitancy in 1960 and 1961, increased steadily and impressively to reach an all-time high of 49,200,000 tons in 1966. This record, which exceeded even the expectation of the tolls forecasts, gave reason to expect that the 50,000,000-ton target would be reached, on schedule, by 1968 but a five-week strike in 1967 tied up the majority of the Canadian Lakes fleet and contributed to a 5,000,000-ton decline from the previous year and a three-week strike in 1968, coupled with a late-season slowdown in bulk shipments, again prevented attainment of the 1966 level. Final totals for 1968 amounted to 48,000,000 tons through the Montreal-Lake Ontario section and 58,100,000 tons through the Welland; the 10,000,000-ton differential between these two sections has remained almost constant through recent years.

The growth in cargo tonnage has been accompanied by a change in the composition of Seaway traffic. Originally it was forecast that manufactured products would account for only about 10 p.c. of cargo movements and in the early years this was borne out by experience. However, general cargo increased to almost 13 p.c. in 1965 and remained at that level until 1968 when it exceeded 16 p.c. of the total tonnage. Much of this increase resulted from heavy volume movements of imported iron and steel products, bound primarily for United States ports and carried in large, ocean-going bulk carriers.

The future of general cargo is not certain. However, the fact that it has increased in volume year by year is an indication that the economic advantages offered by the Seaway route are being more widely recognized in both North America and abroad. And the growing movement of containers to ports like Toronto, Hamilton, Toledo, Cleveland, Detroit, Milwaukee and Chicago testifies to the willingness of Seaway users to adapt to the most up-to-date techniques in cargo handling. Many of these ports handled more than 1,000 containers during 1968.

Basically, of course, the Seaway has been and, in all probability, will remain a low-cost means of moving bulk cargo to and from the North American hinterland. Since 1959, two commodities have dominated the trade: iron ore, which annually represents between 30 p.c. and 37 p.c. of the total tonnage, and grain—especially wheat—which varies between 26 p.c. and 30 p.c. of all cargoes. In some years these two items alone have accounted for more than two thirds of the total tonnage, making the Seaway quite sensitive to variations in the flows of these commodities. Coal and petroleum products account for between 8 p.c. and 10 p.c. of tonnage in the Montreal-Lake Ontario section and easily 20 p.c. of Welland cargoes. Coal trade has increased sharply since the opening of the Lakeview Steam Generating Station and with the growth in steel production in

*Based on an address by Dr. Pierre Carnu, President of The St. Lawrence Seaway Authority, delivered Jan. 20, 1969, to the Joint Annual Conference of the Dominion Marine Association and the Lake Carriers' Association.

Hamilton. Three main classes of commodities are distinguishable in Seaway traffic: those that fluctuate with world demand, of which grain and manufactured iron and steel are examples; other raw materials such as iron ore, forest products, petroleum and coal for which demand is reasonably stable; and coastal trade, which is independent of national or international considerations. The pattern of trade movements through the Montreal-Lake Ontario section involving these commodities has changed very little during the Seaway's brief history. Grain is carried downbound; iron ore, fuel oil, coal and pulpwood move upbound into the Lakes; and general cargo flows in both directions. The most interesting change has occurred in the ratios of upbound to downbound traffic. In the first six years, downbound traffic tended to dominate the shipping pattern but since 1965 upbound shipments are more voluminous due largely to the increased movement of iron ore and imports of general cargo. In the Welland, downbound traffic has always been heavier than the upbound trade, usually in a ratio of three to two but a slight shift in this ratio has been developing since 1965, influenced by heavier upbound iron ore shipments.

Until 1963, traffic of Canadian origin using the Welland ranged between 47 p.c. and 50 p.c. of the total; since that time the ratio has increased slightly to between 52 p.c. and 54 p.c. Traffic of United States origin accounts for 40 p.c. to 45 p.c. and shipments originating overseas range up to 10 p.c. of the total tonnage. The situation is different for the Montreal-Lake Ontario section where two thirds of the traffic is of Canadian origin, the remainder being almost equally split between cargoes of United States and overseas origin. However, these statistics are, to some extent, misleading. For example, if destination is also considered it may be concluded that international trade approximates 70 p.c. of the total tonnage, with domestic shipments accounting for the remainder.

The System

It was apparent soon after the opening of the Seaway that, in coping with a growing and diversified traffic, a static approach to operation and maintenance on the Seaway could not suffice and that a continuing program of adaptation, modernization and change in plans and proposals would have to be followed. The Welland Canal which, by 1959, had been in service for 27 years, required immediate attention when traffic increased. It was logical, when serious queues started to develop in 1962 and 1963, to prepare plans for twinning the remaining single locks. But within a year it became evident that such a solution would not achieve the desired result of doubling the Welland's capacity which, with the existing vessel mix and direction of cargoes, appeared to be just over 50,000,000 tons. Moreover, improvements that would result from twinning would not have been available until the completion of the heavy construction program four or five years later. Because the problem of congestion was too pressing to permit a deferred solution, a major improvement and modernization program was launched in the summer of 1964. Five channel widening projects were undertaken in 1965 and completed in 1966; a major alignment job was carried out at Lock 1 in 1965 and 1966; hydraulic modifications, designed to streamline the filling and emptying of Lock 2, were undertaken in 1964 and 1965, followed by similar improvements at Locks 1, 3 and 7 during the winters of 1964-66. Other major works included the hydraulic separation of the reach between Locks 6 and 7, with direct discharge of Lock 7 into the pondage area and additional tie-up wall facilities at Locks 1, 2, 3 and 4 and on the south side of the Guard Gate. Perhaps the most spectacular undertaking, and certainly the most expensive, is the channel relocation between Port Robinson and Ramey's Bend started in 1967 and scheduled for completion in 1972; the 8.6-mile channel will have a width of 350 feet.

In addition to these capital works, a series of major changes were introduced in Welland operations. As a result, the concept of traffic control evolved from a "pencil and paper" era to a total systems approach. Modern electronic equipment was in operation by September 1966. Equipment such as closed-circuit television systems, new navigation lights, lock telemetry and visual display boards appeared throughout the Welland to assist in the implementing of new traffic control procedures. A data collection system providing information on the performance of ships and locks also became available.

Meanwhile, in response to a need to firm up the closing date of the navigation season, major modifications were made to the two entrance locks of the Eastern Region—St. Lambert and Côte Ste. Catherine—to increase and modify the flow of water in order to flush ice under early winter and spring break-up conditions. Also in the same section, at Beauharnois, new studies to determine the capacity of the two locks in that area have been undertaken. The introduction to the Montreal-Lake Ontario section of techniques and procedures similar to those in use in the Welland is under way, in co-operation with the United States Saint Lawrence Seaway Development Corporation. As a result, a new Seaway-wide integrated traffic control system should be implemented by 1971, the main feature of which will be the employment of an on-line real-time computer for assisting Seaway personnel to schedule vessel movements from Montreal to Long Point in Lake Erie.

These improvements to the Seaway have produced some very significant benefits for the shipping industry which include: (1) faster and safer vessel transits despite increases in cargo tonnages and in the size of ships; (2) increases in drafts from 25' in 1959, to 25'6" in 1963 and to 25'9" in 1967; and (3) a longer season of navigation, increased from 222 days in 1959 to 250 days in 1968.

The Ports

The Seaway owes much of its success during the past decade to St. Lawrence and Great Lakes ports. If facilities to accommodate maximum-sized lakera and large ocean vessels had not been provided; if access channels had not been deepened to Seaway draft; if dredging at wharfs, piers and anchorage areas had not been carried out; if the necessary cargo terminal sheds, grain elevators, conveyor systems or pipelines had not been built or modified to meet the demands of increased traffic, the Seaway's achievements would never have been realized. Two distinct types of successful Seaway port may now be recognized: industrial harbours like Superior and Ashtabula which specialize in handling one commodity—iron ore or coal—and in accommodating only one class of vessel; and commercial and general ports of call where manufactured goods, grain, coal, iron ore and a score of other commodities are handled. The latter group includes Canadian ports such as Toronto, Hamilton and the Lakehead, and United States ports like Duluth, Milwaukee, Chicago, Detroit, Toledo, Cleveland and Buffalo. Together these ports usually handle about 70 p.c. of all Seaway tonnage.

The great seaport of Montreal, which feared so much for its future before the opening of the deep waterway, is also a Seaway port of call. Working as a trans-shipment and transfer point, it has become another port in the system, complementing those of the Great Lakes. It is distinctly to the advantage of the Seaway to have a world-famous and well-operated harbour of the size of Montreal, with all its extensive marine services and facilities, located at the entrance to the waterway. It is interesting to note, too, that a number of other specialty ports, like Baie Comeau, Sept Îles, Port Cartier and Pointe Noire, serving as trans-shipment points for grain and iron ore shipment terminals, have emerged at least indirectly as a result of the Seaway.

It is through these many thriving ports and their respective hinterlands that the Seaway has become—in ten years—a vital link between markets, connecting regions of production and consumption in the Great Lakes-St. Lawrence industrial basin.

The Ships

They come and go, in all sizes, shapes and forms, flying the flags of many nations and carrying cargoes originating from a multitude of ports of call. A few, both inland and ocean vessels, are veterans of the Great Lakes-St. Lawrence route from long before the Seaway came into existence. Others, born or conceived as a result of new economic considerations introduced by the opening of the Seaway, have emerged as dominant forces, gradually replacing smaller, less efficient carriers. The old canallers, built to navigate in the now extinct St. Lawrence canals, have all but vanished, unable to compete with much larger lakera which, with the Seaway, were able to navigate all the way to the Atlantic.

The small ocean vessels, which once plied the Lachine, Cornwall, Galop and other canals, were first elongated by addition of new mid-sections, then superseded by *Liberty* and *Victory* ships which are now themselves obsolete. The new generation of vessels have, for the most part, been constructed to optimum size to suit Seaway lock dimensions. The most typical and most efficient of these is the big bulk carrier, widely referred to as a "laker" and called "730s" by lockmasters and operations staff. There are 38 ships of that size in operation, five of which were launched in 1968, all built in Canadian shipyards.

Even among these ships, launched in the period 1959-68, changes have been made. Self-unloaders are the most recent development, some with unorthodox shapes—but quite efficient—such as the *Canadian Century* and *Canadian Progress* of the Upper Lakes fleet. Others have been built with bow thrusters, stern thrust, or both, such as the *Ralph Misener* and the *Ottercliffe Hall*. And new package freighters have appeared to compete in a highly competitive trade.

Ocean vessels have also changed, the trend now swinging toward large dual-purpose bulk and general cargo carriers such as the *Rolvi* and the *Nanfri*, both of Norwegian registry, and both 709 feet in length. These vessels and others like the *Federal Scholde* and the *Federal St. Laurent*, which have entered the Seaway in the past two years, have been specifically designed for Seaway service. They usually carry steel imports to Great Lakes ports, returning with grain, some containers and, occasionally, with scrap metals. Today more than 30 nations, including Japan, Thailand, Switzerland, Taiwan and the Soviet Union, use the waterway.

The trend in Seaway shipping has been unmistakably toward larger and larger ships, carrying more and more cargo. In 1960, the average laker had a gross registered tonnage of less than 3,400 tons and carried an average cargo of approximately 3,100 tons. In the same year, the typical ocean ship had a gross registered tonnage of approximately 5,300 tons and carried about 3,600 tons of cargo per transit. By 1967, the change was remarkable. Lake vessels had more than doubled in average size, to 7,450 gross registered tons, carrying more than twice the payload, at 8,100 tons; ocean vessels had increased in size to an average of 7,000 gross registered tons with cargoes of 5,300 tons per transit. The growth in size and capacity of ships has been even more impressive in the Welland. This evolution in the size of ships operating in the Seaway has been stimulated by economics, especially in respect to considerations such as the productivity of crews and rising operating costs. The Seaway itself has benefited by this development—the capacity of the system has increased despite a reduction in the number of vessels. In 1959, it required 7,930 transits in the Montreal-Lake Ontario section and 7,966 in the Welland to move less than half the tonnage carried in 1968, when 6,576 transits were recorded in the St. Lawrence and 7,203 through the Welland. The ratio of lakers to ocean vessels has remained relatively constant over the years, approximating three to two in the Montreal-Lake Ontario section and three to one in the Welland, with lakers dominating.

The Future

The task of providing safe, efficient and economic service to the users of the Seaway, of reducing as much as possible vessel transit times through the system and, above all, of ensuring that sufficient capacity is always available to handle the traffic that presents itself, has raised many problems in the past ten years and will, undoubtedly, raise more in the future. In order to meet these problems as expeditiously as possible, the Authority has developed a planning program which envisages the Seaway system from both the short-term and the long-term view. Most immediate is the task of employing the basic facilities already in place—the Welland section which was completed in 1932 and the Montreal-Lake Ontario section opened in 1959—to the optimum. The key elements in this program are an integrated traffic control system, a more efficient technique for handling vessels in the lock chambers, and an extension of the navigation season, all improvements planned to provide benefits in terms of service to shipping that will far outweigh their costs and extend significantly the life of the present waterway. From the long-term point of view, the Seaway entities cannot ignore the possibility that existing

facilities, no matter how efficiently used, will eventually reach a point when they can no longer cope with the demands made upon them. If historical trends alone are considered, it would appear that Seaway traffic would reach the limits of the present system's capacity before the end of the next decade—leaving scarcely enough time to construct new facilities even if begun immediately. Recent analyses of this traffic by both Canadian and United States economists, however, suggest that the growth rate characteristic of the Seaway's development period may be expected to level off and that sufficient time should be available to thoroughly plan for any new system that eventually may be required. It was with this eventuality in mind that the Authority, in 1967, proposed a long-term expansion program for the Seaway involving, among other things, locks of larger than present dimensions. This proposal is under study by the Federal Government and certain preliminary steps, such as funds for planning and for the acquisition of lands, have been authorized. A final decision to go ahead with such an expansion program will, of course, have to be taken in the light of traffic developments over the next few years and with reference to the success of current plans to utilize the existing facilities to their utmost capacity.

Thus, against a background of a decade of successful development and with a planning program that looks to the future, the Seaway should continue to be a viable avenue of commerce and an integral part of the Canadian and North American transportation network.

Seaway Traffic.—Tables 13 and 14 give combined traffic statistics of the St. Lawrence and Welland Canals for the years 1967 and 1968. Duplicate transits are eliminated so that the figures show the actual total movement of goods through the St. Lawrence Seaway.

In 1968, 4,555 ships carrying about 33,313,000 tons of cargo moved upbound through the Seaway and 4,630 vessels carrying 33,038,000 tons moved downbound. Ocean-going ships carried 23.0 p.c. of the total cargoes and lakers 77.0 p.c. Of the total tonnage carried upbound in 1968, 25,324,000 tons were domestic cargo and 7,989,000 tons were foreign traffic; downbound, 25,818,000 tons were domestic freight and 7,270,000 tons were carried to and from foreign ports.

On the Montreal-Lake Ontario section, upbound traffic amounted to 30,400 000 tons in 1968 and downbound traffic to 17,600,000 tons, an increase of 9.0 p.c. over 1967. Almost 60 p.c. of the former was accounted for by iron ore shipped from St. Lawrence ports to Hamilton and Lake Erie, and the latter largely by overseas shipments of wheat. There were 176 fewer upbound transits and 169 fewer downbound transits in 1968 than in 1967, indicating a slight decrease in the number of vessels using this portion of the Seaway. Bulk cargo comprised 80.1 p.c. of the total traffic through the Section in 1968, the principal commodities through the St. Lawrence canals being iron ore, wheat, corn, fuel oil, soybeans and bituminous coal. Traffic patterns show that 26.8 p.c. of the total movement was between Canadian ports, 41.1 p.c. moved between Canadian and United States ports and 31.8 p.c. consisted of foreign trade to and from Canada and the United States. The small remainder was traffic between ports in the United States.

There were 7,204 transits through the Welland Canal in 1968, with a cargo volume of 26,200,000 tons upbound and 31,900,000 tons downbound; bulk cargo accounted for 85.6 p.c. of the traffic. Although many vessels pass through both the St. Lawrence and the Welland Canals on "through" trips, there is a substantial amount of local traffic between Great Lakes ports which involves only the Welland Canal. These movements are largely

of iron ore, grain and coal. The Welland Canal traffic was 10,100,000 cargo tons greater than that reported for the Montreal-Lake Ontario section.

Income of the St. Lawrence Seaway Authority for 1968 amounted to \$22,051,023, comprising toll revenue of \$19,896,897 assessed for transits through the Seaway locks between Montreal and Lake Ontario and sundry revenues (rentals, wharfage, bridge revenue, etc.) of \$2,154,126. Total expenses for 1968 amounted to \$16,743,334, of which operation and maintenance expenses amounted to \$11,805,202 and regional headquarters, headquarters administration and engineering expenses amounted to \$4,234,913, and construction \$703,219.

Subsection 5.—Marine Services of the Federal Government

The Marine Services of the Department of Transport comprises four Branches—Marine Works, Marine Regulations, Marine Operations, and Marine Hydraulics—each headed by a director responsible to the Assistant Deputy Minister, Marine.

The *Marine Works Branch* responsibilities include provision and maintenance of aids to navigation, maintenance and management of Canada's secondary canals, administration of public harbours and wharves, and general supervision of harbour commissions. It has three Divisions—Aids to Navigation, Canals, and Harbours and Property.

The *Marine Regulations Branch*, with three Divisions—Ships Machinery Inspection, Hulls and Equipment Inspection, and Nautical and Pilotage—is responsible for the administration of those parts of the Canada Shipping Act that relate to the operations of Canadian ships and ships within Canadian waters. It is charged with the registry and licensing of ships, the certification of ships' officers and the engagement and discharge of ships' crews. Other responsibilities include pilotage, safety inspection of ships, handling of dangerous cargoes, prevention of oil pollution of Canadian waterways and air pollution by ships, and the investigation of marine accidents. It is also responsible for the co-ordination of Canada's participation in the Intergovernmental Maritime Consultative Organization, a United Nations body charged with the promotion of marine safety on an international basis.

The *Marine Operations Branch* is responsible for operating the departmental fleet, the Canadian Coast Guard, which consists of 146 ships of various types including both heavy and light icebreakers, an icebreaking cable repair ship, a special Arctic service ship, and two weather-oceanographic ships, the CCGS *Vancouver* and CCGS *Quadra*, which alternate in manning Weather Station "Papa" in the Pacific Ocean.

A principal duty of the fleet is tending lighthouses, buoys and other aids to navigation in Canadian coastal and inland waters. Coast Guard ships, including icebreakers, take part each summer in the Department's Arctic re-supply operations, moving some 100,000 tons of cargo to more than 40 ports of call in the Far North. These ships work in conjunction with a number of chartered commercial vessels which carry most of the cargo. During the winter, the icebreakers operate in support of commercial shipping in the Gulf of St. Lawrence from Cabot Strait to the Quebec North Shore. They also operate in the St. Lawrence River to break ice jams and prevent flooding, particularly in the section between Trois-Rivières and Montreal.

The Coast Guard ships assist with projects of other Canadian Government departments, such as scientific programs carried out by research teams based aboard various ships ranging from the Great Lakes to the High Arctic in such fields as oceanography, hydrography and related sciences. Departments concerned with the development of the Canadian Arctic and with the welfare of its population also carry out their undertakings with the aid of Coast Guard ships.

A Canadian Coast Guard Officer Training College, officially opened in September 1966 at Sydney, N.S., provides a four-year course for students, who will graduate as

junior engine-room or deck officers. Upon acquiring the necessary sea experience, they may take the examinations to earn the rank of engineer first-class or master foreign-going, respectively.

The *Marine Hydraulics Branch* comprises three Divisions—Marine Hydraulics, the St. Lawrence Ship Channel, and Marine Traffic Control. Marine Hydraulics deals with the hydraulic and engineering aspects of providing navigable channels for marine transportation on the Great Lakes and the St. Lawrence River. Maintenance and improvements of the St. Lawrence River below Montreal and of the Saguenay River are under the jurisdiction of the St. Lawrence Ship Channel Division, which is located in Montreal.

In the interests of St. Lawrence River traffic safety, a Marine Traffic Control Service was established on Apr. 3, 1967, as a result of studies initiated by the Department in 1964. Using very high frequency (VHF) radio equipment, the service keeps track of ship traffic in much the same way as the air traffic controllers watch over the busy sky lanes. The information needed to assist ships' masters in the safe conduct of their vessels comes from two main traffic control centres—one at Quebec and the other at Montreal—six shore stations and 18 reporting points along the river between Montreal and Les Escoumins, Que. All ships navigating the river must be equipped with the required VHF equipment to take advantage of the service.

Field Organization.—In the field, a regional management organization within the Marine Services is being developed. This system will provide the Department with more efficient means of matching resources to workloads in all areas. Included in the completed system will be the 11 district marine agencies that have existed for many years, and some 15 other Marine Services field offices that in the past have been reporting individually to Marine Services directors or to the Assistant Deputy Minister, Marine.

The first step was completed in May 1967 with the establishment of the Maritime Region. This covers the Maritime Provinces and their outlying islands including Sable Island and the Magdalen Islands, and embraces the Steamship Inspection Service and Nautical and Pilotage offices in the three provinces. In all, there will be five regions, each under a regional director. The other four will be Newfoundland Region; Laurentian Region, including Quebec, Hudson Bay and Eastern Arctic waters; Lakes Region, including Ontario and Manitoba inland waters; and Western Region, including the Pacific Coast, western and northwestern Canadian waterways and the Western Arctic.

Aids to Navigation.—The Canadian system of aids to navigation is similar to that of other North American countries. Such aids maintained by the Department of Transport for Canadian and contiguous waters consist of buoys, lightships, lighthouses, day beacons, radio beacons and two electronic networks operating on the hyperbolic principle—Loran and Decca. The numbers of danger signals maintained during the years ended Mar. 31, 1967 and 1968 were:—

<i>Type of Signal</i>	<i>1966-67</i>	<i>1967-68</i>	<i>Type of Signal</i>	<i>1966-67</i>	<i>1967-68</i>
No.	No.		No.	No.	
Lights.....	3,618	3,757	Lighted and combination		
Lightships.....	2	1	lighted whistling and		
Light-keepers.....	882	716	bell buoys.....	1,821	2,199
Fog whistles and sirens....	67	61	Unlighted bell and whis-		
Diaphones and tyfons....	275	274	tling buoys.....	27	—
Mechanical bells and gongs	12	9	Electronic signals.....	21	31
Hand fog horns and bells..	68	15	Unlighted beacons and		
			buoys.....	13,068	13,448

All aids incorporating light or sound devices are listed in the Department of Transport annual publication *List of Lights and Fog Signals*. Information on the radio beacons and on Loran and Decca is published in *Radio Aids to Marine Navigation*.

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels.

St. Lawrence Ship Channel.—This channel extends from about 40 miles below Quebec City to the foot of the Lachine Canal at Montreal, a distance of 200 miles. About 130 miles of this distance is dredged channel.

Above Quebec, in the Quebec-Trois-Rivières reach, the channel has a limiting depth of 35 feet at extreme low water and a minimum width of 800 feet. The channel on Lake St. Peter has a limiting depth of 35 feet at extreme low water and a minimum width of 550 feet. This reach is being improved and widened to a minimum width of 800 feet, and is expected to be completed during 1970.

From Lake St. Peter to Montreal the limiting depth of the channel is 35 feet at extreme low water and a minimum width of 800 feet.

Below Quebec the limiting depth of dredged channel, about 15 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route. Above Quebec, maintenance requirements as a result of silting in this dredged channel are relatively minor but below the city silting is more pronounced because of tidal action.

The Ship Channel is well defined by buoys and the centre marked by range lights, permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December. The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the St. Lawrence waterway are made available through the Marine Traffic Control Service (see p. 849).

Steamship Inspection.—The Steamship Inspection Service was established by authority of the Canada Shipping Act. Its functions include the formulation and subsequent enforcement of regulations concerned with the approval of design of hulls, machinery and equipment of ships; inspection during construction; periodic inspection and issuance of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading and unloading ships; the prevention from pollution of Canadian territorial waters by oil from ships; control of pollution of the atmosphere by smoke emitted by ships; control of the powering, equipment and load limits of small vessels; and the certification of marine engineers. The Board also prepares correspondence courses in marine engineering for use in Marine Engineering Schools now controlled by the Department of Labour.

The Chairman and the Board of Steamship Inspection are located at Ottawa and field offices are maintained in the principal ocean and inland ports. A total of 1,869 vessels of Canadian ownership or registry, including 454 passenger ships, 182 new ships built in Canada, 14 ships built outside Canada for registry in Canada, and 19 converted or reconditioned ships were inspected during the year ended Mar. 31, 1968.

Pilotage.—Pilotage service functions under the provisions of Part VI and Part VIa of the Canada Shipping Act. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district. There are in Canada 25 pilotage districts, in nine of which the Minister of Transport is the pilotage authority (see Table 15); in each of the other districts the authority is a local body appointed by the Governor in Council. There are also three districts that are administered jointly by Canada and the United States; and one area in which the Department of Transport provides qualified pilots.

Section 2.—Financial Statistics of Waterways

The principal statistics available on the cost of facilities for water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. The major part of the capital expenditure for the permanent improvement of waterways is provided by the Federal Government, that by municipalities and private industry being confined almost entirely to terminal or dockage facilities.

The figures available of federal capital expenditure on waterways are contained in the *Public Accounts* and the annual reports of the Departments of Transport, Public Works and Finance and in the annual report of the St. Lawrence Seaway Authority. However, for several reasons, these figures cannot be regarded as an accurate indication of the present worth of the undertakings represented and therefore are not included here; the one exception is the capital expenditure made by the National Harbours Board on facilities under its jurisdiction. The capital values of the fixed assets administered by the Board at Dec. 31, 1967 amounted to \$498,313,011; this figure includes expenditure on all buildings, machinery and durable plant improvements less deductions for depreciation and the scrapping or abandonment of plant, and therefore represents a fair approximation of the present value of the properties. The total amount advanced by the Federal Government to the National Harbours Board for capital expenditure during 1967 was \$16,974,491, distributed as follows: Champlain Bridge (Montreal), \$1,897,854; Montreal, \$2,525,691; Belledune (N.B.), \$2,284,669; Vancouver, \$6,588,120; Quebec, \$2,437,187; Churchill, \$359,840; and Saint John (N.B.), \$881,130.

Waterways Expenditure and Revenue.—Expenditure under this heading (Tables 16 to 18) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable. Revenue in connection with waterways of the Department of Transport, the Department of Public Works and the St. Lawrence Seaway Authority is shown in Table 19.

To facilitate water transportation, the Federal Government expends annually, in addition to the recurrent expenditure shown here, a considerable amount to cover deficits of the National Harbours Board, and for mail subsidies and steamship subventions as shown in Table 21. Operating revenue and expenditure of facilities administered by the National Harbours Board are shown separately in Table 20.

PART IV.—CIVIL AIR TRANSPORT

Section 1.—Civil Aviation Administration and Policy

Administration.—Civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act and the National Transportation Act and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Director of Civil Aviation under the supervision of the Assistant Deputy Minister, Air Services, Department of Transport. Part II of the Act deals with the economic aspects of commercial air services and assigns to the Canadian Transport Commission certain regulatory functions of commercial air services (see p. 876). Part III deals with matters of government internal administration in connection with the Act.

International Air Agreements.—The position of Canada in the field of aviation as well as its geographical location makes co-operation with other nations of the world engaged in international civil aviation imperative. Canada therefore took a major part in the original discussions that led to the establishment of the International Civil Aviation Organization (ICAO) which has headquarters at Montreal, Que. At present, Canada has air agreements with 25 other countries.

Federal Civil Aviation Policy.—The intent of Federal Government concern in civil aviation is to provide an efficient and stable service for the Canadian public and the best possible economic framework for the orderly development of commercial aviation. In formulating its aviation policy in 1964, three principles were accepted by the Government as basic. The first related to the international field and stated that air services provided by Canadian airlines should serve the Canadian interest as a whole; that these services should not be competitive or conflicting but should represent a single integrated plan which could be achieved by amalgamation, by partnership or by a clear division of fields of operations.

By a further policy statement in June 1965, the Minister of Transport defined more precisely the respective areas of operation of Air Canada and Canadian Pacific Air Lines Limited (CP Air) and additional international air services have since been introduced consistent with Government policy.

The second principle concerned the domestic mainline services and stated that, although competition was not to be rejected, development of competition should not compromise or seriously injure the economic viability of Air Canada's domestic operations which represent the essential framework of its network of domestic services, and in the event that competition continues, opportunity should be ensured for growth to both lines above this basic minimum. In accordance with this principle, the Government has authorized the Canadian Transport Commission to permit CP Air to operate additional transcontinental air services, and to serve Calgary, Edmonton and Ottawa in addition to Vancouver, Winnipeg, Toronto and Montreal which were already being served.

The third principle concerned the role of regional air carriers providing scheduled service and their relationship with the mainline carriers. Recommendations were prepared by the two major airlines and the larger regional carriers which resulted in a "Statement of Principles for Regional Air Carriers" tabled in the House of Commons on Oct. 20, 1966, by the Minister of Transport. These principles are summarized as follows:—

- (1) Regional carriers will provide regular route operations into the North and will operate local or regional routes to supplement the domestic mainline operations of Air Canada and CP Air; they will be limited to a regional role.
- (2) Greater scope will be allowed regional carriers in the development of routes and services by the following means: (a) where appropriate, limited competition on mainline route segments of Air Canada or CP Air may be permitted to regional carriers if this is consistent with their local route development; (b) in a few cases, secondary routes at present operated by Air Canada and CP Air may become eligible for transfer to regional carriers; and (c) a larger role will be allotted to regional carriers in connection with the development of domestic and international charter services, inclusive tours and new types of services.
- (3) Greater co-operation between the mainline carriers and the regional carriers will be developed in a variety of fields, ranging from technical and servicing arrangements to joint fare arrangements.
- (4) A limited policy of temporary subsidies for regional routes will be introduced, to be based upon a "use it or lose it" formula.
- (5) Firmer control will be exercised over the financial structure of regional carriers in connection with new licensing arrangements.
- (6) Regional carriers will be assisted with the acquisition of aircraft by development of a scheme for consultation between government and the carriers regarding plans for new aircraft, and by a special investigation designed to explore the possibility of developing a joint approach to this problem on the part of the carriers.

To implement the above principles, the Air Transport Board (now the Canadian Transport Commission acting through its Air Transport Committee) introduced during the year the following measures:—

- (1) Provision for the carriage of two pro-rata charter groups on any pro-rata charter flight, provided that each group is composed of not less than 40 persons;
- (2) Provision for the operation of domestic and international inclusive tours with chartered aircraft; and
- (3) Provision for the operation by regional air carriers of entity and pro-rata affinity group passenger charters between mainline points, subject to certain restrictions.

Thus, in the international field, the joint approach to the provision of world-wide service by the two major Canadian carriers is intended to strengthen their position in a very competitive field and provide a better over-all service to the travelling public. In the domestic field, a degree of competition remains to provide the public with the advantages that can result from a competitive atmosphere but avoids excesses of competition that could be ruinous to the operators and unsatisfactory to the public.

Section 2.—Current Air Services

Two major airlines, Air Canada and CP Air, form the nucleus of Canada's freight and passenger air service. Current operations of these airlines are discussed briefly below, followed by short outlines of the services provided by independent airlines and a list of Commonwealth and foreign air carriers licensed to operate services into Canada.

Broadly, air transport services in Canada may be grouped into two classes—Scheduled Services and Non-scheduled Services. Services in the first group are operated by air carriers that offer public transportation of persons, mails and/or goods by aircraft serving designated points in accordance with a service schedule and at a toll per unit. The second group includes the following:—

- (1) Regular Specific Point Air Services—operated by air carriers that offer public transportation of persons, mails and/or goods by aircraft serving designated points on a route pattern and with some degree of regularity, at a toll per unit.
- (2) Irregular Specific Point Air Services—operated by air carriers that offer public transportation of persons, mails and/or goods by aircraft from a designated base, serving a defined area or a specific point or points, at a toll per unit.
- (3) Charter Air Services—operated by air carriers that offer public transportation of persons and/or goods by aircraft from a designated base, at a toll per mile or per hour for the charter of the entire aircraft, or at such other tolls as may be permitted by the Air Transport Committee.
- (4) Contract Air Services—operated by air carriers that do not offer public transportation but who transport persons and/or goods solely in accordance with one or more specific contracts.
- (5) Flying Clubs—operated by air carriers incorporated as non-profit organizations for the purpose of furnishing flying training and recreational flying to club members.
- (6) Specialty Services—operated by air carriers for purposes not provided for by any other class, such as flying training, recreational flying, aerial photography and survey, aerial application and distribution (crop dusting, pest control, seeding), aerial inspection (forests, fire patrol, pipelines), aerial control (fire, water-bombing) and aerial construction (supply).

Air Canada.—Continued development in all phases of Air Canada's operations, stimulated by Expo 67 and the Pan American games, made 1967 an exceptional year in terms of both traffic and revenues. In that year, the 30th of its operations, Air Canada carried 6,393,124 passengers on scheduled and chartered flights, an increase of 21 p.c. over 1966. Scheduled seat-miles offered numbered 8,054,000,000, up 26 p.c. from 1966, and scheduled revenue passenger-miles flown exceeded 5,221,000,000, an increase of 25 p.c. The passenger-load factor dropped from 66 p.c. in 1966 to 65 p.c. in 1967.

North American passenger-miles flown, which represented almost three quarters of Air Canada's scheduled passenger traffic, increased 26 p.c. over 1966 as additional services were extended to points in the United States as well as to communities in Canada; 3,747,000,000 passenger-miles were flown compared with 2,984,000,000 in 1966. There was a 23-p.c. advance in scheduled transatlantic passenger traffic, and passenger traffic to Florida, Bermuda, the Bahamas and the Caribbean Islands rose by 20 p.c.

Commodity traffic continued to increase, although to a lesser degree due mainly to delays in delivery of new aircraft, air freight rising 15 p.c. to 85,653,000 ton-miles compared with 33 p.c. in the previous year, air express increasing by 8 p.c. to 6,774,000 ton-miles compared with 13 p.c. in 1966, and mail traffic 13 p.c. to 21,529,000 ton-miles.

At the end of 1967, Air Canada, one of the world's largest air carriers, was operating over 68,645 unduplicated route miles, serving 61 communities in Canada, the United States, the British Isles, Continental Europe and the Caribbean. At year-end, its fleet consisted of 21 DC-8s, 18 DC-9s, 23 Vanguards and 39 Viscounts, of which four 196-passenger DC-8-61 and twelve 94-passenger DC-9-32 jetliners were acquired during the year.

1.—Operating Statistics of Air Canada, 1958-67

Year	Traffic				Operating Revenue			Operating Expenses	Operating Profit
	Revenue Passenger ¹		Revenue Commodity ²	Mail	Passenger	Freight and Mail	Totals ³		
	No.	'000 passenger-miles	'000 ton-miles	'000 ton-miles	\$'000	\$'000	\$'000	\$'000	\$'000

¹ Includes non-scheduled service.² Includes excess baggage and express.³ Includes other revenue.

Canadian Pacific Air Lines Limited (CP Air).—In 1968, for the first time, CP Air had revenues exceeding \$100,000,000 and carried more than 1,000,000 passengers.

Formed in 1942, the airline now has 50,780 miles of international routings as a Canadian flag-carrier. CP Air serves Honolulu, Fiji, New Zealand and Australia with its South Pacific service out of system headquarters at Vancouver. The Great Circle Route over the North Pacific to Hong Kong and Japan radiates from Vancouver as does the Polar Route via Calgary and Edmonton to Amsterdam. CP Air, in Eastern Canada from Toronto and Montreal, crosses the Atlantic to Holland, the Azores, Portugal, Spain, Italy and its newest international destination Greece. A South American network operates to Mexico, Peru, Chile and Argentina from Montreal, Toronto and Vancouver, with an anticipated service to Panama. Regular west coast flights link Vancouver with San Francisco.

Within Canada, a transcontinental route, with five daily frequencies, joins Montreal, Ottawa, Toronto, Winnipeg, Calgary, Edmonton and Vancouver. In addition, interior British Columbia, northern Alberta and Yukon routes are flown. CP Air in 1968 pioneered a 50-p.c. standby fare for senior citizens. It offers a similar fare to youths under age 22 and a special hotel accommodation package at CP hotels across Canada.

In 1969, CP Air became an all-jet airline, the fleet consisting of seven standard DC-8s and four elongated "Spacemaster" DC-8-63s, carrying 141 and 199 passengers, respectively, seven Boeing 737s and two Boeing 727s (on order) the latter two types having 99-passenger capacity; the two 727s are slated for delivery in early 1970 and will bring the fleet total to 20.

Independent Airlines.—In addition to the two major Canadian air carriers—Air Canada and CP Air—there are five domestic air carriers licensed to operate scheduled regional commercial air services in Canada, namely, Eastern Provincial Airways (1963) Ltd., Gander, Nfld.; Quebecair, Montreal, Que.; Nordair Ltée—Ltd., Dorval, Que.; Transair Limited, Winnipeg, Man.; and Pacific Western Airlines Ltd., Vancouver, B.C.

As of Dec. 31, 1968, there were 1,428 other carriers licensed to operate in Canada. Of this number, 1,063 were Canadian carriers and 365 were foreign.

Scheduled flights operated by the larger carriers serve major urban centres while non-scheduled services, in addition to providing effective access to areas of Canada that are inaccessible by other means of transportation, act as feeder lines to the intercity routes.

Some carriers provide non-transportation services using aircraft specially equipped for such activities as flying training, aerial photography and survey, water-bombing, crop dusting and spraying, aerial advertising and aerial construction.

Eastern Provincial Airways (1963) Ltd.—This company, officially recognized as air carrier in the Canadian Atlantic region, operates throughout the Maritime Provinces, Newfoundland-Labrador, and Quebec. It serves Charlottetown and Summerside in Prince Edward Island; Moncton and Campbellton-Dalhousie in New Brunswick; New Glasgow and Halifax in Nova Scotia; Deer Lake-Stephenville-Corner Brook, Gander, St. John's, St. Alban's and St. Anthony in Newfoundland; Goose Bay, Saglek, Wabush-Labrador City, and Twin Falls-Churchill Falls in Labrador; and Montreal, Sept Îles, and the Magdalen Islands in Quebec.

Eastern Provincial Airways' mainline fleet consists of three Handley-Page Dart Heralds, one DC-4, two Convairs with combination passenger and cargo configuration, and four DC-3s. Its bushline fleet consists of five PBY Cansos, five DH Beavers, six DH Otters, one DH Twin Turbo Otter, one Beech Baron, two Super Cubs and an assortment of helicopters. The company carries on an extensive air freight service throughout the Atlantic region and conducts many specialty services such as mineral exploration, package trips (hunting and fishing), ambulance service and forestry, seal and ice patrol services, aerial photography, and general charters.

Quebecair.—Quebecair, with head office at Montreal, offers scheduled services in Quebec and Labrador. The company dates from 1946 and was founded under the name "Le Syndicat d'Aviation de Rimouski". In 1957 the name was changed to Rimouski Airlines and the company inaugurated an air transport service between the shores of the Gulf of St. Lawrence, linking Matane, Mont Joli, Rimouski, Forestville, Baie Comeau and Sept Îles. Until 1953 service was limited to towns and small centres located between Rimouski and Gaspé on the south shore of the St. Lawrence River and between Forestville and Sept Îles on the north shore. In 1953 with amalgamation of Gulf Aviation the name "Quebecair" was adopted. With the expansion of mining and industrial activities, it extended its network to Quebec City and Schefferville in 1955, to Montreal in 1957, to Gagnon and Rivière du Loup in 1959, to Wabush in 1960, to Manicouagan and Saguenay in 1961 and to Murray Bay in 1962. During 1965, Quebecair acquired Matane Air Services Ltd., Northern Wings Ltd., and Northern Wings Helicopters Ltd., and merged its scheduled services with those of its two subsidiaries Northern Wings Ltd., and Matane Air Services Ltd. In 1967, Quebecair acquired A. Pecteau Transport Aérien Ltée, thus extending its operations to the Abitibi region and eastern bank of Hudson Bay. Quebecair was purchased at the end of July 1968 by Sogebry Ltée, a Montreal private holding company. Also during 1968 Quebecair merged its operations with Eastern Provincial Airways. The agreement between the two airlines covers exchange of equipment and services and operational matters.

Quebecair is primarily responsible for the operation of scheduled service by large aircraft; the subsidiaries handle flights by light aircraft, charter and contract services. Scheduled services are operated over 6,000 miles and some 48 localities situated in nine economic regions of Quebec and Labrador are served. Points linked are Montreal, Quebec City, Murray Bay (Charlevoix), Baie Comeau (Hauterive), Churchill Falls (Twins Falls), Forestville, Gagnon, Wabush (Labrador City), Manicouagan, Mingan, Mont Joli, Rimouski, Rivière du Loup, Rivière au Tonnerre, Saguenay (Bagotville), Schefferville, Sept Îles, Senneterre, Mistassini, Temiscaming, Lac Doda, Lac Caché, Lac Mistassini, Rupert River, Fort George, Obedjiwan, Oskelaneo, Manouane, Val d'Or, Amos, Label-sur-Quévillon, Rupert House, Chibougamau, Matagami, Blanc Sablon, Saint Paul, Old Fort Bay, St. Augustin, La Tabatière, Tête à la Baleine, Harrington Harbour, Gethsemani, Kégaska, Natashquan, Aguanish, Baie Johan Beetz, and Havre St. Pierre.

At the end of 1968 the combined fleet of Quebecair and subsidiaries totalled 57 units: five turboprop Fairchild F-27, three turboprop DHC-6 Twin Otter, nine Douglas DC-3, two Canso PBY, one Curtiss C-46, two Lockheed 10, one Beechcraft D-18, five DHC-3

Otter, fourteen DHC-2 Beaver, five Cessna 180, two Cessna 185, five Bell 47-G-4 helicopters and three Hughes 300 helicopters. During 1967, Quebecair and subsidiaries carried 223,697 passengers, flew 114,125 mail-ton-miles and 1,072,045 freight-ton-miles.

Nordair Ltée-Ltd.—Nordair, with head office at Dorval, Que., was established in 1957 by the merger of Mont Laurier Aviation and Boreal Airways. Since its formation, Nordair has enjoyed a steady expansion and operates scheduled services in northern Quebec and in the Northwest Territories and charter flights throughout Canada and to points around the world. Scheduled services are operated from Montreal to Chibougamau, to Great Whale, to Fort Chimo in Quebec, and to Frobisher Bay and Resolute in the Northwest Territories, and from Frobisher Bay to Hall Beach, Broughton Island, Pangnirtung, Cape Dyer, Cape Dorset, Coral Harbour, Clyde River/Cape Christian and Igloolik in the Northwest Territories. Nordair introduced the first jet on its northern services in December 1968. It has purchased two Boeing 737s and operates charter flights to the south, mainly on weekends. Nordair has applied to the Air Transport Committee to provide air service between Montreal-Hamilton and Hamilton-Pittsburgh, as well as between Montreal and Toronto, Sault Ste. Marie and Fort William/Port Arthur. Charter flights are also operated, if necessary with ski-equipped DC-3s.

Nordair's fleet is composed of two Boeing 737-200C jet aircraft, three 1049H, three DC-4, three DC-3 and four C-46.

Transair Limited.—Transair Limited, with headquarters at the Winnipeg International Airport, operates scheduled services in Manitoba, Saskatchewan, Ontario and the Northwest Territories and charter flights throughout Canada and from Canada to the United States. The company's scheduled mainline services are operated in three areas: (1) the Prairies—from Winnipeg to Brandon-Regina-Saskatoon-Prince Albert and return, and from Winnipeg to Yorkton and return; (2) Manitoba and Central—from Winnipeg to The Pas-Thompson-Churchill and return, from Winnipeg to Dauphin-The Pas-Flin Flon-Lynn Lake and return, from Winnipeg to Thompson and return, from Winnipeg to Thompson-Churchill-Yellowknife and return, and from Winnipeg to Red Lake-Fort William/Port Arthur and return; and (3) Arctic—from Churchill to Rankin Inlet-Baker Lake and return and from Churchill to Rankin Inlet-Coral Harbour and return. Several other points in the Keewatin District of the Northwest Territories are also served on these two routes from Churchill.

Most of Transair's fleet of multi-engine aircraft (YS-11A, Viscount, DC-7C, DC-4, DC-3 and C-47) is stationed at Winnipeg but a DC-4 and a C-47 are usually positioned at the company's major base at Churchill, Man., in support of its Arctic and DEW Line operations. Since 1961, under contract with the United States Air Force, Transair has operated, from Winnipeg and Churchill, the vertical re-supply flights to the four main sites in the Canadian sector of the DEW Line in the extreme Arctic and is regarded as the largest contract cargo carrier in Canada.

Consistent with the regional air carrier policy of the Federal Government, Transair in 1967 sold its "bush" (primarily single-engine float and ski-equipped) aircraft, services and equipment in northwestern Ontario and Manitoba and has discontinued the flights it formerly operated from Sioux Lookout and Pickle Lake in Ontario, and Norway House and Lac du Bonnet in Manitoba to points in adjacent areas. As a result, the company is now concentrating on its scheduled operations to larger centres.

Major company developments in 1968 were: (1) the purchase and receipt of two YS-11A twin, jet-prop airliners, each capable of carrying 46 passengers and 3,000 lb. of cargo; (2) the purchase of two Boeing 737-200C twin jet aircraft for delivery in April and May 1970, each capable of carrying 115 passengers and 7,000 lb. of cargo; (3) the purchase of a DH Twin Otter for delivery in April 1969 for use on services to smaller settlements in the central Arctic north of Churchill; (4) the introduction of direct flights between Winnipeg-Thompson, Thompson-Winnipeg; (5) the inauguration in November of two flights weekly, each way, between Churchill and Yellowknife, N.W.T., in conjunction with

a special Winnipeg-Thompson-Churchill service; (6) the filing of an application with the Air Transport Committee for a Boeing 727 tri-jet service from Winnipeg to Fort William/Port Arthur-Toronto-Sault Ste. Marie-Toronto and an application to provide service, initially with piston aircraft, from Winnipeg to Kenora-Dryden-Fort William/Port Arthur.

In 1968, Transair carried 134,371 passengers, flew 2,986,345 miles and 3,376,733 revenue-ton-miles; employees numbered 391, including 54 pilots.

Pacific Western Airlines Ltd.—Pacific Western Airlines Ltd., with head office at Vancouver International Airport, operates over more than 8,000 route miles; its services include scheduled mainline, local regular unit toll and charter flights in Saskatchewan, Alberta, Yukon Territory, the Northwest Territories including the Arctic islands, and British Columbia. Regularly scheduled mainline services are operated northbound from Edmonton to Dawson Creek, Peace River, Fort McMurray, Uranium City, Fort Smith, Cambridge Bay, Fort Resolution, Hay River, Yellowknife, Fort Simpson, Wrigley, Resolute, Norman Wells and Inuvik. The only no-reservations-required AirBus service in Canada operates daily between Edmonton and Calgary. The company also operates international charter services.

On the Pacific Coast, mainline services are operated from Vancouver to Comox, Powell River, Campbell River and Port Hardy in B.C., and from Vancouver to Kamloops, B.C., to Calgary, Alta. Large aircraft charter services are operated from major centres.

Aircraft operated by Pacific Western number 30 and include Lockheed Hercules (freight), DC-7Cs, DC-6Bs, DC-6s, Convair 640 Javelin jet-props, DC-4s, Boeing 707s and Boeing 737s jet aircraft on mainline and charter services. In 1967, 401,955 revenue passengers were carried, 23,312,930 lb. of freight and express were carried and 6,159,108 miles were flown. Comparable figures for 1966 were 339,525, 27,998,405 and 5,695,180, respectively.

Commonwealth and Foreign Scheduled Commercial Air Services.—At the end of 1967, there were 26 Commonwealth and foreign air carriers holding valid Canadian operating certificates and licences issued for the following international scheduled commercial air services into Canada:—

Aeroflot, operating between Moscow (U.S.S.R.) and Montreal (Canada) in transit to New York.
Aerovias de Mexico, S.A., operating between Montreal and Toronto (Canada) and Mexico City (Mexico).

Air France (Compagnie Nationale Air France), operating between Paris (France) and Montreal (Canada) and beyond to Chicago (U.S.A.) with traffic rights, and to other points beyond in transit to Los Angeles and New York.

Airwest Inc., operating between Calgary (Canada) and Spokane (U.S.A.).

Alaska Airlines Inc., operating between Ketchikan (U.S.A.) and Prince Rupert (Canada).

Alitalia (Italian International Airlines), operating between Rome and Milan (Italy) and Montreal (Canada) and beyond to Chicago (U.S.A.) with traffic rights, and to other points beyond in transit.

Allegheny Airlines Inc., operating between Erie (U.S.A.) and Toronto (Canada).

American Airlines Inc., operating between Toronto (Canada) and New York/Newark (U.S.A.) and between Chicago (U.S.A.) and Toronto (Canada), and between Los Angeles (U.S.A.) and Toronto (Canada).

British Overseas Airways Corp., operating between London and Manchester (England), Prestwick (Scotland) and Montreal and Toronto (Canada), beyond Montreal with traffic rights to Chicago and beyond in transit to Boston, New York and Detroit (U.S.A.), and between London (England), Prestwick (Scotland), Gander (Canada), Bermuda, Nassau, Montego Bay, Barbados and Trinidad.

Deutsche Lufthansa Aktiengesellschaft (Lufthansa German Airlines), operating between Germany and Montreal (Canada) and beyond in transit to Los Angeles (U.S.A.) and Mexico City.

Eastern Air Lines, Inc., operating between the terminals Ottawa and Montreal (Canada), and New York (U.S.A.) and between the terminals Ottawa and Montreal (Canada) and Washington (U.S.A.) and between Tampa/Miami (U.S.A.) and Toronto (Canada) and between Buffalo (U.S.A.) and Toronto (Canada).

- Irish International Airlines (Aerlínte Éireann Teoranta)*, operating between Shannon (Ireland) and Montreal (Canada) and beyond in transit to Chicago (U.S.A.).
- Japan Air Lines Co. Ltd.*, operating between Tokyo (Japan) and Vancouver (Canada) and San Francisco (U.S.A.).
- KLM Royal Dutch Airlines*, operating between Amsterdam (Netherlands) and Montreal (Canada) and beyond in transit to Houston (U.S.A.) and Mexico City (Mexico) and for cargo to New York (U.S.A.).
- Mohawk Airlines, Inc.*, operating between Toronto (Canada) and Buffalo (U.S.A.) and Rochester (U.S.A.) and Toronto (Canada) and between Burlington (U.S.A.) and Montreal (Canada). (Service to both Rochester and Burlington terminates October 1969.)
- North Central Airlines, Inc.*, operating between Port Arthur/Fort William (Canada) and Duluth/Superior (U.S.A.) and between Detroit (U.S.A.) and Toronto (Canada).
- Northeast Airlines, Inc.*, operating between Montreal (Canada) and Boston (U.S.A.) via Concord, Montpelier-Barre, Burlington and White River Junction (U.S.A.) and between Tampa/Miami (U.S.A.) and Montreal (Canada).
- Northwest Airlines, Inc.*, operating between Minneapolis (U.S.A.) and Winnipeg (Canada).
- Qantas Empire Airways Ltd.*, operating between Sydney (Australia), San Francisco (U.S.A.) and Vancouver (Canada).
- Sabena Belgian World Airlines*, operating between Brussels (Belgium), and Montreal (Canada) and beyond in transit to New York (U.S.A.) and Mexico City.
- Scandinavian Airlines System*, operating between Stockholm (Sweden), Bergen (Norway), Copenhagen (Denmark) and Montreal (Canada), and beyond in transit to New York and Chicago (U.S.A.).
- Seaboard World Airlines, Inc.*, operating between points in the United States, Gander (Canada) and points in Europe.
- Swiss Air Transport Company Ltd., (Swissair)*, operating between Zurich and Geneva (Switzerland) and Montreal (Canada) and beyond in transit to Chicago (U.S.A.).
- United Air Lines, Inc.*, operating between Vancouver (Canada) and Seattle (U.S.A.) and between Chicago (U.S.A.) and Toronto (Canada).
- Western Air Lines, Inc.*, operating between Calgary (Canada) and Great Falls/Denver (U.S.A.) and between Los Angeles/San Francisco (U.S.A.) and Vancouver (Canada).
- Wien Consolidated Airlines, Inc.*, operating between Whitehorse, Y.T. (Canada) and Fairbanks and Juneau (Alaska, U.S.A.).

Flying Schools and Clubs.—During 1967 commercial flying schools registered as members of the Air Transport Association of Canada instructed and graduated 3,758 students as private pilots and 1,046 private pilots as commercial pilots.

Membership in 41 flying clubs connected with the Royal Canadian Flying Clubs Association numbered 9,495 at the end of 1967. During the year these clubs instructed and graduated 1,361 students as private pilots and 332 private pilots as commercial pilots.

Weather Services.*—Weather services for aviation are provided by the Meteorological Branch, Department of Transport. Routine hourly and special weather reports are available for 250 locations and these reports, together with upper wind and temperature observations for 33 stations, weather radar observations for nine stations, weather satellite pictures and pilot reports, provide current information on the state of the weather over Canada. Aerodrome area and upper wind and temperature forecasts are issued and made available by 11 Weather Offices for designated areas of responsibility within Canada and the Arctic Ocean.

Information required for pre-flight planning and in-flight operations, including information received from other countries in accordance with international agreement, is exchanged on the meteorological communications system including both teletype and weatherfax circuits.

Weather information is provided in Canada to pilots and aviation interests by 47 Weather Offices, 44 Weather Stations and 46 Aeradio Stations for flights within Canada and between Canada and the United States, Europe, Central America, the Caribbean and Asia.

* See also p. 48.

Ground Facilities.—Aircraft landing areas in Canada are listed in Table 2 and classified by administrative agency as licensed or unlicensed land facilities or seaplane bases, and military airfields. Licensed aerodromes are those that are inspected at regular intervals and meet specific standards, whereas unlicensed aerodromes may not meet the same standards. In addition to aerodromes, a network of radio aids to navigation is maintained to facilitate en route navigation and safe landings under instrument conditions. (See item on Aeronautical Navigation, p. 892.)

Air Traffic Control.—The primary functions of the Air Traffic Control Division of the Department of Transport are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled airspace and between

aircraft and obstructions on the movement area of controlled airports. This is accomplished through airport control, terminal control and area control services. These and other allied services are described below.

Airport Control Service provides control service to flights operating in the vicinity of major civil airports where the volume and type of aircraft operations, weather conditions and other factors indicate its need in the interest of flight safety. The service also includes the control of all traffic on the manoeuvring area of the airport. Control is effected by means of direct radiotelephone communication or visual signals. Airport control towers are located at: Whitehorse, Y.T.; Fort St. John, Prince George, Victoria (international), Port Hardy, Abbotsford, Vancouver (international), Pitt Meadows and Kamloops, B.C.; Lethbridge, Calgary, Edmonton (industrial) and Edmonton (international), Alta.; Saskatoon and Regina, Sask.; Brandon, Winnipeg (international) and St. Andrews, Man.; Lakehead, Windsor, London, Toronto Island, Toronto (international), Buttonville, Ottawa (international), and North Bay, Ont.; Montreal (international), Cartierville, Quebec, Baie Comeau, Sept Iles and St. Hubert, Que.; Moncton, Fredericton and Saint John, N.B.; Halifax (international), and Sydney, N.S.; and Wabush, Gander (international) and St. John's, Nfld. Airport control service was instituted at St. Jean, Que., for the tourist season.

Area Control Service provides control service to en route flights operating within controlled airspace during weather conditions that prevent a pilot from seeing other aircraft or obstructions and necessitate his reliance on instruments to conduct the flight. Area control centres are located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., Moncton, N.B., and Gander, Nfld. Each centre is connected with control towers, terminal control units, communications stations and operation offices within its area by means of an extensive system of local and long-line interphone or radio circuits, and through radio communications facilities available at these stations to all aircraft requiring area control service. Area control centres are also capable of communicating directly with most pilots flying within their control areas. Each area control centre is similarly connected with adjacent centres, including centres in the United States, for the purpose of co-ordinating control of aircraft operating through more than one control area. This communications system permits each centre to maintain a continuous detailed record of all aircraft operating in accordance with the Instrument Flight Rules (IFR) and a general record of aircraft operating in accordance with the Visual Flight Rules within its control area. In addition to providing area control service to aircraft operating within controlled airspace over Newfoundland, the Gander Control Centre provides control service within the airspace over approximately one half of the North Atlantic Ocean.

Terminal Control Service consists of the provision of separation to aircraft operating in accordance with IFR in the vicinity of all controlled airports. This service is normally provided by area control centres but separate terminal control units have been established at Calgary, Alta.; Saskatoon and Regina, Sask.; Lakehead, North Bay and Ottawa, Ont.; Quebec, Que.; and Halifax, N.S.

Northern Area Control Service, inaugurated Sept. 26, 1963, is provided by the Edmonton, Winnipeg and Moncton area control centres for aircraft flying above 23,000 feet, and is available throughout more than 3,000,000 sq. miles of Northern Canada.

Radar Control Service is provided extensively in the control of IFR traffic, both in terminal areas and while en route. Terminal service is provided at Vancouver, B.C.; Calgary and Edmonton, Alta.; Regina and Saskatoon, Sask.; Winnipeg, Man.; Lakehead, Toronto, North Bay and Ottawa, Ont.; Montreal and Quebec, Que.; Moncton, N.B.; Halifax, N.S.; and Gander, Nfld. En route service is provided by area control centres and by radar units located at Kenora, Ont., and Goose Bay, Nfld. Ground Control Approach Service is provided at Gander, Nfld., and Precision Approach Radar Service is provided at St. John's, Nfld.; Halifax, N.S.; Montreal, Que.; Toronto, Ont.; Winnipeg, Man.; Calgary, Alta.; and Vancouver, B.C.

Flight Information Service is provided by all air traffic control units, but particularly by all area control centres. It consists of advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information, refuelling and transportation facilities, and other data of assistance to the pilot in planning or conducting a flight.

Alerting Service ensures that appropriate organizations are notified of aircraft that may be in need of search and rescue aid. This entails the maintenance and constant supervision of a continuous record of active flights to ensure that failure of an aircraft to arrive at the planned destination notified to air traffic control is detected immediately. The service is available to any pilot who files either a flight plan or flight notification with air traffic control.

Customs Notification Service facilitates the routine notification of the appropriate customs agency by pilots who plan to cross the Canada-United States boundary at certain designated customs airports. This is achieved through the prompt notification by air traffic control, at a pilot's request, of the customs officer at the destination airport of the intended arrival and of the need for customs clearance.

Airspace Reservation Service provides reserved airspace for specified air operations within controlled airspace and information to other pilots concerning these reservations and military activity areas in controlled and uncontrolled airspace. The Airspace Reservation Co-ordination Office, located at Ottawa, is responsible for co-ordinating all airspace reservations in Canada and in the Gander Oceanic Control Area.

Aircraft Movement Information Service is provided by area control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

Airport Activity.—The upward trend of aircraft movements at Canadian airports continued in 1968. Of the total number of 5,510,350, almost three quarters took place at tower-controlled airports.

Tower-Controlled Airports.—On Dec. 31, 1968, DOT Air Traffic Control was operating towers on 42 airports across the country, an addition of three during the year. At these airports there were 4,048,224 aircraft movements (landings, take-offs and simulated approaches) in 1968, a moderate increase over the 4,037,749 movements in 1967. Since 1964 the volume of controlled aircraft activity had increased nearly 80 p.c. by the end of 1968.

Aircraft movements in 1968 were made up of 2,265,995 locals (landings and take-offs of flights that do not enter or leave the tower-control zone), 1,667,608 itinerant movements (those that enter or leave the tower-control zone) and 114,621 simulated approaches. Itinerant movements were nearly 69 p.c. greater in number than in 1964.

Toronto International Airport recorded the highest itinerant activity in 1968, a position held by Montreal International Airport for the preceding four years. Itinerant movements handled by the five major airports were (with 1967 figures in parentheses): Toronto International 153,336 (141,477), Montreal International 140,511 (151,502), Vancouver International 129,730 (124,748), Winnipeg International 109,268 (106,776), and Cartierville, Que., 91,527 (98,064). Toronto International Airport also handled the greatest number of airline scheduled flights with 101,227 (93,401 in 1967), followed by Montreal International with 89,164 (89,032), Vancouver International with 37,815 (34,907), Winnipeg International with 29,912 (27,040), and Calgary International with 24,013 (21,865).

In 1968, international movements rose 7.9 p.c. to 183,714, of which 60 p.c. were reported by two airports. Toronto handled 62,816 international movements, of which 56,327 were trans-border to and from the United States; Montreal reported 48,494 international movements, of which 35,876 were trans-border to and from the United States.

At tower-controlled airports, aircraft weighing less than 4,000 lb. were responsible for 47 p.c. of all itinerant traffic and those weighing over 39,000 lb. accounted for 31 p.c.

Airports without Tower Control.—During 1968, 102 airports without towers handled 1,462,126 aircraft movements, an increase of 32 p.c. over 1967 when 105 airports then in the survey reported 1,107,771 movements. Itinerant traffic amounted to 354,299 movements, an increase of 31 p.c. over the 269,825 movements in 1967. Local movements, which refer mainly to training flights, numbered 1,107,670, 33 p.c. more than the 830,046 local movements in the previous year.

Section 3.—Civil Aviation Operation Statistics

Table 3 gives a picture of commercial civil aviation in Canada for the years 1964-67. It shows data on miles and hours flown, traffic carried, fuel and oil consumed, employees, salaries and operating revenues and expenses, by type of service, for Canadian air carriers earning over \$100,000 gross annual flying revenues. Summary statistics are shown for those foreign companies operating scheduled services in Canada. Figures for Canadian carriers include domestic and international operations, and figures for foreign companies cover miles and hours flown over Canadian territory only, excluding passengers and goods in transit through Canada. Unit toll service refers to the transportation of passengers or goods at a toll per unit, whereas bulk service is the transportation of passengers or goods at

a toll per mile or per hour for the entire aircraft. Other flying services comprise non-transportation services such as flying training, aerial photography and aerial patrol and inspection.

Goods carried.....lb.	301,494,757	346,176,884	414,254,858	435,850,235

Summary statistics of Canadian and foreign commercial air carriers, by type of service, are shown in Table 4 for 1967. For the foreign carriers, hours and miles reported are those flown over Canadian territory only, and passengers and goods in transit through Canada are excluded. It is interesting to note that the six scheduled carriers*—those holding Class I licences from the Canadian Transport Commission—accounted for 91 p.c. of all revenue passengers transported by Canadian carriers during 1967. The weight of goods transported by scheduled carriers amounted to approximately 69 p.c. of the total tonnage moved by all Canadian air carriers earning over \$100,000 gross annual flying revenue.

Bulk transportation figures, except those for departures, include helicopter operations. The growing importance of helicopter services is evidenced by the fact that helicopters accounted for more than one quarter of the hours flown in domestic charter service in 1967.

* Excludes Nordair Ltée—Ltd. (see p. 860).

PART V.—OIL AND GAS PIPELINES*

Oil Pipelines.—Since the late 1940s large capital expenditures have been made each year for oil pipeline construction. In 1967 they were an estimated \$95,400,000 and were forecast at \$84,900,000 for 1968, raising the estimated cumulative total for the period 1950-68 to \$848,900,000.

The prime components of the network of Canadian oil pipelines are the trunk lines of the Interprovincial Pipe Line Company and the Trans Mountain Oil Pipe Line Company. The bulk of domestic crude oil is carried in these lines. Refineries that do not rely on these systems are located in the oil producing regions such as Calgary and Edmonton. The Interprovincial system carries crude oil eastward from Edmonton, receiving and discharging oil at various locations along its length. The Trans Mountain system operates similarly westward from Edmonton. Supplying these two trunk lines are pipeline systems funnelling oil from hundreds of fields into storage tanks at the pipeline terminals. Some of these feeder lines are impressive in themselves, not only in size of pipe and in length of route but in the volumes of oil that they transport. Most of the feeder lines are in Alberta, which is to be expected because of the pre-eminent position of that province in oil production. In 1966, 143 miles of 20- to 24-inch pipe were laid by Rainbow Pipe Line Company Ltd. to complete the 479-mile line from the Rainbow-Zama Lake producing area in northwestern Alberta to connect with Interprovincial at Edmonton. At year-end, additional pumping capacity was being added to increase capacity from 55,000 bbl. to 125,000 bbl. daily, while full design capacity is rated at 265,000 bbl. daily. A competing line to the same area was begun in November 1967 by Peace River Oil Pipe Line Company Limited; it will build a 296-mile, 20-inch line from the Zama Lake field to connect with the Company's existing Valleyview pumping station.

The main pipeline terminal at Edmonton has 10 crude oil feeder lines, including the Interprovincial extension to Redwater, as follows:—

<i>Pipeline</i>	<i>Total System Length</i>	<i>Capacity</i>	<i>General Area of Supply Related to Edmonton</i>
	<i>miles</i>	<i>bbl./day</i>	
Britam Oil Pipe Line Co. Ltd.....	410	60,000	south-southeast
Federated Pipe Lines Ltd.....	529	151,000	northwest
Great Canadian Oil Sands Limited.....	266	50,000	north-northeast
Imperial Pipe Line Co. Ltd.....	210	72,000	southwest
Interprovincial Pipe Line Co.....	31	110,000	northeast
Canadian Industrial Gas and Oil Ltd.....	82	15,000	southeast
Peace River Oil Pipe Line Co. Ltd.....	704	95,000	northwest
Pembina Pipe Line Ltd.....	889	154,000	west-southwest
Rainbow Pipe Line Company, Ltd.....	565	55,000	northwest
Texaco Exploration Company.....	173	111,000	south

In addition, three pipelines are connected to the Interprovincial at Hardisty, some 100 miles southeast of Edmonton. Here, Gibson Associated Oil Ltd. makes deliveries of up to 15,000 bbl. daily of oil from fields just south of the pipeline terminal. Husky Pipe Line Ltd. takes deliveries of condensate and delivers a blended crude, incorporating the light condensate received and the heavy Lloydminster asphaltic crude; a twin-line system carries the condensate to Lloydminster in one line and returns the blended oil in the other, which has a capacity of 22,000 bbl. daily. The third pipeline connection, Bow River Pipe Line Ltd., carries crude from the most southerly oil fields in Alberta, near Taber; this line has a capacity of 20,000 bbl. daily. Home Oil Limited operates a pipeline serving refineries in the Calgary area with oil from fields north of the city; the line also has connections with the Rangeland pipeline which, in turn, is linked to the Texaco line going north to Edmonton. Also serving Calgary is the oldest pipeline in Alberta operated

* Prepared in the Mineral Resources Branch, Department of Energy, Mines and Resources, Ottawa.

by Valley Pipe Line Company, which carries crude from the historically important Turner Valley in quantities up to 15,000 bbl. daily.

The Trans Mountain pipeline also has a second receiving terminal in Alberta at Edson where the Peace River pipeline makes deliveries to Trans Mountain from fields to the north. In British Columbia, the Western Pacific Products-Crude Oil Pipelines Ltd. carries crude over a distance of 500 miles from fields near Fort St. John in northeastern British Columbia to the Trans Mountain pipeline at Kamloops; this line has a capacity of 64,000 bbl. daily.

Three main pipeline systems carry crude oil from Saskatchewan fields to the Interprovincial pipeline. The largest is the Westspur Pipe Line Company-Producers Pipelines Ltd. network, with a capacity of 175,000 bbl. daily, which delivers crude from the important southeast Saskatchewan producing area to the Interprovincial terminal at Cromer, Man., and also carries crude delivered to it by Trans-Prairie Pipelines Ltd. from fields in the Midale area of southeast Saskatchewan. The South Saskatchewan Pipe Line Company, with a capacity of 115,000 bbl. daily, takes medium-gravity crude from fields near Swift Current in southwest Saskatchewan to the Interprovincial pipeline at Regina. The third system is the mid-Saskatchewan pipeline of Royalite Oil Company, which has a capacity of 10,000 bbl. daily and carries crude oil from the Coleville-Dodsland area to the Interprovincial terminal at Kerrobert.

The Manitoba System of Trans-Prairie Pipelines Ltd. is the only pipeline in Manitoba serving the producing fields in the general area of Virden. It carries crude to the Interprovincial terminal at Cromer and has a capacity of 27,000 bbl. daily.

Interprovincial Pipeline.—The system of Interprovincial Pipe Line Company is Canada's longest oil pipeline. It incorporates the wholly owned subsidiary in the United States, Lakehead Pipe Line Company Incorporated, and has a right-of-way length of 2,025 miles including a 95-mile lateral to Buffalo, New York. The system has two complete oil lines between Edmonton and Superior, Wisconsin, and in certain high-traffic sections, such as between Cromer and Gretna in Manitoba, there are three lines and occasionally four. The pipeline can deliver 28 grades of crude oil. Year-end capacities of the various sections of the pipeline are shown below for 1967 and for 1968.

<u>Section</u>	<u>1967</u>	<u>1968</u>
	bbl./day	bbl./day
Edmonton-Regina.....	516,000	633,000
Regina-Cromer.....	532,000	823,000
Cromer-Gretna.....	709,000	862,000
Gretna-Superior.....	664,000	821,000
Superior-Sarnia.....	563,000	536,000
Superior-Chicago.....	—	204,000
Sarnia-Port Credit.....	280,000	281,000
Westover-Buffalo.....	76,000	79,000

Interprovincial serves 31 refineries: three at Edmonton; one at Lloydminster via the Husky pipeline; one at Saskatoon via Saskatoon pipeline from Mildred; one at Moose Jaw via B-A Saskatchewan pipeline from Stony Beach; two at Regina; one at Brandon via Anglo Canadian pipeline from Souris; two at Winnipeg via Winnipeg pipeline from Gretna, 13 in the United States either directly or through connecting carriers; three at Sarnia; two at Oakville; one at Clarkson; and one at Port Credit.

Trans Mountain Pipeline.—The system of Trans Mountain Oil Pipe Line Company extends from Edmonton to Vancouver via Jasper and has a right-of-way length of 780 miles, including a section of 57 miles in the United States which belongs to a wholly owned subsidiary of Trans Mountain. Trans Mountain serves eight refineries: one at Kamloops; four at Vancouver; and three in the Puget Sound region of Washington State. Under a contract with British American Oil Company Limited, facilities were completed at the

Vancouver terminal to handle storage and transfer of liquid propane from railway tank cars to refrigerated Japanese tankers. First loading under the 10-year contract was made in October 1966, and in 1967, 2,300,000 bbl. were delivered to tankers. Capacity of various segments of the system at the end of 1967 are shown below.

<i>Section</i>	<i>1967</i>	<i>Section</i>	<i>1967</i>
	bbl./day		bbl./day
Edmonton-Edson.....	310,000	Sumas-Ferndale.....	220,000
Edson-Kamloops.....	285,000	Sumas-Anacortes.....	235,000
Kamloops-Sumas.....	335,000	Sumas-Burnaby.....	335,000

Montreal-Portland Pipeline.—The Montreal refinery centre is served by a 236-mile pipeline which is a joint system of Montreal Pipe Line Company and its wholly owned subsidiary in the United States, Portland Pipe Line Corporation. This line takes delivery of tanker-borne crude from Venezuela, the Middle East and Africa at Portland, Maine. In 1965, the company completed a 24-inch pipeline alongside the existing 18-inch and 24-inch crude oil lines. An additional 24-inch line was completed under the St. Lawrence River in 1967 to serve the refineries in Montreal and, at the same time, 16- and 20-inch lines were installed for future use. Present capacity of the system is 400,000 bbl. daily.

Product Pipelines.—Traditionally, a product pipeline carries refined products from oil refineries to truck terminals in large consuming centres. However, with the growth of natural gas processing in Canada, which results in large volumes of products such as propane, butane and pentanes plus being produced, a new type of product line has emerged which carries these products to markets or to refineries.

There are three product lines in Eastern Canada, all supplying markets in Ontario with refined petroleum products. Two pipelines, Sun-Canadian Pipe Line Company and Sarnia Products Pipe Line, run from refineries at Sarnia to bulk plants in London, Hamilton and Toronto. Trans Northern Pipe Line Company, once a pipeline carrying products from Montreal to markets in Ontario as far west as Hamilton, now has a two-way flow. Products from Montreal are now delivered only in the area east of Brockville, including the Ottawa Valley; products from refineries west of Toronto are carried eastward as far as Kingston.

In Western Canada, the Petroleum Transmission Company pipeline carries propane, butane and pentanes plus from a plant at Empress in Alberta to Winnipeg in Manitoba, a distance of 578 miles. The predominant product carried is propane which is also marketed at various locations along the line. Elsewhere in Alberta, the Rimbey Pipe Line Company transports condensate from the Rimbey gas plant and takes deliveries from the Rangeland condensate pipeline to serve areas north of Calgary as far as Edmonton. Also going to Edmonton from the Leduc gas conservation plant are three pipelines owned by Nisku Products Pipe Line Company Ltd., one each for propane, butane and pentanes plus. Near Calgary, Home Oil Company operates a condensate pipeline to serve refineries there and also to make deliveries to the Rangeland condensate pipeline. There are other condensate pipelines in Alberta, most of which are associated primarily with production and do not serve end-users.

Pipeline Tariffs.—Typical of the charges to move crude oil are the following pipeline tariffs:—

	<i>Charge</i>	<i>Distance</i>
	cts./bbl.	miles
Edmonton to Vancouver.....	40.0	718
Edmonton to Regina.....	20.7	438
Edmonton to Winnipeg.....	32.7	847
Edmonton to Sarnia.....	48.0	1,743
Edmonton to Port Credit.....	51.0	1,899
Portland to Montreal.....	10.5	236

Natural Gas Pipelines.—Natural gas now accounts for over 17 p.c. of Canada's energy requirements and, in addition, large volumes are delivered to markets in the United States. Relatively small amounts of natural gas have been transported in other areas of the world as a liquid under refrigeration, and this method was utilized for the first time in Canada in 1967 to supply gas to the distribution system of the town of Squamish, B.C. However, most of the gas used in Canada, as well as in North America as a whole, is moved by pipeline. There is an extensive network of pipelines serving most centres of population from Vancouver to Montreal and delivering gas to several points of export on the United States border.

Since the mid-1950s when large-volume gas removal was authorized from Alberta, capital expenditures in gas pipeline construction have constituted a significant proportion of the country's total outlay for transportation facilities. In 1967, capital expenditures of \$184,400,000 were made, and forecast expenditures for 1968 amounted to \$269,500,000, bringing the cumulative expenditures for the period 1955-68 to an estimated \$1,334,000,000 for gathering and transmission systems, with an additional \$976,500,000 for distribution systems.

Pipelines are usually categorized under three headings—gathering lines, transmission lines and distribution lines. The gathering lines are those that take gas from the wells or separators to the field gate or some other specified point. Transmission lines are normally the large-diameter pipelines that take gas from gathering lines and deliver it to the distributors principally at the 'city gate'. In total, there were 48,210 miles of all types of gas pipeline in operation at the end of 1967, of which 5,739 miles were gathering, 15,655 miles were transmission and 26,816 miles were distribution.

Unlike oil pipeline companies which are common carriers that transport oil for a fixed charge, gas pipeline companies, with few exceptions, own the gas that is transported. The principal exception is the Alberta Gas Trunk Line Company which delivers virtually all of the gas exported from Alberta to the provincial boundary where main transmission companies accept delivery. This is an important exception because most of the Canadian gas reserves are in Alberta. The right-of-way distance of Alberta Gas Trunk is 2,094 (total) miles.

Some details of the main transmission systems are contained in the following paragraphs. Like oil pipelines, there are two trunk lines serving Canada. One is the Trans-Canada pipeline and the other is the Westcoast pipeline.

Trans-Canada Pipeline.—The Trans-Canada pipeline, extending from the Alberta border near Burstall, Sask., makes its way eastward through Saskatchewan and Manitoba to the Ontario Lakehead cities of Port Arthur and Fort William and then follows a broad, northerly-arched route through the clay belt of Ontario, then southward via North Bay to Toronto. There the line divides, one part going to the western region of Ontario and the other eastward along the northern shore of Lake Ontario and the St. Lawrence River to Montreal. Lateral pipelines serve communities that are not within the immediate reach of the main pipeline. Trans-Canada is Canada's longest pipeline, with a right-of-way distance of 2,475 miles. The maximum amount of gas delivered in any one day by the company in 1967 was 1,694,000 Mcf. Export sales average about 242,000 Mcf. daily.

In 1967, the company received approval of United States regulatory authorities to construct, jointly with a United States company, a 971-mile, 36-inch transmission line from Emerson, Man., to Sarnia, Ont., with a 10-unit lateral to Sault Ste. Marie, Ont. The first phase was completed in late 1967 to provide Eastern Canada with gas from Michigan and the remainder in late 1968.

Westcoast Transmission Company.—The supply of gas for Westcoast comes mainly from fields in northeastern British Columbia but significant quantities are gathered in northwestern Alberta. The main line from Fort St. John runs in a southerly direction to Vancouver and to the United States border at Sumas, B.C. An extension to its system from the Fort St. John area to the Fort Nelson area permits the pipeline system to pick

up gas from the main areas stretching from Dawson Creek to the Kotocho Lake area, northeast of Fort Nelson. The right-of-way distance of the Westcoast system is 940 miles.

Alberta Natural Gas Company.—Although the Alberta Natural Gas pipeline is only 107 miles long, it forms part of one of the major gas export pipelines that carries Canadian gas as far south as California. The line extends from the Alberta border through the Crowsnest Pass to Kingsgate, B.C., where it crosses the International Border and continues through Idaho.

Other Gas Pipelines.—There are many other natural gas pipelines operating in Canada. Many are gathering systems and others are exclusively distribution systems. They constitute important sectors of the country's gas pipeline industry, as is evidenced by their aggregate pipeline mileage. To mention a few, Canadian Montana pipeline gathers gas in the southeastern part of Alberta and transports it southward into the State of Montana; the company also operates a line that purchases gas from Alberta Gas Trunk Lines in the southwestern part of the province. In Saskatchewan, the system of the Saskatchewan Power Corporation has gathering, transmission and distribution systems and delivers all of the gas for sale in Saskatchewan; the Corporation had 5,375 miles of pipeline in operation at the end of 1967. Three other systems have gathering, transmission and distribution systems: in Alberta, Canadian Western Natural Gas Company Limited operates in the southern portion of Alberta and Northwestern Utilities in the northern area, the combined length of pipe being 5,956 miles; Union Gas operates mainly in southwestern Ontario, picking up gas from some fields that are the oldest in Canada. These and many other systems make up the fast-growing network of gas pipelines in Canada which serves domestic, commercial and industrial customers in all provinces except the Maritimes.

Oil Pipeline Statistics.*—There were 43 oil pipeline companies operating in Canada at the end of 1967. Pipeline deliveries shown in Table 1 were made to non-pipeline carriers, foreign pipelines, and terminals including refineries and distributing centres.

* Statistics of oil pipelines are given in greater detail in the DBS monthly report *Oil Pipe Line Transport* (Catalogue No. 55-001).

A new Saskatchewan plant produces spiral-weld pipe from 16 to 80 inches in diameter which will be added to the thousands of miles of pipeline constructed during the past decade to carry oil, gas and their products to refineries and to markets.

Gas Pipeline Statistics.—As already stated, the natural gas transport industry became a significant factor in the Canadian economy in 1957 with the completion of the first of several extensive pipelines constructed to transport natural gas from the field or processing plant to distribution outlets. Consequently, the distribution industry also greatly increased deliveries to consumers from that time. Table 3 illustrates this expansion for the years 1964-67.

PART VI.—GOVERNMENT PROMOTION AND REGULATION OF TRANSPORTATION

The Federal Government plays a twofold role in the development of transportation services. One is the promotional role, ensuring the growth and development of the kind of transportation appropriate to the times; the other is a regulatory role, including economic regulation of rates and services and also technical regulation to meet safety requirements and for other purposes. Examples of promotion are the building of canals from the time of Confederation to the recent constructing of the St. Lawrence Seaway, the underwriting of railway development and branch-line extension, the establishment of Air Canada, the large investments in airports and aeronautical installations, and the building of the Trans-Canada Highway.

The Department of Transport and the various Crown agencies reporting to Parliament through the Minister of Transport have jurisdiction over canals, harbours, shipping, civil aviation and interprovincial and international railways. Interprovincial or international pipelines for carrying gas, crude oil or petroleum products are under the jurisdiction of the National Energy Board. Jurisdiction over for-hire interprovincial or international highway transport also rests with the Federal Government but these powers are at present exercised by the provincial highway transport boards under the federal Motor Vehicle Transport Act of 1954.

Railway regulation was developed in a period when railways enjoyed a virtual monopoly of transport in the country. Measures to protect the public against excessive charges, unjust discrimination and other objectionable monopoly practices, together with measures to ensure safe operations, have over the years subjected railways to the most comprehensive regulation of any Canadian industry. In the intervening years the rapid growth of road, air and pipeline services has ended the railway monopoly for a large part of the total traffic available and has placed the railways in a highly competitive situation.

A Royal Commission was appointed in 1959 to inquire into the railway rate structure and other problems. Its findings indicated a need to shift from regulating monopoly to maintaining a balance between the several competing modes of transport. Legislation based on the findings of the Royal Commission was passed by Parliament and received Royal Assent on Feb. 9, 1967. The statute, called the National Transportation Act, defines a national transportation policy for Canada looking to the achievement of an economic and efficient transportation system making the best use of all available modes of transportation at the lowest total cost. It establishes a new body, the Canadian Transport Commission, to carry out the functions formerly performed by the Board of Transport Commissioners for Canada, the Air Transport Board and the Canadian Maritime Commission. In addition, the Act creates a framework within which the pipeline carriage of commodities other than oil and gas and the interprovincial and international motor transport undertakings could be regulated by the Canadian Transport Commission.

The general purpose of the Act is to create a situation in which the development of the transportation industry and the protection of the public against excessive or discriminatory charges are accomplished in the main by competition between modes rather than by regulation and control. The railways are relieved of some of the more onerous and outdated restrictions on their freedom to meet competition. On the other hand, a shipper who has no practical alternative to rail shipment can apply to have a maximum rate fixed for his goods by the new Commission. The Act also provides a procedure to allow the railways, under safeguards for the public interest, to abandon lines and withdraw passenger services where they are no longer needed.

The Canadian Transport Commission.—The Commission, created by the National Transportation Act (SC 1967, c. 69), was organized on Sept. 19, 1967 and succeeded to all the powers and duties of its predecessors, the Board of Transport Commissioners for Canada, the Air Transport Board and the Canadian Maritime Commission. The Commission is a court of record. It consists of a maximum of 17 members, of whom one is president and two are vice-presidents. One of the vice-presidents is charged with the superintendence of the work of the committees of the Commission and the other is charged with the superintendence of the programs of study and research of the Commission. For the purpose of performing its duties the Commission must establish committees, any of which may, in accordance with the rules and regulations of the Commission, exercise the powers of the Commission. Three of these committees—the Railway Transport Committee, the Air Transport Committee and the Water Transport Committee—are at present functioning in respect of these several modes of transport. The finding or determination of the Commission upon any question of fact within its jurisdiction is binding and conclusive and no order or decision may be questioned or reviewed except on appeal to the Supreme Court of Canada upon a question of law or a question of jurisdiction with leave of that Court, or by the Governor in Council. However, a party to an application for a licence under the Aeronautics Act or the Transport Act may appeal to the Minister of Transport from a final decision of the Commission.

The Commission has jurisdiction under more than a score of Acts of Parliament, including the Railway Act, the Aeronautics Act and the Transport Act, over transportation by railway, by air and by inland water, and over communication by telephone and telegraph.

Railway Transport.—Under the Railway Act the jurisdiction of the Commission is, stated generally, in respect of construction, maintenance and operation of railways that

are subject to the legislative authority of the Parliament of Canada, including matters of engineering, location of lines, crossings and crossing protection, safety of train operation, operating rules, investigation of accidents, accommodation for traffic and facilities for service, abandonment of operation and uniformity of railway accounting. The Commission also has certain jurisdiction over telephones and telegraphs, including regulation of the telephone tolls of The Bell Telephone Company of Canada and over tolls for the use of international bridges and tunnels.

Except for certain statutory rates, and subject to certain powers of the Commission to deal with rates that it finds to be contrary to public interest, the railways are free to charge rates as they wish. However, rates must be compensatory, and the Commission may prescribe tolls for captive shippers if such tolls take undue advantage of a monopoly situation favouring the railways.

Air Transport.—The Commission is responsible for the economic regulation of commercial air services in Canada and is also required to advise the Minister of Transport in the exercise of his duties and powers in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad and to foreign air services operating into and out of Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. The Commission issues regulations, approved by the Governor in Council, dealing with the classification of air carriers and commercial air services, accounts, records and reports, traffic tolls and tariffs, and various other matters. All regulations, rules and orders issued by the former Air Transport Board continue in force until repealed or amended by the Canadian Transport Commission.

On Oct. 20, 1966, the Minister of Transport tabled in the House of Commons a "Statement of Principles for Regional Air Carriers", which assigns to the Commission the responsibility for initiating measures to implement the policy set out therein. In this connection, the Commission has under review the route structures of regional air carriers.

The Commission takes an active part in the work of the International Civil Aviation Organization and, when appropriate, undertakes bilateral negotiations for the exchange of traffic rights. At present, Air Canada and CP Air are Canada's designated international scheduled carriers.

Water Transport.—Under the Transport Act, the Commission entertains applications for licences for ships to transport goods or passengers for hire or reward between places in Canada on the Great Lakes and on the Mackenzie and Yukon Rivers, except goods in bulk on waters other than the Mackenzie River. Before granting a licence, the Commission must be satisfied that public convenience and necessity require such transport. The Commission also has regulative powers over tolls for such transport.

In addition, the Commission administers subsidies paid by the Federal Government for the maintenance of certain coastal and inland water shipping services; the services and the amounts paid for the years ended Mar. 31, 1967 and 1968 are given on p. 854.

The National Energy Board.—The National Energy Act (SC 1959, c. 46) proclaimed Nov. 1, 1959, provided for the establishment of a five-member Board charged with the duty of assuring the best use of energy resources in Canada. In the performance of this function, the Board is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipeline, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The functions and operations of the Board are covered in the Domestic Trade and Prices Chapter of this volume, Part II, Section 4.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Section 1.—Telecommunications*

Communications media in Canada have been shaped to meet the needs of the country. Great networks of telephone, telegraph, radio and television facilities, inextricably bound together, provide adequate and efficient service which, in this era of electronic advancement, is under continual technological change and development. The familiar challenges of the country—its size, its topography, its climate, its small population—which have reared their heads in other areas of development, have had to be faced as well in the field of telecommunications. That these have been met is evidenced by the fact that today Canada possesses communications facilities and services which are second to none in the world and which are somewhat unique in structure. On the one hand there is a group of telephone companies acting in concert to provide national services and on the other there are two railway companies providing services, each of which is national in scope. These companies provide a most comprehensive total telecommunications network and almost all Canadians from the Arctic Coast to the 49th parallel and from St. John's in Newfoundland to Vancouver in British Columbia can communicate with each other and with the rest of the world by the simple action of twisting a dial or pushing a button. Messages are carried by microwave, tropospheric scatterwave systems, land lines and high frequency radio bands. The great advancement in telecommunications during the past few years indicates that machine-to-machine communications will, within a very short time, surpass the volume of man-to-man communications. The use of computers is becoming more and more commonplace and the ability to transmit computer data from one location to any distant location across the country is a tremendous boon to industry and commerce and a benefit to every Canadian.

The growing importance of telecommunications and the Federal Government's increasing involvement has led to the creation in 1969 of a federal Department of Communications. The new Department includes: the Telecommunications Policy and Administration Bureau, formerly with the Department of Transport, responsible for the regulation of radio and the management of radio frequencies; the Defence Research Telecommunications Establishment, formerly a branch of the Defence Research Board; the Canadian

* Revised by Canadian National Telecommunications, Ottawa.

Overseas Telecommunications Corporation which formerly reported to the Minister of Transport; and the Canada Post Office. The decision to form the Department of Communications makes it clear that the Federal Government has taken a new approach to the subject of telecommunications which is concerned with the total information system of this country, that is, with the transmission and reception of ideas and information, whether between people by way of telephone or telegraph, between computers, data links, radio systems, letters or via satellite or ground facilities. It is expected that the new Department will form national communications policies with a national communications program.

Public Telephone Service.—Telephone service, local and long-distance, is provided by telecommunications companies serving a total of some 8,400,000 telephones across Canada. The largest serving organization is the Trans-Canada Telephone System comprising eight telephone companies, either privately or publicly owned—the Alberta Government Telephones, the British Columbia Telephone Company, the Manitoba Telephone System, the Maritime Telephone and Telegraph Company Limited, the Saskatchewan Government Telephones, the Avalon Telephone Company Limited, the Bell Telephone Company of Canada, and the New Brunswick Telephone Company Limited. In addition, there are over 2,200 independent telephone companies providing private service in smaller communities across the country, many of which link into the Trans-Canada Telephone System for world-wide telephone access. Each company has a monopoly within its own territory and is subject to government regulations at the appropriate level—federal, provincial or municipal.

CN Telecommunications, the largest single telecommunications system in Canada on the basis of area served, provides telephone service for residents in the Yukon and Northwest Territories, in parts of Newfoundland, and in northern sections of British Columbia. In all, there are some 35,000 subscribers on the CNT telephone network. Without exception, all the CNT exchanges are of the automatic dial type. Subscribers in the Far North have access to the outside world via CNT-operated long-distance toll centres at Whitehorse, Y.T., Fort Nelson, B.C., and Hay River and Inuvik, N.W.T. In some areas, such as the Mackenzie River Delta, short-haul long-distance calls are handled by automatic toll ticketing similar to that used by the large telephone companies in the major southern Canadian centres. A recent multi-million-dollar expansion program has brought telephone service to an additional 50 communities in Newfoundland and many isolated settlements now have as modern a telephone service as any in Canada.

The latest telephone innovation is the electronic exchange and the touch-tone telephone, developed in the United States. The dial is replaced by push-buttons, each of which, when pressed, emits a tone that activates the exchange to contact the desired party. Electronic exchanges are now being used in some areas by the Trans-Canada Telephone System and CN-CP Telecommunications are using a similar touch-tone application in their Broadband Exchange Service (see p. 880).

Public Telegraph Service.—Canada's telegraph systems are operated by CN and CP Telecommunications. These companies operate telegraph offices, often amalgamated, in all 10 provinces and in the Yukon and Northwest Territories and messages can be sent to and from any point in Canada or throughout the world via the overseas cable services (see pp. 887-888). At one time, much of the CNT and CPT revenue came from telegraph message traffic but the proportion now accounted for by such traffic is only about 20 p.c. Even so, the reduced telegraph message traffic is handled by the most up-to-date facilities. Messages are transmitted by teleprinter and facsimile equipment, and telegraph networks over which public messages flow are controlled by computers. In other words, messages are taken in and forwarded automatically in accordance with special programs stored in the computer's memory. The computer determines where the message is to be sent and sends it as soon as the circuits are free.

Telex Service.—Telex, by far the largest teletypewriter service in Canada, is provided by CN-CP Telecommunications. Its network of more than 16,300 subscribers in Canada interconnects with the Western Union Telex network in the United States and with European and world-wide networks of at least 250,000 subscribers. Telex is a direct distance dial teleprinter system which permits a subscriber to directly dial any other subscriber on the network. Two speeds are offered to customers—66 words a minute and 100 words a minute—at costs determined on a time-used and distance basis. There is no minimum charge. CN-CP Telecommunications were the first to introduce this dial-and-type service in Canada 12 years ago.

TWX, similar to Telex, is provided by the major telephone companies. One transmission speed of 100 words a minute is offered on this service, the network of which consists of some 2,700 subscribers in Canada and interconnects with the American Telephone and Telegraph network of some 50,000 TWX subscribers and also with the European and world-wide Telex network outside the North American network.

A medium-speed Telex service is offered exclusively by CN-CP Telecommunications, operating in the speed range of up to almost 300 words a minute. The subscriber may own his computer or data sending-receiving equipment or may lease it from CN-CP. This service provides a direct dial interconnection with subscribers anywhere in Canada to achieve a medium-speed range transfer of data from one location to another. The monthly rates to subscribers are the same as the standard-speed Telex service, that is, are based on time used and distance. A six-level code, an eight-level code and punched computer cards can operate on the medium-speed service.

Broadband Exchange Service.—In 1967, CN-CP Telecommunications introduced an automatic switching system of the most advanced design, known as Broadband Exchange Service, which has moved Canada into a new era of extremely high quality and very rapid communications. It is the first such system to operate in Canada and the second in the world. Broadband has more than tripled the fastest conventional machine-to-machine transmission. Furthermore, it has the capability, upon customer demand, of transmitting computer data at 51,000 words a minute, or more than 50 times faster than the top speed reached by conventional switched networks. The Royal Canadian Mounted Police was the first organization to be tied into this supersonic network, using it for intricate and high-quality transmission of fingerprints, photographs and documents between headquarters at Ottawa and divisional headquarters at Montreal, Toronto, Winnipeg, Edmonton, Regina, Vancouver, Fredericton, Halifax and St. John's.

The name, Broadband Exchange Service, is derived from the actual system since subscribers eventually will be able to select various bandwidths, depending upon their communications needs. The broader the bandwidth, the faster the speed of transmission. CN-CP will offer four bandwidths: four and eight kilocycles for voice, facsimile and data (from 1,000 to 3,000 words a minute); 16 kilocycles for high fidelity radio program transmission and facsimile; and 48 kilocycles for high speed computer-to-computer data exchange (51,000 words a minute) and high speed facsimile. The four kilocycle bandwidth is now operational and the other bandwidths will become available upon customer demand.

The initial system consists of 10 switching centres across Canada with concentrators or, more aptly, "links" to other communities connecting these other communities to the main network. Broadband uses the most advanced techniques known to ensure error-free data transmission. The exchanges are entirely electronic, using dry reeds and without moving parts. Present-day exchange centres, including telephone exchanges, use electro-mechanical switching equipment which can occasionally cause disturbances and errors while transmitting computer data. Without mechanical equipment in the Broadband exchanges, transmission disturbance is virtually eliminated. Transmission is carried by the CNT-CPT microwave system using frequency diversity techniques to provide a high degree of reliability. In other words, the transmission is carried twice both ways over different circuits at the same time, one being the back-up system for the other.

Each subscriber has in his office a voice-data subset—a most advanced telephone instrument which, with the flick of a button, can change from voice communication to transmission of computer data. The subset features push-button “dialling” and the customer, to reach a distant point, simply pushes the buttons in a series of seven digits. The first three digits pressed designate the distant exchange, the fourth digit indicates the desired bandwidth and the last three digits are for the line of the desired party. A re-ring button is included so that the customer may signal the distant party to revert to voice communication during or after sending computer data. A feature of Broadband is abbreviated keying, where customers may contact frequently called stations by pushing a two-digit code instead of the normal seven. Broadband will make distant connections, including keying time, within five seconds, or two seconds on the special “hot line” service. Actual connection time after keying or “dialling” is less than two seconds. Another feature of Broadband is conference calling, where a subscriber, by pushing a two-digit code, will automatically contact a pre-determined list of parties needed for the conference. Subscribers are charged on a “pay-as-you-use” basis.

Data-Phone Service.—The major Canadian telephone systems operate Data-Phone service which transmits data from punched cards, tape or magnetic tape between two or more machines or computers. It takes pulses from punched cards or tape-data machines and transforms them into tones which are sent over telephone circuits or leased private lines. The subscriber pays for the line which is being used at regular long-distance rates. Data-Phone transmits at a speed of 1,200 bits a second or 1,000 words a minute.

Data-Line Service.—Data-Line service was put into operation by the Trans-Canada Telephone System late in 1968, primarily for customers who wished to be connected to time-sharing computers. Using the normal telephone lines and exchanges, this service has the capability of transmitting computer data from 1,000 words a minute to a new offering in 1969 of 50,000 words a minute. The subscriber may use his own send-and-receive equipment or he may lease the equipment from the Trans-Canada Telephone System. Charges are based on a flat rate and depend upon the bandwidth used.

Wide Area Telephone Service.—Wide Area Telephone Service (WATS), operated by the Trans-Canada Telephone System, provides dial-type telephone communication from one WATS zone directly to another long-distance zone. In other words, the subscriber has a wider area that he may call directly without going through the long-distance operator or Direct Distance Dialing, and he may select any or all of the WATS zones he wishes. The customer has an access line to a dial exchange office for use only in originating WATS calls. INWATS, the reverse series to WATS, is expected to be introduced by the Trans-Canada Telephone System in 1969. Subscribers are charged on a measured time-period rate and an additional hourly rate. The measured time-period is 10 hours of accumulated time in each month and the additional hourly rate applies to the time used above the measured time.

Hot-Line Service.—A new service offered in 1969 by CN-CP Telecommunications and Western Union is the Hot-Line service where companies in Toronto or Montreal may talk to their offices in New York City by simply picking up the handset of the telephone. When a customer picks up his handset, the exchange equipment will seek out the proper telephone at the other end. If all the circuits are in use at the time of calling, the caller will hang up and as soon as a circuit is free, the equipment will make the connection and ring the telephone set at each end. Subscribers are charged on a time-used basis.

Private Wire Teletype Systems.—A transformation has been gradually taking place in private wire systems. Most major Canadian firms with large communications requirements in years past found that private wire systems best suited their needs—that

is, their own private teletype network rented to them by telecommunications companies. Although private wire services are still a significant part of business for the telecommunications industry, prime communications users who must communicate with many stations across the country have been moving to the newer computer-controlled transmissions systems.

Computer-Controlled Transmission Systems.—CNT, CPT and the Trans-Canada Telephone System all have in operation store and forward message switching computers which control the flow of message traffic. CNT pioneered in the uses of message switching computers in Canada, having operated in this field since 1964. Trans-Canada Telephone System inaugurated a computer-controlled system late in 1968 and CPT expect to have a system in operation in 1969. The telephone companies have switching centres located at Vancouver, Calgary, Edmonton, Regina, Winnipeg, Montreal and at Toronto, their primary centre. This computer-controlled system converts transmission codes and speeds and also determines where messages are to be sent.

CNT's system provides a switching medium for Air Canada, CP Air and CN administrative message traffic and also controls and transmits information on CN's reservation system. When a railway customer wishes to make a reservation, a computer card is marked and inserted into a card reader. Within seconds, a reply will return via a teleprinter confirming the reservation. Air Canada's "Notice to Airmen" (NOTAM) project is also handled by this system where particular flight plans, runway conditions and navigational aids are stored in Air Canada's computer and given out to pilots across the country when a special code is dialed on teletype machines. A third-generation computer installed for CNT in 1968 will perform major store and forward message switching functions for the Meteorological Branch of the Department of Transport. Once the computer finds a weather report from any one of the 175 DOT weather stations throughout Canada, it will tell the station equipment to transmit the report into the computer and then it determines where and at what time of the day the information is to be sent.

Commercial telegrams are to be switched across the country by CNT's third-generation message switching computer beginning in 1969; this will undoubtedly be the most important development in telegraph service since the Morse key gave way to reperforator equipment.

Satellite Communications.—Increasing activity in the Canadian Arctic and sub-Arctic, where communities are being expanded and new ones formed, as well as forecasts of the telecommunications needs of all of Canada, has prompted the telecommunications industry and the Federal Government to consider a domestic satellite system. In 1966 a proposal from the Niagara Television Limited and the Power Corporation of Canada Limited was submitted to the (then) Board of Broadcast Governors for a satellite system to distribute television programs for a third national television network. In March of 1967 the Trans-Canada Telephone System and CN-CP Telecommunications proposed to the Government a domestic satellite telecommunications system to carry television, telephone calls, data and other telecommunications services. In that same year RCA Victor Company Limited issued a proposal giving definite design criteria for a communications satellite within the capabilities of Canadian industry. In 1968, Northern Electric Company announced an agreement with Canadair Limited and Hughes Aircraft of California, to form a group interested in designing and building equipment for satellite communications. For some time this subject was also under study by the Department of Transport and the result of this study was presented to the Government in 1967. By July of 1967 an intense interest had developed in the potential of a domestic satellite system and the Prime Minister announced the creation of a Task Force, under the direction of the Science Secretariat, to advise on satellite policy in general and, in particular, on the use of satellite technology for domestic communications.

On Mar. 28, 1968, the Government released a White Paper entitled "A Domestic Satellite Communication System for Canada" which reviewed the main factors involved in planning and establishing such a system. It was based to a large extent on the recommendations of the Task Force. The White Paper stated that it was the Government's conclusion that a domestic satellite communication system is of vital importance for the growth, prosperity and unity of Canada, and should be established as a matter of priority. It also stated the Government's intention to form a corporation by special statute of Parliament to develop, own and operate both the satellites and earth stations of the system and the pattern of ownership, which was announced later, is to be shared by the Government, the public and private industry.

The Task Force commissioned Northern Electric Company Limited and RCA Victor Limited to prepare a report on their version of a communications satellite that would fulfil Canada's needs. The report was presented to the Task Force in November 1968 for evaluation and at the time of this writing had not been made public. However, the Task Force has stated that it would like to have the satellite system operational in early 1972, which was the target date set in its report.

In any event, Canada must act as soon as possible before the limited number of good orbital positions are lost by default to other countries. The whole of Canada is visible in space from that part of the equatorial orbital plane lying between 96° and 116° West Longitude. This forms a 20° arc and contains the satellite positions most desirable for Canadian domestic service. The satellite or satellites would be able to maintain a stationary orbit at an altitude of 22,300 miles which means that they would rotate with the earth every 24 hours and therefore at any particular time of the day be over the same spot on earth.

Basically, satellite communication is just one long microwave link. The clarity and strength of transmission provided by such a satellite would be comparable to that of existing microwave systems; only with respect to time required for transmission from an originating earth station to a satellite and back to another receiving earth station would there be a noticeable difference. Because of the 22,300-mile altitude of the satellite, the two-way transit time would be about 600 milli-seconds or six tenths of a second. This delay would be of no concern for one-way transmission services such as television, but it must be taken into account in the case of two-way voice circuits. To minimize the time effects, there must be an avoidance of tandem connections on space facilities and, wherever possible, the operation of voice circuits with one direction via satellite and the other via ground facilities.

These first-generation satellites would be nearing the end of their life cycle five years after they are put into operation and undoubtedly additional satellite capacity would be required by then. The scope, capacity and design of the second-generation Canadian satellite would depend on technical developments and traffic requirements during the intervening years. Canada's microwave, land-line and troposcatter systems will continue to be the backbone of telecommunications services for many years to come but satellite communications, properly integrated with land facilities, will make it possible to reach all areas to which service has not yet been economically feasible.

Subsection 1.—Government Control over Telecommunications Agencies

Telephone and telegraph companies incorporated under the Federal Parliament are subject to the jurisdiction of the Canadian Transport Commission in the matter of rates and practices under the provisions of the Railway Act (see p. 876); other companies are responsible to provincial regulatory bodies. International telegraph and telephone communications are handled subject to the International Telecommunication Convention

and the Regulations thereunder and/or under regional agreements. Tolls charged to the public for radio communication service are subject to the provisions of the Regulations made under the Radio Act. Overseas cables landed in Canada are subject to the External Submarine Cable Regulations under the Telegraphs Act.

Radio communications in Canada, except for those matters covered by the Broadcasting Act, are regulated under the Radio Act and Regulations and also under the Canada Shipping Act and Ship Station Radio Regulations. In addition, radio communication matters are administered in accordance with the International Telecommunication Convention and Radio Regulations annexed thereto; the International Civil Aviation Convention; the International Convention for the Safety of Life at Sea; the Inter-American Telecommunication Convention and the Convention between Canada and the United States of America relating to the operation by citizens of either country of certain radio equipment or stations in the other country; and also in accordance with such regional agreements as the Agreement between Canada and the United States for the Promotion of Safety on the Great Lakes by Means of Radio, the Agreement between Canada and the United States relating to the Co-ordination and Use of Radio Frequencies Above Thirty Megacycles per Second, the Inter-American Radio Agreement, the North American Regional Broadcasting Agreement, the Canada-USA Television Agreement and the Canada-USA FM Agreement (see also p. 889).

National radio broadcasting in Canada came under Government regulation in 1932 when the Canadian Radio Broadcasting Commission was established under the Canadian Radio Broadcasting Act. In 1936 the Canadian Broadcasting Act was passed, replacing the Commission by the Canadian Broadcasting Corporation to which it gave wide powers in the operation of a national broadcasting system and gave to the Minister of Transport the technical control of all broadcasting stations. In 1958, the Government established a Board of Broadcast Governors which had the function of regulating the establishment and operation of networks of radio and television broadcasting stations, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. New broadcasting legislation was passed by Parliament in 1968 and proclaimed Apr. 1, 1968, enunciating a new broadcasting policy for Canada and amending the Radio Act. Under this new Broadcasting Act the Canadian Radio-Television Commission succeeded the Board of Broadcast Governors. For details, see pp. 894-895.

The powers, duties and functions of the Minister of Transport under the Radio Act and Telegraphs Act and his responsibilities for telecommunications matters under the Railway Act were transferred to the Postmaster General, who is the Minister designate of the new Department of Communications (see p. 889).

Subsection 2.—Telephone and Telegraph Statistics

Telephone Statistics.—In 1967 there were 2,281 telephone systems operating in Canada compared with 2,310 in 1966, of these systems, 2,057 reported in 1967 and 2,130 in 1966. Co-operative systems in rural districts decreased in number from 1,906 to 1,848 in the same comparison and incorporated companies from 137 to 130. The largest of the incorporated companies, The Bell Telephone Company of Canada, which operates throughout the greater part of Ontario and Quebec and in Newfoundland and the Northwest Territories, served 62 p.c. of all the telephones in Canada in both years and the British Columbia Telephone Company, also shareholder-owned, served 9.7 p.c. of the total in 1967. The number of telephones in use continues to increase at the rate of about 6 p.c. annually.

1.—Pole-Line and Wire Mileage and Number of Telephones in Use, 1958-67

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

Year	Systems Reporting	Route Mileage	Length of Wire	Telephones in Use			
				Business	Residential	Total	Per 100 Population
	No.	miles	miles	No.	No.	No.	No.

The major telephone systems record completed calls on representative days throughout the year and on this basis estimate the number of local conversations which, added to the actual count of long-distance calls, gives their total volume of business. Estimates are included for the smaller systems.

3.—Local and Long-Distance Calls and Average Calls per Capita and per Telephone, 1958-67

NOTE.—Figures from 1928 will be found in the corresponding table of previous Year Books beginning with the 1939 edition.

Year	Local Calls	Long-Distance Calls	Total Calls	Total Calls per Capita	Average Calls per Telephone		
					Local	Long-Distance	Total
	'000	'000	'000	No.	No.	No.	No.

Telegraph Statistics.—There were nine telegraph and cable companies operating in Canada during 1967 but, as already stated, telegraph service is provided mainly by the telecommunications departments of the two major railway companies (see also p. 879). The number of telegrams sent continues to decline year by year, giving way to other types of message transmission, but the number of cablegrams sent has been rising. The business of telegraph and cable companies appears to be changing from one of handling messages directly to one of leasing equipment for the transmission of messages by others. Revenues from the latter source have been rising over the past several years and have been the main factor in the steady advance in total operating revenues. Total cost of property and equipment for all telegraph and cable companies was \$494,486,481 in 1967, increasing from \$474,826,188 in 1966.

6.—Summary Statistics of Canadian Telegraphs, 1958-67

NOTE.—Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

¹ Excludes commission operators.

² Includes wireless messages and transatlantic Telex messages.

Subsection 3.—Overseas Telecommunications Services

The Canadian Overseas Telecommunication Corporation* was established in 1950 to maintain and operate external telecommunication services for the conduct of public communications by cable, radiotelegraph and radiotelephone and any other means of telecommunication between Canada and overseas points; to make use of all developments in cable and radio transmission and reception for external telecommunication services; and to conduct investigation and research with the object of improving and co-ordinating such telecommunication services with the telecommunication services of other nations.

The services currently being provided are: direct telegraph, telephone and Telex communications between Canada and Argentina, Australia, Barbados, Belgium, Bermuda, Brazil, Britain, Denmark, Finland, France, Germany, Iceland, Italy, Jamaica, Japan, the Netherlands, New Zealand, Norway, the Soviet Union, Sweden and Switzerland; direct telephone and telegraph services with the islands of St. Pierre and Miquelon; direct telephone service with Greece, Austria and Spain; direct telegraph and Telex services with Peru and Telex with Portugal. Datel 600 service is in operation between Canada and Switzerland and between Canada and Britain; it is expected that this service will be available with other countries in due course. International Telex service is available with 145 countries.

The first transatlantic telephone cable, a joint project with the British Post Office, the American Telephone and Telegraph Company, Eastern Telephone and Telegraph Company and the Corporation, was brought into service in 1956. Apart from normal use of its system for public telephone, telegraph message traffic and Telex service, capacity is available for private leased circuits.

* As of Apr. 1, 1969, the Corporation reports to Parliament through the Minister of Communications.

Since 1961 the following cables have been brought into service: the Canada-Britain 80-circuit telephone cable (CANTAT); the Commonwealth Trans-Pacific 80-circuit cable—a four party enterprise of Canada, Britain, New Zealand and Australia—connecting Vancouver and New Zealand and Australia via Hawaii and Fiji (COMPAC); the South East Asia Commonwealth 80-circuit cable—a six-party enterprise of Canada, Britain, New Zealand, Australia, Malaysia and Singapore—connecting Australia, Hong Kong, Singapore and Kuala Lumpur via New Guinea and Guam (SEACOM), collectively forming part of the round-the-world Commonwealth Telephone Cable System; a number of circuits for Canadian purposes have been acquired in telephone cable systems connecting Bermuda and the United States and Jamaica and the United States. Currently under construction is a large-capacity telephone cable between Nova Scotia and Bermuda (CANBER).

The Corporation also operates direct circuits via satellite with Belgium, Britain, France, Germany, Greece, Italy, the Netherlands, Spain and Switzerland. The earth station constructed for the Department of Transport (DOT) at Mill Village, N.S., for research and experimentation with respect to satellites was brought into service in 1966 for commercial use and at present carries 240 telephone circuits for North American-European traffic via Intelsat I (Early Bird). The Corporation's own earth station, Mill Village 2, which came into service early in 1969, will operate with the larger-capacity satellites of the Intelsat III series, due to replace Intelsat I. The DOT station will then revert to its original purpose but will also serve as a standby for commercial operations. The Corporation at present operates direct circuits via the Pacific satellite with Australia through the American-owned earth station at Brewster Flat, Washington, pending the erection of an earth station on the West Coast of Canada.

Canada, represented by the Canadian Overseas Telecommunication Corporation, is a member of the Interim Communications Satellite Committee (ICSC) set up by the participating nations for the development and operation of a global communications satellite system. The Corporation is also represented on the Commonwealth Telecommunications Council.

Under a long-term agreement, the Corporation has under charter from the DOT the CCGS *John Cabot*, a combined ice-breaker/cable repair ship, used mainly for repairing the cables in the western North Atlantic Ocean. It also operates a cable depot at St. John's, Nfld.

¹ Twin cable from Clarenville, Nfld. to Oban, Scotland, and single cable from Clarenville, Nfld. via Terrenceville, Nfld. to Sydney Mines, N.S.

² Licensed for operation by two carriers—COTC and ET&T.

Increased demand for all types of overseas telecommunication services resulted in the COTC reporting a net profit of over \$3,990,000 for the year ended Mar. 31, 1968. Income for the year amounted to \$24,502,031.

Subsection 4.—Federal Government Civil Telecommunications and Electronics Services

Telecommunications policy and planning administered by the Government Telecommunications Policy and Administration Bureau, formerly under the jurisdiction of the Department of Transport, has been transferred to the Department of Communications (as of Apr. 1, 1969). For the time being, the functions and responsibilities of the Bureau remain unchanged and may be summarized as: (1) development of policy and plans with respect to national and international telecommunications by satellites, cables and other media including relations with the Canadian Overseas Telecommunication Corporation, and participation in the work of the International Telecommunication Union and its subsidiary organs; (2) forward planning for the development of economical and effective telecommunications facilities to meet the administrative and general needs of Federal Government departments and agencies throughout Canada, compatible with the improvement of public services, and to arrange for these facilities; (3) planning of emergency measures and administration of the Emergency National Telecommunication Organization (ENTO); (4) development and maintenance within the Bureau of a centre of competence in the latest telecommunications technology; and (5) administration of the Radio Act and Regulations including allocation and assignment of radio frequencies, radio provisions of the Canada Shipping Act, Ship Station Radio Regulations, the Telegraph Act and the Regulations thereunder covering the licensing of overseas submarine cables.

Telecommunications operations include: (1) research into and development of new and improved communication and electronic equipment and systems in support of aeronautical, marine, meteorological and other services; (2) construction, maintenance and operation of radio aids to marine and air navigation and of radio communication stations, including procurement of the necessary equipment; and (3) administration of the leasing of land-line telecommunication circuits, equipment and related facilities.

Licensing and Regulation of Radio Stations.—Under the Radio Act and the Canada Shipping Act it is provided that radio stations employing a form of Hertzian wave transmission, including television and radar, be licensed by the (now) Department of Communications unless otherwise exempted by regulation. Licensing, which provides basic control over the right to establish a radio station, involves the assigning of specific frequencies to each station. Frequencies are assigned to many types of services on a shared non-interference basis. Engineering briefs covering the selection or change of frequency, amount of power and design of the directional antenna system must be approved by the Department of Communications and, before a new broadcasting station can be licensed or before modifications can be made to an existing station, notification is sent to the signatory countries of the North American Regional Broadcasting Agreement, in the case of AM broadcasting stations, and to the United States under the Canada-USA Television Agreement and the Canada-USA FM Agreement, for television and FM broadcasting stations, respectively. The setting of standards for the equipment, installation and operation of a station provides control for efficient use of the radio spectrum. A further control is the requirement that operating personnel be subject to examination and certification.

From time to time, the Department of Communications establishes standards governing the technical suitability of radio equipment and radio systems for licensing in Canada. These standards, which are called Radio Standards Specifications, Radio Standards Procedures and Standard Radio System Plans, are issued by the Department in co-ordination with representatives of industry. Before a licence may be issued, the radio equipment to be used must comply with the technical requirements of the applicable Radio Standards Specification or Procedure, in which case they will be listed in the Radio Equipment List as type-approved or technically acceptable. Briefs supporting a request for technical appraisal of a radio apparatus may be prepared and submitted by a duly qualified engineer or the necessary tests may be conducted, for a fee, at the Department's Radio Regulations Engineering Laboratory, Ottawa. Over 2,000 units were listed as type-approved or technically acceptable during the year ended Mar. 31, 1968.

Ten fixed and two mobile monitoring stations are maintained at suitable points across Canada to observe actual radio spectrum conditions using a variety of modern electronic aids, their purpose being to ensure that radio communications are conducted according to regulatory procedures and to determine causes of harmful interference.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for distress use. Approval is given for each make and model of equipment that meets the required standard and, in addition, the ship station as a whole is inspected after the licence is issued and periodically thereafter. All Canadian and foreign ships are subject to inspection to ensure that they conform to the requirements of the Safety of Life at Sea Convention.

Standards have been developed for the installation of aircraft radio stations specifying the techniques and materials that may be used, and inspections of radio stations aboard civil aircraft of all operational categories are carried out at prescribed periods. In-flight inspections of the radio communications and navigational aspects of proposed new air-carrier operations, encompassing both land and oceanic routes, are made as required.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile radio stations and the regulations made under the Radio Act provide for the examination and certification of operators, both professional and amateur.

Number of Radio Stations Licensed in Canada.—The number of licences in force for radio stations in Canada during the year ended Mar. 31, 1968, was 219,590 compared with 191,849 in 1966-67. These figures include stations operated by federal, provincial and municipal government departments, stations on ships and aircraft registered in Canada, and mobile stations operated in public and private land mobile services but do not include private commercial broadcasting licences.

<i>Item</i>	<i>Year Ended—</i>	
	<i>Mar. 31, 1967</i>	<i>Mar. 31, 1968</i>

Certificates of Registration issued to U.S. licensees.....	2,442	2,697
Net increase in licences in force over preceding year.....	29,009	27,741

Investigation and Suppression of Radio Interference.—The Radio Act provides penalties for selling or using apparatus liable to cause interference to radio reception. Standards are developed and approvals for exemption from licensing issued for certain classes of each equipment. The Department of Communications also provides a country-wide interference service using special investigation equipment for the purpose of tracing sources of interference and recommending cures for interference to broadcast, television and other radio reception. Ninety-eight cars equipped for measuring and locating sources of interference operate from offices located in 35 cities throughout Canada.

Regulations specifying the limits to be met by particular types of apparatus are contained in the Radio Noise Limits Order and Radio Noise Limits Order Amended. This amendment, introduced on Sept. 24, 1964, designates the limits for noise from television receivers manufactured in Canada or imported into Canada on or after Apr. 1, 1966 (amended to Apr. 1, 1972 on July 26, 1967). Certain low-power radio transmitting

and receiving equipment, such as garage door controls, may be exempted from licensing under Section 2A(1) of the Radio Act. When a particular model has been exempted, it may be operated without the radio station licence.

Meteorological Communications.—Weather stations operated by the Meteorological Branch of the federal Department of Transport throughout Canada are linked coast-to-coast by means of teletype and, in the remote northern areas, by radio or radio-teletype. The land-line teletype circuits are leased from commercial companies and operated by the Meteorological Branch while the radio circuits are operated chiefly by the Telecommunications and Electronics Branch of the Department.

Weather stations on the teletype network transmit their reports directly; other stations report via commercial telegraph or radio facilities to the nearest station on the teletype network for subsequent transmission on the meteorological circuit. The reports are collected on a regional basis and then relayed to other parts of the country as required. There are two coast-to-coast teletype systems transmitting weather information, with main relay points at Vancouver, Edmonton, Winnipeg, Toronto, Montreal, Halifax, Gander and Goose Bay. These centres handle the distribution of weather information within Canada, including the Arctic, and also effect international exchange with the United States and through them, with many other countries. Altogether, the Meteorological Branch uses 58,500 miles of teletype circuits, connecting 384 teletype offices.

In addition, weather charts are transmitted over two facsimile networks from the Central Analysis Office at Montreal to weather offices across Canada. Radio facsimile broadcasts of these charts can be recorded at Arctic stations and on ships at sea. Charts prepared at the various Weather Central Offices in Canada are also transmitted to their respective regional areas. Altogether, the Meteorological Branch utilizes 19,000 miles of facsimile circuits, serving 102 offices.

Radio Aids to Marine and Aeronautical Navigation.—Federal services in aid of marine and aeronautical navigation are outlined in the following paragraphs; details may be obtained on request from the Department of Transport, Ottawa. Six regional offices, located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., and Moncton, N.B., carry out the construction and operations of the facilities.

Marine Navigation.—Radio aids to marine navigation are provided for radio-equipped Canadian vessels and foreign ships using Canadian waters. This safety and communications service for shipping covers the East and West Coasts, the Great Lakes, the St. Lawrence River and Gulf, Hudson Bay and Hudson Strait and includes regularly broadcast weather reports, storm warnings and notices of dangers to navigation. Ships at sea may obtain medical advice from any coast station. The stations carry out communications by radiotelegraph and/or radiotelephone and most of them provide connections to land telephone lines. Halifax (VCS) and Vancouver (VAI) stations provide long-range radiotelegraph and radiotelephone services to ships. Coast stations on Hudson Bay and Hudson Strait, in addition to their regular services, provide commercial communications for posts of the Hudson's Bay Company and various prospecting and development organizations, make weather observations, handle administrative traffic and assist aircraft with information, landing conditions, etc.

Automatic radiobeacon stations are maintained on the East and West Coasts, the St. Lawrence River and Gulf, the Great Lakes and Hudson Bay and Strait, giving navigational aid to mariners by transmitting signals on which bearings may be taken. These stations are arranged, where possible, in groups up to a maximum of six stations transmitting in sequence on a common frequency, the sequence being repeated continually regardless of weather conditions.

Loran is a long-range radio aid to marine and air navigation providing accurate fixes at distances of up to 750 miles by day and 1,500 miles by night. Two Loran stations operate

in Nova Scotia, three in Newfoundland and one on the West Coast. These stations, in conjunction with Loran stations of the United States Coast Guard, give service to ships and aircraft plying the North Atlantic and Pacific Oceans. *Decca* is a short-range radio aid to navigation providing accurate fixes at distances of up to 250 miles. Four chains of *Decca* stations are in operation—the Newfoundland chain, the Nova Scotia chain, the Anticosti chain and the Cabot Strait chain—giving service to ships off Newfoundland and Nova Scotia and in the St. Lawrence River and Gulf.

It has become general practice to equip merchant ships with radar and important buoys are fitted with radar reflectors to increase their radar visibility. Two shore-based radar installations are in operation—one at Camperdown near the mouth of Halifax Harbour and the other on the Lion's Gate Bridge across the entrance to Vancouver Harbour. Low-powered transceivers are provided for use in emergencies at lighthouses, particularly at locations that would otherwise be completely cut off from assistance in case of illness.

*Aeronautical Navigation.**—Radio aids to air navigation are provided from coast to coast and from the Canada–United States border to the Arctic along and off the airways, and are used by Canadian and foreign air carriers flying over Canadian territory. Low-frequency radio range stations, located approximately every hundred miles along airways, provide specific track guidance to pilots by means of audible signals which may also be used to obtain direction finding bearings. In addition, radiotelephone communications are provided by 120 ground stations, by which means pilots may obtain weather data, air traffic control instructions and other information concerning the safety of flights. Fifty-two very high frequency omni-directional ranges (VOR) are in operation, a type of facility that enables the pilot to select any desired course. These omni-directional ranges have permitted the establishment of VOR airways across Canada and on a number of trans-border routes in co-operation with the United States. Additional installations are under construction.

There are 275 aeronautical radiobeacon stations which provide radio signals with which pilots may use their direction finding equipment to obtain relative directional bearings. Fan markers operating on very high frequencies are usually placed on an airway to inform the pilot when he may safely lose altitude or to indicate accurately the distance from an airport. Station location markers, similar to fan markers, are installed at most radio range sites; they enable a pilot to determine when he is exactly over the station.

Airport and airway surveillance radars (150 nautical-mile) are in operation at 16 airports for air traffic control purposes. Precision approach radars are in operation at eight major airports. Instrument landing systems (ILS) provide radio signals which permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter for slope guidance to the approach end of the runway, two marker transmitters giving distance indications from the runway and a low-power radiobeacon (compass locator) to assist in holding procedures and lining up on the localizer course. Forty-one instrument landing systems are in operation.

Aeronautical radio communications stations are located at strategic points across the country, including the Arctic. These stations, operating for the most part on high frequencies, provide communication with domestic and international air carriers. Thirteen international communications stations, giving coverage from coast to coast and over the oceans, form a major contribution on the part of Canada to international aviation.

Subsection 5.—Public and Private Commercial Microwave Facilities

Canada, because of its population distribution and the vast areas served by microwave communication links, ranks second highest among the world's users of microwave communications systems on a per capita/per mile basis. Increasing demand for television

* See also the item on Air Traffic Control, pp. 863-865.

outlets necessitated the extension of microwave routes to provide interconnections for the CBC English and French and private networks and recently these routes have been up-graded to enable the transmission of colour television which started in the autumn of 1966. With the use of more automated equipment by industry and various services, associated data and control information must be transmitted at rapid speeds over microwave radio-relay to widespread areas throughout the country. This Subsection gives a summary of the facilities existing or under construction at the end of March 1968.

Railways.—The Telecommunications Departments of the Canadian National and Canadian Pacific Railway Companies have placed in operation a microwave system extending from Montreal to the Pacific Coast, which is used for television, telephone and data relay purposes. They also operate microwave facilities linking the Province of Quebec with the Maritime Provinces and Newfoundland and a major expansion of microwave facilities in Newfoundland has been undertaken by Canadian National Telecommunications (CNT). In addition, CNT has installed a microwave system between Alberta and the Yukon Territory which carries telephone and data traffic and serves both civil and military organizations in the area. In co-operation with Alberta Government Telephones, a combination microwave and tropospheric scatter system connects Alberta and the Northwest Territories. This system is also intended to provide communication for civil and military use in the Far North. The Quebec North Shore Labrador Railways has developed a microwave system extending into northern Quebec to provide communication for mining operations and to serve some civil communication purposes. Ontario Northland Railways operates a microwave installation connecting northern Ontario and James Bay, also for purposes of military and civil communication. The Pacific and Great Eastern Railway makes extensive use of 6,000 Mc/s microwave facilities linking Vancouver with Prince George and Dawson Creek, B.C.

Telephones.—The Trans-Canada Telephone System consists of eight provincial and private systems collectively providing a transcontinental microwave system for the purpose of carrying telephone, television, data and other types of communication services. Extensive microwave systems are utilized within the respective provinces for civil and military communications or television relay purposes. Major expansion has taken place in each province, greatly increasing the number of areas served and system capacity for all types of communication requirements. Tropospheric scatter systems are employed to provide beyond line-of-sight transmissions especially to the Far North; these are used for both civil and military applications.

The telephone companies of the three Prairie Provinces are constructing a major microwave system extending from Winnipeg to Edmonton, to form part of a projected second transcontinental microwave system operated by the telephone companies. The British Columbia Telephone Company has installed a major trunk system from Prince Rupert to Prince George, which is linked through Prince George with the transcontinental system in the southern part of the province. A microwave system links Mill Village communication satellite earth station, near Liverpool, N.S., with the trunk route system of the Maritime Telegraph and Telephone Company.

Television.—The two main television interests in Canada—the CBC and the CTV Television Network Limited—lease private microwave facilities for the relay of television programs from coast to coast. In addition, studio transmitter links are used by various television stations where the television transmitter is situated some distance from the studio and interconnection is required. In sparsely populated areas, off-the-air pick-up signals from primary television stations are sometimes relayed via microwave to rebroadcasting sites. Microwave facilities are also used in connection with portable and mobile television pick-up where program material is intended for the main studio. Recently, both network facilities and local studio transmitter links have been up-graded to enable the transmission of colour television.

Industrial.—Although many firms utilize public communication facilities on a lease basis, some organizations have installed private microwave systems to provide voice, teletype and control data for various purposes. The British Columbia Hydro and Power Authority, the Calgary Power Corporation, The Hydro-Electric Power Commission of Ontario, the Quebec Hydro-Electric Commission and Manitoba Hydro use a considerable number of microwave relay systems for important control and communication purposes. For example, Hydro-Quebec has greatly expanded its hydro power-generating capacity and new microwave routes have been added to permit a central control of the various generating stations. The British Columbia Hydro and Power Authority is installing facilities to link the Vancouver area with Peace River, Mica Creek and the Bonneville Power Administration in the State of Washington, and also for system control in the Vancouver area. The Hydro-Electric Power Commission of Ontario is constructing an extensive microwave system to provide important control, monitoring and communications with all their facilities in southwestern Ontario.

Instructional.—The Department of Communications has opened the 2,600 MHz. microwave band for use by the various educational authorities in Canada for an instructional TV system. Some systems have now been licensed and others are being planned. The largest system is located at Calgary and it provides TV communications to 24 schools.

Subsection 6.—Miscellaneous Radio Communication Services

In addition to radio communication services provided by the Federal Government, extensive radio communication systems have been established in the provinces, mainly for police, highway and forestry protection purposes. Municipal government departments have steadily increased their use of radio to facilitate operations, particularly as a medium of communication with vehicles—police, fire, engineering, hydro, etc. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medical also make extensive use of radio for communication purposes.

Public utilities, power companies, provincial power commissions, oil exploration and mineral development organizations have expanded considerably their use of radio in both mobile and point-to-point radio fields.

The telephone companies provide an extension of land telephone service, by radio, to suitably equipped vehicles. This service is available in all major cities in Canada and along many of the nation's arterial highways. Restricted common-carrier mobile radio service (this service does not permit interconnection with the over-all telephone system but only with specific dispatchers) is available in most major cities in Canada as well as in a number of smaller urban centres. The latter service is provided by telephone companies as well as by other organizations. Low-power radio stations may be licensed to permit short-distance personal and private business radiotelephone communications.

Subsection 7.—Radio and Television Broadcasting*

Broadcasting in Canada has developed over a period of some 48 years as a combination of public and private enterprise. Since the opening program from the first radio station was beamed into a few Montreal homes in 1918, the role of the radio and television program in the daily life of the Canadian family has grown to startling prominence. Today, radio service reaches 99 p.c. and television service over 96 p.c. of the Canadian population.

To have become such an integral force in the daily life of the nation, broadcasting had to learn the needs of the people and how to serve them. Two 'official' languages

* Textual material was revised by the Information Services of the Canadian Broadcasting Corporation and statistical data by the Transportation Division of the Dominion Bureau of Statistics.

forming two distinct cultures had to be served independently but without diminishing the concept of national unity. Dozens of other smaller groups, distinct in culture and frequently dwelling in the same radio or TV coverage area but in separate communities with widely divergent program interests, had to be served. Physical problems of distance and geography had to be overcome. It requires some hundreds of radio transmitters and TV stations and satellites to reach a population distributed across a 4,000-mile southern frontier, through seven time zones and a variety of topographical and climatic regions, and scattered northwest through thousands of square miles to the shores of the Arctic Ocean. Not only do these people have local service that is a reflection of life in their own districts, but by means of thousands of miles of land-lines for radio networks and microwave circuits for television nearly every Canadian may, at the same time, listen or watch as an event of national interest takes place.

The Canadian Broadcasting Corporation is a publicly owned corporation established by an Act of the Canadian Parliament to provide the national broadcasting service in Canada. Its radio and television facilities extend from Atlantic to Pacific and into the Arctic Circle. The CBC was created in 1936, replacing an earlier public broadcasting agency which had operated since 1932. It is financed mainly by public funds voted annually by Parliament but supplementary revenue is obtained from commercial advertising. As a publicly owned corporation, the CBC is responsible to Parliament and reports on its operations each year through a Cabinet Minister designated in the Broadcasting Act (at present the Secretary of State). The CBC head office is in Ottawa. The main production centre for English networks is in Toronto, and for French networks in Montreal, with regional centres across the country.

The regulation of all Canadian broadcasting stations, both public and private, was a CBC function until 1958, when a separate regulatory body, the Board of Broadcast Governors, was created. In 1966, the Government published a White Paper on Broadcasting proposing amending legislation with respect to the administration and regulation of broadcasting. As a result of these proposals, a new Broadcasting Act was passed by Parliament on Feb. 7, 1968 (SC 1967-68, c. 25) establishing the Canadian Radio-Television Commission (CRTC), consisting of five full-time members and ten part-time members, all appointed by the Governor in Council; recruitment and appointment of the officers and employees of the CRTC is the responsibility of the Public Service Commission. The Act states that there shall be an Executive Committee of the Commission, consisting of the five full-time members, which will exercise the powers conferred on it by the Act and submit to each meeting of the Commission minutes of its proceedings since the last preceding meeting of the Commission.

Subject to the provisions of the Broadcasting Act and the Radio Act and any directions issued from time to time by the Governor in Council under the authority of the Broadcasting Act, the Commission regulates and supervises all aspects of the Canadian broadcasting system with a view to implementing the policy enunciated in Section 2 of the Act. The Commission is the licensing authority for the Canadian broadcasting system. The Minister of Communications is responsible for the regulation and control of all technical matters relating to the planning for and the construction of broadcasting facilities but CRTC is responsible for all other matters.

An applicant for licence to establish and operate an AM, FM or TV broadcasting station, a community antenna television system, or a network files completed application forms with the Secretary of the CRTC. If found to be reasonably complete and technically acceptable, the application is accepted by the Commission and a public notice is issued in the *Canada Gazette* and in one or more newspapers of general circulation within the area normally served or to be served by such a station or system. The same procedure applies to an application for the issue of a renewal licence or the amendment of an existing licence.

Broadcasting Facilities.—As of Mar. 1, 1969, the following numbers of broadcasting stations were in operation in Canada:—

	<i>CBC</i>	<i>Private</i>	<i>Total</i>
AM stations.....	31	267	298
Low-power relay transmitters.....	202	—	202
FM stations.....	7	70	77
Short-wave stations.....	5	6	11
TV stations (including rebroadcasting stations).....	92	239	331

All but 43 of the privately owned television stations and many of the privately owned radio stations are affiliated with the CBC and help to distribute national radio and television services over networks operated by the CBC. Of the unaffiliated private television stations, 11 form the CTV Television Network Limited; the others are independent of network affiliation.

Operations of the Canadian Broadcasting Corporation, 1967-68

Centennial year was a year of program challenge and achievement for the CBC—a year that re-emphasized the role of the CBC as an instrument of national purpose and broadcasting. Some 1,500 hours of special Centennial programs and coverage were broadcast on CBC French and English radio and television, and thousands of Centennial items were broadcast to other countries by the CBC International Service. The CBC commissioned new works by Canadian writers and composers, issued special recordings and publications, and sponsored a variety of public concerts and competitions. A Centennial Technical Centre was established in Montreal for the assembly, maintenance and shipment of specially designed equipment packages and for the training and assignment of technical crews covering events across the country. At Expo 67, the International Broadcasting Centre, built and operated by the CBC, provided radio and television facilities for broadcasters from all over the world.

Other notable program projects during the year included coverage of the two-week 1967 Pan-American Games in Winnipeg, and the production of the Canadian program segments for the first live global telecast by satellite, *Our World*, a project of the European Broadcasting Union. The full program was carried on the CBC English and French television networks.

In 1967 and 1968 there was extensive live coverage of the Canadian political scene: the Progressive Conservative leadership convention, the Toronto and Ottawa constitutional conferences, the Liberal leadership convention, the first national television debate among Canadian party leaders (a joint CBC-CTV production), and the federal election in June 1968. A number of feature films were produced for television and for release to movie theatres, by the CBC itself or in co-operation with the National Film Board. The CBC's French television network completed a 39-week historical drama serial in colour, in co-operation with European broadcasting organizations. There was also extensive live coverage of the Olympic Games in Mexico, and a 10-year contract was signed for CBC coverage of major athletic events at Canadian universities.

Colour programming was increased and, by the opening of the 1968-69 program season, some 80 or 90 p.c. of prime-time evening programming was in colour on both English and French networks. The CBC Research Department expanded its English TV network audience panel to cover a nine-month period annually, and established a parallel operation to obtain representative audience reaction to French network programs.

The CBC's regional program centres produced a wide range of programs for their own communities, contributed to the national networks and continued the growing exchange of programs among regions. French and English AM radio networks offered a comprehensive service of news and current affairs coverage, special-interest programs, music, drama, sports and popular entertainment. FM radio emphasized music but also offered a variety of spoken word material including discussion and lecture series.

The all-night program service of music and news carried on most CBC radio stations as a function of the Emergency Broadcasting Plan was discontinued in March 1968 in line with government economy measures. However, all network connections were maintained in standby condition, capable of emergency network service on short notice.

Coverage and Facilities.—As of Mar. 31, 1968, CBC television was within reach of 96.6 p.c. of all Canadians and CBC radio reached 98.7 p.c. Facilities to extend television coverage during the year included new transmitters at Grand Falls and three other Newfoundland locations. The Corporation's French-language station at Moncton was increased to maximum power to provide improved service to a large area of New Brunswick, Nova Scotia and Prince Edward Island. In Quebec, a new transmitter began operation in French in the St. Georges de Beauce area, and in Ontario a new French-language station was opened at Elliot Lake. A complex of four stations in north-central Ontario now brings television coverage to a large, hitherto unserved area. In Alberta, new rebroadcasting stations at Lac-La-Biche, Hinton and Jasper were brought into operation. In British Columbia, new stations began operation at Bowen Island, Squamish, Crawford Bay and Creston and the transmitters at Trail and Nelson were increased in power to provide improved service.

Frontier Coverage Packages—low-power TV transmitters operating four hours a day and broadcasting a selection of national service programs provided on videotape—are in operation at Yellowknife, N.W.T.; Lynn Lake, Man.; and Havre St. Pierre, Que. Both technically and in terms of audience acceptance, this coverage experiment appears to be working successfully and, if these findings are confirmed, plans to extend the FCP service could bring television to some 40 isolated locations in the Canadian North by the end of 1972. A satellite distribution system could eventually provide live service to such communities. The CBC continues to keep abreast of developments in this field (see pp. 882-883).

The limited first-stage colour conversion authorized by government policy was completed during the year; the next phase, which will include more colour production facilities in the network centres at Toronto and Montreal and the conversion of regional production facilities, will start when government funds become available.

In August 1968, CBC acquired ownership of its former English-language affiliate in Charlottetown, CFCY-TV, and its subsidiary station in New Glasgow, N.S. These stations now operate under the call letters CBCT and CBCT-1.

In radio, a number of new low-power relay transmitters began operation in 1968, distributed through Newfoundland, New Brunswick, Quebec, Ontario, Manitoba, British Columbia and the Yukon. In Vancouver, the CBC began operation of CBUF-FM, a maximum-power French-language station, and authorization was received and plans begun for a French-language AM transmitter at Windsor, Ont. The overcrowding of the standard AM broadcast band and the resulting coverage problems led to the experimental use of FM for a low-power unattended radio service at Maniwaki, Que., and to applications for relocation of the Sackville and Vancouver AM transmitters.

Planning continued for the consolidation of scattered CBC facilities in Montreal, Toronto and Vancouver. New radio studios and office buildings were completed at Goose Bay, Fredericton and Prince Rupert, and work on similar facilities was started at Sydney. In Ottawa, work was continued on a new transmitter site to accommodate all local TV and FM transmitters, both CBC and privately owned.

CBC Northern Service.—The Northern Service was ten years in operation on Nov. 10, 1968. It broadcasts to 29 communities and in the northern areas of five provinces and in the Yukon and Northwest Territories and on shortwave to the High Arctic. It has program centres at Happy Valley in Labrador, at Yellowknife, Inuvik and Frobisher Bay in the Northwest Territories, at Whitehorse in Yukon Territory, and at Churchill in Manitoba; all except Frobisher Bay are connected to the national radio networks.

Northern Service radio schedules combine local programs—particularly news, public affairs, public service information and personal messages—with a variety of national network programs. Development continues of community programs for Indian, Eskimo and metis listeners in their own languages. In the Mackenzie Delta and Yellowknife areas, discussions are broadcast among Indians and Eskimos in their own languages, in co-operation with the Indian-Eskimo Association. Frobisher Bay's open-line program in Eskimo retained its enthusiastic following. News editors at Whitehorse and Yellowknife provided regional news services for the Yukon and Mackenzie networks and reported on northern news to newsrooms "outside". *Indian Magazine*, a Northern Service program linking the widely separated Indian peoples of Canada, has acquired a wider and wider audience, and in 1968 became part of the schedule of the full national English radio network. The CBC Northern Service is also responsible for the English and French program schedules of the Iron Ore Company's television stations at Labrador City, Nfld., and Schefferville, Que.

Armed Forces Service.—Through the CBC Armed Forces Service and the Department of National Defence, Canadian servicemen and their dependants in Europe, Africa, Asia and Northern Canada and on Canadian Forces ships at sea are provided with CBC radio and television programs. Recorded and shortwave radio programs are supplied to broadcasting stations of the Canadian Forces in West Germany, the managers and program directors of which are CBC personnel. A weekly package of television programs is distributed among remote Canadian Forces bases in Northern Canada and abroad. The Department of National Defence and the CBC organize concert parties to entertain members of the forces and their dependants at military bases in Canada and abroad and radio and television programs are produced from these concerts for use on CBC networks in Canada.

External Services.—The various CBC foreign operations were grouped into a single External Services Division in 1968. The Division includes the CBC International Service, the Overseas and Foreign Relations Department, CBC offices in foreign countries, and the Export Sales Department.

During 1967, the CBC International Service concentrated on covering Expo 67 and all aspects of the Centennial celebrations for its international audience. More than 46,000 program hours of recorded Canadian music were shipped to radio organizations all over the world, four times the amount shipped in 1966. Continuing their collaboration which resulted in the commercial release of "Music and Musicians of Canada", a 17-record collection of Canadian music, the International Service and RCA Victor also made available a nine-record album of Canadian folk songs, a recording of Calixa Lavalee's "The Widow", and the first commercial recording by the Montreal Symphony Orchestra. In television, the Service regularly distributed its *Canada Magazine*, reflecting various aspects of Canadian life, to more than 30 countries. In the shortwave radio service, news, commentary and information from Canada was broadcast daily in English, French, German, Spanish, Portuguese, Czech, Slovak, Hungarian, Polish, Ukrainian and Russian. Work continued in 1968 to expand and improve the shortwave transmitting facilities at Sackville, N.B., shared by the International Service and the Northern and Armed Forces Service. During the crisis in Czechoslovakia in the late summer of 1968, all the language sections of the International Service broadcast special reports and coverage, and evidence indicated that Canadian shortwave broadcasts were not among those jammed by the Soviet Union.

The Overseas and Foreign Relations Department co-operated with the Canadian International Development Agency and the Ryerson Institute of Technology in providing on-the-job broadcast training for 52 students from 19 countries. Visits of radio and television producers, commentators and broadcast executives from 75 countries were taken care of during Centennial year and the Department was host to the annual meetings in Montreal of La Communauté radiophonique des programmes de langue française and La Communauté des télévisions francophones, and to production meetings of the European Broadcasting Union during the planning of the first live world television program *Our*

World. Contacts and co-operation were increased with other international broadcasting organizations including the Asian Broadcasting Union, the Commonwealth Broadcasting Conference, and the Organization International de Radio et Télévision. Documentaries continued to be produced for showing in the member countries of Intertel and co-productions with European and American broadcasters and with such agencies as UNICEF were also undertaken. An agreement was signed between CBC and the U.S.S.R. Council of Ministers Committee for Radio and Television Broadcasting providing for an exchange of programs of interest to Canadian and Soviet audiences and allowing the CBC to produce TV films in the Soviet Union with all-Canadian production crews or with the assistance of Soviet staff.

Twenty-two CBC programs were accepted for presentation or won awards in international festivals. More than 300 radio and television items for magazine programs were exchanged between European countries and the CBC's French networks. Combined programs sales to foreign countries for the English and French networks were in excess of \$340,000.

Finance.—Operating expenses of the CBC for the year ended Mar. 31, 1968, totalled \$185,885,439, an increase of \$31,644,840 over the previous year. The largest single item of the increase was \$21,437,626 spent on programs; this increase was attributable to special Centennial telecasts, increased salaries resulting from negotiated union agreements, and general price increases. Parliamentary grants totalled \$140,147,000 of which \$2,889,905 went back to the Receiver-General as repayment of capital loans to the CBC, leaving the net operating funds received from the Federal Government at \$137,257,095. Depreciation, included as an operating cost not recoverable from Parliamentary grants, brought the net cost of operations to \$145,684,000. Gross advertising revenue amounted to \$38,734,295 and other revenue to \$1,466,507. Capital assets, after accumulated depreciation, totalled \$87,918,259.

8.—Financial Statement of CBC Operations, Years Ended Mar. 31, 1966-68

Item	1965-66	1966-67	1967-68

Operations of Private Broadcasting Stations

Canada's privately owned stations, which are dependent entirely on advertising revenue, provide alternate radio and television service to more than 17,000,000 viewers and listeners. They offer a varied and comprehensive local service to hundreds of communities and many of them are outlets for the CBC network's national service. Although the first private station opened in 1919, legislation recognizing private broadcasting as an integral part of the Canadian scheme came only in 1958. By 1968 there were 264 AM, 68 FM and 60 TV stations, representing a capital investment of \$200,000,000 and transmitting 2,500,000 hours of programming annually. These stations employ about 10,100 persons and pay salaries of close to \$72,000,000, including payments to freelance talent. Some 95 p.c. of the private stations are members of The Canadian Association of Broadcasters, which has offices in Ottawa, Toronto and Montreal. CAB's Radio Bureau Division produces the non-partisan public service series *Report From Parliament Hill*, featuring talks by Members of Parliament. The Program Exchange Department in Toronto gathers high-quality Canadian and foreign programs and distributes them to interested member stations. Other noteworthy CAB projects include recent five-year sponsorship of the Dominion Drama Festival and the continuing provision of 'in-station' training for students from other countries.

Statistics of the Broadcasting Industry

Financial and other statistics of the radio and television broadcasting industry are obtained by the Dominion Bureau of Statistics in co-operation with the Canadian Radio-Television Commission; summary figures for private and CBC sectors are given in Table 9 for 1965-67.

In 1967, 305 private radio stations and 66 television stations reported to DBS. The operating revenue of the broadcasting industry in 1967 amounted to \$214,239,000, an increase of 11.3 p.c. over the previous year. Of the total, radio broadcasting accounted for \$90,700,000 or 42.3 p.c. and television broadcasting for \$123,500,000 or 57.5 p.c.; in 1966 radio received \$81,700,000 or 42.5 p.c. and television \$110,700,000 or 57.5 p.c. Revenue from network and national advertising represented 63.5 p.c. of the total broadcasting revenue and revenue from local advertising 36.5 p.c.; network and national advertising increased by 10.8 p.c., local advertising by 10.5 p.c. and other non-broadcasting revenue by 21.7 p.c. over 1966. Operating expenses in 1967 at \$332,500,000 were 16.6 p.c. higher than in 1966. The growth of revenues exceeded the growth of expenses and resulted in an operating profit of \$27,500,000 in 1967 compared with one of \$25,400,000 in 1966. After adjustment on account of other income and expenses and income taxes, the final net profit of the private sector of the broadcasting industry for 1967 was \$15,569,000 compared with \$15,050,000 in 1966.

¹ The CBC charges its operations with depreciation, but deducts the charge on its published statements; the charge so made has been added to the government grant. ² Excludes advertising agency commissions, estimated to be \$17,585,786 in 1965, \$20,298,498 in 1966 and \$23,164,429 in 1967.

Section 2.—Postal Service

The basic tasks of the Canadian Postal Service are to receive, convey and deliver postal matter with speed and security. To carry out these duties, it maintains thousands of post offices and utilizes air, rail, road and water transportation facilities. In addition, associated functions include the sale of stamps and other articles of postage, the registration of letters and other mail for dispatch, the insuring of parcels, the accounting of CQD articles and the transaction of money-order business. Because of its transcontinental facilities, the Post Office also assists other government departments with such tasks as selling unemployment insurance stamps and hunting permits, collecting government annuity payments, distributing income tax forms and Public Service employment application forms, and displaying government posters.

Post offices are established wherever the population warrants. Those in rural areas and small urban centres transact all the functions of a city office. In larger urban areas, postal stations have full functions similar to the main post office, including general delivery service, lock-box delivery and letter-carrier delivery.

Much sophisticated automatic equipment has been installed in Canada's larger post offices, which could be described as complex semi-automated plants. Such devices include conveyors and chutes, parcel and bag sorting machines, photo-electric counters, intercom

systems, observation gallery telephone systems and industrial music. Outside the post office building are found such innovations as mailmobiles, automatic stamp-vending machines and curbside mail boxes.

The operating service of the Post Office Department is organized into 14 districts, each under a district director. These district directors and the postmasters, Toronto, Montreal, Vancouver, Winnipeg and Ottawa, report directly to the Assistant Deputy Postmaster General Operations, who has the responsibility of conducting the normal field operations of the Postal Service. The operating and support functions required in the provision of postal service to the public are the responsibility of the local postmasters who receive technical and administrative assistance from district offices at strategic points.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont. (the most southerly inhabited point of Canada), to settlements and missions far into the Arctic. Canada's airmail system provides several transcontinental flights daily, intersected by branch and connecting lines radiating to every quarter and linking up with the United States airmail system. First-class domestic mail is carried by air between one Canadian point and another, whenever delivery can thus be expedited. Air stage service provides the only means of communication for many areas in the hinterland. There are approximately 46,000 miles of airmail and air stage routes. However, the railways are still the principal means of distant mail transport.

At Mar. 31, 1968, there were 10,838 post offices in operation. Letter-carrier delivery, performed in 247 urban centres, employed 8,605 uniformed carriers. Some 605 side services transport mail between post offices, railway stations, steamer wharves and airports, and 1,535 stage services convey mail to and from post offices not located on railway lines. Transportation of mail by motor vehicle on highways is expanding and about 590 such services were in operation in 1968, many of them replacing or reducing conveyance by rail. In 1968 there were 1,046 city mail services transporting mail to and from post offices and postal stations, collecting mail from street letter boxes and delivering parcel post.

Revenue and expenditure of the Post Office Department for the five years ended Mar. 31, 1968 are shown in Table 10; gross revenue receipts are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during 1967-68 was \$118,131,756, and receipts from postage meter or postage register impressions and postage paid in cash by other means amounted to \$188,270,075.

10.—Revenue and Expenditure of the Post Office Department, Years Ended Mar. 31, 1964-68

NOTE.—Figures from 1868 will be found in the corresponding table of previous Year Books beginning with the 1911 edition.

Year	Gross Revenue	Net Revenue ¹	Expenditure ²	Deficit
	\$	\$	\$	\$
1964.....	235,807,940	200,774,264	206,900,000	-37,507,200

1968.....	327,224,461	281,765,993	348,957,037	-67,191,044

¹ Gross revenue less commissions and allowances to postmasters and other small items.
of semi-staff and staff post offices.

² Excludes rental

In the year ended Mar. 31, 1968, post office money orders, issued for any amount not exceeding \$100 and payable in almost any country of the world, were sold at more than 9,361 post offices and money orders payable in Canada only, for amounts not exceeding \$15.99, were sold at some 1,018 additional post offices. Table 11 shows the amount of money order business conducted by the Postal Service in recent years.

Section 3.—The Press*

The freedom of the public in Canada is strenuously exercised by an omnipresent press. Daily newspapers published in the country in 1968 numbered 118, counting morning and evening editions separately. Combined circulation was about 4,527,000—83 p.c. in English and 17 p.c. in French. Publishers' surveys show that each newspaper is read by an average of three persons.

Daily newspaper advertising revenue in 1967 was \$239,810,000 and circulation revenue was \$89,214,000. By comparison, advertising revenue of 305 private radio stations in Canada in 1967 was \$86,703,000 and of 66 private television stations \$84,891,000. There were 13 daily newspapers with circulation in excess of 100,000, accounting for about 54 p.c. of total circulation. There were 12 dailies published in the French language, 10 of them located in Quebec. Although the circulation of daily newspapers blankets the more populous areas well beyond publishing points, smaller cities and towns and rural areas are also served by close to 850 weekly newspapers catering to local interests and exercising important local influence. The Canadian society is also enriched by 82 ethnic daily or weekly newspapers published in many languages, often sprinkled with English.

About 60 p.c. of Canada's daily newspapers are privately owned or independent. There are three major newspaper chains in the country, owned by Southam Press Ltd. (10 dailies), Thomson Newspapers Ltd. (27 dailies) and FP Publications Ltd. (eight dailies). Both Southam and Thomson Newspapers are publicly owned companies with shares traded on Canadian stock exchanges. Papers in the Thomson chain are concentrated in the smaller cities. FP accounts for about 19 p.c. of total daily circulation, Southam for 18 p.c. and Thomson for about 8 p.c.

In addition to their own news-gathering staffs and facilities, Canadian newspapers subscribe to a number of syndicated agencies and wire services, the largest being Canadian Press which is a co-operative agency owned and operated by Canadian dailies. Largely by teletype and wirephoto transmission, it provides its 103 member newspapers with world and Canadian news and also serves weekly newspapers and radio and television stations. CP has its own news-gathering staff and each member newspaper provides the agency with important local news for transmission to fellow members and members share the cost in ratio to the size of population of the cities in which they publish.

CP carries world news from Reuters, the British agency, and from Associated Press, the United States co-operative, and these agencies are offered CP news on a reciprocal basis. CP maintains a French-language service in Quebec and translation services for both English and French Canada.

United Press International of Canada, the second major news wire service in Canada, is a private company and an affiliate of United Press International World Service. It

* An article in the 1957-58 Year Book traces developments in Canadian journalism from their beginnings in 1752 to (circa) 1900. A second article appearing in the 1959 edition brings that account up to 1958.

provides Canadian and international news and pictures to about 80 subscribers in Canada and is an outlet for Canadian news through United Press International facilities throughout the world. Certain foreign newspapers maintain bureaus in Ottawa and elsewhere in Canada to collect and interpret Canadian news.

Press Statistics.—The following tables are based on data estimated from *Canadian Advertising*. Circulation figures are given for daily English-language and French-language newspapers only. Such circulation figures are relatively easy to obtain because, in their own interest, newspapers qualify for and subscribe to the Audit Bureau of Circulation. For these, ABC 'net paid' figures have been used; 'controlled' (free) distribution newspapers are not included. On the other hand, circulation data for foreign-language newspapers, weekly newspapers, weekend newspapers and magazines are incomplete and therefore not usable. Data for 1967 were not compiled.

Revenue from Printing and Publishing.—One of the industrial groups for which information is collected by the DBS in its annual Census of Manufactures is the printing, publishing and allied industries group which includes establishments engaged primarily in the publishing and printing of newspapers, magazines, periodicals, books, almanacs, maps, guides and the like, as well as establishments printing such publications for publishers, publishing firms that do no printing, and engraving, stereotyping and allied industries. Of interest in connection with press statistics is the amount of revenue received by these industries from advertising and from subscriptions or sales, which is given for the years 1965 and 1966 in Table 16. Additional data on manufacturing activity of this industrial group are included in Chapter XVI on Manufactures.

¹ Net revenue from advertising excludes commissions paid to recognized advertising agencies and all cash discounts; net revenue from subscriptions and sales excludes commissions paid to indirectly employed sales agents who are not regular employees.

² Includes telephone directories published by telephone companies.

The trend in the value of goods sold in the retail market is an accurate barometer of the well-being of the nation. Most goods pass from producer to wholesaler to retailer and reach the consumer through one of many types of outlets, from the large indoor shopping centre with its variety of stores carrying a complete range of goods to the small independent corner store. On the other hand, the farmers' market, where goods pass direct from producer to consumer, is still an attraction in many cities and towns.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad in terms of scope and complex in terms of activity. It encompasses all values added to commodities by agencies and services connected with the storage, distribution and sale of goods within each province as well as between provinces. Domestic trade is engaged in or facilitated by manufacturers, wholesale and retail establishments, mail-order houses, service trades, warehouse operators and other distributors, and by such "outside" agencies as banks, insurance companies, railways, advertising agencies and market research houses.

In recent years, a considerable degree of interest and speculation has been focused on the service trades, which embrace a wide spectrum of activities engaged in by professional, business and personal service establishments. Included also are the amusement and recreation services, such as regular and drive-in movie theatres, health clubs, golf courses, race tracks and other sports activities. Services provided by doctors, lawyers, hospitals and educational institutions do not fall within the scope of the Census of Merchandising and Service Establishments.

Only certain phases of this broad field of domestic trade are covered in this Chapter but, wherever possible, references are given to related material appearing elsewhere in this publication. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various perspectives. The Index will be found useful in this respect.

Section 1.—Merchandising and Service Establishments*

Surveys of merchandising and service establishments centre on a census of such business establishments. The first census was taken in 1931 and similar censuses in 1941, 1951 and 1961, the latter providing a broader range of data than the previous censuses. The reports for 1961 were published in two series (locations and establishments) and contained information on sales, inventory and credit; gross margins and operating expenses; small geographic area data; and, for establishments only, an analysis of sales by commodities. That census, however, marked the end of the "decennial" program. Commencing with 1966, the censuses of merchandising and service establishments became part of a quinquennial series undertaken by DBS to provide more frequent survey benchmarks. Summary results of the 1966 Census, covering retail and service trades, are given in Subsection 1.

Each census forms a new base for the various intercensal (monthly, quarterly and annual) surveys of retail, wholesale and service trades; some are sample surveys and others are on a full-coverage basis. Subsection 2 contains current intercensal information on the distributive trades, most of which is on a 1961 base; conversion to the 1966 benchmark is under way and the revised data on that base will be available for the 1970 Year Book. In the meantime, these data may be secured, as they are compiled, from the Merchandising and Services Division of DBS.

Subsection 1.—1966 Census of Merchandising and Services

Retail Trade†

The results of the 1966 retail trade census, particularly in the smaller geographic areas reflect the changes that took place between 1961 and 1966 in the structure of retailing. The advent of new shopping areas, whether in the form of planned multiple centres or as single discount department or other large stores, had a significant effect on retail trade, as did urban redevelopment and the construction of new retail outlets outside corporate boundaries of cities and towns.‡

Although no classification change was made since 1961 to shift any area into or out of retail trade, some changes in definition were made within the retail universe. In such cases, direct comparisons with 1961 data are not feasible. Details of these changes are as follows:—

1. The 1961 classification "confectionery stores" was largely replaced by "groceries, confectionery and sundries" stores, in which no one major commodity grouping can exceed 60 p.c. The new category embraces an unknown number of stores formerly classified as "grocery stores, without fresh meat". In the aggregate, however, the food group is comparable to the 1961 results.
2. A major change in definition occurred in the department store category, details of which may be found in the monthly publication *Department Store Sales and Stocks* (Catalogue No. 63-002). Briefly, the data now reflect a "pure" department store concept. Catalogue and mail-order offices, together with other "general" type stores, are now included in the classification "general merchandise stores". Specialty clothing and appliances stores, owned and operated by department store firms, are now included in their appropriate trade categories. In contrast, a number of stores were brought into the universe—in particular, department store locations operated by other retail establishments (including food and variety chains). An important change in treatment was accorded the sales of concessions located in department store outlets. These are now included as part of the total business of the outlet, with the exception of associated food departments which are not an integral part of the operation or which are identified to the public by any name other than that of the department store with which they are associated. Formerly, concessions were tabulated and counted as separate "stores" in their own kind of business, either in retail or service trades. Direct comparison with related trade results in 1961 is therefore difficult, if not impossible.
3. A new census classification introduced in 1966 was "home and auto supply stores". These stores can be added to the now lesser classification "accessories, tire and battery shops" in order to achieve comparability with 1961.

* Prepared in the Merchandising and Services Division, Dominion Bureau of Statistics.

† 1966 Census of Canada, Vol. VI (Retail Trade), (Catalogue Nos. 97-601 to 97-608), published at intervals during 1968-69.

‡ For purposes of analysis and research, the reader is referred to the *Market Research Handbook*, 1969 ed. (Catalogue No. 63-514), published by the Merchandising and Services Division of DBS. This volume contains detailed information, particularly for small geographic areas, on population, housing, income, agriculture, manufacturing and the retail and service trades.

In addition to definitional changes, the 1966 Census incorporated a significant improvement in classification of returns. This was a "streamlined" census, with a consequent reduction in the number of questions asked. As a result, it was possible to include a complete list of kinds of business which respondents were asked to check off rather than being required to write in their trade designation (as in 1961). For example, returns classed as "garages" in 1961, based on the respondents' write-in of "auto repairs", were properly checked off and classified as "paint and body shops" in 1966.

Table 1 gives retail trade figures by province and incorporated urban centres of 10,000 population or over; Table 2 gives summary statistics of retail trade by kind of business; and Table 3 shows the growth in retail trade from 1961 to 1966, stratified by current "kind of business" groups, and provides a comparison of 1966 data on both the new and the 1961 Census bases.

¹ Includes groceries, confectionery and sundries stores.² Includes "service trade" concessions (restaurants, beauty parlours, etc.) operating in department store locations.

Service Trades*

Changes within the service sector of the economy can best be measured and analysed by comparing the results obtained in each census of merchandising and services since, at present, intercensal surveys provide only partial coverage of this large and diversified field.

Consumer expenditures on services—at least, those considered within the scope of the census—have increased rapidly in recent years. Examination of the 1961-66 rates of change within the following key economic areas shows that the service trades have developed at a faster rate than most other important measurements.

<u>Indicator</u>	<u>Rate of Change 1961-66</u>
	p.c.
Gross national product.....	+ 55.1
Service trades.....	+ 53.9
Personal income.....	+ 51.0
Personal disposable income.....	+ 48.3
Personal consumer expenditure.....	+ 42.4
Retail trade.....	+ 41.1
Per capita personal income.....	+ 37.6

At the present rate of growth, the receipts of service trades covered by the census will have more than doubled their 1961 levels by the end of the present decade.

In the census, service trades are divided into six main categories, each of which is further stratified by kind of business. These main categories—and the most important classifications within each—are as follows:—

Amusement and Recreation Group—theatres (regular, movie and drive-in); bowling alleys and billiard parlours; health clubs; golf courses; and race tracks.

Business Services Group—advertising agencies; sign-painting shops; chartered and certified accountants; addressing, duplicating, typing and mailing services; credit agencies; and employment agencies.

Personal Services Group—barber shops; beauty salons; laundries; dry cleaners and dyers; shoe repair shops; valet service, pressing and repair shops; and dressmakers.

Repair Services Group—welding shops; locksmiths; gunsmiths; and tool and cutlery repair shops.

Hotel, Tourist Camp and Restaurant Group—hotels (full-year and seasonal); motels; tourist courts, cabins, etc.; hunting and fishing camps; eating places; refreshment booths and stands; fish-and-chip shops; cocktail lounges, bars and nightclubs; taverns, beverage rooms and public houses; caterers; and industrial restaurants.

Miscellaneous Services Group—funeral directors; photographers (commercial and portrait); developing, printing and enlarging services; automobile and truck rentals; collection agencies; driving schools; window cleaning; and building maintenance services.

It should be noted that in Table 4, which shows service trades by province and by kind of business group for 1961 and 1966, the 1966 totals are slightly understated, to the extent that service trade concessions operating in department store locations, such as beauty parlours, restaurants and shoe repairs, are considered as department store sales and are therefore included in retail trade.

* 1966 Census of Canada, Vol. VIII (Services), (Catalogue Nos. 97-641 to 97-647), published at intervals during 1969.

**Subsection 2.—Intercensal Surveys of Retail, Wholesale and
Service Trades**

Retail Trade

The trend of retail trade is one of the most accurate barometers of the economic health and well-being of the nation. In 1967, retailers accounted for 57.1 p.c. of personal disposable income available to Canadians and 63.1 p.c. of total personal expenditure on consumer goods and services. The value of retail sales, estimated from intercensal sample surveys, increased by 31 p.c. during the period 1964-68.

Table 5 gives estimates of retail sales by province and by kind of business in two parts: 1964-67 on the 1961 base; and 1967 and 1968 on a partial (i.e., definitional) 1966 base. The new series for the 1961-68 period, revised in accordance with 1966 Census definitions and results, will be available in 1969 (see p. 910). Commencing in 1967 (second series), a new kind-of-business classification was introduced called "general merchandise stores". Such stores were previously included as part of the "all other stores" category but were taken out of that category as part of the reclassification of non-department store operations of department stores, made necessary by definitional changes in the 1966 Census.

¹ The 1966 Census definition of department stores (see preceding text). ² These data for 1966 were derived from a sample survey and are therefore dissimilar from the 1966 Census results given in Tables 1-3. ³ Includes the Yukon and Northwest Territories. ⁴ Prior to 1967, general merchandise stores formed part of the "All other stores" category.

Chain* and Independent Stores.—Within the framework of retail trade, chains and independent retailers compete with one another to achieve or retain a viable share of the total market. In some kinds of business, such as general stores, motor vehicle dealers, service stations and garages, men's clothing stores and drug stores, independent merchants have maintained a dominant position; in others, such as department stores, variety stores and general merchandise stores, chains account for the largest proportion of sales. However, the competitive struggle continues without interruption, particularly among grocery and combination stores, women's clothing stores and shoe stores. The constantly shifting balance between chain and independent stores is shown in Tables 6 and 7. The former indicates the rate of growth in each kind of business from 1967 to 1968 (figures are shown in the last three columns of Table 5) and the latter shows the changes in market share held by chain and independent retailers in each kind of business.

* A retail chain is defined by DBS as "an organization operating four or more retail stores in the same kind of business under the same legal ownership".

6.—Sales of Chain and Independent Stores, by Kind of Business, 1967 and 1968

Department Stores.—In 1968, department stores accounted for a higher proportion of total sales than most other forms of retailing (exceeded only by grocery and combination stores and motor vehicle dealers). Their sales of \$2,376,100,000 represented 9.4 p.c. of the total retail trade and 12.1 p.c. of the business done by competing firms (all trades other than motor vehicle dealers, fuel dealers and parts of the "all other stores" classification). Department store sales in 1968 were 10.1 p.c. higher than in 1967, the largest increase among the 18 specified trades. However, growth of the various departments within the department stores has not been consistent, as Table 8 shows.

8.—Department Store Sales, by Departments, 1967 and 1968

Voluntary Group Stores.—In order to stem the continuing encroachment of chains and department stores on many kinds of business, independent retailers have turned increasingly in recent years to affiliation in a voluntary group organization. For a number of reasons, this strategy has met with widely varying degrees of success in the four trades principally affected by the voluntary group concept—grocery and combination stores, drug stores, hardware stores and variety stores. Through such group affiliation, independent retailers were afforded the opportunity to gain many, if not all, of the benefits enjoyed by chain store firms—mass purchasing power, centralized buying, lower per-unit advertising costs and a number of important management services. As sponsors and/or suppliers of many voluntary groups, wholesalers also gained, particularly through the streamlining of their selling and order-filling systems.

The effects of voluntary group activity during the 1964-67 period are shown in Table 9. In the case of grocery and combination stores and hardware stores, sales by affiliated independent retailers grew at a much faster rate than both non-affiliated independents and chains. Variety stores operating in a voluntary group setting out-paced non-affiliated stores but lagged behind the chains (possibly because the latter category included

the department store outlets of variety chain organizations). Only affiliated drug stores fared badly, increasing at less than one third of the rate of growth experienced by non-affiliated drug stores and chains.

² Includes department store outlets operated by variety store chains.

New Motor Vehicle Sales.—The largest homogeneous group of commodities sold within the confines of retail outlets is embodied in the classification "new motor vehicles". In the only *current* survey of retail trade carried on at the commodity level (all others are based on "kind of business"), new motor vehicles are taken to include private passenger cars and taxis, trucks, buses and other commercial vehicles sold at retail.

As shown in Table 10, sales of new motor vehicles in 1968 exceeded the \$3,000,000,000-mark for the first time. Automobile dealers and distributors effected sales of 887,007 new motor vehicles with a value at the consumer level of \$3,110,630,000; this occurred despite the fact that, commencing in 1967, automobile manufacturers and distributors were requested to report sales based on the *actual cost to purchasers*, rather than on manufacturers' suggested list prices as in previous years.

Table 11 shows new motor vehicle sales, by type of vehicle and by source of origin, for 1967 and 1968. It will be noted that sales of overseas-manufactured vehicles increased considerably more than those of domestic and United States manufacture—47.4 p.c. compared with 8.8 p.c.—but accounted for less than one twelfth of the total value.

Direct Selling.—In addition to being sold in retail stores, consumer goods often reach the household user through other, more direct channels of distribution, commonly described as "direct selling". These channels are characterized by the fact that the commodities handled bypass the retail outlet completely in moving from manufacturer to distributor to household consumer. For a number of years, the Dominion Bureau of Statistics has conducted a survey of one form of direct selling—that carried on by vending machine operators—and has recently initiated a second and more thorough examination of the direct selling engaged in by manufacturers and distributors specializing in direct-sales methods.

Vending Machine Operators.—The survey of vending machine operators is designed to measure the value of sales through automatic vending machines owned or operated by vending machine operators, including soft-drink bottlers engaged in vending activities on a regular year-round basis. In 1967, such sales reached a high of \$119,650,900, 11.3 p.c. above the 1966 total. As shown in Table 12, there were 790 vending machine firms in this business during 1967, operating more than 91,000 merchandise vending machines in a variety of locations across the country. These firms also operated 721 microwave and infra-red ovens, as well as 1,431 coin and bill changers.

Although vending machines can be used to distribute many types of commodities, the largest proportion of sales has been accounted for consistently by three main lines: tobacco products; hot drinks; and cold drinks vended in bottles, cans, cartons and disposable cups. The share of the market held by these three commodity lines rose in 1967 to \$98,060,307, or 82.0 p.c.

Direct Selling by Manufacturers and Specialist Agencies.—The first annual survey of direct selling was undertaken by DBS during 1968; the only data published previously were those contained in 1961 Census, *Retail Trade: General Review* (Catalogue No. 99-534). Unlike the 1961 survey, which covered all firms (manufacturing, wholesaling, retailing, etc.) engaged even partially in selling goods directly to household consumers, the new study was restricted in scope to manufacturers and selected agencies specializing in direct sales methods. In order to allow an analysis of growth in this area, data were obtained for both 1966 and 1967.

As shown in Table 14, the direct sales of manufacturers and specialized agencies amounted to \$645,586,000 during 1967, an increase of 5.1 p.c. over 1966 and 31.5 p.c. over the 1961 total of \$490,985,000. Among the industries surveyed, the largest share of sales was held by the following, with percentage change from 1961 shown in parentheses: dairy products (+19.1); newspapers, magazines and periodicals (+40.7); bakery products (-24.5); cosmetics (+62.8); and books (+23.3). Large increases were also recorded in direct sales of kitchenware and phonograph records. To supplement these data and to provide a more complete coverage of the direct selling field, it is intended to expand the survey by stages to include the direct sales of wholesalers, service establishments, contractors and others engaged in this form of activity.

14.—Direct Selling by Manufacturers and Specialist Agencies, 1961, 1966 and 1967

¹ The three components specified may not add to 100 p.c. due to omission of sales from roadside stands, market stalls, kiosks and other unspecified direct selling channels.

² Includes leather goods, jewellery and silverware,

aluminum products, textiles, boats, etc.

Operating Results of Retail Stores.—As an adjunct to its regular current publications on retail trade, DBS in 1963 initiated a triennial series of surveys on the operating results of retail stores. In the course of these surveys, data were collected on sales, inventory, cost of goods sold, stock turnover and operating expenses. Publications in this series include detailed information on the operating results of chain stores and independent stores; incorporated and unincorporated businesses; those that own their own premises and those that rent; and all types classified by sales size.

Table 15 gives a summary of profit-and-loss data for a number of trades in the food field: grocery stores, fruit and vegetable stores, meat markets, combination stores and dairy products stores. The data are expressed in percentage terms, as a proportion of the average net sales dollar, and direct comparisons from one trade or category to another are therefore possible.

15.—Operating Results of Selected Food Stores as a Percentage of Net Sales, 1966

Wholesale Trade

The sales of wholesalers, as estimated in the course of a monthly sample survey of such firms, have increased consistently over the past several years, reaching a new high in 1968 of \$17,038,000,000, almost 5 p.c. above 1967. Consumer goods wholesalers experienced a 7.7-p.c. increase in sales compared with a 2.4-p.c. rise recorded by wholesalers of industrial goods. Only in the latter category were there declines in any specific trades; the sales of coal and coke, grain, and farm machinery wholesalers were all lower in 1968 than in the previous year.

Table 16 shows the annual sales of 26 wholesale business groups (wholesale merchants only) during the period 1964-68. These data reflect changes in the wholesale trade series brought about by revisions to a 1964 benchmark, updating the figures from the 1951 benchmark. The intercensal revisions, part of which are included here, were published in a special report released by DBS in April 1969.

16.—Wholesale Sales, by Kind of Business, 1964-68

NOTE.—Totals do not include the business transactions of manufacturers' sales branches, agents and brokers, primary product dealers and petroleum bulk tank plants and distributors. Components may not add to totals due to rounding.

In addition to the principal surveys of wholesalers (monthly) and other wholesale distributors and agents (annually), two annual surveys of wholesale sales at the commodity level have been completed—farm implements and equipment, and construction machinery and equipment. It should be noted that figures on farm implement and equipment sales are also published monthly, in aggregate form, based on the data reported by a panel of major-line companies.

Farm Implements and Equipment.—After a number of years of steadily increasing growth, the sales of farm implements and equipment (valued at wholesale prices) declined markedly during 1968 when, at \$362,004,000, they were 16.3 p.c. lower than the \$432,299,000 recorded in 1967. Saskatchewan, with the largest volume of sales, suffered the greatest decline (24.1 p.c.), its second in two years. Only in British Columbia were sales higher (by 7.7 p.c.) than in 1967.

Table 17 gives data on sales by province and by major group of commodities for 1964-68. Sales for repair parts, not shown, were \$63,092,000 in 1968, 1.8 p.c. higher than the record \$61,999,000 reached in the previous year.

17.—Sales of Farm Implements and Equipment, by Province and by Major Group, 1964-68

NOTE.—Data are based on a commodity survey and therefore exclude sales of other products and receipts from secondary activities, including repairs, carried out by respondents. The figures are not comparable with those given in Table 16.

Construction Machinery and Equipment.—The first survey of construction machinery and equipment sales was undertaken for the year 1967. Its purpose was to measure the sales of Canadian distributors and manufacturers in this field and to assess the revenue derived from rentals. As shown in Table 18, total sales and rental revenue amounted to \$568,680,000, nearly 80 p.c. of which was realized through the sale of new machinery and equipment. Distributors accounted for approximately 90 p.c. of the totals.

Service Trades

Hotels.—In addition to its annual hotel survey, DBS also reports semi-annually on the trend of hotel receipts in Canada—based on results obtained from a panel of hotels

having 50 or more rooms. Table 20 shows that the receipts of such hotels increased by nearly 20 p.c. during the 1965-68 period. The best results were experienced in British Columbia and Alberta, the poorest in Newfoundland and Prince Edward Island (combined) and Quebec.

On a year-to-year basis, the greatest rise took place between 1966 and 1967, as Canada's Centennial year celebrations produced a considerable volume of hotel business. The let-down from 1967 to 1968 was most acutely felt in Quebec, which had shown the greatest increase in the previous year. As a result, hotels having 50 or more rooms experienced an over-all decline of 1.4 p.c. during 1968.

20.—Percentage Change in Hotel Receipts, by Province, 1965-68

(Hotels having 50 or more rooms)

¹ Includes the Yukon and Northwest Territories.

Restaurants.—The same factors that affected hotel business during recent years were also evident in another large area of the service trades—restaurants and other eating places. From 1966 to 1967, restaurant receipts rose by 4 p.c. and reached a new high of \$1,121,000; however, the 1968 results of \$1,109,000 represented a decline of 1 p.c. below the 1967 level. The 1968 loss in revenue was confined to Newfoundland, Quebec (where business rose by 7.9 p.c. in 1967) and Saskatchewan.

As shown in Table 21, restaurant receipts rose by nearly \$177,000,000 (18.9 p.c.) over the 1964-68 period. The largest percentage growth took place in Alberta (33.1 p.c.), British Columbia (33.0 p.c.) and Nova Scotia (24.5 p.c.). Declines were recorded in only two provinces—Newfoundland and Saskatchewan.

21.—Restaurant Receipts, by Province, 1964-68, with Percentage Change, 1967-68

Motion Picture Theatres.—In 1967, the receipts of motion picture theatres, both regular and drive-in, reached their highest level in the past 12 years (the highest level ever for drive-ins alone). The total of \$103,563,832 received was 9.7 p.c. higher than in 1966, and the amount of amusement taxes increased to \$7,216,034, up 10.7 p.c. over the previous year. The increase in revenues was not evenly split; drive-in theatre receipts grew at a somewhat faster rate (12.3 p.c.) than those of regular motion picture theatres (9.4 p.c.).

In contrast to the revenue and tax increases, the number of admissions for all types of theatres declined in 1967 for the third successive year, dropping 1.4 p.c. to 97,572,894. As in previous years, the decline in admissions was restricted to regular theatres, which lost nearly 2,200,000 customers compared with 1966.

22.—Summary Statistics of Motion Picture Theatre Operations, 1966 and 1967

Film Distributors.—During 1967, films were distributed by 57 companies through 116 offices located across Canada. These exchanges had total receipts of \$56,551,239 in 1967, compared with \$53,389,163 in the previous year, and paid \$4,667,600 in salaries and wages to 763 employees. (The activities of the National Film Board of Canada are not included here; they are covered in the Board's Annual Report, copies of which are available from the Queen's Printer, Ottawa.)

Receipts from the rental of films increased by \$3,059,938 (5.8 p.c.) during 1967, to reach a new high of \$56,099,098. Revenue derived from rentals for theatrical use amounted to \$37,328,258, for television use \$17,737,654 and for other use \$1,033,186. In addition, \$34,494 was derived from the sale of advertising and \$417,647 from other sources.

New films released for theatrical bookings numbered 945, of which 623 were feature films, 128 cartoons, 110 newsreels and 84 other short subjects. Of the 623 feature films, 210 originated in the United States, 148 in France, 106 in Italy, 70 in Britain, eight in Canada and 81 in other countries.

Motion Picture Production.—In 1967 there were 93 private (i.e., non-government) firms engaged principally in the production and printing of motion picture films and filmstrips for industry, government, education and entertainment purposes. These firms employed 1,161 persons, paid \$6,668,977 in salaries and wages, and had a gross revenue of \$22,734,605, 26.7 p.c. higher than in 1966. Excluded from these data are: television stations; nine government agencies engaged principally in motion picture pro-

duction; and four private firms engaged only partially in this form of activity. The latter firms produced three information or documentary films for television use, three non-theatrical films, 27 commercial advertising films for television, and two sound filmstrips. They derived \$172,118 of their total revenue of \$1,179,428 from this source.

24.—Summary Statistics of Motion Picture Production by Private Firms, 1964-67

¹ Excludes proprietors of unincorporated businesses.

Table 25 shows the motion picture production records of both private industry and government agencies during 1966 and 1967. Of the 9,079 films produced in Canada in the latter year, nearly all (8,995) were in the English or French languages; the total represents an increase of 6.6 p.c. over the 1966 figure. If government production (which fell by 40.3 p.c.) is omitted, the rate of activity in the private sector was 13.5 p.c. higher than in 1966.

In total, private and government film producers printed 58,719,559 ft. of 16mm film and 7,862,392 ft. of 35mm film in black and white; and 36,620,457 ft. of 16mm film and 6,703,260 ft. of 35mm film in colour. Included in these figures were 45 sound motion pictures of five minutes or longer made for other than Canadian sponsors.

Power Laundries, Dry Cleaning and Dyeing Plants.—In 1966, the combined receipts of laundries and dry cleaning and dyeing plants increased by 11.8 p.c. over the previous year's level, reaching a new high of \$253,311,429. Power laundries reported revenues of \$99,421,169, 10.9 p.c. higher than in 1965, and dry cleaning and dyeing plants reported \$153,890,260, an increase of 12.4 p.c. In total, 2,470 laundries, dry cleaners and dyers employed 35,433 people and paid out \$116,681,656 in salaries and wages. The cost of materials and supplies used in their operations amounted to \$24,990,210, 10.3 p.c. more than in 1965. The upward trends reflected in these statistics provide further evidence of the increasing importance that such "personal service" trades have assumed in the economic life of the nation.

Advertising Agencies.—Billings of advertising agencies advanced during 1967 to \$429,595,237, 6.8 p.c. higher than in 1966. Commissionable billings (i.e., for advertising placed in publications, radio, television and other media) increased 7.0 p.c. to \$420,092,360 and billings for production work done by agency staff increased by 14.7 p.c. to \$4,753,410. However, there was a 13.5-p.c. decline in the amount of billings for market surveys, research and other fees. Although gross revenue for all agency business done during 1967 rose to \$72,834,604—8.8 p.c. higher than the 1966 total—net revenue (before deduction of income tax) decreased to \$6,019,603, 8.5 p.c. below the previous year's figure.

Table 28 shows the way in which commissionable billings of advertising agencies were distributed among the various media during 1964-67. Although radio's share remained more or less constant over this period, the amount devoted to television advertising increased from 26.7 p.c. to 29.1 p.c. At the same time, billings for advertising in publications declined from 40.4 p.c. to 37.2 p.c. and for other visual advertising forms from 3.9 p.c. to 3.5 p.c.

Credit Statistics

Sales Financing.—During 1967, for the second consecutive year, the value of new financial paper purchased by Canadian sales finance companies declined. The \$1,457,000,000 of new paper purchases (the lowest amount recorded since 1963) was 4.5 p.c. below the previous year's total. The decline was felt mainly in the consumer goods field—the result of a drop of \$67,000,000 or 7.7 p.c. in new paper purchases on new and used passenger cars. In the commercial and industrial goods field, new paper purchased on new and used commercial vehicles was very slightly ahead of the 1966 figure but for non-vehicular commercial goods purchases declined by 3.0 p.c.

As might be anticipated following two successive years of declines in the rate of acquisition of new financial paper, the outstanding balances of sales finance companies fell for the first time in several years. The drop of \$115,000,000 in balances outstanding from Dec. 31, 1966 to Dec. 31, 1967, represented a loss of 6.2 p.c., which was fairly evenly divided between consumer goods (–6.7 p.c.) and commercial and industrial goods (–5.4 p.c.). The major impact was felt in the balances outstanding on new and used passenger cars which were down 7.7 p.c., and on new and used commercial vehicles which declined 7.5 p.c.

Consumer Credit.—Total balances outstanding on credit extended to consumers by retail stores and selected financial institutions have increased rapidly during the past decade, surpassing the \$8,300,000,000-mark by the end of 1967 and reaching an estimated \$9,500,000,000 at Dec. 31, 1968. From 1959 to 1968, consumer credit outstanding (calculated as at Dec. 31 in all cases) has nearly tripled, with most of the growth heavily concentrated in the chartered banks, consumer loan companies and credit unions. The data in Table 30 do not include consumer credit extended by investment, trust, mortgage, leasing and rental companies, nor do they include various forms of service and personal credit on which no detailed information is available.

30.—Consumer Credit Balances Outstanding, by Selected Holders, 1959-68

¹ Credit on consumer goods only.² Includes personal loans other than secured loans, home improvement loans and mortgages.³ Includes Quebec savings banks loans and oil company credit card balances.

Retail Credit.—During 1968 there was continued growth in the value of accounts outstanding on the books of Canadian retailers, who held \$1,458,600,000 in retail credit as at Dec. 31, an amount 3.8 p.c. higher than at the end of the immediately preceding year and 55.6 p.c. higher than 10 years earlier. Of the total credit outstanding at year-end 1968, more than two thirds was accounted for by department stores, furniture, television, radio and appliance stores, and motor vehicle dealers.

Section 2.—The Marketing of Agricultural Products*

Subsection 1.—The Grain Trade, 1966-67

Estimated domestic supplies of wheat, oats, barley, rye and flaxseed totalled 2,209,400,000 bu. in the crop year 1966-67, an increase of 7 p.c. over the total of 2,062,400,000 bu. in 1965-66.

Marketings of the six major grains (including rapeseed) in the Prairie Provinces during the 1966-67 crop year amounted to 835,400,000 bu., an increase of 9 p.c. over the 1965-66 level of 769,500,000 bu. and 42 p.c. over the ten-year (1955-56—1964-65) average of 587,600,000 bu. Deliveries of wheat, barley and rapeseed were larger than those of the previous crop year and those of oats, rye and flaxseed were smaller. Marketings of wheat at 632,400,000 bu. were up 11 p.c. and accounted for 76 p.c. of the total deliveries. Marketings of the other major grains, with totals for 1965-66 and the ten-year averages, respectively, in brackets and in millions of bushels, were as follows: oats, 38.4 (51.7, 50.8); barley, 112.7 (93.9, 96.5); rye, 11.0 (12.1, 6.7); flaxseed, 20.1 (23.7, 16.9); and rapeseed, 20.8 (18.8, 7.2).

As in the preceding year, an initial Western grain delivery quota of 100 units was in effect at local delivery points at the beginning of the marketing year: permit holders were entitled to deliver a maximum of 400 bu. of wheat or 1,000 bu. of oats or 600 bu. of barley or 600 bu. of rye or any combination of these grains which, when calculated on a unit basis, did not exceed 100. The initial unit quota was followed by general quotas based on bushels per specified acre; specified acreage consisted of each permit holder's acreage seeded to wheat (including Durum), oats, barley and rye, the summerfallow acreage and the acreage seeded to eligible grasses and forage crops. The crop year commenced with the initial quotas in effect at all delivery points. The first general quotas, established Sept. 5, 1966, were extended and increased as local country elevator space became available. For flaxseed and rapeseed, a delivery quota of 5 bu. per acre seeded or 250 bu. whichever was larger, was established Aug. 22, 1966, increased to 8 bu. per seeded acre or 400 bu. on Nov. 23, to the larger of 12 bu. per seeded acre or 600 bu. on

* Prepared in the Agriculture Division, Dominion Bureau of Statistics.

SUPPLY AND DISPOSITION OF CANADIAN WHEAT CROP YEARS ENDED JULY 31, 1958-67

Jan. 27, 1967, and declared open for the remainder of the crop year on Mar. 31. The general quota applied to rye until Mar. 31, 1967, when the quota was declared open for the remainder of the crop year.

Stocks of the six principal grains in store at both country and terminal elevators on Aug. 1, 1966, at 441,100,000 bu., were some 69,200,000 bu. lower than on the same date of 1965. The volume of high-moisture grain that required conditioning was lower than in the 1965-66 crop year. However, to assist producers who were holding stocks of high-moisture grain, the Canadian Wheat Board authorized, on Nov. 28, an advance delivery privilege on wheat, oats, barley and rye, having a moisture content of 15.7 p.c. and over, up to 4 bu. per specified acre in excess of established quotas, provided that such deliveries, when added to deliveries already made under authorized specified acreage quotas, did not exceed 8 bu. per specified acre. Heavy export commitments for wheat necessitated the movement of large volumes of grain to and from country elevators during the August-December period and this large shipping program enabled the Board to advance quotas. By the end of the first half of the crop year most delivery points were on a quota of 4, 5 or 6 bu. per specified acre. In early 1967 it became necessary to ensure that sufficient supplies were available in country elevators for forwarding to terminal positions to meet sales commitments. To avoid filling commercial grain handling facilities

with grain not immediately required, a supplementary quota of 5 bu. per acre seeded was authorized, first effective on Apr. 3. Shipments from country elevators continued in large volume from the opening of navigation in the spring of 1967 to the end of the crop year. By June 12, the specified acreage quota at all delivery points had been increased to 8 bu., and by July 20 the supplementary wheat quota was in effect at all stations.

Wheat.—Domestic supplies of wheat in 1966-67 were at an all-time high of 1,247,500,000 bu., 7 p.c. above the 1965-66 total of 1,162,400,000 bu. and 3 p.c. above the previous record supply of 1,210,700,000 bu. in 1963-64. The 1966 production of wheat, at \$27,300,000 bu., was higher than the 1965 output of 649,400,000 bu. but carryover stocks of 420,100,000 bu. were down from the 1965 carryover of 513,000,000 bu. Exports of wheat and flour in terms of wheat, at 515,300,000 bu., were 12 p.c. below the 584,900,000 bu. exported in the previous year but surpassed by wide margins both the ten-year average of 350,600,000 bu. and the long-term average of 283,400,000 bu.

During the crop year 1966-67, marketing of Western Canadian wheat was again conducted by the Canadian Wheat Board on a one-year Pool basis, with the initial payment being \$1.50 per bu. No. 1 Northern, basis in store Fort William-Port Arthur or Vancouver. There were no adjustment or interim payments on the 1966-67 Wheat Pool, but on Mar. 27, 1968, the final payment was announced. Producers delivered 626,500,000 bu. including 23,600,000 bu. of Durum. The amount of the final payment distributed to producers was \$315,000,000, of which \$14,900,000 was distributed to producers of Durum. After deducting the Prairie Farm Assistance Act levy, the average final payment on spring wheat (other than Durum) was 49.759 cents per bu. and the average final payment on Durum grades was 63.323 cents per bu. The total payment for No. 1 Northern, basis in store Fort William-Port Arthur or Vancouver and prior to deduction of the PFAA levy, amounted to \$1.98709 per bu.

Sales in 1966-67 under the International Wheat Agreement continued to be quite widely distributed, with 30 of the 40 importing countries included in the pact purchasing wheat and/or flour from Canada. Under the terms of the Agreement, purchases of Canadian wheat and flour amounted to the equivalent of 206,800,000 bu. during 1966-67 and accounted for 28 p.c. of total sales under the Agreement. Britain was the leading IWA market. Shipments to that country amounted to some 73,100,000 bu. and shipments to other major importers were as follows, in millions of bushels: Japan, 60.2; India, 43.6; Federal Republic of Germany, 22.6; Cuba, 19.5; Belgium and Luxembourg, 13.9; Republic of South Africa, 9.4; Venezuela, 5.0; and Switzerland, 4.9. In 1966-67, the leading markets for Class II wheat and wheat flour were, in millions of bushels: the Soviet Union, 93.2; Communist China, 90.5; Poland, 13.8; Italy, 9.5; Pakistan, 7.6; East Germany, 4.5; Czechoslovakia, 4.2; and Bulgaria 3.8.

Other Grains.—The supply and disposition of the major Canadian grains for the crop years 1965-66 and 1966-67 are shown in Table 32. During the 1966-67 crop year, initial payments for oats basis No. 2 C.W. in store Fort William-Port Arthur, and barley basis No. 3 C.W. Six-Row in store Fort William-Port Arthur, were 60 cents per bu. and 46 cents per bu., respectively, the same as in 1965-66; no interim payments were made on either grain.

The surplus of oats for distribution, announced Mar. 12, 1968, amounted to \$8,402,616 and, based on 35,104,357 bu. delivered to the 1966-67 Pool, averaged 23.9361 cents per bu. after deducting the 1-p.c. PFAA levy. The final payment on barley, also announced Mar. 12, was based on deliveries of 106,155,792 bu. and amounted to \$35,798,202, averaging 33.7223 cents per bu. after deducting the 1-p.c. PFAA levy. Total prices realized by producers for representative grades, prior to the PFAA levy, were: No. 2 C.W. oats, \$0.83445 per bu.; No. 1 Feed oats, \$0.79536 per bu.; No. 3 C.W. Six-Row barley, \$1.29399 per bu.; and No. 1 Feed barley, \$1.20839 per bu.

Combined exports of oats, barley, rye, flaxseed and rapeseed (including Customs exports of seed oats, oatmeal and rolled oats, malt, rye flour and meal in terms of grain

equivalent) amounted to 103,700,000 bu. in 1966-67, 10 p.c. above the 1965-66 level of 94,600,000 bu. and 12 p.c. above the ten-year (1955-56—1964-65) average of 92,800,000 bu. Barley, rye and rapeseed exports were higher in 1966-67 than in 1965-66 and those of oats and flaxseed were lower.

Exports of oats in bulk amounted to 2,800,000 bu. in 1966-67 in contrast to the 15,300,000 bu. shipped in the previous year. The major markets were the Netherlands with 1,500,000 bu. and the United States with 1,400,000 bu., compared with 4,900,000 bu., and 1,100,000 bu., respectively, in 1965-66. Other shipments, ranging from 100,000 bu. to 300,000 bu., went to Britain, Switzerland, Belgium and Luxembourg, Ireland and Syria. Exports of Canadian oatmeal and rolled oats amounted to the equivalent of 287,000 bu. compared with 401,000 bu. the year before.

Barley exports were the highest since 1959-60; at 53,100,000 bu., they represented a sharp increase over the 33,700,000 bu. exported in 1965-66. Shipments to several traditional customers reflected increases over 1965-66 levels and were as follows, with totals for the previous year in brackets, in millions of bushels: Italy, 12.2 (11.9); Japan, 10.5 (6.1); Britain, 9.3 (4.7); United States, 7.4 (4.7); Spain, 2.9 (nil); Federal Republic of Germany, 2.3 (1.5); Netherlands, 1.3 (0.3); Austria, 1.2 (0.7); and Norway, 1.0 (0.6). Shipments of malt were the equivalent of 5,400,000 bu. of barley, 26 p.c. above the 1965-66 figure of 4,300,000 bu. They went to 25 destinations, the major markets being, in millions of bu.: United States, 1.0; Britain, 0.8; Philippines, 0.6; Peru, 0.5; Venezuela, 0.5; and Brazil and Japan, 0.4 each.

¹ Includes flour in terms of wheat, rolled oats and oatmeal in terms of oats, malt and pot and pearl barley in terms of barley, and rye flour in terms of rye. ² Fewer than 50,000 bu. ³ Includes seed wheat, wheat flour in terms of wheat, seed oats, rolled oats and oatmeal in terms of oats, malt in terms of barley, and rye flour and meal in terms of rye. ⁴ Includes human food, seed requirements, industrial use, loss in handling and animal feed.

In 1966-67, exports of rye, at 10,000,000 bu., were only slightly below the all-time record of 12,900,000 bu. shipped in 1955-56. The principal markets, in millions of bushels, were: Japan, 4.3; United States, 1.6; Norway, 1.5; and the Netherlands, 1.0.

Clearances of Canadian flaxseed during 1966-67 amounted to 16,600,000 bu., 13 p.c. below the 18,900,000 bu. of the previous year. The leading markets were Japan with imports of 4,700,000 bu., the Netherlands with 4,100,000 bu., and Britain with 3,500,000 bu. Exports of linseed oil were equivalent to about 500,000 bu. of flaxseed, most of which went to Britain. Trade in rapeseed during 1966-67 amounted to a record 13,800,000 bu., slightly above the previous year; major markets, in millions of bushels, were: Japan, 8.4; Italy, 3.2; and the Netherlands, 1.0. Mustard seed exports, at 2,400,000 bu., were above the 1965-66 level of 1,800,000 bu. and went mainly to the United States, the Netherlands, Japan, and Belgium and Luxembourg.

Production and Exports of Wheat Flour.—Production of wheat flour in the 1966-67 crop year amounted to 39,979,000 cwt. and wheat milled for flour totalled 90,085,000 bu., each representing a decrease of 8 p.c. from the previous year. Of the wheat milled for flour, approximately 77,017,000 bu. were Western Canadian spring wheat (other than Durum) and the remainder was made up of 8,263,000 bu. of Ontario winter wheat, 3,659,000 bu. of Durum wheat and 1,145,000 bu. of other types. Utilization of milling capacity, based on a daily operating potential of some 173,000 cwt., averaged 78.8 p.c. compared with 85.4 p.c. in the previous year. Exports of wheat flour in 1966-67 amounted to 13,848,000 cwt., some 16 p.c. less than the 16,576,000 cwt. exported in 1965-66.

36.—Wheat Milled for Flour, and Production and Exports of Wheat Flour, Five-Year Average 1940-60 and Crop Years Ended July 31, 1961-67

Subsection 2.—Livestock Marketings*

All classes of livestock, except cattle, had higher marketings in 1967 than in 1966. The total output of cattle to public stockyards, direct to packing plants and on export fell short of the previous year by about 6 p.c., amounting to 3,270,880 head. The reduction in marketings was attributable mainly to a sharp drop in direct exports and to curtailed sales for export off public stockyards. Only in two previous years (1956 and 1966), however, were the 1967 marketings exceeded, and then not by a wide margin. All provinces shared in the output decline. Throughout the year there was a strong demand for replacement cattle. The inward movement of 573,573 cattle and 469,870 stock calves was the heaviest ever returned to the country for further feeding. The dressed weight of cattle slaughtered in inspected packing plants was higher than for each comparative month in 1966. Average carcass weight was 550.1 lb., about 5 lb. over the previous year; the heavier weight reflected an expanded cattle feeding program and continued improvement in carcass quality. A record 55.0 p.c. of the inspected slaughtering was in choice and good grades, compared with 51.6 p.c. in 1966. The per head value of all cattle marketed rose about \$13 from 1966 but the reduction in marketings resulted in a lower income at \$735,400,000. Increased calf marketings and higher prices resulted in a record income of \$121,800,000 for this class.

* More detailed information is available from DBS annual report *Livestock and Animal Products Statistics* (Catalogue No. 23-203), and the Canada Department of Agriculture publication *Livestock Market Review*. Statistics of livestock and poultry production and disappearance are given on pp. 494-499.

¹ Includes Newfoundland for the first time.² Fed calves discontinued Jan. 1, 1965; included with steers and heifers.³ Butcher calves not reported separately before 1965.⁴ Grass calves discontinued Jan. 1, 1965; included with Medium and Common, All weights.⁵ Includes injured hogs, ridglings and stags.

The shipment of hogs to inspected and approved packing plants in 1967 was the highest since 1959 and the third highest on record; marketings numbered 8,186,356, or 19.3 p.c. above those of 1966. All provinces participated in the increase but the principal gains were made in the western provinces. The average weight of hog carcasses was 162.0 lb., slightly higher than the 161.5 lb. of a year earlier. For the first time in several years the percentage of grade A hogs declined in several provinces but the percentage for Canada as a whole, excluding sows and stags, was 42.2 compared with 42.0 in 1966. The per head value declined about \$9 but the sharp increase in commercial marketings brought the value to an all-time high of \$373,800,000.

Section 3.—Storage and Warehousing

This Section carries data on licensed grain storage and the public warehousing industry only. Information on other types of storage may be obtained from the following sources: cold storage and storage of food—Economics Branch of the Canada Department of Agriculture; storage of petroleum and petroleum products—Energy Statistics Section of the Manufacturing and Primary Industries Division, DBS; customs warehouses—Port Administration Branch of the Department of National Revenue.

Licensed Grain Storage.—Total grain storage capacity in Canada, licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada, amounted to 679,828,000 bu. at Dec. 1, 1966, the increase over the same date of 1965 being 2,629,000 bu. Greater capacity in western country elevators and lower St. Lawrence

ports more than offset decreases in interior private and mill, interior terminals and lower Lake and upper St. Lawrence ports. The movement of grain in and out of storage during 1966-67 is discussed at p. 941. Table 39 gives the amount in storage at three dates during the year. On July 31, 1967, 65.3 p.c. of the licensed storage capacity was occupied as compared with 57.9 p.c. on the same date of 1966.

The Public Warehousing Industry

The summary statistics of the warehousing industry presented in Table 40 cover the operations of the majority of firms offering general merchandise and refrigerated storage facilities to the public. Associations and organizations such as co-operatives operating warehouses or storages for their own members are not included nor are packing houses and other firms operating storage facilities in connection with their respective businesses. Small food lockers are not included except where they may be part of a general warehousing business.

¹ Includes storage space for household goods amounting to 900,000 cu. ft. in 1963; 1,047,090 cu. ft. in 1964; 969,586 cu. ft. in 1965; 1,037,370 cu. ft. in 1966; and 1,215,270 cu. ft. in 1967.

Section 4.—Co-operative Organizations*

The volume of business in 1967 for 2,517 local co-operatives amounted to \$2,179,000,000, an increase of \$219,000,000 or 11 p.c. over the previous year, and consisting of farm product marketings \$1,418,000,000, sale of merchandise and supplies \$686,000,000, service revenue (trucking, cold storage, grazing, etc.) \$61,000,000 and miscellaneous income (rent, interest, dividends, etc.) \$14,000,000. Assets totalled \$1,000,000,000 of which members' equity represented 47 p.c. Membership at 1,700,000 was up slightly from that of the previous year. Marketing and purchasing co-operatives, which market members' produce and retail merchandise and supplies to members, have been for many years the dominant group and in 1967 were responsible for 95 p.c. of the total business volume. Service and fishermen's co-operatives accounted for the remainder.

Marketing and purchasing co-operatives registered an annual increase during 1967 of \$208,000,000 or 11 p.c. in business volume which was made up of farm product marketings \$1,373,000,000, retailing of merchandise and supplies \$681,000,000, service revenue \$25,000,000 and miscellaneous income \$12,000,000, for a total of \$2,091,000,000. Farm product marketings were up by \$134,000,000, grain sales accounting for \$85,000,000 of the increase. Dairy products and livestock and products were up by \$26,000,000 and \$15,000,000, respectively. Although fruit and vegetable marketings were also substantially higher, most of the increase was due to a return to normal production in the tree fruit area of British Columbia which had suffered severe frost damage in the previous year. Honey marketings were down, reflecting a decline in the yields of Canadian bee colonies in 1967. Supply sales rose by \$72,000,000 or 12 p.c. during the year, with most sales categories contributing to the increase. Supply sales tend to rise at a fairly steady rate over the years whereas farm marketings, particularly wheat, fluctuate as a result of crop failures, over-production, etc., on both a national and international basis. Assets of the marketing and purchasing co-operatives totalled \$859,000,000 at year-end, a rise

* Prepared in the Economics Branch, Canada Department of Agriculture, Ottawa.

of \$82,000,000 or 11 p.c. over 1966, with most of the increase (\$62,000,000) occurring in inventories and property and equipment. Since the increase in assets was largely financed by short-term liabilities, members' equity declined during the year from 48 p.c. to 46 p.c.

41.—Summary Statistics of Co-operative Marketing and Purchasing Associations, 1963-67 and by Province, 1966 and 1967

¹ Includes other revenue.

Service co-operatives provide services to their members such as trucking, cold storage, grazing, medical insurance, rural electrification, etc., and, in conjunction with their main function, some service co-operatives are engaged in the marketing of farm products and the sale of supplies. Total business volume of 1,074 service co-operatives in 1967, with a membership of 317,000, was \$59,353,000, consisting of service revenue \$36,474,000, miscellaneous income \$1,482,000, and sales of farm products and supplies \$21,397,000. Total assets at year-end amounted to \$122,346,000 of which members' equity represented 52 p.c. Fishermen's co-operatives, numbering 86 with a membership of 9,000, reported business volume in 1967 of \$29,076,000, including fish marketings \$25,637,000, fishing and other supplies \$3,039,000, and service revenue and other income \$400,000. Assets totalled \$19,060,000.

42.—Products Handled by Marketing and Purchasing Co-operatives, 1965-67

Wholesale co-operatives are federations of local co-operatives which act as central marketing agencies and distributors for the farm products and supplies of the local co-operatives. Their sales are reported separately from those of the local co-operatives, since they are largely a duplication of the sales made by the locals. For 1967, eight wholesales reported total sales of \$542,000,000, a gain of 17 p.c. over 1966. Farm product marketings were \$193,000,000, including livestock \$100,000,000 and dairy products \$40,000,000. Supply sales totalled \$349,000,000 of which the largest items were food products \$95,000,000, feed \$83,000,000, and petroleum \$61,000,000. Assets for the nine wholesales (one of which is a wholesaler for the other wholesales) amounted to \$190,000,000 at the end of 1967.

Arctic co-operatives (not included in the above figures), initiated in 1959 under the Co-operative Development Program for the benefit of the native population, have since enjoyed continuing and expanding support from the people of that region. These co-operatives have vigorously promoted the marketing of native handicrafts. For the year 1967, total sales of 22 Arctic co-operatives (there were an additional 13 ready to begin operations in 1968) located in the Northwest Territories and northern Quebec exceeded \$2,000,000 and assets amounted to \$1,600,000 of which members' equity, which originally started at a very low figure, represented 50 p.c.

PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

Section 1.—Controls Affecting the Marketing of Farm Products

Subsection 1.—Control of the Grain Trade

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners for Canada which, since 1912, has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board which operates under the Canadian Wheat Board Act, 1935.

The Board of Grain Commissioners for Canada.—The Board of Grain Commissioners was established in 1912 under the authority of the Canada Grain Act, 1912 (RSC 1952, cc. 25 and 308 and amendments). It is a quasi-judicial and administrative body of three—a chief commissioner and two commissioners—reporting to the Minister of Agriculture.

The Canada Grain Act has been called the Magna Charta of the Canadian grain trade or, more particularly, of the Canadian farmer, and the Board's chief duties are to ensure that the rights conferred on the different parties by the provisions of the Act are properly protected. Transportation of grain is restricted except from or to licensed elevators, and restriction is placed on the use of established grade names. The Act does not provide for any control or supervision of grain exchanges and the Board of Grain Commissioners has no power or duties in the matter of grain prices.

The Board manages and operates, under semi-public terminal licences, the Canadian Government elevators situated at Moose Jaw and Saskatoon, Sask., Lethbridge, Edmonton and Calgary, Alta., and Prince Rupert, B.C. The Executive Offices of the Board and other principal offices are situated at Winnipeg, Man., but branch offices are maintained at numerous points from Montreal in the east to Victoria in the west. Total personnel is approximately 1,000, including Canadian Government Elevators staff.

On a fee basis, the Board provides official inspection, grading and weighing of grain, and registration of warehouse receipts. All operators of elevators in Western Canada and of elevators in Eastern Canada that handle western-grown grain for export, as well as all parties operating as grain commission merchants, track buyers of grain, or as grain dealers, are required to be licensed by the Board annually and to file security by bond or otherwise as a guarantee for the performance of all obligations imposed upon them by the Canada Grain Act or by the regulations of the Board.

To protect the rights of the different parties, the Board has jurisdiction to inquire into and is empowered to give direction regarding any matter relating to the grading or weighing of grain; deductions made from grain for dockage; shortages on delivery of grain into or out of elevators; unfair or discriminatory operation of any elevator; refusal or neglect of any person to comply with any provision of the Canada Grain Act; and any other matter arising out of the performance of the duties of the Board.

In the Prairie Provinces the Board maintains four assistant commissioners—one in Alberta, two in Saskatchewan and one in Manitoba. These assistant commissioners investigate complaints of producers and inspect periodically the country elevators in their respective provinces; all elevators with their equipment and stocks of grain are subject at any time to inspection by officials of the Board.

The Board sets up, annually, Committees on Grain Standards and also appoints Grain Appeal Tribunals to give final decisions in cases where appeals are made against the grading of grain by the Board's inspection officials. To assist in maintaining the uniform quality of the top grades of Red Spring wheat handled through terminal elevators, the Canada Grain Act provides that wheat of these grades shall be stored with grain of like grade only.

The Board's Research Laboratory, located at Winnipeg, is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. The Laboratory collects and tests samples to obtain information on the quality of the various grain crops grown each year and on the quality of grain shipped. Basic research is also undertaken, the program being directed toward better understanding of what constitutes quality in cereal grains and toward improvement in the methods of assessing quality.

In addition to its duties under the Canada Grain Act, certain other duties are performed by the Board. Under the provisions of the Inland Water Freight Rates Act (RSC 1952, c. 153), the Board maintains records of rates for the carriage of grain from Fort William or Port Arthur, Ont., by lake or river navigation and is empowered to prescribe maximum rates for such carriage. Under the provisions of the Prairie Farm Assistance Act (RSC 1952, c. 213 as amended), the Board collects from licensees under the Canada Grain Act 1 p.c. of the purchase price of wheat, oats, barley, rye, flaxseed and rapeseed purchased by such licensees.

The Canadian Wheat Board.—The Canadian Wheat Board was established under the Canadian Wheat Board Act of 1935 for the purpose of "the marketing in an orderly manner, in interprovincial and export trade, of grain grown in Canada" and now operates under RSC 1952, c. 44 as amended. The Board accomplishes its objective through regulation and agreement. It owns no grain handling facilities but, by entering into agreements with the owners of these facilities, it attempts to bring about an orderly flow of grain through each of the steps involved in merchandising the grain from the producer to the domestic or overseas buyer.

In the selling of wheat, the Board utilizes the services of shippers and exporters. In its sales operations, the Board endeavours to meet the wishes of overseas buyers and, on occasion, enters into direct contracts. When an exporter completes an export sale, in his capacity as an agent of the Board, he is responsible for the transaction; he completes the transaction with the buyer and settles with the Board for the purchase of the wheat from the Board.

When the commercial storage facilities are inadequate to handle all the grain produced, it is necessary for the Board to regulate the flow of grain from the producer to these forward positions. The first step is accomplished by the use of producer's delivery permits issued annually by the Canadian Wheat Board. Every delivery of grain made to country elevators by a producer is entered in his permit book. By regulating the amount of grain delivered by the producer to the country elevator by the use of a quota system and, by apportioning shipping orders to country elevators according to the needs created by sales commitments, the Wheat Board regulates the amount of grain coming into the marketing channel.

The next step is the handling of the grain by the country elevator. The maximum charges for the handling and storing of the grain are set by the Board of Grain Commissioners, but the actual charges are subject to negotiation between the elevator companies and the Wheat Board.

The third step in the marketing process—transporting the grain from the country elevators to large terminal elevators in Eastern Canada, Churchill or on the West Coast—is carried out by the railways. The Wheat Board determines the kinds and grades of grain that are required at the different terminal destinations to meet its sales commitments and informs the elevator companies and the railways of these needs. The maximum tariffs are set by an agreement between the railways and the Government of Canada.

The fourth major step—storing and handling of the grain at terminal elevators—is done in privately or co-operatively owned elevators. Maximum charges are established for this service by the Board of Grain Commissioners.

In the case of oats and barley, the Board's operations are less extensive than those relating to wheat. These two grains are sold in store positions at the terminal elevators at Fort William-Port Arthur and Vancouver. Oats and barley are marketed either on a straight cash basis at prices quoted daily by the Board or on the basis of exchange of futures concluded through the facilities of the Winnipeg Grain Exchange. The Board controls the movement of coarse grains to the Lakehead. The private trade is responsible for the movement of oats and barley from Lakehead or Vancouver positions.

The producer receives payment for his wheat, oats and barley in two or three stages. An initial payment price is established early in the crop year by Order in Council. The initial payment price less the cost of handling grain at the local elevator and the transportation costs to the Lakehead or Vancouver is the initial price received by the producer. This price is a guaranteed floor price in that if the Wheat Board, in selling the grain, does not realize this price and the necessary marketing costs, the deficit is borne by the Federal Treasury. However, with very few exceptions, the Wheat Board has operated without financial aid from the Federal Treasury.

After the end of the crop year, but prior to the final payment being made, if the Wheat Board can confidently foresee a surplus accumulating and if authorized by Order in Council, an interim payment is made to producers. This interim payment is the same amount per bushel to all producers of the same grade of grain. When the Board has sold all the grain or otherwise disposed of it in accordance with the Canadian Wheat Board Act, the Board, if authorized by Order in Council, makes a final payment to producers.

Under the Prairie Grain Advance Payments Act, administered by the Board, producers may receive, through their elevator agents, cash advances on farm-stored grain in accordance with a prescribed formula. The purpose of this legislation is to make cash available to producers pending delivery of their grain under delivery quotas established by the Board. Cash advances are interest-free as far as producers are concerned.

Western Canadian producers receive the price for their grain that the Wheat Board receives, less its operating costs including carrying charge, and the general level of prices received by the Board is determined by competitive conditions in world markets. The only subsidy received by the farmer in the Canadian wheat marketing system is the part-payment of storage costs for wheat made by the Government of Canada. Under provisions of the Temporary Wheat Reserves Act, the Minister of Finance, out of the Consolidated Revenue Fund, pays to the Wheat Board the storage costs on wheat in storage at the end of the crop year in excess of 178,000,000 bu.

Subsection 2.—Controls Over Farm Products Other Than Grain*

The Government of Canada and provincial governments have, through legislation and in other ways, given marketing aids such as those related to research, education, information, inspection, grading and many other service measures of this type, designed to assist in making adjustments in marketing within agriculture and between agriculture and the remainder of the economy. Closely related is regulatory action designed to protect the consumer.

Producers have been concerned about another type of market control, namely that which will give either their organizations or a government agency influence over the price received. In a highly specialized commercial agriculture such as Canada now has, the producer is dependent on the price of his product for his livelihood. Canadian farmers have long attempted to obtain some measure of market control through voluntary organizations, mainly marketing co-operatives. All provinces have made provision for the incorporation of such co-operatives and most, if not all, have provided other assistance to them. In the federal field, the Agricultural Products Co-operative Marketing Act encourages marketing under a co-operative plan.

* Prepared in the Economics Branch, Canada Department of Agriculture, Ottawa.

Other legislation provides for legal control over the marketing of agricultural products, either by a producers' board or a government agency. Legislation of this type includes that pertaining to milk control boards, to producer marketing boards and to industry marketing commissions. Measures pertaining to grain marketing have been reviewed in Subsection 1, pp. 937-941, and the Agricultural Stabilization Act, which provides price support for certain key products is discussed in the Agriculture Chapter, pp. 469-470.

Product Controls.—The federal and provincial departments of agriculture co-operate in establishing and enforcing grades of quality standards for various foods. Some control over size and type of containers used for distribution of agricultural products is exercised by the Canada Department of Agriculture and the Department of Industry, Trade and Commerce enforces regulations pertaining to weights and measures (see p. 963).

Controls related to health and sanitation in food handling are developed and enforced at all three levels of government—municipal, provincial and federal. Examples of provincial and municipal action include laws pertaining to the pasteurization of milk, inspection of slaughter-houses and sanitary standards in restaurants. At the federal level, inspection by the Health of Animals Branch of the Department of Agriculture of all meat carcasses that enter into interprovincial trade is required. The Food and Drug Directorate of the Department of National Health and Welfare has wide control over the composition of foods and over misleading advertising of foods and drugs.

Marketing Controls.—*The Agricultural Products Co-operative Marketing Act.*—In the late 1930s, the Federal Government decided to assist orderly marketing by encouraging the establishment of pools which would give to the producer the maximum sales return for his product, less a maximum margin for handling expenses agreed upon in advance. Thus, the Agricultural Products Co-operative Marketing Act and the Wheat Co-operative Marketing Act were passed in 1939. The latter was used in one year only but the Agricultural Products Co-operative Marketing Act, which covers the marketing of all agricultural products except wheat, has continuously served agricultural producers since 1939.

The purpose of this Act is to aid farmers in pooling the returns from sale of their products by guaranteeing initial payments and thus assisting in the orderly marketing of the product. The Government may undertake to guarantee a certain minimum initial payment to the producer at the time of delivery of the product, including a margin for handling; sales returns are made to the producer on a co-operative plan. The guaranteed initial payment may be up to a maximum of 80 p.c. of the average price paid to producers for the previous three years, the exact percentage to be recommended by the Minister of Agriculture who enters into an agreement with the selling agency for the product. During 1968 agreements were made for the marketing of maple syrup and apples for processing in Quebec and beans in Ontario.

Milk Control Legislation.—Most of the provinces enacted milk control legislation prior to 1940. Some of them finance these milk-control agencies out of public funds, others finance through the collection of licence fees and assessments from those engaged in the fluid milk industry, and some combine the two methods. Most milk-control agencies have authority to license those engaged in the fluid milk industry and can revoke licences for failure to conform with the orders of the milk control board.

In all provinces with such boards, the milk control board or similar agency sets the minimum price which distributors in specified markets may pay producers for Class I milk, that is, milk actually sold for fresh fluid consumption. In British Columbia, a formula is used as a guide in determining minimum prices to producers. Most provinces set either minimum or maximum wholesale and retail prices for fluid milk. Quebec sets a minimum and maximum price range. Saskatchewan sets minimum prices applicable to all retail milk sales and maximum prices applicable to milk sales off retail wagons, as well as a minimum-maximum price range at the wholesale level. Minimum prices are in effect in Alberta, Nova Scotia and New Brunswick. Maximum prices are set in Manitoba and no

control is exercised over milk prices at the wholesale and retail levels in Ontario and British Columbia. In these three provinces some degree of price competition has developed between store sales and home delivery.

The powers given to or requirements made by milk control boards include: (1) authority to inquire into all matters pertaining to the fluid milk industry, to define market areas, to arbitrate disputes, to examine the books and records of those engaged in the industry, to issue and revoke licences, and to establish a price for milk; and (2) authority to require a bond from distributors, periodic reports from distributors, payments to be made to producers by a certain date each month, distributors to give statements to suppliers, distributors to give notice before ceasing to accept milk from any producer, and producers to give notice before ceasing to deliver milk to any distributor.

The Ontario Milk Marketing Board, a producer-controlled agency, was officially established by the Milk Commission of Ontario on Nov. 1, 1965. The Board was delegated certain powers by the Commission in respect to the production, marketing and transportation of milk and has the power to set the price that milk distributors must pay to their suppliers.

The Canadian Dairy Commission.—The Canadian Dairy Commission was established by Federal legislation and commenced operations on Apr. 1, 1967. This is a new departure in the area of agricultural marketing because it is the first national marketing board to be established since the Canadian Wheat Board was created in 1935. The Commission has the power to purchase any dairy product and package, process, store, ship, insure, import, export, or sell or otherwise dispose of any dairy product purchased by it. The Commission may also make payments to producers of milk and cream for the purpose of stabilizing the price of these products.

The objects of the Commission are to provide producers of milk and cream with the opportunity of obtaining a fair return for their labour and investment, and to provide consumers with a continuous and adequate supply of high-quality dairy products. The Federal Government, through the Canadian Dairy Commission, supports the income of manufacturing milk and cream producers by means of "offer-to-purchase" programs for certain dairy products and direct subsidy payments.

In the 1967-68 dairy support year, the Federal Government introduced a global subsidy eligibility quota which was directly related to the domestic consumption of milk marketed by manufacturing milk and cream shippers. Individual quotas were allocated on the basis of the shipper's deliveries during the previous dairy support year, with certain exceptions.

Producer Marketing Boards.—During the 1930s strong support developed for legislation whereby agricultural producers could exercise legal authority under certain conditions to control the marketing of their produce. The Natural Products Marketing Act of 1934 attempted to provide this power at the federal level but proved *ultra vires*. The Natural Products Marketing (British Columbia) Act, 1936 was *intra vires* of provincial government powers and provided the model from which marketing board legislation has evolved in all 10 provinces.

While marketing board legislation has been revised from time to time on the basis of experience and there are variations in detail from province to province, the same basic powers are given to producers in all provinces. These powers include authority for a duly constituted producer board to control the marketing of 100 p.c. of a specified commodity produced in a designated area. A producers' board, in at least some provinces, may set production quotas for each farmer. One producers' board may control the marketing of several related commodities and the designated area may be either the whole or part of a province. A producer vote is usually required to establish a producer marketing board whose powers are delegated either by a provincial marketing board, which has certain supervisory authority, or by the Lieutenant-Governor in Council.

The powers of a producers' board provided by provincial legislation are necessarily limited to intraprovincial trade. Under the Agricultural Products Marketing Act, the Federal Government may delegate to a marketing board with respect to interprovincial and export trade similar powers to those obtained with respect to intraprovincial trade under provincial authority. This Act also gives the Governor in Council the right to authorize a provincial marketing board to impose and collect levies from persons engaged in the production and marketing of commodities controlled by it for the purposes of the board, the creation of reserves and the equalization of returns.

In 1967 there were 118 producer marketing boards operating in Canada, including the Canadian Wheat Board which was established at the federal level. All of the provinces except Newfoundland had one or more boards established under their jurisdictions, with Quebec accounting for 67 and Ontario 22. It is estimated that approximately 47 p.c. of 1967 farm cash income was received from sales made under the control of producer marketing boards. Commodities sold through the boards included wheat, hogs, milk for factory-made dairy products, fruits, potatoes and other vegetables, tobacco, poultry, wool, soybeans, sugar beets, honey, maple products and pulpwood. As at Nov. 1, 1967, 67 of the provincial boards had received an extension of powers for purposes of interprovincial and export trade from the Federal Government; five boards had received authority with regard to nine commodities to collect levies in excess of administrative expenses.

Section 2.—The Department of Consumer and Corporate Affairs

Legislation that received Royal Assent on Dec. 21, 1967 (SC 1967-68, c. 16), transformed the former Department of the Registrar General of Canada into the new Department of Consumer and Corporate Affairs. The duties, powers and functions of the Minister extend to and include all matters over which the Parliament of Canada has jurisdiction, not by law assigned to any other department, branch or agency of the Government of Canada, relating to consumer affairs; corporations and corporate securities; combines, mergers, monopolies and restraint of trade; bankruptcy and insolvency; and patents, copyrights and trade marks.

The Bureau of Consumer Affairs co-ordinates government activities in the field of consumer affairs. Branches within the Bureau include Service and Information, Research, Operations, Legal and Standards. Regional Offices are being established at Halifax, Montreal, Toronto, Winnipeg and Vancouver. Other Branches and Divisions of the Department are: Combines Branch under the Director of Investigation and Research (Combines Investigation Act), Bankruptcy Branch, Corporations Branch, Trade Marks Branch, Patent and Copyright Office, Registration Branch, Office of the Custodian of Enemy Property, Financial and Administrative Services Branch, Personnel Branch and Information and Public Relations Branch. The Restrictive Trade Practices Commission (Combines Investigation Act) is domiciled in the Department and reports directly to the Minister.

Combines, Mergers, Monopolies and Restraint of Trade*

The purpose of Canadian anti-combines legislation is to assist in maintaining free and open competition as a prime stimulus to the achievement of maximum production, distribution and employment in a system of free enterprise. To this end, the legislation seeks to eliminate certain practices in restraint of trade that serve to prevent the nation's economic resources from being most effectively used for the advantage of all citizens.

By amendments that came into force on Aug. 10, 1960 (SC 1960, c. 45), all the provisions of the anti-combines legislation which previously had been divided between the Combines Investigation Act (RSC 1952, c. 314) and the Criminal Code were amended and consolidated in the Act. The substantive provisions now are contained in Sects. 2,

* Revised by D. H. W. Henry, Q.C., Director of Investigation and Research, Combines Investigation Act, Department of Consumer and Corporate Affairs, Ottawa.

32, 33, 33A, 33B, 33C and 34 of the Combines Investigation Act. The Act was enacted in 1923 and was amended extensively in 1935, 1937, 1946, 1949, 1951 and 1952 as well as in 1960.

Sect. 32, generally speaking, forbids in Subsect. (1) combinations that prevent or lessen "unduly" competition in the production, manufacture, purchase, barter, sale, storage, rental, transportation or supply of an article of trade or commerce or in the price of insurance. Subsect. (1) derives from Sect. 411 of the Criminal Code which was enacted originally in 1889. Although Subsect. (2) provides that no person shall be convicted for participation in an arrangement relating only to such matters as the exchange of statistics or the defining of product standards, etc., Subsect. (3) provides that Subsect. (2) does not apply if the arrangement has lessened or is likely to lessen competition unduly in respect of prices, quantity or quality of production, markets or customers or channels of distribution, or if the arrangement "has restricted or is likely to restrict any person from entering into or expanding a business in a trade or industry". Subsect. (4) provides that, subject to Subsect. (5), no person shall be convicted for participation in an arrangement which relates only to the export trade. Subsect. (5) provides that Subsect. (4) does not apply if the arrangement has had or is likely to have harmful effects on the volume of export trade or on the businesses of Canadian competitors or on domestic consumers.

Sects. 2 and 33 make it an offence to participate in a merger that has or is likely to have the effect of lessening competition to the detriment or against the interest of the public. These Sections also make it an offence to participate in a monopoly that has been operated or is likely to be operated to the detriment or against the interest of the public.

Sect. 33A deals with what are commonly called "price discrimination" and "predatory price cutting". It provides that a supplier may not make a practice of discriminating among those of his trade customers who come into competition with one another by giving one a preferred price which is not available to another if the second is willing to buy in like quantities and qualities as the first; it also forbids a supplier from selling at prices lower in one locality than in another, or unreasonably low anywhere, if the effect or tendency of such policy is to lessen competition substantially or eliminate competitors or the policy is designed to have such effect.

Sect. 33B provides that where a supplier grants advertising or display allowances to competing trade customers he must grant them in proportion to the purchases of such customers; any service he exacts in return must be such that his different types of customers are able to perform; and if such customers are required to incur expenses to earn such allowances, such expenses also must be proportionate to their purchases.

Sect. 33C makes it an offence for any person, for the purpose of promoting the sale or use of an article, to make any materially misleading representation to the public concerning the price at which such or like articles have been, will be or are ordinarily sold.

Sect. 34 prohibits a supplier of goods from prescribing the prices at which they are to be resold by wholesalers or retailers or from cutting off supplies to a merchant because of the merchant's failure or refusal to abide by such prices, i.e., the practice of "resale price maintenance". The Section also provides that it shall not be inferred that a person practised resale price maintenance simply because he refused or counselled the refusal of supplies to a merchant if there were reasonable cause to believe and the supplier did believe that the merchant was making a practice of using articles of such supplier as "loss-leaders" or as bait advertising or was making a practice of engaging in misleading advertising in respect of such articles or of not providing services that purchasers of such articles might reasonably expect.

The Director of Investigation and Research is responsible for investigating combines and other restrictive practices, and the Restrictive Trade Practices Commission is responsible for appraising the evidence submitted to it by the Director and the parties under investigation, and for making a report to the Minister of Consumer and Corporate Affairs. When there are reasonable grounds for believing that a forbidden practice is engaged in, the Director may obtain from the Commission authorization to examine witnesses,

search premises, or require written returns. After examining all the information available, if the Director believes that it proves the existence of a forbidden practice, he submits a statement of the evidence to the Commission and to the parties believed to be responsible for the practice. The Commission then sets a time and place at which it hears argument on behalf of the Director in support of his statement, and hears argument and receives evidence on behalf of any persons against whom allegations have been made in the statement. Following this hearing, the Commission prepares and submits a report to the Minister of Consumer and Corporate Affairs, ordinarily required to be published within thirty days.

Under the provisions of the Act, general inquiries may be made into restraints of trade which, although not forbidden or punishable, may affect the public interest. The courts, including the Exchequer Court of Canada, in addition to imposing punishment for a contravention of the legislation, may make an order restraining persons from embarking on, continuing or repeating a contravention or directing the dissolution of a merger or monopoly as the case may be. Application also may be made to the courts for such an order in lieu of prosecuting and convicting for a contravention of the legislation. Prosecutions for offences against the substantive provisions of the legislation (other than Sect. 33C which is punishable only on summary conviction) may be taken either in the provincial courts or with the consent of the accused in the Exchequer Court of Canada.

In the period Jan. 1, 1966 to Nov. 30, 1968, the following reports of inquiries under the legislation were published:—

- (1) Pricing Practices of Miss Mary Maxim Ltd.
- (2) Pricing of Ready-Mixed Concrete, Windsor, Ont.
- (3) North Star and Shell Gasoline Consignment Plans.
- (4) Trade Practices in the Phosphorous Products and Sodium Chlorate Industries.
- (5) "Specials" in Eggs, Kingston Area, Ont.
- (6) Glued-Laminated Timbers.
- (7) Resale Prices of Corning Glassware.
- (8) Dairy Products, Montreal.
- (9) Resilient Flooring, Toronto.

These reports and copies of the annual reports under the Act may be obtained from the Queen's Printer or the office of the Director of Investigation and Research, Combines Investigation Act, Department of Consumer and Corporate Affairs, Ottawa.

Patents

Letters patent are issued subject to the provisions of the Patent Act (RSC 1952, c. 203), effective since 1935. Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.

1.—Patents Applied for, Granted, etc., Years Ended Mar. 31, 1963-67

Item	1963	1964	1965	1966	1967
Applications for patents..... No.	26,409	27,057	27,811	30,093	29,618
Patents granted.....	21,225	23,230	23,451	24,241	24,432
Granted to Canadians.....	1,682	1,763	1,734	1,131	1,827
Caveats granted.....	256	266	250	275	258
Assignments.....	24,180	25,313	26,487	27,795	27,804

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to 21,432 in the year ended Mar. 31, 1967. Roughly, 68 p.c. of the patents granted resulted from inventions made by residents of the United States, 8 p.c. by residents of Britain and other Commonwealth countries and 5 p.c. by

residents of Canada. Printed copies of patents issued from Jan. 1, 1948 to date are available at a nominal fee. The Canadian *Patent Office Record* gives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1845 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Mexico, Italy, Sweden, the Netherlands, Switzerland, Japan, Egypt, Germany, Ireland, Colombia, Czechoslovakia and Yugoslavia.

Copyrights, Industrial Designs and Timber Marks

Copyright protection is governed by the Copyright Act (RSC 1952, c. 55) in force since 1924. Protection is automatic without any formality. However, a system of voluntary registration is provided. Application for registration should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol . . . or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Canada belongs to the Universal Copyright Convention. This means that the works of Canadian authors are protected in the United States without the formality of compulsory registration or the obligation of printing in the United States, provided that, from the first publication, the work bears in a prominent place the following identification: ©, followed by the name of the proprietor and the year of publication.

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States. Protection of industrial designs and of timber marks is afforded under the Industrial Design and Union Label Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office.

Trade Marks

The Trade Marks Office, a Branch of the Consumer and Corporate Affairs Department, administers the Trade Marks Act (SC 1952-53, c. 49) which covers all legislation concerning the registration and use of trade marks and supersedes from July 1, 1954, former legislation enacted under the Unfair Competition Act, the Union Label Act and the Shop Cards Registration Act. Correspondence relating to an application for registration of a trade mark should be addressed to the Registrar of Trade Marks, Ottawa.

Applications are advertised for opposition purposes in the *Trade Marks Journal*, a weekly publication that also gives particulars of every registration of a trade mark and

every registration of a registered user. The required fee payable on application for registration of a trade mark is \$35, for advertisement of an application \$25 and for registration of a person as a registered user of a trade mark, \$35.

3.—Trade Marks Registered, Years Ended Mar. 31, 1963-67

Section 3.—Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor control authorities. Alcoholic beverages are sold directly by most of these liquor control authorities to the consumer or to licensees for resale. However, in some provinces beer and wine are sold directly by breweries and wineries to consumers or to licensees for resale. During the year ended Mar. 31, 1967, provincial government liquor authorities operated 1,160 retail stores and had 130 agencies in smaller centres of population.

Government revenue specifically related to alcoholic beverages and details of sales by value and volume for each province are given below. DBS report, *The Control and Sale of Alcoholic Beverages in Canada* (Catalogue No. 63-202) shows further detail as well as volume figures of production and warehousing transactions, the value and volume of imports and exports and the assets and liabilities of provincial liquor commissions.

4.—Revenue of Provincial and Territorial Governments Derived Specifically from the Control and Sale of Alcoholic Beverages, Years Ended Mar. 31, 1966 and 1967

NOTE.—Figures include revenue collected directly by the provincial and territorial governments as well as revenue of the liquor authorities, but exclude revenue resulting from a general retail sales tax on alcoholic beverages levied by eight provinces.

¹ Includes an import surcharge of 15 p.c. ad valorem effective from June 25, 1962 to Feb. 20, 1963, when it was reduced to 10 p.c. ad valorem. The import surcharge was removed entirely as of Apr. 1, 1963. ² Drawbacks and refunds of duties and taxes have not been deducted.

Table 6 shows the value of sales of alcoholic beverages in 1965-67 but it should be noted that these figures do not always represent the final retail selling price of alcoholic beverages to the consumer because, when sold to licensees, only the selling price to licensees is known.

Section 4.—Miscellaneous Aids or Controls

The National Energy Board

The National Energy Board was established under authority of the National Energy Board Act, 1959 (SC 1959, c. 46), as amended, for the broad purpose of assuring the best use of energy resources in Canada. The Board is responsible for the regulation in the public interest of the design, construction and operation of those oil and gas pipelines subject to the jurisdiction of the Parliament of Canada, the tolls charged for transmission by such pipelines, the export and import of gas, the export of electric power and the construction of those lines over which such power is exported. The Board is also required to study and keep under review all matters relating to energy within the jurisdiction of the Parliament of Canada and is to recommend such measures as it considers necessary or advisable in the public interest with regard to such matters. The Act also authorizes the extension of the export and import provisions to oil upon proclamation by the Governor in Council. Certain amendments made to the regulations in 1966 increased the quantities of electric power and energy that the Board may authorize by order to be exported, authorized the Board to handle applications for the exportation and importation of small quantities of gas, where the volume of such exportation or importation does not justify the usual procedure, and empowers the Board to authorize the export of power and energy under emergency conditions. The Board, which reports to the Minister of Energy, Mines and Resources, consists of a chairman, a vice-chairman and three other members.

The Board is charged with the administration of federal oil policies, first introduced in 1961 in the shape of a National Oil Policy which had the initial objective of attaining certain target levels of oil production, including natural gas liquids. Production which had averaged only 544,000 barrels per day in 1960, averaged an estimated 1,185,000 barrels per day in 1968. The oil policy also relates to the conditions for the domestic and export marketing of Canadian oil. Objectives in this latter field are pursued almost wholly on the basis of voluntary arrangements with the companies concerned. In the domestic market the principle objective of the policy is to ensure that oil demands arising in Canada west of the Ottawa Valley are substantially supplied from indigenous sources. Canadian oil exports are virtually all to the United States and are the subject of periodic consultation between the two countries.

The National Power Policy, announced in 1963, encourages the development of large-scale power sources at lowest possible cost; the distribution of the benefits thereof as widely as possible through interconnections between power systems within Canada; and the long-term export of large blocks of power where such exports will induce early development of Canadian power resources. This policy also encourages the export of various classes of power under suitable interconnection agreements to provide for mutual assistance in emergencies and for other economic benefits which can be derived by both parties through co-ordinated operation and development. In pursuance of these aims, the Board co-operates with other agencies in the consideration of interprovincial and international interconnections of electric power systems. In this context it is worthy of note that within a very few years almost all the power systems in Canada and the United States will be tied together in one vast power pool.

During the year 1968, the Board issued 1,008 certificates, licences, permits and orders compared with 1,079 during the year 1967. The Board held a number of public hearings and, resulting therefrom, issued certificates authorizing the construction of a new international power line, additional gas pipeline facilities and additional oil pipeline facilities. One application for additional gas pipeline facilities and a companion application for a licence to import gas were dismissed. The licences, permits and orders issued concerned the export of electric power and energy, the export of natural gas and butanes and the import of natural gas. The exemption orders issued related to the construction of pipelines or branches or extensions thereof not exceeding 25 miles in length. The Board issued a total of 577 orders relating to the crossings of and by pipelines, 21 orders approving plans, profiles and books of reference, and 109 orders granting leave-to-open to oil and gas pipelines

including orders approving higher maximum operating pressures. Generally speaking, these orders relate to protection and safety in pipeline operations. The Board carried out numerous field inspections concerning the pressure testing of new oil and gas pipelines, the re-testing and internal sand-blasting of existing pipelines as well as the testing of gas compressor and oil pumping stations. Field inspections were also made resulting from complaints received from individual landowners in regard to pipeline construction.

The financial aspects of regulatory matters associated with the operation of pipeline companies and international power lines under the Board's jurisdiction received constant surveillance. The financial structure, financial responsibility, accounting practices, rates, tolls and tariffs were reviewed and evaluated as appropriate to the requirements of the National Energy Board Act. During 1968 the Board also conducted special studies on matters such as Uniform Accounting Regulations for pipeline companies, the possible financial effects on the oil and gas industry of the Carter Royal Commission Report on Taxation, and the rates of return of certain pipeline companies. In co-operation with the Canadian Transportation Commission a study has been instituted with respect to proposed regulations covering the construction and operation of combined pipelines for the transportation of hydrocarbons and commodities. The export and import of gas and the export of electric power, particularly with respect to border price arrangements, receive close scrutiny by the Board.

In the performance of its obligations in 1968, the Board carried out a number of special studies and maintained liaison with other responsible authorities.

Studies were continued or started during the year in the field of electric power, including an economic study on linking the Prince Edward Island power system with the Maritime Power Pool by means of high voltage cables; assistance in the study of a proposal to supply the major part of Newfoundland's power needs to the year 1992 from Lower Churchill Falls via a high voltage direct current transmission line; and collaboration in studies on the electric power aspects of the Fundy Tidal Power scheme in relation to possible markets for electric power in the Maritimes, Quebec and New England. The Board is co-operating with the Federal Power Commission of the United States in carrying out a new Power Survey of Canada and the United States. The development of the Canadian long-term energy forecast continued throughout the year. Detailed engineering and geological studies of hydrocarbon reservoirs were conducted as part of the Board's continuing program to maintain up-to-date estimates of reserves and producibility of crude oil, natural gas and natural gas liquids in Canada. Records were maintained of estimates of reserves of oil, natural gas and natural gas liquids in the United States and other important oil producing areas. Studies were made of trends of growth of reserves of hydrocarbons and forecasts made of future reserves to be found.

The Board continued to co-operate with the Canadian Standards Association in the preparation and completion of standard codes for the design, construction and operation of pipelines. Studies were continued in the development of computer programs for oil and gas pipelines as well as electric power systems.

Trade Standards

The Standards Branch of the Department of Consumer and Corporate Affairs consolidates under one Director the administration of the National Trade Mark and True Labelling Act, the Precious Metals Marking Act, the Weights and Measures Act, the Electricity Inspection Act and the Gas Inspection Act.

Commodity Standards.—On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act (RSC 1952, c. 191) which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising. In brief, the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. This is exemplified in the National Trade Mark Garment Sizing Regulations which were passed on Mar. 16, 1961. In addition, where manufacturers

descriptively label any commodity or container, it must be labelled accurately to avoid public deception. The regulation applying to the labelling of fur garments, for example, has been established as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (RSC 1952, c. 215), commodities composed of gold, silver, platinum or palladium may be marked with a quality mark describing accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada or for which application for registration has been made must also be applied. Gold-plated or silver-plated articles may also be marked under certain conditions outlined in the Act.

Weights and Measures.—The Weights and Measures Act (RSC 1952, c. 292) prescribes the legal standards of weight and measure for use in Canada; it also requires control of the type of all weighing and measuring devices used for commercial purposes and their periodic verification and surveillance directed toward the elimination of sales by short weight or short measure. During 1967, 671,765 prepackaged articles were checked for weight or measure and 472,365 inspections of devices were made.

Electricity and Gas Inspection.—Responsibilities of the Standards Branch, under the Electricity Inspection Act (RSC 1952, c. 94) and the Gas Inspection Act (RSC 1952, c. 129) comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 20 districts for administration of the two Acts and the staff numbers 237. During the year ended Mar. 31, 1967, 1,356,034 meters were tested. In 1966, there were 6,322,532 electricity meters and 1,715,627 gas meters registered in Canada.

Subventions and Bounties on Coal*

A major problem of the Canadian coal mining industry arises from the fact that its fields are situated far distant from the main consuming markets of the Provinces of Ontario and Quebec while these markets lie in close proximity to the bituminous and anthracite fields of the United States. Transportation subventions, which have been maintained in varying degree during the past 30 years, were designed to further the movement of Canadian coals by equalizing as far as possible their laid-down costs with the laid-down costs of imported coals in various market areas. With the take-over of major mines by the Cape Breton Development Corporation and the assumption by Nova Scotia of additional responsibilities for other mines, federal subvention of Nova Scotia coal terminated on Mar. 31, 1968. The transfer to New Brunswick of administration of financial assistance for the coal of that province resulted in the termination of federal subvention of New Brunswick coal in December 1968. Subvention continued to be available for certain coals of Western Canada but was in a phasing-out process, particularly in relation to export coal.

* Revised by the Dominion Coal Board, Ottawa.

8.—Expenditure for Coal Subventions, by Province, 1963-67

NOTE.—Tonnage and expenditures shown in a given year, being on a calendar-year basis, are not necessarily in direct relationship; certain of the amounts include adjustments on movements of previous years.

The Canadian Coal Equality Act (RSC 1952, c. 34), which implemented one of the recommendations of the Royal Commission on Maritime Claims (1926), was designed to assist the Canadian steel industry and only incidentally affects coal. It provides for the payment of 49.5 cents per ton on bituminous coal mined in Canada and converted into coke to be used in the Canadian manufacture of iron and steel. Payments under the Act were discontinued in 1968 because of circumstances connected with the establishment of the Cape Breton Development Corporation. Payments for the years 1963-67 were as follows:—

PART III.—BANKRUPTCIES AND COMMERCIAL FAILURES

Two series of figures are included in this part which, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures. The first, under the heading of "Administration of Bankrupt Estates" is limited to the supervision, by the Superintendent of Bankruptcy, of the administration of bankrupt estates under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act); it gives information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can therefore be assumed that this applies in even greater degree to the more extended fields covered in the second section under the heading of "Returns under the Bankruptcy and Winding-Up Act" which is compiled by the Dominion Bureau of Statistics. This series is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) and, since 1955, includes business failures only (see p. 965). The figures of assets and liabilities are estimates made by the debtor and, because they are not made uniformly, should be accepted with reservations.

Administration of Bankrupt Estates.*—The Bankruptcy Act, which was last revised in 1949, was amended by SC 1966, c. 32. These amendments were instigated by recent exposures and suggestions of illegal and improper practices in connection with bankruptcy proceedings or administration. They do not constitute a complete revision of the Bankruptcy Act but were rather designed to provide, as an interim measure, remedies to the most urgent areas of complaints. They provide the Superintendent of Bankruptcy with direct and immediate authority in the field of investigation and inquiry, and tighten the procedures and requirements in a number of areas, such as that of proposals which an insolvent person may make to his creditors. In other words, these amendments were intended to provide remedies in situations where it had been shown by experience that abuses of the bankruptcy process are most likely to occur. The amendments also contain a new Part X entitled "The Orderly Payment of Debts" which may come into force in any province at the request of the provincial authorities concerned. This Part came into force in Alberta on Apr. 17, 1967, and in Manitoba on June 1, 1967.

* Prepared by the Superintendent of Bankruptcy, Ottawa.

PART IV.—PRICES*

Section 1.—Index Numbers of Wholesale Prices

The term "wholesale prices" refers to transactions that occur below the retail level. It has more of a connotation of bulk purchase and sale than of any homogeneous level of distribution. Wholesale price indexes and individual price series have numerous uses, one of the most important of which is in escalator clauses of contracts where prices quoted are linked to movements of specified price indexes. They are also of major importance in studies of replacement and construction costs in investment projects; analyses of price movements of both individual items and commodity groups in relation to purchases and sales; industrial planning and market analysis; valuations for tax purposes and inventory analysis; and studies of changes in physical volume. Foreign companies also utilize the indexes in assessing the competitive position of Canadian goods.

General Wholesale Index.—The general wholesale index mainly includes manufacturers' prices but also incorporates those of wholesalers proper, assemblers of primary products, agents and operators of other types of commercial enterprises which trade in

* Prepared in the Prices Division, Dominion Bureau of Statistics.

commodities of a type, or in quantities characteristic of primary marketing functions. Prices are grouped according to a commodity classification scheme based on chief component material similarities. Indexes classified according to degree of manufacture are also available. In Table 1, the general wholesale index is presented for the period 1940-67. This index is used as a conventional summary figure against which to observe the behaviour of particular price groups such as farm products, raw materials and building materials, for which separate price indexes have been constructed. Table 2 gives, for the years 1958-67, the general wholesale price index and two of its integral classifications—raw and partly manufactured goods, and fully and chiefly manufactured goods; also presented are two related systems—industrial materials and Canadian farm products. Annual price index numbers of non-residential building materials and residential building materials are given for 1958-67 in Tables 3 and 4, respectively; during 1966 the price samples of both of these indexes were revised and the price indexes given for that year are on the new sample basis.

In addition to the summary tables presented in this Section, DBS monthly publication *Prices and Price Indexes* (Catalogue No. 62-002) contains indexes of principal component groups of the wholesale price index. Other industrial price indexes included in the publication are: monthly selling prices of about 100 Canadian manufacturing industries, including commodity details; a system of annual bid price indexes relating to highway construction in which price movements are shown for completed units of work such as earth excavation and crushed gravel put in place; and price indexes for construction of transmission lines, distribution systems and transformation and switching stations of electrical utilities, based on labour, material and capital inputs into these facilities. (See also DBS publications, Catalogue Nos. 62-616, 62-520 and 62-526, respectively.) The monthly DBS publication *Prices and Price Indexes* also contains current series on retail price indexes and security price indexes covered in Sections 2 and 4 following.

1.—General Wholesale Index Annual Averages, 1940-67

(1935-39=100)

Year	Average	Year	Average	Year	Average	Year	Average
1940.....	108.0	1947.....	163.3	1954.....	217.0	1961.....	233.3
1941.....	116.4	1948.....	193.4	1955.....	218.9	1962.....	240.0
1942.....	123.0	1949.....	198.3	1956.....	225.6	1963.....	244.6
1943.....	127.9	1950.....	211.2	1957.....	227.4	1964.....	245.4
1944.....	130.6	1951.....	240.2	1958.....	227.8	1965.....	250.4
1945.....	132.1	1952.....	226.0	1959.....	230.6	1966.....	259.5
1946.....	138.9	1953.....	220.7	1960.....	230.9	1967.....	264.1

The gradual easing of demand pressures observed in the first half of 1966 continued into 1967 and resulted in a considerable moderation of wholesale price increases over those experienced in 1965. The 1967 rate of change in the general wholesale index was very similar to that of the preceding year (2.0 p.c. in 1967 vs. 1.9 p.c. in 1966). Within the general wholesale index, price movements were quite diverse with moderate increases in some groups partly offset by declines in other groups. The more gradual expansion in economic activity is reflected especially in the cyclically highly sensitive prices, e.g., field products and industrial materials. These products are characterized by a demand relatively unresponsive to price changes and often not only a reduced demand but even a levelling-off in demand may result in price declines. In general, the greater the degree of processing the less sensitive prices seem to be to economic fluctuations. Thus, in 1967 the slowdown in the rate of growth of economic activity had the least effect on the price

of manufactured goods which showed the highest increase. Fully and chiefly manufactured goods prices moved up slowly throughout the year whereas the price index of raw and partly manufactured goods remained virtually unchanged until December when it registered most of its 1.4-p.c. rise for the year. The wholesale index reflects the inter-yearly price movements of both these groups. Prices of industrial materials remained fairly constant in 1967 at a level of 3.2 p.c. below 1966. Animal product prices, which moved rather uncertainly throughout the year, ended with a moderate increase which was, however, more than offset by a pronounced decline in the price of field products so that farm products in total registered a 1.4-p.c. price decline.

2.—Annual Index Numbers of Wholesale Price Groups, 1958-67

(1935-39=100)

Year	General Wholesale Index	Raw and Partly Manufactured Goods	Fully and Chiefly Manufactured Goods	Industrial Materials	Canadian Farm Products		
					Field	Animal	Total
1958.....	227.8	209.3	238.3	229.8	171.4	274.5	222.9

Section 2.—Consumer Price Index*

The purpose of the consumer price index is to measure the movement from month to month in retail prices of goods and services bought by a representative cross-section of the Canadian urban population. For a particular article or service, a price index number is simply the price of the article in one period of time expressed as a percentage of its price in a reference period, usually called a base period. However, indexes for individual goods may be combined to form indexes representing prices of broad groups of goods and services. Thus, the consumer price index relates to the wide range of goods and services bought by

* A comprehensive description of the index is contained in the publication *The Consumer Price Index (1949=100)*—Revision Based on 1957 Expenditures (Catalogue No. 62-512). A description of the change in the base period from 1949 to 1961 appears in the January 1969 issue of *Prices and Price Indexes* (Catalogue No. 62-002).

Canadian urban families. The index expresses the combined prices of such goods each month as a percentage of their prices in the base period 1961.

The group of goods and services represented in the index is called the index "basket" and "weights" are assigned to the price indexes of individual items for purposes of combining them into an over-all or composite index. The weights reflect the relative importance of items in expenditures of middle-size urban families with medium incomes. The basket is an unchanging or equivalent quantity and quality of goods and services. Only prices change from month to month and the index, therefore, measures the effect of changing prices on the cost of purchasing the fixed basket. The basket and weights now used in the index are based on expenditures in 1957 of families of two to six persons, with annual incomes of \$2,500 to \$7,000, living in cities of 30,000 population or over.

6.—Consumer Price Index Numbers, 1941-68

(1961=100)

1947.....	65.6	1954.....	89.9	1961.....	100.0	1968.....	120.1

The behaviour of the consumer price index during the years of almost continuous economic growth following the end of the Second World War up to 1959 is discussed in the 1967 Year Book at pp. 928-929 and the movement during 1959-66 in subsequent editions. Between 1966 and 1967, the consumer price index increased by 3.6 p.c. The major contributing factors to this increase were a 4.6-p.c. rise in the housing index, followed by higher prices for clothing (5.0 p.c.), transportation (4.2 p.c.) and food (1.3 p.c.). In 1968 the upward trend accelerated with retail prices averaging 4.1 p.c. higher than in the preceding year. Over one third of the increase since 1967 was attributable to higher housing costs which advanced 4.6 p.c., while other main contributing factors were a 0.9-p.c. rise in the heavily weighted food index and a 9.1-p.c. advance in the tobacco and alcohol index. The unusually large increase for tobacco and alcohol products was attributable mainly to the imposition of higher federal and provincial taxes.

Consumer Price Indexes for Regional Cities.—Table 9 gives regional consumer price indexes for ten cities or city combinations. These indexes do not show whether it costs more or less to live in one city than in another and should not be used for such comparisons. Their function is to measure percentage changes in retail prices—over a certain time in each city or city combination—of a fixed basket of goods and services representing the level of consumption of a particular group of families.

World Retail Price Indexes.—In order to place movements in Canadian retail prices into perspective, they should be compared with price changes occurring elsewhere in the world. This is done in Table 10, which indicates the percentage changes over the previous year in the consumer price index for each country specified. For purposes of comparison, countries are listed, alphabetically, by region. It should be noted that all percentages are rounded to the nearest whole number.

Section 3.—Consumer Expenditure

Household surveys of family expenditure provide information on consumer spending that can be related to family characteristics, such as geographical location, family size, income level, etc. A primary purpose of such surveys is to provide information for constructing, reviewing and revising the weights of consumer price indexes. Initially, the small-scale sample surveys carried out in Canadian urban centres since 1953 were designed to follow changes in the spending patterns of a well-defined group of middle-income urban families known as the target group of the consumer price index. However, in the years from 1953 to 1968, during which seven survey programs were conducted, a growing demand

for expenditure statistics to serve other needs of government, business, welfare organizations and academic research resulted in a widening in the scope and size of the surveys in recent years, and in a decision to expand the 1969-70 survey programs to provide a large-scale national survey for the first time since 1948-49.

The more restricted surveys (1953, 1955, 1957 and 1962) consisted of two phases—the collection by means of monthly record-keeping surveys throughout the reference year of detailed information on food expenditures, and the collection of information by annual recall of all family expenditure, income and change in assets and liabilities. In the other three surveys (1959, 1964 and 1967), the monthly surveys were omitted and the annual recall surveys were enlarged in scope to refer to all families and individuals, regardless of family type or income. The sample size was doubled in order to obtain about 2,000 usable annual records. The 1959 survey was unique in the series in that it was designed to represent population in all urban centres of 15,000 or over, whereas the 1964 and 1967 surveys were identical in city coverage, referring to 11 major regional cities.

Detailed results of the surveys have been published in two series of occasional publications covering food expenditure and all family expenditure, respectively. The most recent publication in the food expenditure series is *Urban Family Food Expenditure 1962* (Catalogue No. 62-524). The companion publication *Urban Family Expenditure 1962* (Catalogue No. 62-525) has been followed by *Urban Family Expenditure 1964* (Catalogue No. 62-527), from which a table presenting summary results appeared in the 1967 Canada Year Book, pp. 947-949. Results from the 1967 expenditure survey are expected to be available early in 1969.

A detailed survey of food expenditures will be carried out monthly throughout 1969 and a survey of the complete family budget will be taken early in 1970. The food expenditure survey sample comprises over 14,000 households distributed in monthly samples across the year. Families are requested to keep two-week records of quantities and costs of food purchased. Information on purchases of selected non-food items is being collected experimentally on the same record. The national survey of all family expenditures and income is expected to obtain about 15,000 usable family records. Both surveys will produce results for selected individual cities as well as for urban, rural non-farm and farm population.

Section 4.—Security Price Indexes

Security price indexes measure, through time, the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on the Toronto, Montreal and Canadian stock exchanges. In the case of the mining and the two supplementary indexes (primary oils and gas, and uraniums), eligible issues are for producing mines and wells only. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the weekly common stock indexes (investors, mining and supplementary indexes) are Thursday's closing quotations. For the monthly preferred stock indexes, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The indexes express current prices as a percentage of prices in 1956. Monthly and certain weekly indexes appear in the DBS monthly publication *Prices and Price Indexes* (Catalogue No. 62-002) and a weekly DBS report gives indexes on a weekly basis for all groups and sub-groups.

The investors index is comprised of three major groups, with relative importance indicated by percentage weights as follows: industrials, 67.5; utilities, 18.6; and finance, 13.9. Each major group is further divided into industry sub-groups corresponding to the standard industrial classification, adopted as the basis of classification in the revision of the index to the 1956=100 base. The mining index is composed of two groups: base metals with a weight of 64.6 p.c. and golds with a weight of 35.4 p.c. The two supplementary indexes of common stocks—primary oils and gas, and uraniums—and the index of preferred stocks are not divided into component groups.

*The interpretation of the symbols used in the tables throughout the Year Book
will be found on p. viii of this volume.*

The subject of foreign trade covers more than the treatment of exports and imports of commodities, important though this is. In its broader sense, foreign trade is made up of the total international interchange of goods, services, securities and other financial transactions, all of which are presented in their appropriate relationship in this Chapter and in Section 4 of Chapter XXIV. Part I contains specially prepared information on Canada's trade with the European Economic Community. Part II gives detailed statistics of that trade. Part III outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure. Part IV contains a review of the extent of travel between Canada and other countries in 1967, with estimates of the amount of money expended for that purpose.

PART I.—CANADA'S TRADE WITH THE EUROPEAN ECONOMIC COMMUNITY*

The establishment of the European Economic Community (EEC) was an event of major significance not only to the six Western European countries involved but generally to the whole world of international trade. As one of the greatest trading nations of the world, Canada is vitally concerned with developments that affect its economic and trade interests. The progress toward the integration of Europe is a development of far-reaching consequences and has therefore continued to evoke considerable interest in Canada, as elsewhere. This study provides a synoptic review of Canada's trade with the EEC during the first decade of its operation. It describes and analyzes the salient features at an aggregate level and at the level of some principal commodities and commodity groups.

Background

The establishment of the European Economic Community was the culmination of a long process of attempts at European unity going back to the early nineteenth century. The German Zollverein formed in 1834 was the most important union then. A really

* Prepared by D. Paul Ojha, External Trade Division, Dominion Bureau of Statistics.

effective customs union was the Benelux formed in 1944 by Belgium, the Netherlands and Luxembourg. Belgium and Luxembourg had been linked by an earlier economic union since 1921.

It is not necessary to recall here the many details that form the background to the European Economic Community or the details of a parallel movement in Europe which led to the establishment in 1960 of the European Free Trade Association composed of the United Kingdom, Austria, Denmark, Norway, Portugal, Sweden and Switzerland, with Finland as an associate member from 1961. The European Economic Community was established as the result of the Treaty of Rome signed on Mar. 25, 1957, by Belgium, France, the Federal Republic of Germany, Italy, Luxembourg and the Netherlands. These countries had already been members of the European Coal and Steel Community (ECSC) which was formed in June 1952 following the agreement of Mar. 9, 1951, on the Schuman plan to pool the coal and steel resources of the countries concerned. Another treaty signed at the same time (March 1957) related to the establishment of the European Atomic Energy Community (Euratom).

Principal Objectives

The principal objectives of the Treaty of Rome were to promote harmonious development of economic activity within the Community, continuous and balanced expansion, greater stability, a steady improvement in living standards, and closer economic relations among the member states. These objectives were to be achieved through the creation of a common market; the gradual alignment of economic policies and, more specifically, the elimination of customs duties, quantitative restrictions on the import and export of goods, and of obstacles to the free movement of persons, services and capital; the establishment of a common external tariff on imports from third countries; the co-ordination of economic (including financial) policy, and the establishment of common policies for external trade, agriculture and transport; the creation of a European Social Fund to strengthen the employment potential and to raise the standards of living; the establishment of a European Investment Bank to promote investment and economic growth; and the association of other countries and overseas territories with a view to expanding trade and generally contributing to social and economic development. A transition period of 12 years, liable to extension up to 15 years, was provided for before the establishment of the Common Market.

Major Developments

The first objective of the EEC, the creation of a customs union, was fulfilled 18 months ahead of schedule, with the establishment of a common external tariff against imports from third countries effective July 1, 1968. Concurrently, the EEC countries made the first of their tariff cuts agreed to at the Kennedy Round of trade negotiations, with the result that the average EEC external tariff on manufactured goods came down to 10.7 p.c. The common agricultural policy is also in operation, although some matters of a regulatory nature still remain to be settled. While the customs union has been established, several important steps remain to be taken before an economic union is in effect. On July 1, 1967, the institutions of the three Communities—the ECSC, Euratom and the EEC—were merged into a single Commission which assumed all powers conferred by the three Treaties.

The economies of the countries that constitute the EEC were already witnessing considerable expansion, especially as the process of reconstruction following the Second World War provided a valuable opportunity for modernization of plant and equipment and as the result of the impetus given by United States aid to Europe under the Marshall Plan. For example, of the six countries that were later bound together in the EEC, France, the Federal Republic of Germany, Italy and the Netherlands were expanding their output faster than Canada, the United States and the United Kingdom, although increases began to slow down somewhat in the early 1960s relative to North America. The gross national product of the six countries more than doubled from \$166,700,000,000 (U.S.) in 1958—the year before the EEC went into operation—to \$340,400,000,000 (U.S.) in 1967. The index of industrial production (1963=100) rose nearly 64 p.c. from 72 in 1958 to 118 in 1967.

To be sure, there are wide differences in the rates of growth of the six countries, mainly because they began with different stages of development and because of the growth and location of new industries.

Trade Growth

As a unified market, therefore, the EEC now constitutes a very potent force in the world. During the first decade of its existence, EEC's intra-area trade increased 250 p.c. to about \$26,000,000,000 while its trade with the outside world rose 100 p.c. to about \$33,000,000,000. EEC has thus become the leading world trader, accounting for over 20 p.c. of total exports and 18 p.c. of total imports, as against the United States share of a little under 20 p.c. in exports and 16 p.c. in imports.

These figures are impressive but it is difficult to say how much of the expansion in intra-area trade has been the consequence of reductions in tariffs. The question of the actual effects of integration on trade flows is very complex as integration leads to both trade-creation and trade-diversion. No precise method has yet been found of computing the exact trade-creating and trade-diverting effects of economic integration, although research is in progress.

In the perspective of trade growth of industrial countries as a whole and in comparison with the European Free Trade Association (EFTA), the EEC did better in 1967. According to the annual report of the GATT, *International Trade, 1967*, exports from industrial countries increased by nearly 8 p.c., while exports from the EFTA increased by only 1 p.c. By contrast, EEC exports grew by almost 9 p.c. In the first half of 1968, the absolute amount of EEC exports exceeded that of EFTA by over 100 p.c., compared with only 47 p.c. in 1958.

Although in absolute magnitude the EEC is still far behind the United States in terms of gross national product and income per capita (less than half in 1966), there is little doubt that it is moving ahead at a rapid pace.

Canada's Trade with the EEC

Canada's traditionally favourable balance of trade with the EEC shrank from \$184,800,000 in 1958 to \$101,800,000 in 1968. While total trade with the six countries more than doubled in that period from \$659,700,000 to \$1,425,000,000 and total exports (including re-exports) rose more than 80 p.c. from \$422,300,000 to \$763,400,000, imports from the EEC rose twice as fast or about 180 p.c. from \$237,500,000 to \$661,600,000. Also, the growth of exports to the EEC did not keep pace with the over-all growth of Canada's export trade. Exports to the EEC constituted only 5.6 p.c. of exports to all destinations in 1968 compared with 8.6 p.c. in 1958. Statistics of Canada's trade with the EEC together with the balance of trade appear in Table 1.

1.—Canada's Trade with the EEC, 1958-68

Trade by Section.—Because of a major revision of the Canadian commodity classifications (for exports in January 1961 and for imports in January 1964), historical data for previous years are not strictly comparable. However, both exports and imports are comparable back to 1960 on the basis of the new classifications, so that it is possible to examine Canada's trade with the EEC for the period from 1960 by section, as shown in Table 2.

2.—Canada's Domestic Exports to and Imports from the EEC, by Section, 1960-68

1968.....	554	46,046	7,342	195,410	403,630	8,599	661,581

As shown in Table 2, there were, in absolute terms, increases in domestic exports to the EEC in every section between 1960 and 1968, although important shifts took place in the proportions contributed by the sections. Food, feed, beverages and tobacco (Section II) exports, which constituted 29.4 p.c. of total domestic exports in 1960, fell to 19.1 p.c. by 1968; exports of inedible crude materials (Section III) rose from 23.7 p.c. to 36.3 p.c. over the same period; and the proportion of inedible fabricated materials (Section IV) fell from 40.6 p.c. to 34.8 p.c. Inedible end products (Section V), on the other hand, although still a small proportion of total domestic exports to the EEC, registered an increase of over 50 p.c. in their share from 6.1 p.c. in 1960 to 9.6 p.c. in 1968.

As a proportion of total imports from the EEC, there were declines in every section except inedible end products, which showed a steadily upward trend from 55 p.c. to 61 p.c. between 1960 and 1968. The share of food, feed, beverages and tobacco decreased from 8.2 p.c. to 7.0 p.c.; inedible fabricated materials declined from 32.8 p.c. to 29.5 p.c.; and inedible crude materials from 2.4 p.c. to 1.1 p.c.

Trade by Stage of Fabrication.—Another way of looking at the performance of Canada's trade with the EEC is by stage of fabrication. Table 3, presenting these data for 1960 to 1968, shows that domestic exports in all three categories (crude materials, fabricated materials and end products) went up, as did imports in each of the three categories. A clearer picture is given in Table 4 which shows the proportions of exports to and imports from the EEC in each stage of fabrication for the years 1960 to 1968.

3.—Domestic Exports to and Imports from the EEC, by Stage of Fabrication, 1960-68

Year	Domestic Exports			Imports

1964.....	51.5	28.4	20.1	2.6	36.3	61.1
1965.....	57.4	28.2	14.4	2.3	39.4	58.3
1966.....	58.9	28.3	12.8	2.4	34.1	63.5
1967.....	56.0	33.7	10.3	2.1	32.9	65.0
1968.....	53.4	35.4	11.2	1.8	31.1	67.1

Table 4 shows that exports of crude materials as a proportion of total domestic exports to the EEC did not change significantly between 1960 and 1968, although there were fluctuations in individual years. Exports of fabricated materials declined as a proportion from 41.1 p.c. in 1960 to 35.4 p.c. in 1968. End products exports, on the other hand, made a sizable gain from 7.4 p.c. in 1960 to 20.1 p.c. in 1964, but went down again to 11.2 p.c. in 1968.

Canada's imports from the EEC have traditionally consisted of manufactured and, to a lesser extent, semi-manufactured goods; crude materials imports formed the very small proportion of 1.8 p.c. in 1968, down from 3.6 p.c. in 1960. Imports of fabricated materials more than doubled from \$102,500,000 in 1960 to \$205,600,000 in 1968, although as a proportion of total imports they declined from 34.8 p.c. to 31.1 p.c. over the same period. End products imports during the period varied between 58.3 p.c. (1965) and 67.1 p.c. (1968) of total imports.

Leading Exports to the EEC.*—As seen above, Canadian exports to the EEC have risen considerably in absolute terms since 1960 but, as a proportion of EEC's imports from third countries, they declined from 1.9 p.c. in 1958 to 1.5 p.c. in 1960 and 1.2 p.c. in 1967. There has been no regular trend in the composition of Canadian exports to the EEC,

*At the time of analyzing trends in principal exports and imports, data were not available for 1968. Therefore, the principal commodities were chosen on the basis of their rank in 1967 and 1968 data were added afterwards.

largely because over half of Canada's exports to the EEC still consist of food and crude materials subject to variations in supply and demand conditions and the level of economic activity in the importing countries.

Although wheat has always been the most prominent Canadian export to the EEC, its sales have varied from year to year, depending on the crop conditions within the EEC itself. The peak was achieved in 1961 when wheat sales were valued at \$155,300,000; they have since fluctuated at a somewhat lower level and were valued at \$108,400,000 in 1968.

The second best export in 1968 was wood pulp and similar pulp which then stood at \$87,600,000 compared with \$60,600,000 in 1967 and \$13,200,000 in 1960. Here, exports have shown a steadily rising trend since 1960, and since 1966 this item has been Canada's second largest export to the EEC.

Leading Imports from the EEC.—Roughly two thirds of Canadian imports from the EEC consist of end products. As a matter of fact, these and fabricated materials have so far constituted virtually all of Canadian imports from this market. The share of crude materials was the highest at 3.6 p.c. in 1960 and has been steadily on the decline since, being only 1.8 p.c. in 1968. End products in 1968 constituted 67.1 p.c. and fabricated materials 31.1 p.c. of all imports.

Turning from aggregates to commodities, passenger automobiles and chassis have always been, by far, the largest Canadian import from the EEC during the period 1958-68, rising 71.1 p.c. between 1960 and 1968. The second highest purchase in 1968 was footwear valued at a record \$17,000,000, up from \$3,000,000 in 1960 and \$12,800,000 in 1967. Next came metalworking machinery at \$15,600,000, compared with \$18,600,000 in 1967 and \$2,800,000 in 1960. Table 6 traces the movement of the 10 leading import commodities from 1958.

6.—Leading Imports from the EEC, 1958-68

Canada's Trade with the Individual EEC Countries

Trade with Belgium and Luxembourg.—Canada has always had a favourable balance of trade with Belgium and Luxembourg, which are among the top 10 trading nations in the world and have, in fact, the highest per capita trade. The highest export surplus of \$71,500,000 was achieved in 1968. Wheat, traditionally the principal export to Belgium and Luxembourg, has been declining steadily since 1965. It was replaced by zinc in ores, concentrates and scrap in 1968 when it fell to third place following copper in ores, concentrates and scrap. Zinc exports have been between \$22,000,000 and \$23,000,000 annually and at \$23,000,000 in 1968 were, in fact, lower than the 1965 figure of \$23,600,000. Exports of copper in ores, concentrates and scrap rose to a record \$19,500,000 in 1968 from \$3,000,000 in 1967 and less than \$1,000,000 in 1964. In each year since 1960, the top three commodities have accounted for a sizable proportion of Canadian exports to Belgium and Luxembourg.

Canada's principal imports from Belgium and Luxembourg are fabricated materials such as steel bars and rods, structural shapes and sheet piling, cut but unset gem diamonds, and steel plates, sheets and strips.

Trade with France.—During the years after World War II, with the exception of 1959, Canada had a favourable balance of trade with France up to and including 1964—the highest in 1960 at \$23,500,000 and the lowest in 1962 at \$3,100,000. From 1965, however, the trade balance has been in France's favour—\$6,500,000 in that year, \$20,000,000 in 1966, \$46,500,000 in 1967 and \$37,400,000 in 1968.

Of the nine years (1960-68) considered here, wheat was the top export in 1961, 1963 and 1965, copper and alloys in 1964, 1967 and 1968, unmanufactured asbestos in 1962 and 1966, and in 1960 the top rank went to the omnibus group of synthetic and reclaimed rubber and plastics materials, not shaped. Among Canadian exports to France, the top three commodities in each year have accounted for roughly one third to over one half of the total domestic exports to that country. The percentage was as high as 54.1 in 1961 and as low as 31.7 in 1965; in 1967 and 1968 it was 36.9.

Canada's principal imports from France are passenger automobiles and chassis, books and pamphlets (not in English), steel bars and rods, and grape wines. In recent years, imports of electronic computers and parts have shown a tendency to rise, although they were considerably reduced to \$2,400,000 in 1968 from \$6,900,000 in 1967. Aircraft with engines were a major import in 1967 when they were valued at \$7,400,000.

Trade with Germany.—Canada's trade with the Federal Republic of Germany prior to 1952 included also trade with East Germany, although trade with the latter was never high during that period. Nevertheless, throughout the postwar period up to 1964, Canada had a trade surplus with the Federal Republic, with the sole exception of 1950 when there was a deficit of over \$2,000,000. In 1965, the situation reversed and the Federal Republic had a surplus amounting to \$16,300,000. Canada's deficit increased to \$55,500,000 in 1966 and to \$75,600,000 in 1967 but decreased to \$66,400,000 in 1968.

Excluding 1968, wheat has been the principal export to the Federal Republic during the 1960s. However, from the peak in 1961 at \$78,200,000 it showed a generally declining trend and in 1968 hit a low of \$20,900,000 and accounted for only 9.1 p.c. of Canadian exports to that country. Wood pulp and similar pulp replaced wheat as the top export in 1968 and accounted for 11.8 p.c. of total domestic exports. Copper in ores and concentrates, also higher than wheat in 1968, accounted for 9.7 p.c. of all exports.

Here again, the pattern is more or less in line with Canadian exports to most other EEC countries. The top three commodities accounted for over 30 p.c. of the total domestic exports; the percentage for the top three was the highest at 56.9 in 1961 and the lowest at 30.6 in 1966 and again in 1968. Asbestos, unmanufactured, and aluminum including alloys generally are the other principal exports to the Federal Republic.

Passenger automobiles and chassis imports, Canada's largest purchase from the Federal Republic, in 1968 were valued at \$54,200,000, a new high. Other important purchases from that country include steel bars and rods, steel plates, sheets and strips, dyestuffs, and tractors and parts.

Trade with Italy.—Canada had a favourable balance of trade with Italy during the postwar period except in 1958, 1959 and 1964. The 1968 surplus for Canada at \$32,900,000 was the highest on record, an improvement of about \$4,000,000 over 1967. The principal exports are wheat, wood pulp and similar pulp, iron ores, and aluminum including alloys; wheat was the top export except in 1964 and 1967. There seems to be a broader base of exports to Italy than to other EEC countries. The lowest percentage the top three export commodities accounted for in total domestic exports to Italy was 25.9 in 1964 and the highest was 49.7 in 1968.

The principal imports from Italy are last-made pairs of boots and shoes, calculating machines and parts, and, more recently, passenger automobiles and chassis, and canned tomatoes and tomato paste.

Trade with the Netherlands.—Canada has always had a favourable balance of trade with the Netherlands, the highest on record being \$115,800,000 in 1968. The principal exports to the Netherlands are wheat, wood pulp and similar pulp, and iron ore, with other commodities, such as aluminum including alloys, copper and alloys, and flaxseed, prominent in some years. Exports of aircraft and parts also became important in 1962 (when they were valued at \$4,700,000) and in 1968 (\$5,900,000). Here again, the concentration of exports is quite heavy as the three top items in a year have accounted for a percentage of total domestic exports varying from 35.0 in 1965 and 1966 to 48.2 in 1960.

Among Canadian purchases from the Netherlands, no particular item stands out and the importance of import commodities varies from year to year. Thus, for example, steel plates, sheets and strips, which are a relatively minor import from the Netherlands, suddenly shot up to \$6,800,000 in 1965 for just that one year. In recent years, vegetable oils and fats except essential oils have been bought from the Netherlands in amounts varying from \$3,500,000 to \$5,400,000. Over-all, therefore, there is no clear trend.

Problems and Prospects

EEC's exports and imports have both expanded rapidly during the first decade of its operation. There is some evidence of trade-creation but it is difficult to say precisely how much of this expansion is attributable directly to the formation of the EEC. For, even if the EEC had not been formed, some expansion would have taken place. There is also some evidence of trade-diversion in that the EEC's intra-area trade has expanded much faster than its extra-area trade. How much of it is the direct effect of the establishment of the Community is again difficult to say. In short, the impact of the EEC on intra-area trade cannot be distinguished from other influences such as scientific and technical advance and the existing trends in expansion of trade both with Western Europe and other areas. There is still a long way to go before an economic union can be said to have been established. It is too early, therefore, to see clearly the trade-creating and trade-diverting effects of the EEC. A definitive judgment will have to wait until more data become available, until the experience of the EEC is known over a longer period of time, and until methodological and conceptual problems involved in computing accurately the effects of trade-creation and trade-diversion are satisfactorily resolved.

The EEC's trade with Canada has expanded in absolute terms over the first decade of its operation; its exports to Canada rose 130 p.c. and its imports from Canada only 50 p.c. But, in relative terms, there has been a diminution in Canada's trade with the six countries. Not only do Canadian exports to the Community now form a smaller proportion of its exports to all destinations, they also constitute a smaller percentage of the EEC's total imports. As Canada's exports to the Community consist largely of food and crude materials, its position may be affected considerably by the operation of the Common Agricultural Policy, especially with respect to exports of wheat, of which the Federal Republic of Germany is at present the major buyer. The prospects for Canadian wheat generally depend on the situation of the Durum wheat harvest in Italy. It should be borne in mind that the EEC is now a net exporter of wheat in its trade with third countries. It exports indigenous soft wheat and flour and generally imports high-quality blending wheats and Durum wheat. Intra-area trade of the EEC in indigenous wheat has been increasing, especially since the removal of internal trade barriers.

Manufactured goods is the fastest growing component of EEC's import demand, and demand is also increasing for fabricated materials, steel and other metals, chemicals, paper and textiles as well as for forest products and unmanufactured asbestos. Canada's export performance will ultimately depend on such factors as the demand pattern of the Community, especially among the markets of the individual member countries, and Canada's ability to compete with other outside sources in meeting this changing pattern of import demand. It is, therefore, essentially a question of competitive strength.

As long as the cuts agreed to by the EEC during the Kennedy Round of trade negotiations are being made—and they will be completed by January 1972—Canadian industry may be able to resolve most of the problems posed by the coming into force of the common external tariff. But, in the longer run, it may be necessary to devise other ways of scaling the tariff walls erected around the Community. Direct Canadian investment in the EEC could be one way, as the United States has been doing. Canadian manufacturers may have to license their products for manufacture within the EEC or to set up subsidiaries there. Although the mutual interdependence of the EEC countries is undoubtedly increasing, there will always be demand for imports. Economic development, growing per capita income and rising standards of living will continue to create demand for imports from beyond the national frontiers. Some of this demand is bound to be for imports from outside the Community which is still evolving, so that it is not yet certain what the shape of things will finally be. In any case, given the right outlook on the part of Canadian industry, there should be no cause for undue pessimism nor for complacency, for the problems are real and the market must be cultivated assiduously if performance is to be maintained.

PART II.—FOREIGN TRADE STATISTICS*

Section 1.—Explanatory Notes on Canadian Trade Statistics

Sources.—Canadian foreign trade statistics are compiled from information recorded on customs documents received by the Dominion Bureau of Statistics from the various customs ports in Canada with the following exceptions: *electricity* exports are based on reports received from the National Energy Board and imports are based on reports received from public utility companies; and *crude petroleum exported by pipeline*, statistics for which are reported directly to the Bureau by the pipeline companies. Record is kept of value and, whenever possible, of quantity. In considering trade figures, it should be noted that the statistics do not necessarily reflect the financial transactions relating to the movement of goods since the method and time of payment are affected by many factors.

Coverage.—*Domestic exports* or *exports of Canadian produce* include exports of goods wholly produced in Canada together with exports of previously imported goods that have been changed in form by further processing in Canada. *Re-exports* or *exports of foreign produce* include previously imported goods that are exported from Canada in the same form as when imported. From January 1964, re-exports have also included exports of goods previously imported but stored in customs warehouses.

Imports, as from Jan. 1, 1964, include all goods cleared by customs immediately on arrival in Canada, plus goods entered into customs warehouses rather than cleared on arrival. For 1963 and earlier years, imports included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods entered into customs warehouses and then re-exported, but there may be an important difference in the time at which warehoused goods are recorded as imports; some shipments entering customs warehouses remain there for several months before clearance.

The most important exclusions from export totals are: current coin, gold, goods shipped to Canadian Armed Forces or diplomats stationed abroad, goods financed under the Defence Appropriation Act and shipped to other NATO countries, temporary exports for exhibition or competition, fuel and stores sold to foreign vessels and aircraft in Canada, settlers' effects, private donations and gifts, and identifiable tourist purchases—generally all temporary exports and goods merely moving in transit through Canadian territory.

The most important exclusions from import totals are: current coin, gold, goods for use of the United States Armed Forces stationed at treaty bases in Canada, Canadian-owned military equipment returned to Canada, ships imported for use in foreign trade and ships of British construction and registry imported for use in the coasting trade, temporary imports for exhibition or competition, fuel and stores purchased by Canadian vessels and aircraft abroad, settlers' private donations and gifts, tourist purchases exempt from duty, and goods imported for foreign armed forces or diplomats stationed in Canada—generally all temporary imports and goods merely moving in transit through Canadian territory.

Beginning Jan. 1, 1964, Canada's trade statistics are compiled on a "General Trade" basis instead of on the "Special Trade" basis used previously. The main difference in the case of figures recorded on the General Trade basis is that imports are entered as such whether the goods are cleared through customs for immediate domestic use or stored in a customs warehouse. Domestic exports remain the same on both bases but re-exports, after Jan. 1, 1964, include exports from customs warehouses which were previously excluded. Over a period of years, the totals of Canadian exports or imports would be almost the same on either basis but considerable differences might appear in individual years because of time of clearance and extent of business activity.

From Jan. 1, 1960, a new category was established in both export and import statistics entitled "Special Transactions—Non-trade". This category includes certain commodity

*Prepared in the External Trade Division, Dominion Bureau of Statistics.

movements which either have no international financial implications or, for various reasons, are better considered separately from merchandise trade in economic analysis. The value of transactions of these types is now excluded entirely from published totals of Canadian merchandise trade and does not appear in this volume, but statistics for the classes of this category are contained in the regular monthly export and import reports.

Beginning with statistics for January 1961, a new export commodity classification was used, based on the Standard Commodity Classification developed by the DBS as a tool for integrating statistical series derived from different sources. Whereas the classification previously used classified commodities primarily according to the material of which they were chiefly composed, the new classification places commodities in sections mainly according to stage of processing and purpose, as follows: Live Animals; Food, Feed, Beverages and Tobacco; Crude Materials, Inedible; Fabricated Materials, Inedible; End Products, Inedible; and Special Transactions—Trade.

As from Jan. 1, 1964, a new commodity classification was also introduced for import statistics, based on concepts similar to those embodied in the export commodity classification, so that there is now a closer approach to comparability between the two sets of statistics. As part of the change to the new classifications, the commodity detail shown in trade returns has been modernized by eliminating statistics on some commodities of minor significance and instituting new classes for many commodities of greater importance. The grouping system employed in the new classification also makes easier the identification of other commodities which may merit separate specification. For most of the commodities of greatest importance in Canadian exports, the classes of the new export commodity classification are substantially identical with those of its predecessor. The import commodity classification is more extensive than the export commodity classification and in its new form gives an up-to-date and comprehensive coverage of those commodities which constitute the bulk of Canada's import trade.

Valuation.—Export entries define the value of exports as the "actual amount received or to be received in terms of Canadian dollars, exclusive of all charges" (freight, insurance, handling, etc.). This definition would give values f.o.b. point of consignment for export but in practice it is not always followed. For example, in recent years a significant but indeterminate proportion of exports has been reported in United States dollars, resulting in some overstatement of the value of exports for the period prior to June 1961 and some understatement of their value in subsequent years.

The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export but, at least in recent years, importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January 1959); raw cotton and crude petroleum from January 1962, retroactive to January 1960); raw sugar (from January 1963, retroactive to January 1961); and all shipments individually valued at \$100,000 or more (from January 1964). Only about one fifth of the value of imports is covered by these specific checks.

Country Classification.—Trade is credited to countries on the basis of consignment. For exports from Canada, the country of consignment is that country to which goods are sent at the time of export, intended to pass without interruption of transit except in the course of transfer from one means of conveyance to another. For imports into Canada, the country of consignment is the country from which the goods came without interruption of transit except in the course of transfer from one means of conveyance to another. This is not necessarily the country of actual origin, since goods produced in one country may be imported by a firm in another country and re-sold to Canada; in such cases the second country is the country of consignment to which the goods are credited. There is one exception to this rule; an attempt is made to classify by country of origin goods produced in South America, Central America, Bermuda and the Antilles and consigned to Canada.

from the United States. The effect of this procedure is to reduce slightly the imports credited to the United States and to increase those credited to South and Central American countries.

The country sub-totals include trade with Commonwealth and other countries (the Republic of Ireland and the Republic of South Africa) entitled to Preferential rates of duty. Trade with Alaska and Hawaii is included in the United States statistics in all the relevant tables included in this Chapter even though these two areas were separately classified prior to Jan. 1, 1969, and Jan. 1, 1960, respectively.

Discrepancies in Trade Statistics Between Canada and Other Countries.—Canada's statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Major factors contributing to these discrepancies include:—

- (1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.
- (2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual aid shipments, postal and express shipments, or warehouse trade.
- (3) Differing definitions of territorial areas.
- (4) Differing systems of crediting trade by countries, notably the consignment system used by Canada and the actual origin or ultimate destination system in use in some other countries.
- (5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

Section 2.—Total Foreign Trade

In considering the figures in Sections 2 to 5, reference should be made to the explanatory notes on trade in Section 1. Exports and imports of gold are excluded from all tables.

1.—Value of Total Foreign Trade of Canada (excluding Gold), 1952-67

NOTE.—Figures have been revised to cover the adjustment for "Special Transactions—Non-trade"; see p. 986.

Treatment of Gold in Trade Statistics.—The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price. Also, gold may be bought or sold internationally without any physical

movements of the metal, such transactions being recognized by simply setting aside or 'ear-marking' the metal in the vaults of some central bank.

For these reasons, movements of gold in a primary or semi-fabricated state are excluded from the totals of Canada's commodity trade. However, since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a division of the figures into transactions with individual countries is not possible.

2.—New Gold Production Available for Export, by Month, 1960-67

(Millions of dollars)

¹ Less than \$500.

The proportion of imports subject to duty varies widely between countries and geographic areas. Generally, the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average ad valorem rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries or in the average ad valorem rates of duty charged on imports from different countries therefore do not necessarily indicate differences in the tariff relations between Canada and these countries. There are, in the main, three sets of tariff rates in operation in Canada: Commonwealth Preferential, Most-Favoured-Nation, and General Tariff (see p. 1022).

Section 4.—Trade by Commodity

This Section provides detailed information on the composition of Canada's exports and imports for 1966 and 1967. Table 8 shows exports and re-exports to and imports from all countries, the United Kingdom and the United States, classified by section; Table 9 gives detailed statistics of all commodities of any importance exported from Canada to all countries, to the United Kingdom and to the United States; and detailed statistics for imports into Canada by section and commodity appear in Table 10.

Section 5.—Trade by Section and by Stage of Fabrication

This Section contains a series of statistics covering trade by stage of fabrication, based on the new commodity classification (see p. 987). The Section totals given in Tables 11 and 12 for the period from 1948 were compiled by converting statistics tabulated on the old classification to the new framework; old classes or fragments of classes were converted to appropriate new classes and changes in content, descriptions or codes of former classes were taken into account as much as possible, but the results for 1957 and previous years are subject to some limitations.

To classify exports and imports by stage of fabrication, that is, within the categories of Crude Materials, Fabricated Materials and End Products, requires a secondary classification of the commodities in certain Sections. Live Animals (Sect. I), being a natural product, is considered as crude materials; Food, Feed, Beverages and Tobacco (Sect. II) is allocated as follows: Crude Materials includes natural products not further processed than cleaned or prepared for shipment; Fabricated Materials includes commodities which are further processed and are used in processing industries rather than for direct human consumption, and also all commercial stock feeds; End Products includes commodities which are further processed and are mainly used directly for human consumption, and also prepared pet feeds. Sects. III, IV and V are clearly defined in the Standard Commodity Classification. Sect. VI contains relatively few classes; these have been pro-rated as necessary for both exports and imports according to studies undertaken over a number of years.

Exports.—An analysis of the figures for 1948-67 shows that export totals followed a generally upward trend. By 1967, their value had risen 264.7 p.c. over that in 1948, with a steady increase from 1954 onward. This growth was reflected in all sections except Live Animals where exports in 1967 declined to 48.2 p.c. of the value in 1948. Food, Feed, Beverages and Tobacco increased 90.8 p.c. over 1948; Crude Materials, Inedible were up 582.7 p.c.; Fabricated Materials, Inedible 204.0 p.c.; End Products, Inedible, where the growth rate was the most striking, increased 649.2 p.c.; and Special Transactions—Trade increased 477.9 p.c.

Exports during 1967 were 10.3 p.c. above those during 1966. Live Animals recorded a decline of 45.8 p.c.; Food, Feed, Beverages and Tobacco declined 15.1 p.c.; and Special Transactions—Trade declined 11.2 p.c. On the other hand, Crude Materials rose 8.2 p.c.; Fabricated Materials 5.4 p.c.; and End Products 46.6 p.c.

Analysis of exports by stage of fabrication indicates that exports of Crude Materials during 1967 increased 275.5 p.c. over 1948, Fabricated Materials were up 180.7 p.c. and End Products 465.2 p.c. Exports of Crude Materials during 1967 were 5.0 p.c. lower than in 1966 but those of Fabricated Materials were up 4.7 p.c. and those of End Products 41.2 p.c. The relative contribution of Crude Materials to total exports increased from 28.2 p.c. in 1948 to 29.0 p.c. in 1967 and that of End Products from 20.1 p.c. to 31.2 p.c. On the other hand, the contribution of Fabricated Materials declined from 51.7 p.c. to 39.8 p.c. of total exports.

Imports.—The total value of imports during 1967 advanced 323.0 p.c. over that in 1948. Between 1960 and 1967, imports increased by 102.0 p.c. against an increase of 111.4 p.c. in exports during the same period. Thus, while expanding imports have reflected the increasing prosperity of the Canadian people, exports have been more buoyant in recent years. Considering the period 1948-67, imports of Live Animals rose 544.2 p.c.; those of Food, Feed, Beverages and Tobacco, 209.2 p.c.; Crude Materials, Inedible, 55.0 p.c.; Fabricated Materials, Inedible, 211.7 p.c.; End Products, Inedible, 644.7 p.c.; and Special Transactions—Trade 784.7 p.c.

The relative importance of Food, Feed, Beverages and Tobacco dropped from 10.6 p.c. in 1948 to 7.8 p.c. in 1967; of Crude Materials, Inedible, from 26.2 p.c. to 9.6 p.c.; and

11.—Domestic Exports by Section and Stage of Fabrication, 1948-67

Fabricated Materials, Inedible, from 28.3 p.c. to 20.9 p.c. On the other hand, the relative importance of End Products, Inedible, rose from 33.6 p.c. to 59.1 p.c. Live Animals and Special Transactions—Trade form a comparatively small proportion of total imports.

Analysis of imports by stage of fabrication shows that the proportion of Crude Materials went down from 31.6 p.c. in 1948 to 14.2 p.c. in 1967, and of Fabricated Materials from 32.0 p.c. to 22.8 p.c. The relative importance of End Products, on the other hand, increased from 36.4 p.c. to 63.0 p.c. during the same period.

PART III.—THE GOVERNMENT AND FOREIGN TRADE

Section 1.—Federal Foreign Trade Services*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated, however, that two-way trade should be encouraged so that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities not indigenous to this country must be imported. Some of these are required for industrial processes and others may be classed as consumer goods necessary for the maintenance of the Canadian standard of living.

Although numerous private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls imposed by many countries for a variety of reasons, together with foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives. The federal Department of Industry, Trade and Commerce, a primary function of which is the promotion of external trade, makes available to businessmen a wide variety of services to assist them in selling their products abroad. These services are provided by the Department's head office in Ottawa, seven regional offices in Canada, and a corps of Trade Commissioners stationed around the world.

Trade services available from the various branches, divisions and agencies of the Department of Industry, Trade and Commerce are described below. The work of these entities is interrelated, each operating in its own field but working closely with the others to effect the over-all objective of trade promotion.

Trade Commissioner Service.—The Trade Commissioner Service, as the overseas arm of the Department, is actively engaged in the promotion of Canadian trade and the protection of Canada's commercial interests; 73 offices are maintained in 50 countries.

Every effort is made by Trade Commissioners to bring Canadian exporters and prospective buyers together. On their own initiative, and in response to requests from the Department and Canadian businessmen, they study potential markets for specific Canadian commodities and services. Economic reports provide background information necessary to the formulation of Departmental trade policy. Reports are provided on the demand in the country concerned, prices, competition, trade and exchange regulations, tariffs, shipping and packaging requirements, credit terms, channels of distribution, labelling regulations,

*This Section was prepared in the several Branches of the Department of Trade and Commerce as it was organized before the legislation integrating that Department and the Department of Industry was passed in March 1969. Departmental services in the area of foreign trade, as described here, have not been greatly changed although they are, in some instances, under different Branch or Division designations. For the functions of the re-organized Department as a whole, see the Appendix to this volume.

etc. Inquiries from local businessmen for goods obtainable from Canada are forwarded to the Department in Ottawa, or directly to Canadian firms in a position to supply the products required.

The supervision of Canadian exhibits at overseas trade fairs and the provision of assistance to participating Canadian firms is an important function of many offices. Trade Commissioners make local arrangements for and travel with Canadian trade missions visiting overseas markets. They also seek sources of supply for a wide variety of goods on behalf of Canadian importers.

In developing trade opportunities, Canada's Trade Commissioners travel extensively in their territories, visit leading industrial and commercial centres and call on government officials, businessmen, trade associations and municipal authorities. They establish social contacts with commercial interests, thereby developing goodwill for Canada and Canadian products, while creating connections for Canadian exporters and facilitating the collection of trade information. They return to Canada at periodic intervals and make tours of Canadian industrial and commercial centres. Such direct contacts enable them to discuss specific problems with businessmen and bring into focus the Canadian commercial scene.

In countries where Canada has a diplomatic mission, the Canadian trade office is the commercial division and the Trade Commissioner has the rank of Minister (Commercial), Minister-Counsellor (Economic), Commercial Counsellor, Commercial Secretary or Assistant Commercial Secretary. When attached to a consulate, he carries the title of Deputy Consul General (Commercial), Consul (Commercial), or Vice-Consul (Commercial), according to his rank, in addition to that of Trade Commissioner or Assistant Trade Commissioner. He may also be the Consul General, in charge of the office. Where trade offices are detached and do not form part of a diplomatic mission, the Trade Commissioner may also be required to undertake consular, immigration and other duties as the sole representative of Canada.

CANADIAN FOREIGN TRADE OFFICES ABROAD, AS AT JANUARY 1969

ARGENTINA.—Commercial Counsellor, Canadian Embassy, Casilla de Correo 3898, Suipacha 1111, Buenos Aires. Territory includes Paraguay.

AUSTRALIA.—

Sydney: Commercial Counsellor for Canada, P.O. Box 3952 GPO, A.M.P. Building, Circular Quay, Sydney. Territory includes States of New South Wales and Queensland, Capital Territory, Northern Territory, and Dependencies.

Victoria: Commercial Counsellor for Canada, Mobil Centre, 2 City Rd., South Melbourne, 3205, Victoria. Territory includes States of Victoria, South Australia, Western Australia and Tasmania.

Canberra: Commercial Counsellor, Office of the High Commissioner for Canada, Commonwealth Ave., Yarralumla 2600, Canberra ACT.

AUSTRIA.—Commercial Counsellor, Canadian Embassy, P.O. Box 190, Obere Donaustrasse 49/51, 1020, Vienna 2. Territory includes Albania, Bulgaria, Hungary and Romania.

BELGIUM.—Commercial Counsellor, Canadian Embassy, 35 rue de la Science, Brussels 4. Territory includes Luxembourg.

BRAZIL.—

Rio de Janeiro: Commercial Counsellor, Canadian Embassy, Caixa Postal 2164-ZC-00, Edifício Metrópol, Av. Presidente Wilson 165, Rio de Janeiro.

São Paulo: Consul and Trade Commissioner, Canadian Consulate, Caixa Postal 6034, Edifício Scarpa, Av. Paulista, 1765, 9 andar, São Paulo.

BRITAIN.—

London: Minister (Commercial), Office of the High Commissioner for Canada, One Grosvenor Square, London, W1X 0AB. Territory includes Gibraltar.

Liverpool: Canadian Government Trade Commissioner, Martins Bank Bldg., Water Street Liverpool L2 3SY. Territory includes Midlands and North England.

BRITAIN.—concluded

Glasgow: Canadian Government Trade Commissioner, Cornhill House, 144 West George St., Glasgow C.2, Scotland. Territory includes Scotland.

Belfast: Canadian Government Trade Commissioner, 15-17 Chichester St., Belfast BT1 4JB, Northern Ireland. Territory includes Northern Ireland.

CEYLON.—Commercial Division, Office of the High Commissioner for Canada, P.O. Box 1006, 6 Gregory's Road, Cinnamon Gardens, Colombo.

CHILE.—Commercial Counsellor, Canadian Embassy, Casilla 771, Agustinas 1225, Santiago.

COLOMBIA.—Commercial Secretary, Canadian Embassy, Apartado Aereo 8582, Edificio Banco de Los Andes, Carrera 10, No. 16-92, Bogota. Territory includes Ecuador.

CUBA.—Commercial Division, Canadian Embassy, Gaveta 6125, Calle 30 No. 518 esquina 7ª Avenida, Miramar, Havana.

CZECHOSLOVAKIA.—Commercial Secretary, Canadian Embassy, Chancery, Mickiewiczova 6, Prague 6.

DENMARK.—Commercial Counsellor, Canadian Embassy, Prinsesse Maries Allé 2, Copenhagen V. Territory includes Greenland and Poland.

DOMINICAN REPUBLIC.—Commercial Division, Canadian Embassy, Apartado 1393, Edificio Copello 408, Calle El Conde, Santo Domingo.

EUROPEAN COMMUNITIES.—Mission of Canada to the European Communities, Canadian Embassy, 35 rue de la Science, Brussels 4, Belgium. Territory includes European Economic Community, European Atomic Energy Community, European Coal and Steel Community.

FRANCE.—Minister-Counsellor (Commercial), Canadian Embassy, 35 Ave. Montaigne, Paris 8°. Territory includes Algeria, Andorra, Monaco and Morocco.

GERMANY.—

Bad Godesberg: Commercial Counsellor, Canadian Embassy, Kennedy-Allee 35, Bad Godesberg, West Germany. Territory includes States of Baden-Wuerttemberg, Bavaria, Hesse, Rhineland-Palatinate, Saar, West Berlin.

Duesseldorf: Consul General, Canadian Consulate General, Koenigsallee 82, 4 Duesseldorf 1, West Germany. Territory includes State of North Rhine-Westphalia.

Hamburg: Consul General, Canadian Consulate General, Esplanade 41-47, 2000 Hamburg 36, West Germany. Territory includes City States of Bremen and Hamburg; States of Lower Saxony and Schleswig-Holstein.

GHANA.—Commercial Secretary, Office of the High Commissioner for Canada, P.O. Box 1639, E 115/3 Independence Ave., Accra. Territory includes Guinea, Ivory Coast, Liberia, Mali, Mauritania, Togo and Upper Volta.

GREECE.—Commercial Counsellor, Canadian Embassy, 31 Vassilissis Sophias Ave., Athens 138. Territory includes Turkey.

GUATEMALA.—Commercial Counsellor, Canadian Embassy, P.O. Box 400, 5a Avenida 11-70, Zone 1, Guatemala City, C.A. Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.

HONG KONG.—Senior Canadian Government Trade Commissioner, P.O. Box 126, P & O Building, 21-23, Des Voeux Rd., Central, Hong Kong. Territory includes Cambodia, People's Republic of China, Laos, Macao and Viet-Nam.

INDIA.—Commercial Counsellor for Canada, P.O. Box 11, 13 Golf Links Rd., New Delhi 1. Territory includes Bhutan, Nepal and Sikkim.

IRAN.—Commercial Division, Canadian Embassy, P.O. Box 1610, Bezrouke Bldg., Corner of Takht Jamshid Ave. and Forsat St., Tehran.

IRELAND.—Commercial Counsellor for Canada, 66 Upper O'Connell St., Dublin.

ISRAEL.—Commercial Secretary, Canadian Embassy, P.O. Box 20140, 84 Hahashmonaim St., Tel Aviv. Territory includes Cyprus.

ITALY.—

Rome: Minister-Counsellor (Commercial), Canadian Embassy, Via G.B. De Rossi 27, 00161 Rome. Territory includes Provinces of Toscana, Marche, Umbria, Lazio, Abruzzi-Molise, Puglia, Campania, Basilicata, Calabria, Sicilia and Sardegna. Other countries: Libya and Malta.

Milan: Consul General and Trade Commissioner, Canadian Consulate General, C.P. 3977, Via Vittor Pisani 19, 20124 Milan. Territory includes Provinces of Emilia-Romagna, Lombardia, Piedimonte, Trentino-Alto Adige, Veneto, Liguria, Trieste, Valle D'Aosta and Friuli-Venezia.

JAMAICA.—Commercial Secretary, Office of the High Commissioner for Canada, P.O. Box 1500, Tobago Rd., (corner Trafalgar Rd. and Knutsford Blvd.) Kingston 10. Territory includes Bahamas, British Honduras, Cayman Islands, Turks and Caicos Islands.

JAPAN.—Minister (Commercial), Embassy of Canada, Akasaka Post Office, Tokyo 107. Territory includes Korea and Okinawa.

KENYA.—Commercial Secretary, Office of the High Commissioner for Canada, P.O. Box 3778, Industrial Promotion Services Bldg., Kimathi St., Nairobi. Territory includes Malawi, Tanzania, Uganda and Zambia.

LEBANON.—Commercial Counsellor, Canadian Embassy, Boîte Postale 2300, Alpha Bldg., Rue Clemenceau, Beirut. Territory includes Iraq, Jordan, Kuwait, People's Republic of Southern Yemen (Aden), Persian Gulf area, Saudi Arabia, Syria, Trucial States and Yemen.

MALAYSIA.—Commercial Counsellor, Office of the High Commissioner for Canada, P.O. Box 990, A.I.A. Bldg., Ampang Road, Kuala Lumpur. Territory includes Brunei and Burma.

MEXICO.—Commercial Counsellor, Canadian Embassy, Apartado Postal 5-364, Melchor Ocampo 463, Mexico 5, D.F.

NETHERLANDS.—Commercial Counsellor, Canadian Embassy, Sophialaan 7, The Hague.

NEW ZEALAND.—Commercial Counsellor, Office of the High Commissioner for Canada, P.O. Box 12-049, Wellington North ICI Building, Molesworth St., Wellington. Territory includes Cook Islands, Fiji, French Oceania, Gilbert and Ellice Islands, Tahiti, Tonga and Western Samoa.

NIGERIA.—Commercial Secretary, Office of the High Commissioner for Canada, P.O. Box 851, Niger House, Odunlami St., Lagos. Territory includes Dahomey, Gambia, Niger, Senegal and Sierra Leone.

NORWAY.—Commercial Counsellor, Canadian Embassy, Fridtjof Nansens plass 5, Oslo 1. Territory includes Iceland.

PAKISTAN.—Commercial Secretary, Office of the High Commissioner for Canada, Hotel Shahrazed, Islamabad. Territory includes Afghanistan.

PERU.—Commercial Secretary, Canadian Embassy, Casilla 1212, Edificio El Pacifico, Corner Avenida Arequipa and Plaza Washington, Lima. Territory includes Bolivia.

PHILIPPINES.—Consul General and Trade Commissioner, Canadian Consulate General, P.O. Box 1825, 1414 Roxas Blvd., Manila. Territory includes Republic of China (Taiwan).

PORTUGAL.—Commercial Counsellor, Canadian Embassy, Rua Rosa Araujo, 2-7º, Lisbon 2. Territory includes Azores, Cape Verde Islands, Madeira and Portuguese Guinea.

PUERTO RICO.—Consul and Trade Commissioner, El Convento Hotel, San Juan. Territory includes Dominican Republic, Haiti and U.S. Virgin Islands.

SINGAPORE.—Commercial Counsellor, Office of the High Commissioner for Canada, P.O. Box 845, International Building, 360 Orchard Rd., Singapore 1. Territory includes Indonesia and Thailand.

SOUTH AFRICA.—

Johannesburg: Canadian Government Trade Commissioner, P.O. Box 715, Mobil House, Corner Rissik and De Villiers Sts., Johannesburg. Territory includes Provinces of Natal, Orange Free State and Transvaal. Other countries: Angola, Botswana, Lesotho, Malagasy, Mauritius, Mozambique, Reunion and Swaziland.

Cape Town: Canadian Government Trade Commissioner, P.O. Box 683, African Life Centre, St. George's St., Cape Town. Territory includes Cape Province. Other countries: St. Helena and South West Africa.

- SPAIN.**—Commercial Counsellor, Canadian Embassy, Apartado 117, Edificio España, Avenida de Jose Antonio 88, Madrid. Territory includes Balearic Islands, Canary Islands, Spanish Sahara and Equatorial Guinea.
- SWEDEN.**—Commercial Counsellor, Canadian Embassy, P.O. Box 14042, Kungsgatan 24, S-104 40 Stockholm. Territory includes Finland.
- SWITZERLAND.**—Commercial Secretary, Canadian Embassy, Kirchenfeldstrasse 88, 3000 Berne. Territory includes Liechtenstein and Tunisia.
- TRINIDAD AND TOBAGO.**—Commercial Counsellor, Office of the High Commissioner for Canada, P.O. Box 1246, Colonial Bldg., 72 South Quay, Port-of-Spain, Trinidad. Territory includes Barbados, Leeward and Windward Islands, French Guinea, Guadeloupe, Guyana, Martinique and Surinam.
- UNION OF SOVIET SOCIALIST REPUBLICS.**—Commercial Counsellor, Canadian Embassy, 23 Starokon-yushenny Pereulok, Moscow.

- VENEZUELA.**—Commercial Counsellor, Canadian Embassy, Apartado del Este 62320, Avenida La Estancia No. 10, Ciudad Comercial Tamanaco, Caracas. Territory includes Netherlands Antilles.
- YUGOSLAVIA.**—Commercial Secretary, Canadian Embassy, Proleterskih Brigada 69, Belgrade.

Dutch housing experts observe logging operations on Vancouver Island. As part of a continuing campaign to introduce timber frame housing in the Netherlands, the Department of Industry, Trade and Commerce in 1968 brought a Housing Mission to Canada to study logging techniques, lumber and plywood manufacture and large-scale home-building methods.

Recent Canadian Trade Missions abroad included a group of fourteen silverware and jewellery manufacturers who visited Australia to examine the market and display some of their products.

Trade Fairs and Missions Branch.—It is the function of this Branch to manage the Department's annual program of participation in trade fairs abroad and of outgoing and incoming trade missions. The Trade Fairs Abroad Division and the Trade Missions Division co-ordinate departmental activity in implementing these promotion programs and in organizing the trade fair exhibits and trade missions scheduled during the year. The Branch Director acts as chairman of the departmental committees that select the program and the Division Chiefs preside over working committees appointed to handle detailed planning. The Branch also provides liaison with Trade Commissioner Service posts abroad, trade associations in Canada, provincial governments and other federal departments or agencies in the development of trade promotion programs. In 1968 the Department sponsored exhibits at 47 trade fairs in ten countries, including Britain, France, Germany, Japan and the United States. Some 400 Canadian companies participated in this program and their products were seen by over 16,000,000 visitors to the fairs.

The trade missions program for 1968 produced 22 trade missions. Divided into incoming and outgoing formal missions, the Department sponsored 13 trade missions rep-

representing over 100 foreign businessmen from Yugoslavia, Romania, Poland, France, the Netherlands, Spain, Kuwait, Iran, Portugal, India, Mexico, Guatemala, Honduras, Colombia, Chile, Peru and Argentina, while Canadian businessmen visited Britain, France, Italy, Germany, the U.S.S.R., Mexico, Jamaica, Venezuela, Peru, Chile, Australia, New Zealand and South Africa in nine organized missions. The Department's formal trade missions program was further supplemented by a program for incoming trade visitors under which over 50 foreign businessmen and government officials from 15 different countries received assistance to visit industries in Canada.

Trade Policy Service.—The Office of Trade Relations, together with the Office of Commodity Trade Policy, which was established in September 1966, forms the Trade Policy Service of the Department of Industry, Trade and Commerce.

The main function of the Office of Trade Relations is to safeguard and improve terms of access for Canadian exporters in foreign markets. The Office is concerned with the conduct of Canadian trade relations with other countries, including the negotiation and administration of trade agreements and Canadian participation in international conferences and meetings dealing with trade and economic matters. It endeavours to find practical solutions for tariff problems and other difficulties encountered in foreign markets by Canadian exporters and, as a service to exporters, provides expert information, advice and assistance on foreign tariffs, import and exchange controls, documentation requirements and other foreign governmental regulations affecting Canada's trade. The Office also has responsibilities in relation to the export financing facilities available for the development of exports of Canadian capital equipment. The Area Divisions of the Office—Commonwealth, United States, Europe, Latin American and Asia and Middle East—are the central points of contact between Canada's Trade Commissioners abroad and the Department in Ottawa.

The Office of Commodity Trade Policy has two main areas of interest: it makes detailed commodity studies to ensure that the development of Canadian trade and related policies reflects the key role of export in the economy, and it has the responsibility for international commodity policy work, including the negotiation of international commodity arrangements and related activities.

Transportation and Trade Services Branch.—The functions of this Branch relate to freight transportation matters, export and import controls, trade directories, the administration of the seven Regional Offices and the provision of general guidance to firms seeking entry into the export field. These activities are conducted by three Divisions: the Transportation Division is concerned primarily with industrial transportation from the export shipper's point of view, with policies and practices affecting the movement of international trade, and with developments and trends in shipping services and freight rates; the Export and Import Permits Division administers the controls established under the Export and Import Permits Act; and the Regional Offices and Trade Services Division administers the Department's Regional Offices and compiles the Exporters' Directory, a confidential directory of firms engaged in or seriously interested in exporting commodities or services.

Commodity Branches.—The Commodities and Industries Services include three commodity Branches—the Agriculture and Fisheries Branch, the Industrial Materials Branch and the Manufacturing Industries and Engineering Branch. These Branches provide the main link between industry and the Department; they maintain close contact with the business community so as to be familiar with production and supply conditions throughout the country. Emphasis is placed on the search for products and services, the sale of which can be promoted abroad.

The Agriculture and Fisheries Branch is organized into five Divisions to cover fisheries, grain, livestock and animal products, plant products, and commodity arrangements and markets development. The Industrial Materials Branch is composed of three Divisions to

handle chemicals, forest products and metals and minerals. The Manufacturing Industries and Engineering Branch is organized into five Divisions responsible for appliances and commercial machinery, electrical and electronic equipment, mechanical equipment and engineering, textiles and consumer goods, and transportation equipment; a project division is responsible for specialized studies. These Divisions are staffed by commodity officers who are specialists in their fields and are available to assist Canadian businessmen.

Commodity officers visit manufacturing plants and production facilities, attend and address meetings of business associations and study groups and prepare product reports and market surveys. They constitute the principal channel through which information on Canadian products and services reaches Canadian Trade Commissioners abroad and a channel through which information on sales opportunities in countries abroad is disseminated to industry in Canada. They continually analyse reports from Trade Commissioners abroad to determine potential markets for commodities and services of interest to Canadian industry. In co-operation with the Canadian Government Exhibition Commission, they assist in making arrangements for the display of commodities in trade fairs throughout the world to introduce Canadian products into new markets. They organize and accompany departmental trade missions and serve as delegates to international commodity conferences to study world market conditions and to consider corrective adjustments.

Publicity Branch.—The function of the Publicity Branch is to stimulate interest in Canadian products in foreign markets and to encourage Canadian manufacturers to look beyond domestic horizons. Advertising, public relations and publicity techniques are used in varying combinations to accomplish these objectives. Advertising, periodicals, booklets, brochures and other printed matter are used in direct support of trade fairs and missions; news releases, radio tape recordings and television film clips are employed to inform Canadians of foreign trade opportunities and successes.

The Branch is composed of six Divisions. The Foreign Operations Division plans and executes the major activities concerning trade fairs and in-store promotions. Working closely with them is the Editorial Division which employs writers and editors to prepare promotional material, and the Art Division which is responsible for design, production and technical work. The Media Relations Division prepares and distributes press releases, articles, photographs, speeches and background material to newspapers, radio and television stations, magazines and the Canadian trade press. It provides publicity material for distribution abroad and produces and distributes films and television film clips to promote interest in Canada as a supplier of many commodities. The Canada Courier Division produces *Canada Courier*, an illustrated, eight-page international trade promotion newspaper, published on behalf of Canadian exporters to promote products and services abroad. It has a circulation of 97,000 and is distributed in more than 100 countries. The English edition is published six times a year and the French, Spanish and German editions twice annually. The Foreign Trade Division publishes the magazine *Foreign Trade*, fortnightly, and *Commerce extérieur*, monthly. These journals, designed to help Canadian exporters, contain information on overseas markets, tariffs and exchange rates as well as other pertinent trade data.

Office of Tourism.—The Office of Tourism comprises the Canadian Government Travel Bureau and the Travel Industry Branch. The Bureau is charged with promoting travel to Canada from other countries; the Branch is concerned with the study and analysis of the Canadian travel industry, including Federal Government activities in support of tourism.

Canadian Government Travel Bureau.—The Canadian Government Travel Bureau is in operation to encourage tourist travel to Canada and to co-ordinate the tourist promotion conducted by the provinces, transportation companies and national, regional and local tourist associations. The Bureau undertakes extensive tourist advertising campaigns abroad, provides tourist publicity material for foreign newspapers, magazines, radio and television outlets, and handles about 2,000,000 inquiries a year from potential visitors to

Canada. Offices are operated in New York, Chicago, San Francisco, Minneapolis, Los Angeles, Boston, Philadelphia, Cincinnati, Rochester, Indianapolis, Cleveland, Detroit, Washington, Hartford, Pittsburgh and Seattle in the United States; the Bureau also has representation in London, Paris, Frankfurt, Amsterdam, Copenhagen, Mexico City, Tokyo, and Sydney, Australia.

Travel Industry Branch.—The Branch is concerned primarily with the domestic travel industry. Its duties entail close examination of the nature and extent of tourist facilities and services in Canada and appraisal of their adequacy to meet visitor expectations; the study of federal, provincial and private programs and policies related to the growth and development of the travel industry; assessment of industry strengths, weaknesses and problems; and the preparation of advice to the Minister on ways and means to aid the industry. Close liaison is maintained with federal and provincial departments and agencies having activities related to travel and tourism and with major elements of the private sector of the Canadian travel industry.

The Branch also keeps under review the tourism and travel policies and practices of other countries, studies trends and developments in international tourism, and concerns itself with the activities of international organizations and agencies involved with tourism so far as Canada's interests may be related.

Export Credits Insurance Corporation.—This Corporation was established under the provisions of the Export Credits Insurance Act, 1944 (RSC 1952, c. 105, as amended) and is administered by a Board of Directors that includes the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance. It operates in two fields—export credits insurance and long-term export financing.

Insurance is available to all persons or corporations carrying on business in Canada to cover export sales made on customary credit terms. It provides protection against risks involved in the export, manufacture, treatment or distribution of goods, or the rendering of engineering, construction, technical or similar services. The main risks covered include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or an export licence or the imposition of restrictions on the import or export of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country. The insurance is available under three main classifications—general commodities, capital goods and services. General commodities policies cover a policyholder's export sales to all countries for a period of one year, and are renewable. Two types are available: the contracts policy, which insures an exporter against loss from the time he books an order until payment is received; or the shipments policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received. Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit up to a maximum of five years may be necessary. Specific policies are issued for transactions involving capital goods but the general terms and conditions are the same as those applicable to policies for general commodities. Specific policies are also issued to cover engineering, construction, technical or similar service contracts entered into between Canadian firms and persons in foreign countries who have agreed to purchase such services. The Corporation may also extend unconditional guarantees to Canadian chartered banks which will agree to provide non-recourse financing to insured exporters who have sold capital equipment abroad on medium-term credit.

The Corporation insures exporters on a co-insurance basis, the exporter retaining a small percentage of the risk involved, and the same principle operates in the distribution of recoveries obtained after the payment of a claim. When, in the opinion of the Minister of Industry, Trade and Commerce, a proposed transaction is in the national interest but

CF-5s for the Royal Netherlands Air Force coming off the production line at Canadair, Montreal. These twin-jet tactical aircraft, also produced for the Canadian Armed Forces as CF-5s, are capable of level flight supersonic speed and are ideally suited for close support, all-altitudes photo-reconnaissance and interceptor roles.

Heavy tracked vehicles built in a Calgary plant being inspected before shipment to the Soviet Union—they are part of a million-dollar order for vehicles ranging in size from two to 30 tons.

would impose upon the Corporation a liability for a term or in an amount in excess of that normally undertaken, the Corporation may be authorized by the Governor in Council to enter into a contract of insurance at the Government's risk.

The Corporation also administers direct financing facilities available under the Act in cases where export sales involving capital goods are of such a nature as to warrant credit terms in excess of five years. The Corporation, when authorized by the Governor in Council, buys the promissory notes or other negotiable instruments of the foreign purchaser.

Section 2.—The Development of Tariffs

Limitations of space in the Year Book have made it necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs.

Subsection 1.—The Canadian Tariff Structure*

The Canadian Tariff consists, in the main, of three sets of tariff rates—British Preferential, Most-Favoured-Nation, and General.

British Preferential Tariff rates are, with some exceptions, the lowest rates. They are applied to imported commodities from British countries, with the exception of Hong Kong, when conveyed without trans-shipment from a port of any British country enjoying the benefits of the British Preferential Tariff into a port of Canada. Some Commonwealth countries have trade agreements with Canada that provide for rates of duty, on certain specified goods, lower than the British Preferential rates.

Most-Favoured-Nation rates are usually higher than the British Preferential rates and lower than the General Tariff rates. They are applied to commodities imported from countries with which Canada has trade agreements. These rates would apply to British countries when they are lower than the British Preferential Tariff rates. The most important trade agreement concerning the effective rates applied to goods imported from countries entitled to Most-Favoured-Nation rates is the General Agreement on Tariffs and Trade (GATT).

General Tariff rates are applied to goods imported from the few countries with which Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tariff, or under both the British Preferential and Most-Favoured-Nation Tariffs, or under all Tariffs.

Valuation.—In general, the Customs Act provides that the value for duty of imported goods shall be the fair market value of like goods as established in the home market of the exporter at the time when and place from which the goods are shipped directly to Canada when sold "(a) to purchasers located at that place with whom the vendor deals at arm's length and who are at the same or substantially the same trade level as the importer, and (b) in the same or substantially the same quantities for home consumption in the ordinary course of trade under competitive conditions". In cases where like goods are not sold for home consumption but similar goods are sold, the value for duty shall be the cost of production of the goods imported plus an amount for gross profit equal in percentage to that earned on the sale of similar goods in the country of export. The value for duty ordinarily may not be less than the amount for which the goods were sold to the purchaser in Canada, exclusive of all charges thereon after their shipment from the country of export. Internal

* Information relating to rate of duty, value for duty and anti-dumping duty is available from the Department of National Revenue, Customs and Excise, which administers the Customs Act, the Customs Tariff and the Anti-dumping Act.

taxes in the country of export (when not incurred on exported goods), the cost of shipping goods to Canada and similar charges do not normally form part of the value for duty. There are, of course, further provisions for determining value for duty under the Act.

Anti-dumping Act.—Canada's Anti-dumping Act (SC 1968-69, c. 10) provides, in brief, that where goods are dumped, i.e., the export price is less than the normal value, and such dumping has caused, is causing, or is likely to cause material injury to the production of like goods in Canada, or has materially retarded or is materially retarding the establishment of the production in Canada of like goods as determined by the Anti-dumping Tribunal, there shall be levied, collected and paid an anti-dumping duty. This anti-dumping duty is in an amount equal to the margin of dumping of the entered goods.

Drawback.—There are provisions in the Customs and Excise Tax Acts for the repayment of a portion of the duty, sales and/or excise taxes paid on imported goods used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments are called) is to assist Canadian manufacturers to compete in foreign markets with foreign producers of similar goods. A second class of drawback, known as "home consumption" drawbacks, is provided for under the Customs Act and the Customs Tariff and applies to imported materials and/or parts used in the production of specified goods to be consumed in Canada.

The Tariff Board.—The organization and functions of the Tariff Board are described in the Appendix to this volume, under the heading of Departments, Boards, Commissions etc.

Subsection 2.—Tariff and Trade Arrangements with Other Countries as at Dec. 1, 1968

Canada's tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements providing for exchange of preferential rates are: Australia, the Bahamas, Barbados, Bermuda, Guyana, British Honduras, Jamaica, the Leeward and the Windward Islands, Trinidad and Tobago, New Zealand, Britain and its dependent territories, and Malawi. Canada also exchanges preferences with Ceylon, Cyprus, Malaysia and Malta and accords preferences to India, Pakistan, Ghana, Nigeria, Kenya, Tanzania, Uganda, Zambia and Sierra Leone. Many of these countries are also members of the GATT. In addition, Canada has trade agreements with Ireland and South Africa under which preferences are exchanged.

Canada signed the Protocol of Provisional Application of the General Agreement on Tariffs and Trade on Oct. 30, 1947, and brought the General Agreement into force on Jan. 1, 1948. The Agreement provides for scheduled tariff concessions and the exchange of most-favoured-nation treatment among the contracting parties, and lays down rules and regulations to govern the conduct of international trade.

At the beginning of April 1968, there were 76 full members in the GATT. These countries and the effective dates of their accession are indicated in the following list. In addition, Tunisia and the United Arab Republic were provisional members. The GATT is applied on a *de facto* basis to a number of newly independent states—Algeria, Botswana, Democratic Republic of the Congo, Lesotho, Maldives Islands, Cambodia, Mauritius, Mali, Singapore and Zambia—pending decisions as to their future commercial policies.

Trade relations between Canada and a number of other countries are governed by trade agreements of various kinds, by exchange of most-favoured-nation treatment under Orders in Council, by continuation to newly independent states of the same treatment originally negotiated with the countries previously responsible for their commercial relations, and by even less formal arrangements.

**Tariff and Trade Arrangements with Commonwealth Countries
as at Dec. 1, 1968**

Country	Agreement	Tariff Treatment
AUSTRALIA.....	Trade Agreement signed Feb. 12, 1960; in force June 30, 1960. GATT effective Jan. 1, 1948.	Agreement includes schedules of tariff rates and margins and exchange of British preferential rates on items not scheduled. May be terminated on six months notice.
BARBADOS.....	Relations are based on Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective Nov. 30, 1966.	The parties exchange specified tariff preferences.
BOTSWANA.....	GATT: <i>de facto</i> application pending Botswana's decision on commercial policy.	Canada and Botswana exchange preferential tariff treatment.
BRITAIN.....	Trade Agreement signed Feb. 23, 1937, effective Sept. 1, 1937; modified by exchanges of letters Nov. 16, 1938 and Oct. 20, 1947. GATT effective Jan. 1, 1948.	Various concessions are granted by each country including exchange of preferential tariff rates. The Agreement (as modified) includes provisions relating to the Colonies, Dependencies and Trustships.
CEYLON.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective July 29, 1948.	Canada and Ceylon exchange preferential tariff treatment.
COMMONWEALTH CARIBBEAN (BAHAMAS, BERMUDA, BRITISH HONDURAS, THE LEEWARD ISLANDS, AND THE WINDWARD ISLANDS).	Canada-British West Indies Trade Agreement signed July 6, 1925, in force Apr. 30, 1927; Canadian notice of termination of Nov. 23, 1938, was replaced by notice of Dec. 27, 1939, which continued the Agreement. Protocol signed July 8, 1966 continues <i>ad interim</i> and amends Part I of the Canada-British West Indies Trade Agreement; terminates Part II of that Agreement and incorporates a number of additional provisions. Bermuda, British Honduras and the Leeward and the Windward Islands participate in GATT.	The parties exchange specified tariff preferences.
CYPRUS.....	GATT effective Aug. 16, 1960.	Canada exchanges preferential tariff treatment with Cyprus.
GAMBIA.....	GATT effective Feb. 18, 1965.	Canada and Gambia exchange preferential tariff treatment.
GHANA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Oct. 18, 1957.	Canada accords British preferential treatment to Ghana (except on cocoa beans). Ghana extends most-favoured-nation treatment to Canada.
GUYANA.....	Relations are based on the Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective July 5, 1966.	The parties exchange specified tariff preferences.
INDIA.....	Since 1897 Canada has unilaterally accorded British preferential treatment without contractual obligation. GATT effective July 8, 1948.	Canada accords British preferential treatment to India. India extends most-favoured-nation treatment to Canada.
JAMAICA.....	Relations are based on Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective Aug. 6, 1962.	The parties exchange specified tariff preferences.
KENYA.....	GATT effective Dec. 12, 1963.	Canada accords British preferential tariff treatment to Kenya. Kenya extends most-favoured-nation treatment to Canada.

**Tariff and Trade Arrangements with Commonwealth Countries
as at Dec. 1, 1968—concluded**

Country	Agreement	Tariff Treatment
LESOTHO.....	GATT: <i>de facto</i> application pending Lesotho's decision on commercial policy.	Canada and Lesotho exchange preferential tariff treatment.
MALAWI.....	Malawi and Canada observe the terms of the 1958 Trade Agreement between Canada and the former Federation of Rhodesia and Nyasaland. GATT effective July 6, 1964.	Canada exchanges preferential tariff treatment with Malawi.
MALAYSIA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Sept. 16, 1963.	Canada and Malaysia exchange preferential tariff treatment.
MALTA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Sept. 16, 1964.	Canada exchanges British preferential treatment with Malta.
NEW ZEALAND.....	Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. GATT effective July 26, 1948.	The parties exchange specific preferences on scheduled goods and reciprocally grant British preferential rates on items not scheduled. May be terminated on six months notice.
NIGERIA, FEDERATION OF.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Oct. 1, 1960.	Canada accords British preferential treatment to Nigeria. Nigeria extends most-favoured-nation treatment to Canada.
PAKISTAN.....	Canada unilaterally accords British preferential treatment without contractual obligation. GATT effective July 30, 1948.	Canada accords British preferential treatment to Pakistan. Exchange of most-favoured-nation treatment.
RHODESIA.....	Canada does not recognize the present Government of Rhodesia.	Effective Nov. 11, 1965, Canada withdrew preferential treatment from Rhodesian goods, making them liable to the general tariff rate. Effective Dec. 31, 1965, Rhodesia withdrew preferential treatment from Canadian goods and required that they pay the most-favoured-nation rate.
SIERRA LEONE.....	Relations continue to be governed by Trade Agreement with Britain of 1937. GATT effective Apr. 27, 1961.	Exchange of most-favoured-nation treatment. Canada accords British preferential treatment to Sierra Leone. Sierra Leone extends most-favoured-nation treatment to Canada.
SINGAPORE.....	GATT: <i>de facto</i> application pending Singapore's decision on commercial policy.	Canada and Singapore exchange preferential treatment.
TRINIDAD AND TOBAGO.....	Relations are based on Canada-West Indies Trade Agreement and protocol thereto (see Commonwealth Caribbean). GATT effective Aug. 31, 1962.	The parties exchange specified tariff preferences.
UGANDA.....	GATT effective Oct. 9, 1962.	Canada accords British preferential tariff treatment to Uganda. Uganda extends most-favoured-nation tariff treatment to Canada.
UNITED REPUBLIC OF TANZANIA.....	GATT effective for Tanganyika Dec. 9, 1961 and extended to Zanzibar upon formation of United Republic Apr. 23, 1964.	Canada accords British preferential tariff treatment to the United Republic of Tanzania. Tanzania extends most-favoured-nation tariff treatment to Canada.
ZAMBIA.....	GATT: <i>de facto</i> application pending Zambian decision on commercial policy.	Canada accords British preferential treatment to Zambia. Zambia extends most-favoured-nation tariff treatment to Canada.

**Tariff and Trade Arrangements with Non-Commonwealth Countries
as at Dec. 1, 1968**

Country	Agreement	Tariff Treatment
ALGERIA.....	Franco-Canadian Trade Agreement of 1933 applied to Algeria. Algeria maintains a <i>de facto</i> application of the GATT.	Since the creation of Algeria as an independent state in 1962, Canada has continued to grant most-favoured-nation treatment.
ARGENTINA.....	Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941. GATT effective Oct. 11, 1967.	Exchange of most-favoured-nation treatment.
AUSTRIA.....	GATT effective Oct. 19, 1951.	Exchange of most-favoured-nation treatment.
BELGIUM-LUXEMBOURG.....	Convention of Commerce with Belgium-Luxembourg Economic Union (including Belgian colonies) entered into effect Oct. 22, 1924. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
BENELUX (BELGIUM-NETHERLANDS-LUXEMBOURG CUSTOMS UNION).	(See Belgium-Luxembourg and Netherlands.)	
BOLIVIA.....	Order in Council of July 20, 1935, accepted Article 15 of U.K.-Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
BRAZIL.....	Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. GATT effective July 31, 1948.	Exchange of most-favoured-nation treatment.
BULGARIA.....	Trade Agreement signed Oct. 8, 1963 and renewed to Oct. 8, 1969.	Exchange of most-favoured-nation treatment and undertaking by Bulgaria to purchase a minimum of 200,000 metric tons of wheat or equivalent in flour during the three years validity of the Agreement.
BURMA.....	GATT effective July 29, 1948.	Exchange of most-favoured-nation treatment.
BURUNDI.....	GATT effective July 1, 1962.	Canada grants most-favoured-nation treatment.
CAMBODIA.....	Franco-Canadian Trade Agreement of 1933 applied to Cambodia. Although not a full member, Cambodia takes part in the work of GATT under a special arrangement.	Since the creation of Cambodia as an independent state in 1955, Canada has continued to grant most-favoured-nation treatment.
CAMEROON.....	Franco-Canadian Trade Agreement of 1933 applied to Cameroon. GATT effective Nov. 28, 1960.	Exchange of most-favoured-nation treatment.
CENTRAL AFRICAN REPUBLIC...	Franco-Canadian Trade Agreement of 1933 applied to Central African Republic. GATT effective Aug. 14, 1960.	Exchange of most-favoured-nation treatment.
CHAD.....	Franco-Canadian Trade Agreement of 1933 applied to Chad. GATT effective Aug. 11, 1960.	Exchange of most-favoured-nation treatment.
CHILE.....	Trade Agreement signed Sept. 10, 1941; provisionally in force Oct. 15, 1941, and definitively on Oct. 29, 1943. GATT effective Mar. 16, 1948.	Exchange of most-favoured-nation treatment.
CHINA.....	<i>Modus vivendi</i> signed Sept. 26, 1946. Covers the territory of China and Taiwan.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries
as at Dec. 1, 1968—continued**

Country	Agreement	Tariff Treatment
COLOMBIA.....	Treaty of Commerce with Britain of Feb. 16, 1866, applies to Canada. Modified by protocol of Aug. 20, 1912, and exchange of notes Dec. 30, 1938.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
CONGO (BRAZZAVILLE).....	Franco-Canadian Trade Agreement of 1933 applies to Congo (Brazzaville). GATT effective Aug. 15, 1960.	Exchange of most-favoured-nation treatment.
CONGO (LEOPOLDVILLE).....	Belgo-Canadian Convention of Commerce of 1924 applied to Congo (Leopoldville). Maintains a <i>de facto</i> application of the GATT.	Since the Congo's independence in 1960, Canada has continued to grant most-favoured-nation treatment.
COSTA RICA.....	<i>Modus vivendi</i> signed Nov. 18, 1950; brought into force Jan. 26, 1951.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
CUBA.....	GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment.
CZECHOSLOVAKIA.....	Convention of Commerce signed Mar. 15, 1928; in force Nov. 14, 1928. GATT effective May 21, 1948.	Exchange of most-favoured-nation treatment.
DAHOMEY.....	Franco-Canadian Trade Agreement of 1933 applied to Dahomey. GATT effective Aug. 1, 1960.	Exchange of most-favoured-nation treatment.
DENMARK (INCLUDING GREENLAND).	Treaties of Peace and Commerce with Britain of Feb. 13, 1660 and July 11, 1670, apply to Canada. GATT effective May 28, 1950.	Exchange of most-favoured-nation treatment. Declaration of May 9, 1912 provides means for separate termination by Dominions on one years notice.
DOMINICAN REPUBLIC.....	Trade Agreement signed Mar. 8, 1940; in force Jan. 22, 1941. GATT effective May 19, 1950.	Exchange of most-favoured-nation treatment.
ECUADOR.....	<i>Modus vivendi</i> signed Nov. 10, 1950; in force Dec. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
EGYPT.....	(See United Arab Republic.)	
EL SALVADOR.....	Exchange of notes of Nov. 2, 1937; in force Nov. 17, 1937.	Exchange of most-favoured-nation treatment. May be terminated on four months notice.
ETHIOPIA.....	Exchange of notes effective June 3, 1955.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
FINLAND.....	Exchange of notes of Nov. 13-17, 1948; effective Nov. 17, 1948. GATT effective May 25, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
FRANCE AND FRENCH OVERSEAS TERRITORIES.	Trade Agreement signed May 12, 1933; in force June 10, 1933. Exchange of notes of Sept. 29, 1934, and additional protocol of Feb. 26, 1935. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. May be terminated on three months notice.
GABON.....	Franco-Canadian Trade Agreement of 1933 applied to Gabon. GATT effective Aug. 17, 1960.	Exchange of most-favoured-nation treatment.
GERMANY, FEDERAL REPUBLIC OF.	GATT effective Oct. 1, 1951.	Exchange of most-favoured-nation treatment.
GREECE.....	<i>Modus vivendi</i> by exchange of notes of July 24-28, 1947. GATT effective Mar. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries

Country	Agreement	Tariff Treatment
TURKEY.....	Exchange of notes signed Mar. 1, 1948; in effect Mar. 15, 1948. GATT effective Oct. 17, 1951.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
UNION OF SOVIET SOCIALIST REPUBLICS.	Trade Agreement signed Feb. 29, 1956, renewed for another three years Apr. 18, 1960 and again for the same period on Sept. 16, 1963 and again for the same period on June 20, 1966 (the extension to be valid from Apr. 18, 1966).	Exchange of most-favoured-nation treatment and undertaking by U.S.S.R. to purchase a minimum of 6,375,000 long tons of wheat and flour during the three-year period of validity of the extended agreement.
UNITED ARAB REPUBLIC (EGYPT).	Exchange of notes Nov. 26 and Dec. 3, 1952; in force Dec. 3, 1952. The United Arab Republic has acceded provisionally to the GATT.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
UNITED STATES.....	Trade Agreement signed Nov. 17, 1938; suspended as long as both countries continue to be contracting parties to GATT. GATT effective Jan. 1, 1948.	Most-favoured-nation treatment exchanged.
UPPER VOLTA.....	Franco-Canadian Trade Agreement of 1933 applies to Upper Volta. GATT effective Aug. 5, 1960.	Exchange of most-favoured-nation treatment.
URUGUAY.....	Trade Agreement signed Aug. 12, 1936; in force May 15, 1940. Additional protocol signed Oct. 19, 1953. GATT effective Dec. 16, 1953.	Most-favoured-nation treatment.
VENEZUELA.....	<i>Modus vivendi</i> signed and brought into force Oct. 11, 1950.	Exchange of most-favoured-nation treatment. Made for one year subject to annual renewal.
VIET-NAM.....	Franco-Canadian Trade Agreement of 1933 applied to Viet-Nam.	Since the creation of Viet-Nam as an independent state in 1955, Canada has continued to accord most-favoured-nation rates.
YUGOSLAVIA.....	Trade Agreements Act of June 11, 1928, accepted Article 30 of U.K.-Serb-Croat-Slovene Treaty of Commerce and Navigation of May 12, 1927; in force Aug. 9, 1928. GATT effective Aug. 25, 1966.	Exchange of most-favoured-nation treatment.

PART IV.—TRAVEL BETWEEN CANADA AND OTHER COUNTRIES*

Canada's Centennial celebrations, especially Expo 67, attracted a record number of visitors during 1967 and receipts from these visitors exceeded \$1,250,000,000. Also, for perhaps the same reason, there was some curtailment in the number of Canadians travelling abroad and the amount spent on such travel was estimated at \$900,000,000, unchanged from 1966. Thus, a surplus of \$100,000,000 on travel account was estimated for 1967, in sharp contrast to the deficit of \$60,000,000 recorded for 1966.

Close to 40,000,000 non-residents entered Canada from the United States in 1967, an increase of 13.2 p.c. over the previous year, and their expenditures in Canada, at some

* Prepared in the Travel Statistics Section, Economic Accounts Branch, Dominion Bureau of Statistics.

\$1,164,000,000, made up the bulk of the total travel receipts, a gain of 59.5 p.c. over 1966. Canadians returning from visits to the United States numbered 32,500,000 compared with 34,700,000 in 1966 and their estimated payments remained almost unchanged at \$629,000,000. In 1967, the surplus on travel account with the United States surged to \$536,000,000 compared with a credit of \$102,000,000 in 1966.

The number of overseas visitors entering Canada was also exceptionally high in 1967; at 539,000, they outnumbered Canadians returning from overseas countries by 17,000. However, the higher outlay made by each Canadian on a trip overseas brought their total travel payments to \$274,000,000, a sum considerably above the estimated receipts in Canada from overseas visitors, which approached \$150,000,000; in 1966, Canadian travel payments overseas amounted to \$272,000,000 and receipts from overseas visitors \$110,000,000. The balance of payments on travel account with countries other than the United States again stood in a debit position in 1967, although the deficit at \$124,000,000, was more favourable than the previous year's record of \$162,000,000.

Travel Between Canada and the United States.—Almost 39,976,000 United States residents spent an estimated \$1,164,223,000 in Canada in 1967, including 24,511,000 persons entering and leaving on the same day (excursionists and commuters) who spent \$121,474,000. The latter short-term traffic formed 61 p.c. of the total entries but only 11 p.c. of the aggregate expenditures. Travellers remaining one or more nights, who may be referred to as tourists, numbered 15,464,400 and spent an estimated \$1,039,749,000—39 p.c. of the volume and 89 p.c. of the expenditures.

The most important means of transportation used to enter Canada was the automobile. In 1967, 12,212,800 cars carried 31,582,700 United States travellers to Canada, an increase of 17.5 p.c. in the number of persons compared with 1966. Of the total, 12,597,200 automobile visitors stayed one or more nights in Canada and during their visits spent \$662,600,000, over 50 p.c. of the total receipts from the United States. Significant gains in numbers were also shown by other means of travel from the United States—1,457,800 persons came by bus, more than double the 1966 traffic; 1,177,100 came by 'plane, 65.8 p.c. over 1966; 309,300 came by rail, 10.1 p.c. fewer than in 1966; and 607,100 came by boat, an increase of 10.1 p.c. Persons entering by bus spent \$161,000,000, by air \$177,000,000, by rail \$33,000,000, and by boat \$12,600,000.

Travel payments to the United States (excluding Hawaii) by Canadian travellers amounted to \$616,000,000 in 1967. As stated above, Canadian residents returning from the United States after a visit were down in number from 34,679,900 in 1966 to 32,499,900 in 1967. The decrease occurred in the short-term category; 24,708,900 left and returned on the same day, about 10 p.c. fewer than in 1966, and spent \$59,154,000 in the United States; 7,791,000 remained one or more nights and spent an estimated \$557,150,000, an increase of 7.4 p.c. in volume and a slight decrease in expenditures compared with 1966.

A voluntary questionnaire survey was used to secure information on the travel habits of Canadians travelling in the United States during 1967. The results showed that 41.3 p.c. of those replying were residents of Ontario and their expenditures made up 45.2 p.c. of the total payments to that country. Quebec accounted for 20.0 p.c. of the numbers and 24.3 p.c. of the expenditures. Of those responding, some 53.3 p.c. stated holiday or recreation as the reason for travelling to the United States, 26.6 p.c. visited friends or relatives, and 7.9 p.c. indicated business as the reason. The highest percentage of holiday trips (63) was reported by Quebec residents, and the highest percentage of visits to friends or relatives (29) and business trips (10) were attributed to re-entries in Ontario.

¹ Port administrative procedures used prior to Mar. 1, 1967 appear to have resulted in an overstatement of vehicles staying one or more nights in Canada and a corresponding understatement of same day traffic. ² Includes the classification "Repeats and Taxis" in 1967. ³ See footnote 2.

Travel Between Canada and Overseas Countries.—Unparalleled interest was shown in Canada by travellers from overseas during 1967 when 539,000 visited this country, an increase of 31.2 p.c. over 1966. These visitors spent an estimated \$146,000,000 (including transportation fares paid to Canadian carriers), compared with \$110,000,000 spent by overseas visitors in 1966.

Reports submitted by border officials show that 129,000 of the overseas visitors were residents of the United Kingdom, 72,000 of France, 42,000 of Germany and 19,000 of each of the Netherlands, Switzerland, Mexico and Japan. Overseas visitors entering through ports in Quebec numbered 302,000, an increase of 124.9 p.c. over 1966; Montreal airport alone reported 226,000 entries, some 163.0 p.c. more than in the preceding year. Arrivals in Ontario numbered 172,000; this was a decrease of 19.2 p.c. from the 1966 figure but visitors entering at Toronto airport increased 4.9 p.c. to 97,000. British Columbia ports reported 38,000 entries, up 2.6 p.c.; 23,000 of them entered at Vancouver airport, an increase of 40.5 p.c. over 1966. Persons entering from overseas through ports in the Prairie Provinces and the Atlantic Provinces numbered 16,000 and 11,000, respectively.

Canadians returning from visits to overseas countries in 1967 numbered 522,000, an increase of 3.8 p.c. over 1966. Their expenditures overseas were estimated at \$274,000,000, including payments to overseas carriers for transportation. A breakdown by areas shows that \$98,000,000 was spent in the United Kingdom, \$110,000,000 in OECD countries in Europe, \$37,000,000 in other Commonwealth countries, and \$29,000,000 elsewhere.

From the response to questionnaires distributed to Canadians returning from overseas countries, information was obtained on province of residence, purpose of trip, and length of stay. Replies indicated that 47 p.c. resided in Ontario, 23 p.c. in Quebec and 14 p.c. in British Columbia. About 54 p.c. of the travel overseas was for recreation or holiday, 33 p.c. for visits to friends or relatives and 11 p.c. for business. The average length of stay of Canadians travelling in overseas countries was 26.5 days. About 437,000 Canadians returned direct from overseas countries and an estimated 85,000 re-entered Canada by way of the United States.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Consolidated statistics of revenue and expenditure for all governments in Canada—federal, provincial and municipal—are presented in Section 1 of this Chapter and Section 2 covers the incidence of taxation at the three levels. More detailed information for each level of government is given in Sections 3, 5 and 6. Section 4 gives information on joint federal-provincial programs and on the extent of federal financial participation in such programs.

Section 1.—Consolidated Government Finance Statistics

Tables 1 and 2 provide details of the federal and provincial-municipal government components of consolidated net general revenue by source, and consolidated net general expenditure by function. The object of these consolidations is to reflect the relationship between government and the public in respect of revenue raised and services provided. The consolidated net general figures were arrived at by eliminating from the gross revenue and the corresponding functionalized expenditure of each level of government, the following: conditional grants (grants-in-aid and shared-cost contributions); institutional revenue; and interest, premium, discount and exchange revenue. In addition, transfers of unconditional grants such as subsidy payments of the Federal Government to provincial governments have also been eliminated from the gross revenue of the receiving government and from the gross expenditure of the paying government. Because of the differing accounting practices of governments and the variations in fiscal year-ends, some discrepancies appear between amounts recorded as inter-government transfers received and those recorded as paid.

* Except as otherwise indicated, revised in the Governments Division, Dominion Bureau of Statistics.

¹ Adjustments have been made to the expenditure data published in the source document—*Federal Government Finance*, Catalogue No. 68-211, Table 2. Amounts of \$54,903,000, \$19,144,000 and \$7,415,000 paid to the Province of Quebec have been deducted from the classifications Health, Social Welfare and Education, respectively. In the source document the amounts are treated as grants-in-aid; for purposes of this table they are classified as unconditional transfers under the Established Programs (Interim Arrangements) Act. The total of \$51,462,000 was eliminated upon consolidation. ² Federal—payments to provinces of the federal share of assistance under the Old Age Assistance Act; Provincial-Municipal—payments of old age pensions to individuals. ³ Payments of old age pensions to individuals under the Old Age Security Fund. ⁴ All provincial aid other than pensions, municipal contributions to homes for the aged, administration, and other miscellaneous items. ⁵ An amount of \$1,899,000 has been eliminated from the expenditure of the Province of Quebec. See footnote 3, Table 1.

Section 2.—Taxation in Canada*

Canada is a federal state with a central government and ten provincial governments. In 1867 the principal colonies of the British Crown in North America joined together to form the nucleus of a new nation and the British North America Act of that year became its written constitution. This statute created a central government with certain powers while continuing the existence of political subdivisions called provinces with powers of their own.

Under the British North America Act the Parliament of Canada has the right to raise "money by any mode or system of taxation" while the provincial legislatures are restricted to "direct taxation within the province in order to the raising of a revenue for provincial purposes". Thus, the provinces have a right to share only in the field of direct taxation while the Federal Government is not restricted in any way in matters of taxation. The British North America Act also empowers the provincial legislatures to make laws regarding "municipal institutions in the province". This means that the municipalities derive their incorporation with its associated powers, fiscal and otherwise, from the provincial government concerned. Thus, municipalities are also limited to direct taxation.

A direct tax is generally recognized as one "which is demanded from the very person who it is intended or desired should pay it". This conception has limited the provincial governments to the imposition of income tax, retail sales tax, succession duties and an assortment of other direct levies. In turn, municipalities, acting under the guidance of provincial legislation, tax real estate, water consumption and places of business. The Federal Government levies direct taxes on income, on gifts and on the estates of deceased persons, and indirect taxes such as excise taxes, excise and customs duties, and a sales tax.

The increasing use by both the federal and the provincial governments of their rights in the field of direct taxation in the 1930s resulted in uneconomic duplication and some severe tax levies. Starting in 1941, a series of federal-provincial tax agreements were concluded to promote the orderly imposition of direct taxes. The duration of each agreement was normally five years. Under the earlier agreements, the participating provinces undertook, in return for compensation, not to use or permit their municipalities to use certain of the direct taxes. Under the present arrangements, the federal income tax otherwise payable in all provinces and the estate tax otherwise payable in three provinces are abated by certain percentages to make room for provincial levies.

The current arrangements became operative on Apr. 1, 1962 and were originally scheduled to terminate on Mar. 31, 1967, but have been extended subject to termination on due notice being given. They amount to a partial federal withdrawal from the field of direct taxation and a re-entry of all provinces into the vacated area. The federal personal income tax otherwise payable on income earned in a province and on income received by a resident of a province is reduced by the following percentages: 16 p.c. for 1962 income, 17 p.c. for 1963 income, 18 p.c. for 1964 income, 21 p.c. for 1965 income, 24 p.c. for 1966 income and 28 p.c. for income in 1967 and subsequent years.† The abatements in respect of income earned in Quebec or received by a resident of Quebec are 44 p.c. for 1965 income, 47 p.c. for 1966 income and 50 p.c. for income in 1967 and subsequent years. The additional points of abatement in Quebec are to allow that province to collect revenue to pay for certain programs that are paid for in whole or in part by the Federal Government in other provinces. The Federal Government also reduces its rate of corporation income tax on taxable income of corporations earned in the provinces. The reduction was 9 p.c. of taxable income earned in any province except Quebec and 10 p.c. of taxable income earned in Quebec for the years from 1962 to 1967. The additional 1-p.c. reduction in respect of taxable income earned in the Province of Quebec for these years was to compensate for the additional tax levied by the province during this period on

* Revised (March 1969) in the Tax Policy Division, Department of Finance, under the direction of F. R. Irwin, Director of the Division, and by the provincial authorities concerned.

† The original agreement provided for abatements of 19 p.c. for 1965 income and 20 p.c. for 1966 income. However, in 1964 the provinces were granted an additional two percentage points for 1965 income and four percentage points for 1966 income and in 1966 they were granted an additional four percentage points for 1967 and 1968 income.

corporation income to provide grants to universities. These provincial grants replaced federal grants which in other provinces were paid to the universities by the Federal Government through the Canadian Universities Foundation. Starting in 1967, with the termination of direct federal financial assistance to universities, the abatement of the federal rate of corporation income tax is 10 p.c. of taxable income in all provinces. The Federal Government also abates the federal estate tax otherwise payable by 75 p.c. in respect of property situated in a province that levies its own death tax.*

These reductions in federal income tax and estate tax do not apply to the Yukon Territory or the Northwest Territories or to income earned outside Canada. The Yukon and Northwest Territories do not impose income taxes or death taxes.

The provincial tax rates are not restricted to the extent of the federal withdrawal. The constitutional position of the provinces permits them unlimited use of direct taxes for the raising of revenue for provincial purposes. However, in five provinces (Prince Edward Island, Nova Scotia, New Brunswick, Alberta and British Columbia), the provincial rates of income tax do not exceed the federal abatement.

As part of the current fiscal arrangements, the Federal Government has entered into tax collection agreements under which it collects the provincial personal income taxes for all provinces except Quebec and the provincial corporation income taxes for all provinces except Ontario and Quebec.

Subsection 1.—Federal Taxes

Individual Income Tax

Personal income taxation in Canada is on the basis of residence rather than citizenship. Every individual who is resident in Canada at any time during a year is liable for the payment of income tax on all his income. Every non-resident individual who is employed or carries on business in Canada during a year is liable for tax on his income earned in Canada. The term "residence" is difficult to define simply but, generally speaking, it is taken to be the place where a person resides or where he maintains a dwelling ready at all times for his use. There are also extensions of the meaning of Canadian resident to include a person who has sojourned in Canada for an aggregate period of 183 days in a taxation year, or a person who was during the year a member of the Armed Forces of Canada or an ambassador, a high commissioner, or an officer or servant of Canada or of any one of its provinces, or the spouse or dependent child of any such person. The extended meaning of residence also includes employees who go from Canada to work under certain international development assistance programs.

The Canadian tax law uses the concepts "income" and "taxable income". The income of a resident of Canada for a taxation year comprises his revenues from all sources inside or outside Canada and includes income for the year from all businesses, property, offices and employments. It does not include capital gains unless they arise out of the conduct of a business or as a result of an adventure in the nature of trade.

In computing his income for a taxation year, an individual must include all dividends, fees, annuities, pension benefits, allowances, interest, alimony, maintenance payments and other miscellaneous sources of income. On the other hand, war service disability pensions paid by Canada or an ally of Her Majesty at the time of the war service, unemployment insurance benefits, compensation in respect of an injury or death paid under a Workmen's Compensation Act of a province and family allowances do not have to be included in the computation of income.

In computing his income for a taxation year, an individual who is carrying on business may deduct business expenses including depreciation (called capital cost allowances),

* The original agreement was for a 50-p.c. abatement but at the conclusion of a federal-provincial conference in late 1963 it was increased to 75 p.c. in respect of deaths occurring after Mar. 31, 1964. Currently, only the estates of domiciliaries of British Columbia qualify for the full 75-p.c. abatement. Quebec and Ontario estates are temporarily eligible for only 50 p.c. because they have elected for the time being to take a payment from the Federal Government on account of the additional 25-p.c. abatement rather than to increase their succession duty rates.

interest on borrowed money, reserves for doubtful debts, contributions to pension plans or deferred profit-sharing plans for his employees, bad debts, and expenses incurred for scientific research. In general, no deductions are allowed in computing income from salary and wages, although there are exceptions such as travelling expenses of employees who have to travel as they perform their work (such as employees on trains), union dues, alimony payments and contributions to registered pension plans. Individuals may deduct, within limits, amounts set aside to provide a future income under registered retirement savings plans. Students attending universities, colleges, high schools, public schools or certain other certified educational institutions in Canada may deduct their tuition fees if they exceed \$25 per annum. Students in full-time attendance at universities outside Canada may deduct their tuition fees.

Having computed his income, the individual then calculates his taxable income by deducting certain exemptions and deductions. These exemptions and deductions are as follows: for single status, \$1,000; for married status, \$2,000; for dependent children under age 16, \$300 per child; for other dependants (as defined in the law), \$550 per dependant; where the taxpayer is 70 years of age or over (or between 65 and 70 years of age and not in receipt of an old age security pension), an additional \$500; where the taxpayer is blind or confined to a bed or a wheelchair, an additional \$500; charitable donations, up to 10 p.c. of income; and medical expenses, in excess of 3 p.c. of income. In lieu of claiming deductions for charitable donations and medical expenses, an individual may claim a standard deduction of \$100.

As already stated, an individual who is resident in Canada is taxed on his income from both inside and outside Canada. An individual who is not resident in Canada at any time during the year but who carries on business in Canada or who earns salary or wages in Canada is taxed only on the income earned in Canada. In computing taxable income earned in Canada, such a non-resident individual is allowed to deduct that part of the exemptions and deductions that may reasonably be attributed to the income earned in Canada. (A non-resident who derives investment income from Canada is taxed in a different way described on p. 1043.) An individual who ceases to be a resident of Canada during the year or who becomes a resident during the year so that he is resident for only part of the year will be subject to income tax in Canada on only that part of his income for the year received while he is resident in Canada. In these circumstances, the deductions from income permitted for determining taxable income will be the amount that may reasonably be considered as applicable to the period during which he is resident in Canada.

A progressive schedule of rates is applied to taxable income, beginning at 11 p.c. on the first \$1,000 of taxable income and increasing to 80 p.c. on taxable income in excess of \$400,000. In addition, an old age security tax is levied on taxable income at the rate of 4 p.c. with a maximum of \$240 reached at \$6,000 of taxable income. Starting in 1969 an additional tax, called a social development tax at the rate of 2 p.c. of taxable income with a maximum of \$120, is imposed. For the years 1968 and 1969 there is also a temporary surtax of 3 p.c. of the amount of basic tax in excess of \$200. ("Basic tax" is personal income tax, excluding the old age security tax, the social development tax and the temporary surtax and after deduction of the dividend tax credit but before the abatement for provincial income tax or the general tax reduction of 20 p.c. with a maximum of \$20.)

An individual is allowed a deduction from his tax under four main headings. (1) *Dividend Tax Credit*—to partially eliminate the double taxation of corporate profits and to encourage participation in the ownership of Canadian companies, Canadian resident individuals are allowed to deduct from their tax an amount equal to 20 p.c. of the net dividends they receive from Canadian taxable companies. (2) *Foreign Tax Credit*—foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax related to such income. (3) *Abatement under Federal-Provincial Fiscal Arrangements*—the federal basic tax otherwise payable on income of a resident of a province and on income earned in a province is reduced by 28 p.c., except in the case of income earned in Quebec or received by a resident

of Quebec where it is reduced by 50 p.c. (see p. 1038). (4) *General Tax Reduction*—all individuals may deduct from their tax an amount equal to the lesser of 20 p.c. of their basic tax or \$20.

To a very large extent, individual income tax is payable as the income is earned. Taxpayers in receipt of salary or wages have tax deducted from their pay by their employer and in this way pay nearly 100 p.c. of their tax liability during the calendar year. The balance of the tax, if any, is payable at the time of filing the tax return on or before Apr. 30 in the following year. Persons with more than 25 p.c. of their income from sources not subject to tax deductions must pay tax by quarterly instalments throughout the year and returns must be filed on or before Apr. 30 in the following year. Farmers and fishermen pay two thirds of their tax on or before Dec. 31 each year and the remainder on or before Apr. 30 in the following year.

The following statement shows what taxpayers pay (1969) at various levels of income. In calculating these taxes it has been assumed that all taxpayers take the standard deduction of \$100 and no allowance has been made for the 20-p.c. dividend tax credit.

<i>Status</i>	<i>Income</i>	<i>Income Tax including Social Development Tax and Surtax</i>	<i>Old Age Security Tax</i>
	\$	\$	\$
Single taxpayer—no dependants.....	1,200	11	4
	1,500	43	16
	2,000	97	36
	2,500	174	56
	3,000	255	76
	5,000	661	156
	10,000	1,989	240
	20,000	6,094	240
	50,000	21,688	240
	100,000	52,475	240
Married taxpayer—no dependants.....	2,200	11	4
	2,500	43	16
	3,000	97	36
	5,000	447	116
	10,000	1,684	240
	20,000	5,630	240
	50,000	21,121	240
	100,000	51,805	240
Married taxpayer—two children under age 16....	2,800	11	4
	3,000	32	12
	5,000	330	92
	10,000	1,524	240
	20,000	5,352	240
	50,000	20,782	240
	100,000	51,403	240

The income taxes shown above are the combined federal and provincial taxes in provinces where the provincial tax is the same as the federal abatement (i.e., in Newfoundland, Nova Scotia, Prince Edward Island, Ontario and British Columbia). In Quebec the provincial tax approximates the amount of the federal abatement; in New Brunswick, Manitoba, Saskatchewan and Alberta the provincial tax exceeds the abatement.

Corporation Income Tax

The Income Tax Act levies a tax upon the income from everywhere in the world of corporations resident in Canada and upon the income attributable to operations in Canada of non-resident corporations carrying on business in Canada. In computing their income, corporations may deduct operating expenses including municipal real estate taxes, reserves for doubtful debts, bad debts, and interest on borrowed money. They may not deduct provincial income taxes other than provincial taxes on income derived from mining operations. (For this purpose "income from mining operations" is specially defined.)

Regulations covering capital cost allowances (depreciation) permit taxpayers to deduct over a period of years the actual cost of all depreciable property. The yearly deductions of normal capital cost allowances are computed on the diminishing balance principle. (Taxpayers engaged in farming and fishing may choose between this and the straight-line method.) Published regulations establish a number of classes of property and maximum rates. There is provision for recapture of any amount allowed in excess of the ultimate net capital cost of any asset.

Expenditures on scientific research related to the business of the taxpayer may be written off for tax purposes in the year when incurred.

Taxpayers operating mines, oil wells, gas wells and wells for extracting potash by the solution method are allowed a depletion allowance, usually computed as a percentage of profits derived from mineral, oil or gas production, which continues as long as the mine or well is in operation. This allowance is in addition to capital cost allowances on buildings, machinery and similar depreciable assets used by the taxpayer and the deduction of exploration and drilling expenses. Taxpayers operating timber limits receive an annual allowance, sometimes called a depletion allowance. This is a rateable proportion of the amount invested in the limit and is based on the amount of timber cut in the year. When the amount invested in the limit has been recovered, no further allowance is given.

In computing taxable income, corporations may deduct dividends received from other Canadian taxpaying corporations and also from foreign corporations in which the Canadian corporation has at least 25 p.c. stock ownership. Business losses may be carried back one year or forward five years and deducted in computing taxable income. Corporations may also deduct donations to charitable organizations up to a maximum of 10 p.c. of their income.

The general rates of tax on corporate taxable income are 18 p.c. on the first \$35,000 of taxable income and 47 p.c. on taxable income in excess of \$35,000. Corporations deriving more than one half of their gross revenue from the sale of electric energy, gas or steam pay tax on their taxable income from such sources at the rate of 18 p.c. on the first \$35,000 of taxable income and 45 p.c. on taxable income in excess of \$35,000.* Corporations that qualify as investment companies pay a tax of 18 p.c. on their taxable income. In addition to these rates, all corporations pay an old age security tax of 3 p.c. of taxable income, bringing their rates up to 21 p.c. and 50 p.c. (21 p.c. and 48 p.c. for the public utility companies and 21 p.c. for investment companies).

On profits earned in 1968 and 1969 corporations must also pay a surtax of 3 p.c. of the amount of federal tax excluding old age security tax but before the abatement under federal-provincial fiscal arrangements referred to below. Starting in 1969, life insurance corporations have to pay a special 15-p.c. tax on a base related to their investment income. This is in addition to the normal corporation income tax.

In calculating the amount of their income tax, corporations are allowed a deduction from tax under three headings. (1) *Foreign Tax Credit*—foreign taxes paid on income from foreign sources may be deducted from Canadian income tax but the deduction may not exceed the proportion of Canadian tax relative to such income. (2) *Abatement under Federal-Provincial Fiscal Arrangements*—corporations may deduct from their federal tax otherwise payable a tax abatement equal to a fixed percentage of their taxable income

* 95 p.c. of the federal tax collected from these corporations is remitted to the provinces.

attributable to operations in a Canadian province. This abatement is to make room for the provincial income tax levied by each Canadian province. The amount of the abatement is 10 p.c. of taxable income attributable to operations in each province. (3) *Provincial Logging Tax*—corporations may deduct from their federal tax otherwise payable an amount equal to two thirds of a provincial tax on income from logging operations not exceeding two thirds of 10 p.c. of the corporation's income from logging operations in the province. (At present only Ontario, Quebec and British Columbia impose logging taxes—see p. 1051.)

Income from the operation of a new mine, including income from wells for extracting potash by the solution method, is exempt from income tax during the first 36 months after coming into commercial production.

Corporations are required to pay their tax (combined income, surtax and old age security tax) in monthly instalments. At present, corporations start payments for a taxation year in the third month of that taxation year but for taxation years starting after Nov. 30, 1969, corporations will have to begin their monthly tax payments in the first month of their taxation year and make their twelfth instalment by the last day of that year. Each monthly remittance will be equal to one twelfth of the estimated tax for the year (based on either the taxable income of the previous year or the estimated taxable income of the year in progress). As at present, any balance of tax outstanding will have to be paid by the last day of the third month following the close of the taxation year and the return for the year will have to be filed by the last day of the sixth month following the close of the taxation year.

Taxation of Non-residents

A non-resident is liable for payment of income tax if he was employed or was carrying on business in Canada during a taxation year. The expression "carrying on business in Canada" includes (1) maintaining a permanent establishment in Canada, (2) processing goods even partially in Canada, and (3) entering into contracts in Canada. The taxable income of a non-resident thus derived is taxed under the same schedule of rates as a Canadian resident (personal or corporation income tax rates as the case may be). (Tax treaties with some countries provide certain exemptions from tax for remuneration for services performed in Canada by residents or employees of these countries. They also prohibit Canada taxing profits of a non-resident enterprise unless that enterprise has a permanent establishment in Canada.)

Profits earned in Canada by a non-resident corporation carrying on business through a branch or permanent establishment in Canada are taxed at the regular rates of corporation income tax and are also subject to an additional tax of 15 p.c. This additional tax is imposed on profits attributable to the branch after deducting therefrom Canadian federal and provincial income taxes and an allowance in respect of the net increase in capital investment in property in Canada.

Furthermore, the Income Tax Act imposes a tax at the rate of 15 p.c. on certain forms of income going from Canada to non-resident persons. It applies to interest (other than interest on government bonds issued after Apr. 15, 1966, interest on certain bonds issued before Dec. 20, 1960 and interest paid to certain exempt lenders), dividends, rentals, royalties, income from a trust or estate and alimony, and applies whether the income goes to non-resident individuals or to corporations. The rate is reduced to 10 p.c. in the case of dividends paid by a company that has a degree of Canadian ownership* and is also 10 p.c. on royalties from motion picture films. This non-resident tax is withheld at the source by the Canadian payer. Non-residents who receive only this kind of income from Canada do not file returns in Canada.

* Generally, a corporation is regarded as having a degree of Canadian ownership where 25 p.c. of its equity and voting shares are owned by Canadians and/or corporations controlled in Canada, or where the voting shares of the corporation are listed on a Canadian stock exchange and no more than 75 p.c. of its issued outstanding voting shares are owned by a non-resident alone or in combination with related persons.

Gift Tax

The Income Tax Act levies a tax upon gifts. The Budget presented on Oct. 22, 1968 announced an increase in the rates of gift tax and a change in the exemptions with respect to gifts made after that date. The rates now apply to a cumulative gift sum. A "cumulative gift sum" is the aggregate of the taxable value of all gifts made after Oct. 22, 1968, up to the end of the year for which tax is being calculated. The rates of tax range from 12 p.c. on a cumulative gift sum of \$15,000 or less to 75 p.c. where the cumulative gift sum exceeds \$200,000. Gifts from a husband to his wife or from a wife to her husband are exempt. In addition, gifts up to \$2,000 to any number of persons are exempt.

Estate Tax

The estate of a deceased person is subject to estate tax if its value exceeds \$50,000. The tax applies to property passing, or deemed to pass, at death. Property "deemed to pass" includes such property as gifts made by the deceased within three years of his death, pensions or death benefits payable in respect of his death, and annuities purchased by the deceased. All the property of persons who were domiciled in Canada before their death must be taken into consideration no matter where that property is situated; for persons dying domiciled outside of Canada only their property situated in Canada is subject to tax.

In computing the tax of a Canadian domiciliary, the value of the whole estate is first determined. Then the estate debts and certain expenses, such as funeral expenses, are deducted. The remainder is "aggregate net value".

If the aggregate net value of an estate is \$50,000 or less, no tax is exacted. This figure of \$50,000 is not a deductible exemption, but simply an amount at and below which no tax is levied. If an estate is valued at more than \$50,000, it may or may not be taxable depending on the amount of the deductible exemptions, but in no case must the tax reduce the value of the estate, after tax, to less than \$50,000.

Where the aggregate net value of an estate is more than \$50,000 there may be deducted certain amounts in respect of bequests left by the deceased to his or her surviving spouse or children, or to charitable organizations in Canada. There is a complete exemption of the value of property left by the deceased in the form of an outright bequest to his surviving spouse or in the form of a settlement under which only the surviving spouse is entitled, during her (or his) lifetime, to receive all of the income of the settlement, or to receive periodic annual payments out of the income or capital, and under which only the surviving spouse may, during her (or his) lifetime, use or receive the capital. In the case where the surviving spouse is to receive periodic payments, the exemption cannot exceed the value of a capital sum that is determined by regulation to be sufficient to yield the amount of the periodic payment. The exemption is granted only if it is established that the surviving spouse has an indefeasible right to the bequest.

There are also exemptions for bequests to children of the deceased. A bequest to a child over age 25 (if he is not infirm) is exempt to a maximum of \$10,000. A bequest to a child aged 25 or under is exempt to the extent of a maximum of \$10,000, plus \$1,000 for each full year remaining until he is 26. If the average income of the child for the previous three years is in excess of \$5,000, the additional exemption is reduced by the excess. A bequest to an infirm, wholly dependent child is exempt to the extent of a maximum of \$10,000, plus \$1,000 for each full year remaining until he is aged 71. In all these cases the exemption cannot exceed the value of the bequest. An indefeasible bequest to a charitable organization in Canada is also completely exempt.

After these deductions from aggregate net value are made, the amount left is the "aggregate taxable value" to which the tax rates are applied. The first bracket of the rate schedule—from \$0 to \$20,000 of aggregate taxable value—has a zero rate, which in effect constitutes a basic exemption of \$20,000. The next \$20,000 of aggregate taxable value has a rate of 15 p.c. and so on up to the maximum rate of 50 p.c. on the aggregate taxable value in excess of \$300,000. Gifts made by the deceased during his lifetime that

were not included in the value of his estate but were in excess of the gift tax exemptions are added to the aggregate taxable value to the extent of the excess, as is the amount of gift tax that would be payable on this excess using rates in force at the time of his death. This is only for purposes of setting the rates of estate tax and an allowance is made in recognition of the gift tax paid on them.

From the tax so calculated may be deducted in the following order (1) a tax abatement in respect of property situated in a province that levies a succession duty, or in respect of foreign personal property transmitted in such a province, (2) a credit for gift tax paid on gifts made by the deceased in cases where the value of the property comprised in the gift has been included in computing the aggregate net value (e.g., where the gift has been made within three years of the death of the donor), (3) a credit for foreign death taxes, and (4) the "notch" credit. The "notch" credit has the effect of preventing the tax otherwise payable on an estate whose aggregate net value is immediately in excess of \$50,000 from reducing the value after tax to less than \$50,000; it also reduces the tax otherwise payable on an estate whose value falls in this "notch" area so that the tax actually payable will not exceed 50 p.c. of the difference between the aggregate net value and \$50,000. The abatement referred to above is in recognition of provincial succession duties. It is a deduction of 75 p.c. from the federal estate tax otherwise payable (see p. 1052).

Where an exemption from gift tax or estate tax in respect of a gift or bequest from a person to his spouse in the form of a trust or other settlement has been allowed, the property in the settlement at the time of the death of the spouse second to die is deemed to be property passing on her (or his) death. Where the estate tax on such property would have been abated in recognition of provincial succession duties at the time of the death of the spouse first to die, but was not, because the property was exempt, an appropriate abatement is given at the time of the second death.

In general, the provisions described above apply in respect of property passing on the death of a person who dies on or after Oct. 23, 1968. (For the provisions of the estate tax applicable in respect of property passing on the death of a person who died before Oct. 23, 1968, see the 1968 Canada Year Book, pp. 1015-1016.)

The property situated in Canada of a deceased person not domiciled in Canada is subject to estate tax at a flat rate of 15 p.c. No deduction is allowed against the assessed value of such property except for debts specifically chargeable to it. However, there is a special provision that exempts all such property of less than \$5,000 value and also provides that the tax must not reduce the value of the property after tax to less than \$5,000. (The Estate Tax Convention between Canada and the United States increases this figure to \$15,000.) Where property is subject to provincial succession duty, the 15-p.c. tax is abated by 50 p.c. in the case of property subject to Ontario or Quebec duty and by 75 p.c. with respect to property subject to British Columbia duty.

Excise Taxes

The Excise Tax Act levies a general sales tax and special excise taxes. Both the sales tax and the special excise taxes are levied on goods imported into Canada and on goods produced in Canada. They are not levied on goods exported. The sales tax, which is at the rate of 9 p.c., is levied on the manufacturer's sale price of goods produced or manufactured in Canada or on the duty-paid value of goods imported into Canada. For alcoholic beverages and tobacco products, the sale price for purposes of the sales tax includes excise duties levied under the Excise Act (see p. 1047). An old age security tax of 3 p.c. is levied on the same basis as the 9-p.c. tax, bringing the total sales tax to 12 p.c. (The total sales tax on most building materials is 11 p.c.)

Many classes of goods are exempt from sales tax. Foodstuffs, drugs, electricity and fuels for lighting or heating are generally exempt as are articles and materials used by public hospitals and certain welfare institutions. The products of farms, forests, mines and fisheries are, to a large extent, exempt as well as most equipment used in farming and fishing.

Production machinery and equipment and materials consumed or expended in production are not taxed. Also, a variety of items are exempt from sales tax when purchased by municipalities. These and other exemptions are set forth in schedules to the Excise Tax Act.

A number of articles are subject to special excise taxes in addition to the sales tax. Where these are ad valorem taxes they are levied on the same price or duty-paid value as the general sales tax. Those levied at present are as follows:—

Cigarettes.....	3 cents per 5 cigs.
Cigars.....	17½ p.c. ad valorem
Jewellery, including clocks, watches, articles of ivory, amber, shell, precious or semi-precious stones, goldsmiths' and silversmiths' products except gold-plated or silver-plated ware for the preparation or serving of food or drink.....	10 p.c. ad valorem
Lighters.....	10 cents per lighter
Playing cards.....	20 cents per pack
Radios.....	the greater of \$2 per radio or 15 p.c. ad valorem
Phonographs and television sets.....	15 p.c. ad valorem
Tubes for radios, phonographs and television sets, not including television picture tubes, priced under \$5 per tube.....	10 cents per tube
Television set picture tubes.....	15 p.c. ad valorem
Slot machines—coin, disc or token-operated games or amusement devices	10 p.c. ad valorem
Matches.....	10 p.c. ad valorem
Tobacco—pipe tobacco, cut tobacco and snuff.....	90 cents per lb.
Tobacco pipes, cigar and cigarette holders and cigarette rolling devices...	10 p.c. ad valorem
Toilet articles, including cosmetics, perfumes, shaving creams, antiseptics, etc.....	10 p.c. ad valorem
Wines—	
Manufactured in Canada—*	
Wines of all kinds containing not more than 7 p.c. absolute alcohol by volume.....	25 cents per gal.
Non-sparkling wines containing more than 7 p.c. absolute alcohol by volume but not more than 40 p.c. proof spirit.....	50 cents per gal.
Sparkling wines.....	\$2.50 per gal.
Additional tax applying to all wines whether imported or produced in Canada—	
Wines of all kinds containing not more than 7 p.c. of absolute alcohol by volume.....	2½ cents per gal.
Wines of all kinds containing more than 7 p.c. of absolute alcohol by volume.....	5 cents per gal.
Insurance premiums paid to British or foreign companies not authorized to transact business in Canada or to non-resident agents of authorized British or foreign companies.....	10 p.c. of net premium for property, surety, fidelity and liability insurance. (Most other kinds of insurance are exempt.)

All the foregoing items, except the last, are also subject to the general sales tax of 9 p.c. and the old age security tax of 3 p.c. Cigarettes, cigars and tobacco are subject to further taxes, referred to as excise duties (see below).

Excise Duties

The Excise Act levies taxes (referred to as excise duties) on alcohol, alcoholic beverages and tobacco products produced in Canada. These duties are not levied on imported goods but the customs tariff on these products includes a levy to correspond with the duties levied on domestic production. These duties are not levied on goods exported.

* The customs tariff on wines includes a levy to correspond to these taxes on domestic production.

Spirits.—The duties are on a per-gallon basis in proportion to the strength of proof of the spirits. These duties do not apply to denatured alcohol intended for use in the arts and in industry, or for fuel, light or power, or for any mechanical purpose. The various duties are as follows:—

On every gallon of the strength of proof distilled in Canada.....	\$14.25
On every gallon of the strength of proof used in the manufacture of—	
Medicines, extracts, pharmaceutical preparations, etc.....	\$1.50 per gal.
Approved chemical compositions.....	15 cents per gal.
Spirits sold to a druggist and used in the preparation of prescriptions.	\$1.50 per gal.
Imported spirits when taken into a bonded manufactory in addition to other duties.....	30 cents per gal.

Canadian Brandy.—Canadian brandy, a spirit distilled exclusively from juices of native fruits without the addition of sweetening materials, is subject to a duty of \$12.25 per gallon.

Beer.—All beer or other malt liquor is subject to a duty of 42 cents per gallon.

Tobacco, Cigars and Cigarettes.—The excise duties make up nearly as large a part of the total tax on tobacco products as the special excise taxes already described. The rates are as follows:—

On manufactured tobacco of all descriptions, except cigarettes.....	35 cents per lb.
Cigarettes weighing not more than 3 lb. per thousand (nearly all of the cigarettes used in Canada are of this type).....	\$4.00 per thousand
Cigarettes weighing more than 3 lb. per thousand.....	\$5.00 per thousand
Cigars.....	\$2.00 per thousand
Canadian raw leaf tobacco when sold for consumption.....	10 cents per lb.

Combined Effect of Excise Taxes and Excise Duties on Tobacco Products

Bringing together the taxes imposed on tobacco products under the Excise Tax Act and the duties imposed under the Excise Act gives the following total taxes:—

Cigarettes.....	\$10.00 per thousand (20 cents per pack of 20 cigarettes) plus the 12-p.c. sales tax on the manufacturer's sale price
Manufactured tobacco.....	\$1.25 per lb. plus the 12-p.c. sales tax on the manufacturer's sale price
Cigars.....	\$2.00 per thousand plus the 17½-p.c. special excise tax and the 12-p.c. sales tax on the manufacturer's sale price.

Customs Duties*

Most goods imported into Canada are subject to customs duties at various rates as provided by tariff schedules. Customs duties, which once were the chief source of revenue for the country, have declined in importance as a source of revenue to the point where they now provide less than 10 p.c. of the total. Quite apart from its revenue aspects, however, the tariff still occupies an important place as an instrument of economic policy.

The Canadian Tariff consists mainly of three sets of rates, namely, British Preferential, Most-Favoured-Nation and General. The British Preferential rates are, with some exceptions, the lowest rates. They are applied to imported dutiable commodities shipped directly to Canada from countries within the Commonwealth. Special rates lower than the ordinary preferential duty are applied on certain goods imported from designated Commonwealth countries.

The Most-Favoured-Nation rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled

* See also p. 1022.

to the British Preferential rate. Canada has Most-Favoured-Nation arrangements with almost every country outside the Commonwealth. The most important agreement providing for the exchange of Most-Favoured-Nation treatment is the General Agreement on Tariffs and Trade.

The General Tariff applies to imports from countries not entitled to either the Preferential or Most-Favoured-Nation treatment. Few countries are in this category and, in terms of trade coverage, are negligible.

In all cases where the tariff applies there are provisions for drawbacks of duty on imports of materials used in the manufacture of products later exported. The purpose of these drawbacks is to assist Canadian manufacturers to compete with foreign manufacturers of similar goods. There is a second class of drawbacks known as "home consumption" drawbacks. These apply to imported materials used in the production of specified classes of goods manufactured for home consumption.

The tariff schedules are too lengthy and complicated to be summarized here but the rates that apply on any particular item may be obtained from the Department of National Revenue, which is responsible for administering the Customs Tariff.

Subsection 2.—Provincial Taxes

All of Canada's ten provinces impose a wide variety of taxes to raise the revenue necessary for provincial purposes. All provinces levy a tax on the income of individuals and corporations resident within their boundaries or deriving income from activities or operations carried out therein. Only the Provinces of Ontario and Quebec impose special taxes on corporations in addition to income tax and only the Provinces of Ontario, Quebec and British Columbia impose a tax on property passing at death; the remaining provinces receive payment from the Federal Government of their 75-p.c. share of estate tax levies. Under the terms of the existing federal-provincial fiscal arrangements, the Federal Government makes "equalization payments" to some provinces in recognition of the fact that the potential tax yield in those provinces, measured on a per capita basis, is lower than the national per capita tax yield. For some provinces the equalization payments constitute a very important source of revenue.

Some of the more important provincial levies are reviewed briefly on this and following pages.

Individual Income Tax

All provinces levy a tax on the income of individuals who reside within their boundaries or who earn income therein. In nine of the ten provinces, these taxes are computed as a percentage of federal "basic tax". As previously explained, "basic tax" is federal income tax (excluding old age security tax and the social development tax) otherwise payable at full federal rates before the abatement under the federal-provincial fiscal arrangements and before allowance for the federal tax reduction passed in 1966. These provincial taxes are collected by the Federal Government on behalf of these provinces. In Quebec, provincial income tax is levied at graduated rates that progress from 5.5 p.c. on the first \$1,000 of taxable income to a maximum of 40.0 p.c. on the excess over \$400,000. In addition, a 6-p.c. surtax has been levied for the taxation years 1968 and 1969. The determination of taxable income for Quebec tax is based on exemptions and deductions which, with the exception of deductions for dependent children eligible for family allowances,* are similar to those for federal tax. Quebec taxpayers whose net income does not exceed \$4,000 if married or in a situation recognized as equivalent and \$2,000 in other cases are exempt from

* Quebec has a family allowance program which supplements the federal program; it provides for allowances that increase from \$30 per annum for a first child to a maximum of \$70 per annum for a sixth and for each additional child. The Quebec program is in lieu of exemptions for provincial income tax purposes for children eligible for family allowances.

payment of the tax. If the taxpayer's income exceeds such amounts, the tax to be paid will not reduce his income to less than \$4,000 or \$2,000 as the case may be. The Province of Quebec collects its own tax.

The percentages that provincial income tax liability is of federal "basic tax" for 1969 are: Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Alberta and British Columbia each 28 p.c., Quebec approximately 50 p.c., and Manitoba and Saskatchewan each 33 p.c.

Corporate Income Tax

All provinces levy a tax on the profits of corporations derived from activities carried out within their boundaries. In all provinces except Ontario and Quebec the provincial tax imposed on taxable income in the province is determined on the same basis as for federal income tax. In Ontario and Quebec the determination of taxable profits for purposes of provincial tax follows closely the federal rules. Five of the ten provinces levy corporate income taxes at rates in excess of the 10-p.c. abatement allowed by the Federal Government. The rate that applies in Manitoba and Saskatchewan is 11 p.c., and in Newfoundland, Ontario and Quebec, 12 p.c. All provinces except Ontario and Quebec have signed agreements for the collection of the corporate income taxes by the Federal Government.

Taxes on Alcoholic Beverages and Tobacco

Generally speaking, the sale of spirits in all provinces is made through provincial agencies operating as boards or commissions which exercise monopolistic control over alcoholic beverages. The provincial mark-up over the manufacturer's price is the effective means of taxation. Beer and wine may be sold by retailers or government stores, depending on the province, but in all cases these sales contribute to provincial revenues.* The Province of Prince Edward Island imposes a tax of 10 p.c. on all beer, wine and spirits sold at retail, collected under authority of the Health Tax Act, and in Newfoundland a tax of 7 p.c. is imposed at retail level.

Newfoundland imposes a tax on tobacco sold at retail of one half of one cent per cigarette purchased; from two to 10 cents per cigar, depending on price; and two cents per half ounce or less of other tobacco. Prince Edward Island's tax on tobacco sold at retail, effective Mar. 20, 1968, is two fifths of one cent per cigarette purchased; from one to seven cents on cigars purchased at retail for from four cents to 45 cents; 25 p.c. of the retail price of each cigar purchased for more than 45 cents; and 20 p.c. of the retail price of all other tobacco purchased. Nova Scotia charges a 5-p.c. hospital tax on all alcoholic beverages. Saskatchewan's tax on retail tobacco sales is $\frac{5}{8}$ ths of one cent per cigarette purchased; from one to 10 cents per cigar, depending on price; and two cents on every half ounce of other tobacco; the average rate of the tobacco tax is 15 p.c. Specific sales taxes on tobacco products are also levied in New Brunswick, Quebec, Manitoba and Ontario.

Retail Sales Taxes

Retail sales taxes are levied on the final purchaser or user and are collected by the retailer. All provinces except Alberta levy this type of tax at rates varying from 5 p.c. to 8 p.c. These direct levies apply to tangible taxable commodities sold, with varying exemptions, for consumption in the province and to a few selected services, for example: to telephone services in all provinces; in Quebec and New Brunswick to telecommunications, meals and hotel and motel charges; in Prince Edward Island, since April 1968, to laundry and dry cleaning services, to accommodations, and to repair and installations labour; and in Manitoba to a broad range of services including dry cleaning, furniture repairs, motel accommodation, etc. The sales taxes do not apply to goods sold for delivery in other provinces or to exported commodities. All provinces imposing sales taxes provide comprehensive exemptions for foodstuffs and drugs.

* The provincial mark-up over the manufacturer's price is not considered a "tax" in DBS financial statistics but forms part of the "profits of government business enterprises".

Amusement Taxes

Each of the provinces with the exception of Alberta, Saskatchewan, British Columbia and Quebec has a tax on admission to places of entertainment. In addition, there is generally a licence fee imposed on the operator or owner of these amusement places. The tax on admissions is within the range of 5 p.c. to 15 p.c.

Gasoline and Diesel Fuel Oil Taxes

Each of the ten provinces imposes a tax on the purchase of gasoline by motorists and truckers. The rates vary from 13 cents per gallon in British Columbia to 21 cents in Prince Edward Island and 25 cents in Newfoundland. The amount of tax borne by one gallon of motor vehicle fuel in each province is as follows:—

	<i>Gasoline</i>	<i>Diesel Fuel</i>		<i>Gasoline</i>	<i>Diesel Fuel</i>
	cts.	cts.		cts.	cts.
Newfoundland.....	25	25	Ontario ²	18	24
Prince Edward Island ¹	21	21	Manitoba ³	17	20
Nova Scotia.....	19	27	Saskatchewan ⁴	17	20
New Brunswick.....	19	23	Alberta.....	15	17 ⁵
Quebec ²	19	25	British Columbia.....	13	15

¹ Gasoline and diesel fuel used by primary producers—farmers, fishermen, manufacturers and processors—is exempt from tax as is also gasoline and motor fuel used by owners or operators of registered pleasure craft and skis, and that used by consumers engaged in the construction of the Northumberland Strait Crossing.

² Some relief from taxation is given where gasoline or fuel oil is used for farming, manufacturing, commercial fishing and other off-highway purposes.

³ Exemptions are allowed on purple fuel used in operating agricultural machinery, farm trucks and municipal fire apparatus, and in trapping, fishing and prospecting.

⁴ Gasoline and diesel fuel used by farmers in farm trucks are exempt from tax.

⁵ Three cents less for domestic heating. Generally, fuel oil used for agricultural and industrial purposes is taxed at three cents per gallon.

The British Columbia net tax rate (after refund) on gasoline used in logging trucks off highway, in power units of motor vehicles for stationary industrial use, and in vehicles used by amputees, paraplegics and certain war disability pensioners is one cent per gallon. Gasoline coloured purple for certain off-highway use (including marine) and motor fuels, being any fuel except gasoline not consumed on provincial highways, is also taxed at one cent per gallon. Fuel oil used for heating purposes is taxed at one half cent per gallon.

Motor Vehicle Licences and Fees

Each province levies a fee on the annual registration of motor vehicles, which is compulsory. Upon registration a vehicle is issued with licence plates. The rates of fee vary from province to province and, in the case of passenger cars, may be assessed on the weight of the vehicle, the wheel base, the year of manufacture, the number of cylinders of the engine, or at a flat rate. The fees for commercial motor vehicles and trailers are based on the gross weight for which the vehicle is registered, i.e., the weight of the vehicle empty plus the load it is permitted to carry. Every operator or driver of a motor vehicle is required to register periodically and pay a fee for a new driver's licence. The licences are valid for periods of from one to five years and the fees vary from \$1 to \$7 a year.

Taxes on Mining Operations

All provinces except Prince Edward Island levy taxes of various kinds on mining operations. All provinces except Prince Edward Island and Alberta impose a tax on the income of firms engaged in mining operations in general or in specific kinds of mining operations. The Provinces of British Columbia, Alberta, Saskatchewan and Manitoba impose a tax on the assessed value of minerals or a flat rate per acre of mining property.

Ontario imposes a tax on the profit on the assessed value of minerals and a flat rate per acre of mining property. Manitoba imposes rates of from 6 p.c. to 11 p.c. on mining royalties. The British Columbia mining tax rate is 15 p.c. on net income from mining in excess of \$10,000.

Tax on Logging Operations

The Provinces of Quebec, Ontario and British Columbia levy a tax on the income from logging operations of individuals, partnerships, associations or corporations engaged in this activity. In Quebec and Ontario the rate is 10 p.c. and in British Columbia 15 p.c. on net income where in excess of \$10,000 (in Quebec and British Columbia if the net income is greater than \$10,000 the whole amount is taxable with no basic exemption). In Ontario and Quebec one third and in British Columbia 20 p.c. of the tax is allowed as a deduction from provincial corporate income tax or, in Quebec, from the provincial income tax; two thirds of the provincial tax is deductible from federal income tax.

Business Taxes

The Province of Quebec imposes a tax of one fifth of 1 p.c. on paid-up capital of corporations and Ontario levies a similar tax at the rate of one twentieth of 1 p.c.

The Provinces of Quebec and Ontario have a place-of-business tax. In Quebec, the tax is generally \$50 but is reduced to \$25 when the paid-up capital is less than \$25,000; in the case of loan companies, the tax is \$100 when capital paid up is \$100,000 or more. In Ontario, the tax for each permanent establishment is the lesser of \$50 or one twentieth of 1 p.c. of the paid-up capital of the corporation involved, but the total of the capital tax and the place-of-business tax cannot be less than \$20. Ontario also imposes an office tax of \$50 on every corporation that does not maintain a permanent establishment in the province but merely maintains a buying office, or merely holds certain provincial licences, or merely holds assets. A corporation that does not maintain a permanent establishment in Ontario but is represented by a resident employee or agent who is not deemed to operate a permanent establishment of the corporation in the province must pay an office tax of \$50 or one tenth of 1 p.c. of the total amount of its gross Ontario sales or revenue if less than \$50,000, subject to a minimum office tax of \$5.

Both provinces levy special taxes on certain kinds of companies such as banks, railway companies, express companies, trust companies and sleeping-car, parlour-car and dining-car companies. In Ontario, these special taxes (except the tax payable by insurance corporations calculated on gross premiums) and the capital and place-of-business taxes are payable only to the extent that they exceed the corporate income tax otherwise payable.

The Province of Prince Edward Island charges special annual licence fees to most insurance companies, banks, acceptance companies, chain theatres and chain stores, steamship companies, telephone, telegraph and electric light companies and brokers, as well as nominal licence fees to other incorporated companies, the latter being similar to filing fees in other provinces.

Land Transfer Taxes

The Provinces of Ontario, Manitoba and Alberta levy a tax based on the price at which ownership of land is transferred. In Ontario, one fifth of 1 p.c. is imposed on the purchase price up to \$25,000 and two fifths of 1 p.c. on anything in excess of that amount. In Manitoba the rate is 1 p.c. In Alberta, registration fees proportionate to the conveyancing services rendered are charged and in the case of transfers and mortgages the fees are assessed on the value of the land transferred as on the amount of the mortgage. In addition, there is an Assurance Fund fee charged on transfers and mortgages which guarantees titles in certain circumstances. British Columbia and Saskatchewan do not have a land transfer tax but have an equivalent in land title fees which are based on land values.

Tax on Security Transfers

The Provinces of Ontario and Quebec levy a tax on the sale price of securities transferred; the rates in both provinces are:—

Shares sold, transferred or assigned valued at—

Under \$1.....	$\frac{1}{10}$ th of 1 p.c. of value
\$ 1 to \$ 5.....	$\frac{1}{2}$ cent per share
\$ 5 to \$ 25.....	1 cent per share
\$25 to \$ 50.....	2 cents per share
\$50 to \$ 75.....	3 cents per share
\$75 to \$150.....	4 cents per share
Over \$150.....	4 cents per share plus $\frac{1}{10}$ th of 1 p.c. of value in excess of \$150
Bonds and debentures.....	3 cents for every \$100 or fraction thereof of par value.

Tax on Premium Income of Insurance Companies

All ten provinces impose a tax of 2 p.c. on the premium income of insurance companies relative to risks incurred in the province. Saskatchewan imposes a tax of 1 p.c. on the motor vehicle premium income of insurance companies to finance a comprehensive high school driver-training program.

Succession Duties

Only the Provinces of Ontario, Quebec and British Columbia levy succession duties. These duties are a tax upon the right to succeed to property and are assessed upon the interest or benefit passing at death to an heir or beneficiary. The three provinces impose succession duties on all property situated in the province belonging to the deceased and passing at his death whether the deceased was domiciled in the province or elsewhere. Personal property, wherever situated, of a person dying domiciled within the province is also liable if passing to a successor resident or domiciled in the province.

The rates of succession duty are generally governed by the value of the estate, the relationship of the beneficiary to the deceased and the amount going to any one person. The rate of tax increases as the degree of relationship between the deceased and his successor becomes more remote.

Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta, while not imposing succession duties, each receives 75 p.c. of the Federal Government estate tax levied on property situated within its borders. The Alberta share of estate taxes is rebated in full where the deceased was a bona fide resident of the province.

Provincial Property Taxes

In unorganized (non-municipal) areas, British Columbia levies property taxes at varying rates according to class for provincial revenue. Improved forest and tree-farm lands are taxed at 1 p.c. of assessed value; farm land at one half of 1 p.c.; wild land at 3 p.c.; coal land at 2 p.c. (non-operating) or 7 p.c. (operating); and timber land at $1\frac{1}{2}$ p.c. In unorganized (non-municipal) areas, Ontario levies a property tax of $1\frac{1}{2}$ p.c. of assessed value; the minimum annual tax in respect of any land is \$6. New Brunswick levies a tax of \$1.50 per \$100 market value assessment on all land and buildings in the province and a

similar tax on business occupancy, to finance education, health, welfare and justice services. Nova Scotia also imposes property taxes of limited application.

Race Track Taxes

Ontario levies a tax on operators of race meets and on holders of winning tickets issued under the pari-mutuel system. Holders of winning tickets must pay a tax equal to 7 p.c. of the amount that would be payable to them if no percentage were deducted by the person holding the race meet. A number of other provinces levy a pari-mutuel tax on money bet in the province on horse races; in Newfoundland the rate is 11 p.c., in Prince Edward Island 10½ p.c., in Nova Scotia 11 p.c. on the first \$400,000 wagered and a reduced percentage on any additional money wagered (some of this money is refundable to the individual race tracks), in New Brunswick 5½ p.c., in Manitoba 10 p.c., in Alberta 5 p.c., in Saskatchewan 10 p.c., and in Quebec 7 p.c. on ordinary pools and 9 p.c. on special pools (quinella and daily-double). In British Columbia the tax is 12 p.c. but the province returns 2½ p.c. of money bet to horsemen and track operators for purses, etc.

Miscellaneous Provincial Taxes

In Newfoundland a tax of 7 p.c. is levied on premiums paid for all types of insurance except life, accident and sickness, and marine; and a telegraph tax is levied on companies operating cables or wireless stations between Newfoundland and points outside the province at the yearly rate of \$4,000 a cable or station.

In Prince Edward Island a fire marshal's tax is levied at the rate of ¾ of 1 p.c. on premiums paid for fire insurance. In Nova Scotia a fire marshal's tax is levied at the rate of one half of 1 p.c. on premiums paid for fire insurance in the province. A tax is also levied on long-distance telephone calls at the rate of five cents on the first 50 cents with a five-cent minimum and five cents on each additional 50 cents, applying only to calls made within the province.

Subsection 3.—Municipal Taxes

The municipalities in Canada levy taxes on the owners of property situated within their jurisdiction according to the assessed value of such property. Methods of determining assessed value vary widely but for taxation purposes it is generally considered to be a percentage of the actual value or, as in Nova Scotia and New Brunswick, of the actual market value. The revenues from such taxes are used generally to pay for street maintenance, schools, police and fire protection, snow removal in certain communities and other community services; in New Brunswick the municipal levy is used only for property service. Special levies are sometimes made on the basis of street frontage to pay for local improvements to the property such as sidewalks, roads and sewers. Not only is there a widespread difference in the bases used for property tax but there is also a wide variety of rates applied, depending on the municipality.

In addition to the taxes described above, municipalities usually impose a charge for the water consumption of each property holder or a water tax based upon the rental value of the property occupied. In New Brunswick, utilities (water, domestic sewerage and treatment, and electric power) must be financed on a user-charge basis; a part of the water budget may be transferred to the general budget on a hydrant-rental basis or a percentage of the budget, depending on the size of the municipal population. There are no municipal income taxes although certain localities have retained the use of a poll tax. In Newfoundland, Quebec and Saskatchewan, municipalities are empowered to levy an amusement

tax on the admission of persons to places of entertainment, although the amusement tax is generally a provincial preserve (see p. 1050). Electricity and gas are taxed at the consumer level in some western municipalities and in some New Brunswick municipalities, and coal and fuel oil for heating purposes are chargeable in urban areas of Newfoundland. Telephone subscribers are subject to a special levy in Montreal and certain Ontario municipalities impose a tax on the gross receipts of telephone companies.

In most municipalities, a tax is levied directly on the tenant or the operator of a business. In general, business tax rates are lower than those applying to property. In New Brunswick, business assessment is equal to the value of the real property occupied for business purposes. Three bases of assessment are in use—a fraction of the property assessment, the annual rental value of the premises, or the area of the premises. Certain municipalities may charge a licence fee instead of a business tax but others charge both a licence fee and a business tax.

Subsection 4.—Miscellaneous Levies

These are not generally referred to as taxes but they are similar to taxes in many ways.

Unemployment Insurance

A national program of unemployment insurance operates in Canada. Essentially, it provides relief to those qualified persons who temporarily find themselves without work. It is administered by a federal commission appointed for this purpose and financed by equal contributions from employers and employees plus a contribution from the Federal Government. The amount paid into the fund by employee and employer is directly proportional to the weekly wages of the employee. The rates of contributions, together with statistics on the operation of the program, are given at pp. 789-793.

Workmen's Compensation

Legislation in force in all provinces provides compensation for personal injury suffered by workmen as a result of industrial accidents. In general, these provincial statutes establish an accident fund administered by a Board to which employers are required to contribute at a rate proportional with the hazards of the industry. See also pp. 794-795.

Hospital Insurance

A federal-provincial hospital insurance plan has been adopted by each of the ten Canadian provinces. Under this arrangement, the Federal Government pays approximately one half of the cost of hospitalization for patients who are participants under the plan. The provinces meet the remainder of the cost. Provincial revenues for this purpose are raised by various means. The Province of Quebec has increased its personal and corporation income tax. Certain provinces require the deduction of a monthly premium from the wages of their residents as a contribution or premium for the plan. In such provinces non-salaried people must also pay the premium directly if they wish to be covered by the plan. In some other provinces the proceeds of a retail sales tax are earmarked in whole or in part for the support of the hospital plan. See also pp. 272-274.

Canada and Quebec Pension Plans

In 1966 the Canada Pension Plan, a compulsory government-operated pension program, was introduced whereby each contributor builds up a right to a graduated pension, the amount of which is related to his earnings up to a certain level. This graduated benefit will supplement the universal old age security pension which is paid out of tax revenues.

It operates throughout the country except in the Province of Quebec where a similar pension plan is operated by the government of the province. Both plans have disability and survivor benefits. They are described at pp. 303-306.

Section 3.—Federal Government Finance

Subsection 1 of this Section contains financial statistics of the Federal Government prepared as far as possible in accordance with the classifications, concepts and definitions used in the preparation of provincial and municipal finance statistics. These tables differ from the information presented in Subsection 2 in that the latter has been extracted directly from the *Canada Gazette*. Detailed reports published by the Dominion Bureau of Statistics provide reconciliations of revenue, expenditure and debt as set out in Subsections 1 and 2. The *Canada Gazette* presentation is included because there is interest in and use for information on this basis.

Guaranteed Debt.—In addition to the direct debt already dealt with, the Government of Canada has assumed certain contingent liabilities. The major categories of this indirect or contingent debt are the guarantee of insured loans under the National Housing Act, the guaranteed bonds and debentures of the Canadian National Railways and the guarantee of deposits maintained by the chartered banks in the Bank of Canada. The remainder consists chiefly of guarantees of loans made by chartered banks to the Canadian Wheat Board, to farmers and to university students and of guarantees under the Export Credits Insurance Act.

¹ In addition, the government has an indeterminate contingent liability in respect of rental guarantee contracts which in 1966 amounted to approximately \$13,112,000. Against this amount was a reserve of \$4,135,376 held by Central Mortgage and Housing Corporation.

² These contingent liabilities are expressed in Canadian dollars; they are payable solely in United States dollars and are converted on the basis of \$1 U.S. = \$1.05108 Canadian.

³ As reported (in accordance with Sect. 45, National Housing Loan Regulations) by approved lenders at Dec. 31, 1966.

⁴ Includes contingent liability in respect of alternate payments to non-participating provinces.

Table 12 summarizes the national debt position during the period 1959-68 as to interest and amount outstanding. Details of unmatured debt and treasury bills outstanding and information on new security issues of the Federal Government may be found in the *Public Accounts of Canada*. They are summarized by standard classification in DBS publication *Federal Government Finance, Revenue and Expenditure* (Catalogue No. 68-211).

¹ Based on the official estimates of population for June 1 of the year indicated.

² Based on the official estimates of population for June 1 of the year immediately preceding the one indicated.

Subsection 3.—Revenue from Taxation

The incidence of Federal Government taxation is dealt with in Section 2. This Subsection includes statistical data on revenue received from individual income tax, corporation tax, estate tax, excise duties and excise taxes; customs receipts constitute a single item in the *Public Accounts of Canada* and are not included here.

Individual and Corporation Income Tax

Statistics of income tax collections are gathered at the time the payments are made and are therefore up to date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. Thus, the greater part of the tax is collected during the same year in which the related income is earned and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include employer remittances of tax deductions and Canada Pension Plan contributions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year; they cannot therefore be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made and as a single cheque from one employer may frequently cover the tax payment of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 13 pertain to revenue collections by the Department of National Revenue, Taxation. The collections are for fiscal years ended Mar. 31.

13.—Revenue Collected by the Department of National Revenue, Taxation, Years Ended Mar. 31, 1959-68

NOTE.—Comparable figures from 1917 are given in the corresponding table of previous Year Books beginning with the 1947 edition.

income tax collected by the Department of National Revenue, Taxation.

⁴Includes Canada Pension Plan

contributions by employers, employees and self-employed collected by the Department of National Revenue, Taxation.

Income Tax Statistics.—Individual income tax statistics are presented in Tables 14 to 16 on a calendar-year basis and are compiled from a sample of all returns received. Taxpayers and amounts of income and tax are shown for selected cities and by occupation and income classes. Table 17 gives statistics of corporation income tax by industry group by size of assets.

Succession Duties and Estate Taxes

From Jan. 1, 1947 to Mar. 31, 1963, only Ontario and Quebec levied succession duties, the other provinces having leased this field to the Federal Government under the terms of the federal-provincial tax agreements (see p. 1038). However, British Columbia re-entered the field, effective for all deaths occurring on or after Apr. 1, 1963. The incidence of the estate tax is discussed at pp. 1044-1045. Federal revenue from succession duties and estate taxes in the year ended Mar. 31, 1967 amounted to \$101,105,631. In the same year, provincial revenues from succession duties in Quebec, Ontario and British Columbia were \$37,780,000, \$57,913,000 and \$21,883,000, respectively.

Excise Taxes

Excise taxes collected by the Excise Division of the Department of National Revenue are given for the years ended Mar. 31, 1966-68 in Table 18.

18.—Excise Taxes Collected, by Commodity, Years Ended Mar. 31, 1966-68

Excise Duties

Gross excise duties collected are given in the following statement for the years ended Mar. 31, 1966-68. The totals do not agree with net excise duties as shown in Table 8 because refunds and drawbacks are included. A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, public hospitals, or health institutions in receipt of federal and provincial government aid.

Section 4.—Federal-Provincial Conditional Grants and Shared-Cost Programs*

During the past decade there has been a rapid increase in federal expenditures on joint federal-provincial programs. These programs take three forms: (1) the Federal Government contributes financial assistance to a program administered by a province; (2) the federal and provincial governments each assume the sole responsibility for the construction, administration and financing of separate aspects of a joint project; or (3) the province contributes financially to a joint program administered by the Federal Government.

The first category of joint programs is by far the most common and such programs are commonly called conditional grant programs. They are characterized by the Federal Government agreeing to make money available to a province on certain conditions, such conditions always specifying the field, service or project to which the money must be applied. In addition to being entrusted with the administration of the programs, the provinces may be required to make a financial contribution to the programs, to provide certain facilities, and to meet certain specified standards in operating the program. The various programs in the field of social policy are good examples of conditional grant programs. Under the hospital insurance program, for instance, the Federal Government undertakes to contribute to participating provinces a specified share of the costs incurred by the provinces in respect of public hospital insurance programs. The federal contribution in each province is equal to 25 p.c. of the average per capita cost of in-patient services in Canada as a whole plus 25 p.c. of the average per capita cost of in-patient services in the province multiplied by the average for the year of the number of insured persons in the province.

Although the hospital insurance program, with its specifications of eligible hospitals, shareable costs and the amount of the federal contribution, is characteristic of some conditional grant programs, there are others in which the conditions are nominal. For example, under the Canada Assistance Plan the Federal Government undertakes to share one half of the cost of welfare paid to recipients in need, the scale and conditions of the assistance to be determined by the provinces. In general, it may be said that the hospital insurance program conforms to the traditional pattern of conditional grants, whereas the Canada Assistance Plan marks an approach in which flexibility and adaptability to local circumstances is allowed to modify insistence on a national uniform standard.

Joint programs in the second category—those in which the federal and provincial governments accept sole responsibility for portions of a total project—are not numerous and are generally of a public works type. The irrigation projects carried out jointly by the Prairie Farm Rehabilitation Administration and the Province of Alberta on the St. Mary's and Bow Rivers in southern Alberta are of this nature. In the St. Mary's irrigation project the Federal Government has undertaken the responsibility for the construction of all main reservoirs, large dams and connecting works, and Alberta has assumed responsibility for the construction of the distribution system and the development and colonization of the new irrigable areas.

Joint programs in the third category are also few in number and the sums of money involved are seldom large. The South Saskatchewan River dam is an example: Canada

* As at January 1969. Prepared in the Federal-Provincial Relations Division, Department of Finance, Ottawa.

Federal-Provincial Relations Division, Department of Finance, *Federal-Provincial Conditional Grant and Shared-Cost Programmes, 1962*, Ottawa, Queen's Printer, October 1963, \$3 (Catalogue No. F2-2563). Appendix to House of Commons Debates of Sept. 10, 1964. Statutes of Canada 1964-65, c. 54.

undertook to pay the costs of the dam in the first instance, with Saskatchewan subsequently reimbursing Canada for one quarter of the federal expenditures (up to a maximum of \$25,000,000) on the dam and reservoir. By Mar. 31, 1968, the full amount had been recovered from Saskatchewan.

The federal transfers to the provinces in respect of the conditional grant and shared-cost programs increased from \$75,000,000 in the year ended Mar. 31, 1954, to an estimated \$1,538,796,000 in 1967-68. The increase was attributable largely to the introduction of the hospital insurance and diagnostic services program in 1958, to the increase in the level of old age assistance, disabled persons' and blind persons' allowances, and to the enlargement and reorientation of unemployment assistance and the Canada Assistance Plan. In 1967-68, federal contributions to the programs in respect of hospital and diagnostic services and unemployment assistance and the Canada Assistance Plan were estimated at \$672,554,000 and \$366,115,000, respectively.

The increasing number and extent of conditional grant and shared-cost programs has occasioned some provincial criticisms and misgivings. It has been argued that the preponderant occupancy of the direct tax field in the postwar years by the Federal Government encouraged the growth of such programs as the provinces were denied the revenues that would have enabled them to provide equivalent programs themselves. At the 1964 Federal-Provincial Conference, the Province of Quebec proposed that a province be given the option to assume full administrative and financial responsibility for certain joint programs upon the Federal Government making available to that province the necessary additional tax room. These proposals were referred to a federal-provincial committee of officials for consideration. As a consequence of their consideration, the Prime Minister of Canada, in a letter to the provincial Premiers dated Aug. 15, 1964, proposed a temporary measure permitting a province for an interim period to assume full financial and administrative responsibility in respect of certain programs pending the development of more permanent arrangements. Parliament approved the necessary legislation—the Established Programs (Interim Arrangements) Act—in April 1965. Under the Act, the Government of Canada was authorized to enter into agreements with any province that wished to assume full financial and administrative responsibility for certain programs in return for fiscal compensation. The nature and number of programs were itemized in the schedules to the Act.

Schedule I listed the major conditional grant programs of a continuing nature and Schedule II listed smaller and more transient programs. The Schedule I programs were: (1) hospital insurance; (2) old age assistance, blind persons' allowances, disabled persons' allowances, and the welfare portion of unemployment assistance; (3) the technical and vocational training programs for youths who were not yet members of the labour force; and (4) the health grant program, except those elements that involved research and demonstration. The Schedule II programs were: (1) agricultural lime assistance; (2) the forestry programs; (3) hospital construction grants; (4) campgrounds and picnic areas; and (5) the roads to resources program. The Act was subsequently amended to include the Canada Assistance Plan.

If a province wished to avail itself of the provisions of the Established Programs (Interim Arrangements) Act in respect of a Schedule I program, it had to enter into a supplemental agreement in which it undertook to assume full responsibility for the administration and financing of the program. The Federal Government undertook to ensure that the province received revenue equivalent to the fiscal burden it assumed. The Federal Government undertook to: (a) abate by a specified percentage the individual income tax on the income of residents of the province; (b) pay associated equalization; and

¹ Provinces excepted are shown in parentheses.² As here used, 50 p.c. may mean the province must contribute 50 p.c. of the cost of the project or must match the federal contribution.³ F = a maximum limit set to the federal share; P = a maximum limit to the provincial share; and O = federal and provincial shares are open-ended. Source: *Public Accounts of Canada, 1967-68*.⁴ Not uniform.⁵ Provinces to provide administration, services, facilities, land, loans or to under-
take a specific portion of the project, etc.⁶ Represents the provincial and/or municipal share.⁷ Includes payments to municipalities.⁸ Share for provision of services only.

(c) make an operating cost adjustment. The operating cost adjustment payment or recovery was to ensure that a province did not suffer or benefit financially through assuming the financing of the federal share of the former joint program. Because of their smaller size and lack of continuity, the compensation associated with a Schedule II program did not provide for federal tax abatement or associated equalization payments. The compensation for these programs was to be paid directly to the province by the federal Minister of Finance.

The freedom of a province to vary the nature and condition of a program enumerated in the Established Programs (Interim Arrangements) Act differed between the Schedule I and Schedule II programs. Under the Act, a supplemental agreement with respect to a Schedule I program could vary the conditions of the original agreement only as to the manner in which Canada would contribute to the program and the manner in which accounts were submitted. A supplemental agreement for a Schedule II program might require the program to be continued as in the original authority or it might allow a province to substitute a provincial program having substantially similar objectives.

The Established Programs (Interim Arrangements) Act was designed to provide for an interim period during which a province might assume greater administrative and financial responsibility for the enumerated programs and during which time more permanent arrangements governing joint programs might be devised. The length of the interim period was set out in the Act for each program and varied from Mar. 31, 1967 to Dec. 31, 1970. The tax abatement associated with Schedule I programs was also set out in the Act and varied from 1 p.c. for the health grant program to 14 p.c. for hospital insurance.

The Province of Quebec alone availed itself of the provisions of the above legislation. At the federal-provincial meetings in September and October 1966, the Federal Government offered the provinces revised and more permanent arrangements. The Federal Government proposed to abate, for the period 1967-70, 17 p.c. of the personal income tax in those provinces that would take over the financial responsibility for the hospital insurance, welfare (i.e., Canada Assistance Plan) and health grant programs. To ensure fiscal equity, equalization and operating cost adjustment payments were to be associated with the abatement. As the technical and vocational program was being discontinued in its existing form, the offer did not apply to that program. These proposals were re-offered again at the Nov. 4-5, 1968, meeting of the Ministers of Finance and Provincial Treasurers.

Section 5.—Provincial Government Finance

Provincial government accounting and reporting practices vary considerably so that certain adjustments to the *Public Accounts* figures are required in order to produce comparable statistics. For example, transactions relating to a specific function are sometimes excluded from ordinary account; therefore special or administrative funds of this nature have been added to provincial ordinary account in the tables of this Section. The fiscal years of all provinces end on Mar. 31.

Revenue and Expenditure.—Table 20 shows net general revenue and expenditure of provincial governments for the years ended Mar. 31, 1962-66 and Tables 21 and 22 give details of such revenue and expenditure for the fiscal year ended Mar. 31, 1966. "Net general revenue" and "net general expenditure" are arrived at by first analysing the combined revenues and expenditures of capital account, current or ordinary account and those working capital funds and special funds for which separate accounts are kept. Then the following types of revenue are deducted from revenue and offset against related expenditure: interest, premium, discount and exchange; institutional revenue; and grants-

in-aid and shared-cost contributions from other governments. Table 23 gives details of the amounts transferred to other governments by provincial governments, according to nature of payment.

¹ Home-owners' subsidies are not included; they are considered as assistance to the home-owners and in municipal revenue compilations they form part of taxation revenue rather than contributions from the provincial government.

² N.S.—share of Crown land leases; Ont.—share of liquor licenses; Alta.—share of liquor fines.

³ Re- presents compensation payable to municipalities in lieu of right to impose a sales tax.

⁴ Includes payments under the Municipal Unconditional Grants Act \$27,642,000.

⁵ Does not in- clude grants in lieu of taxes paid by provincial government enterprises.

⁶ Excludes amounts paid directly to municipal hospital boards.

⁷ Primary and secondary schools are operated on a denominational basis; grants to denominational schools amounted to \$23,030,000.

⁸ Local schools are operated by the territorial government and by religious denominations.

⁹ Local schools are operated by the Federal Government, religious denominations and school districts; the amount shown was paid to school districts.

¹⁰ Includes grants of \$5,023,000 to conservation authorities.

¹¹ Includes \$3,263,000 interest on debt assumed on loans by the City of Montreal and the Montreal Metropolitan Corporation.

¹² Consists of: Que.—Department of Mines and Technical Surveys \$55,000; Ont.—annuities and bonuses to Indians \$37,000 and Department of Public Works (flooding and other damage) \$32,000; Sask.—South Saskatchewan River Dam Project agreement \$2,143,000 and Department of Northern Affairs and Natural Resources (water rights) \$2,006¹³; N.W.T.—fees for pupils in federal schools \$1,125,000.

Debt of Provincial Governments.—The latest data at the time of printing on provincial debt were those for Mar. 31, 1965, given in the 1967 Year Book at pp. 1062-63. Figures for Mar. 31, 1966, included in the 1968 Year Book were later considered to be incomplete and should not be used.

Section 6.—Municipal Government Finance

Municipal Taxation.—Table 24 shows, for the year 1965, local taxes levied by municipalities and by some school authorities and total taxes outstanding at the end of the year. Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, these figures should not be used as a basis for interprovincial comparisons of the relative burden of municipal taxation.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

In this Chapter various statistical statements and studies are presented in which broad areas of Canadian economic activity are covered in a comprehensive but summary form. These integrated aggregative economic accounts provide an interrelated framework for economic analysis and the observation of changes in the functioning of the Canadian economy and its structure and in economic and financial relationships with other countries.

Section 1.—National Accounts

The national accounts constitute a set of accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between different sections of the economy. By combining and summarizing these operations into their various classes, information may be obtained on the functioning of the economy which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to businessmen concerned with programs of investment and marketing.

This measurement of the nation's output is in terms of established market prices; hence it is necessary to keep in mind that the value of the nation's production may change because of price variations as well as through increase or decrease in volume of output.

Data are available showing volume changes in gross national expenditure in addition to the value figures. Gross national expenditure is shown in Table 4 in constant dollars (i.e., in terms of 1949 prices). Because the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. In the other tables in which the data are expressed in current dollars, year-to-year changes must be considered in relation to price changes over the period.

* Sections 1 and 2 were prepared in the National Accounts, Production and Productivity Division, and Sections 3, 4 and 5 in the Balance of Payments and Financial Flows Division of the Dominion Bureau of Statistics. Section 6 was prepared by the authorities concerned.

The tables on pp. 1093-1098 cover the more important aspects of the national income analysis in annual terms. Definitions are as follows:—

National Income.—Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and non-farm unincorporated business.

Gross National Product.—Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus capital consumption allowances and miscellaneous valuation adjustments.

Personal Income.—Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government (such as family allowances, unemployment insurance benefits and war service gratuities) in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Gross National Expenditure.—Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

Economic Activity in 1967

A seventh consecutive year of expansion brought Canada's gross national product (GNP) to the level of \$62,100,000,000 in 1967, an increase of 6.8 p.c. following the exceptionally large advance of 11.3 p.c. of the previous year. Prices continued to rise but at a somewhat lower rate than in 1966—3.9 p.c. compared with 4.5 p.c.; the gain in real terms was reduced to 2.8 p.c. A dampening influence on GNP was exerted by a western grain crop much smaller than the record crop of 1966 which bolstered that year's rise; excluding the accrued net income of farm operators, the advance in GNP in value terms was 8 p.c. in 1967 compared with 10½ p.c. in 1966.

For the year as a whole, the general profile of the economy was one of a widespread easing of demand pressures. Every major expenditure category showed a lower rate of increase than in 1966 except business gross fixed capital formation which dropped by 1 p.c.; within this category, divergent movements occurred, with residential construction expenditures rising much more strongly than in 1966 and outlays on plant and equipment declining by 3½ p.c. and 2 p.c., respectively.

A major source of strength was personal expenditure; buoyed up by outlays related to Expo, it increased by over 8 p.c., not much lower than the 1966 rate of advance. Both non-durables and services continued to show strength, while durables advanced only moderately despite a 3-p.c. rise in new and used car purchases which showed no change in the previous year. In real terms, the advance in total spending of over 4½ p.c. was also close to the gain of 1966. However, there was a shift in price movements; food prices were virtually unchanged, while a pronounced degree of price acceleration in durables and services accounted for half of the increase in value terms.

Developments in the external sector were among the highlights of the year. The current account deficit on a national accounts basis narrowed substantially to \$549,000,000 from \$1,207,000,000 in 1966, as exports of goods and services increased by 11½ p.c. while imports advanced 6 p.c. over the year but declined in the last two quarters. An increase

in merchandise exports of $10\frac{1}{2}$ p.c. combined with an 8-p.c. advance in imports more than doubled the merchandise surplus to \$480,000,000. Exports to the United States, where economic activity quickened in the second half of the year after a slowdown in the first half, rose 17 p.c. while imports from that country advanced $12\frac{1}{2}$ p.c., substantially reducing the trade deficit. Notable also was an increase of 45 p.c. in exports to Japan. On non-merchandise transactions, receipts increased by over 17 p.c. while payments rose barely 2 p.c., thus reducing the deficit by \$402,000,000. Prominent in this development was the Expo-affected tourist and travel account which switched from a deficit of \$63,000,000 to a surplus of \$427,000,000, only the second surplus since 1950.

Government expenditures on goods and services rose considerably less than in 1966— $9\frac{1}{2}$ p.c. compared with $17\frac{1}{2}$ p.c. All levels of government reflected the reduced rate of advance; at the federal level the rise was $8\frac{1}{2}$ p.c. as against 19 p.c., and at the provincial-municipal level it was 10 p.c. compared with $16\frac{1}{2}$ p.c. Inclusive of contributions to the Canada and Quebec Pension Plans, the combined government surplus was reduced by more than one half to \$157,000,000. Excluding the pension plan contributions, the provincial-municipal deficit narrowed by \$62,000,000 and the Federal Government switched from a small surplus to a deficit of \$256,000,000.

Notable differences from the pattern of the previous year occurred among the components of business gross fixed capital formation. Expenditures on new residential construction advanced $7\frac{1}{2}$ p.c., up sharply from 2 p.c. in 1966. Aided by developments in the money market and government action relating to interest rates on NHA-approved loans and to CMHC direct loans to builders in the spring, housing starts jumped sharply in the second quarter and remained near this level in the latter half of the year. For the year, starts increased to 164,000, some 30,000 units over 1966. This was heavily concentrated in multiple units which rose to 92,000; single-family unit starts advanced by 2,000.

In striking contrast, investment in plant and equipment declined by 3 p.c. after annual increases of over 20 p.c. in the period 1964-66. Movements in the two components diverged somewhat during the year; non-residential construction declined for the first three quarters and recovered in the fourth, while machinery and equipment declined in the last three quarters after a small increase in the first. With the exception of investment in manufacturing, outlays on plant and equipment ran slightly ahead of the preceding year; however, manufacturing investment declined by 14 p.c. with drops of 9 p.c. and $19\frac{1}{2}$ p.c. in non-durables and durables, respectively.

Investment in non-farm business inventories in 1967 showed a small increase for the year but was almost \$600,000,000 below the accumulation of 1966. Over three quarters of the reduction was at the manufacturing level, where durables shifted from sizable accumulation to moderate liquidation, but reduced investment also occurred at the retail and wholesale levels.

Implicit in the aggregates of the income side are some significant developments relating to output and employment. Excluding agriculture, the gain in output as measured by the indexes of real domestic product was slightly more than 3 p.c.; the increase in services was somewhat lower than in the two preceding years, while the rise in the goods-producing sector was much reduced largely due to an increase of only one half of 1 p.c. in durable manufacturing. As a result, there was a considerable shift in the composition of output, with services accounting for over two thirds of the increase compared with two fifths in the two previous years. The labour force increased almost as rapidly as in 1966 but employment rose by a substantially lesser amount and remained virtually stationary in the latter half of the year. The industrial composite employment index recorded a $1\frac{1}{2}$ -p.c. advance while declines occurred in the durable manufacturing and construction indexes. Most of the increase in employment occurred in the service sector; with greater job opportunities for women in this area, the rise in female employment was much larger than that for men—6 p.c. as against 2 p.c.—and for the first time since 1961 women accounted for

more than half of the total increase. The unemployment rate rose from 3.6 p.c. in 1966 to 4.1 p.c., and reached 4.7 p.c. during the last quarter before declining somewhat in early 1968.

Labour income increased by over 9 p.c., reduced from the exceptionally large $13\frac{1}{2}$ -p.c. rise of 1966; almost three quarters of the advance occurred in the service-producing sector, while pay increases in both goods and services were greater than in 1966. Preliminary indications are that the increase in output per person employed in the commercial non-agricultural industries during 1967 was lower than that of 1966, itself a below-average year. Unit costs continued to rise and were partly absorbed by profit margins; gross profits advanced 1 p.c. compared with 3 p.c. in 1966, while net profits declined a further $2\frac{1}{2}$ p.c. after a 1-p.c. decline previously.

A special feature of 1967 was agriculture. The value of the grain crop was some 22 p.c. lower than that of the record 1966 crop. Reflecting this, accrued net income of farm operators declined 23 p.c. after the 34-p.c. increase of 1966, although it was some 3 p.c. higher than in the less-exceptional year of 1965. An unusual development, however, was a break in the downward trend of agricultural employment which increased for the first time since 1954; combined with lower production, this resulted in a very substantial reduction in output per person employed.

Price increases in 1967, although somewhat lower than in the previous year, were still strong and widespread. Over-all prices as measured by the implicit price index of gross national expenditure rose 3.9 p.c. compared with 4.5 p.c. in 1966, decelerating in the second part of the year and especially in the last quarter. The most striking increases occurred in non-food goods, in services, in government expenditure and in construction. Within non-food goods there was an increase in the price of durables, reversing the apparent trend of the past few years toward slowly declining prices. Virtually unchanged food prices—after the strong rises of previous years, culminating with a 6.2-p.c. increase in 1966—exerted a moderating influence on the over-all price advance. The decline in machinery and equipment prices was also a dampening factor.

In personal expenditures, all major non-food categories showed accelerating rates of price increase, in part a reflection of increased indirect taxes by all levels of government. The rise in durable goods prices started in the second quarter and was maintained at a somewhat slower rate through the remainder of the year. Particularly notable were the more than 5-p.c. rise in the prices of furniture and miscellaneous durables and the 1.6-p.c. rise in car prices. There was a marked acceleration in the rate of price increase of non-durables other than food; many major items such as clothing, newspapers and magazines, electricity, tobacco, and gasoline, grease and oil showed increases of between 3 p.c. and 7 p.c. The implicit index for services rose by 5.7 p.c., the strongest in many years. Most prominent were the increases in prices associated with medical care, recreation, education and transportation. Rents also rose strongly, continuing the acceleration noted in 1966. Within food, the rate of price increase of most components was reduced, while some items—pork, poultry, eggs and fresh vegetables—declined sharply.

More than half of the very strong rises in the implicit price indexes for both residential and non-residential construction was largely attributable to labour cost for the second consecutive year. Machinery and equipment prices declined for the first time since the current expansion began in 1961, as a result of the removal in June of the federal sales tax on production machinery and equipment.

The increase in export prices was more moderate than in the previous year. Some important components showed price declines, notably wheat and meat and meat preparations.

Components of Demand.—Personal expenditure on goods and services reached a level of \$37,700,000,000 in 1967, an increase of some 8 p.c. compared with $8\frac{1}{2}$ p.c. in the

preceding year. Expo and other Centennial events contributed substantially to this rise, although it should be noted that the large expenditures made by foreign tourists are not included in this aggregate.*

The large increase in expenditures on non-durables was broadly based but especially notable were rises of some 11 p.c. in alcoholic beverage purchases, 10 p.c. in outlays on energy sources and 9 p.c. on drugs and cosmetics. Total food outlays increased at a lower rate than in 1966—6 p.c. as against 7 p.c.—with prices increasing only fractionally after a 6-p.c. advance previously. The gain in volume terms, however, was significantly larger. The slightly higher rate of advance in durables in 1967—4½ p.c. as against 4 p.c.—was due to a 3-p.c. gain in new and used car purchases which showed no change in 1966. All other components had lower rates of increase than in the previous year, with furniture rising 4 p.c., home furnishings 8 p.c., and radios and appliances 7 p.c. If price increases are allowed for, the real increase in durables outlays in 1967 was half of the increase of the previous year.

The 11½-p.c. increase in services, excluding net expenditure abroad, was also broadly based but the most pronounced increases were in the series affected by Expo. Recreation expenditures rose by almost 30 p.c. and outlays on purchased transportation by over 19 p.c. Other significant advances were registered in medical outlays and household operations, 10½ p.c. each, and in shelter, 9 p.c. Sharp price increases accounted for fully half of the over-all rise.

Business gross fixed capital formation, including housing, totalled \$12,400,000,000 in 1967, a decline of 1 p.c. from the 1966 level. While outlays for new housing advanced 7½ p.c., business expenditure on plant and equipment fell by 3 p.c., consisting of declines of 3½ p.c. and 2 p.c., respectively, in non-residential buildings and structures and in machinery and equipment. These decreases resulted from a considerable falling-off in investment activity by manufacturers of both durables and non-durables and by service establishments. The diminution of 2 p.c. in new machinery and equipment outlays reflected major cutbacks by manufacturers. The 3½-p.c. drop in non-residential building and engineering construction was associated with decreases for all industries except agriculture and, notably, electric power; however, the service industry expenditure decline was confined to the commercial sector, with university and hospital construction continuing upward. A number of fiscal measures were effected in 1967 to prevent a larger decline in business investment expenditures; the sales tax on production machinery and apparatus was lowered from 11 p.c. to 6 p.c. in April and completely removed in June; the refundable tax on business profits was terminated on Mar. 31; and the previous year's measure regarding capital cost allowances was removed.

The 7½-p.c. increase over 1966 brought the value of new residential construction up to \$2,300,000,000. However, completions actually fell by about 9 p.c. from 162,000 to 149,000 units as a consequence of the low carryover of units under construction (89,000) at the beginning of the year but by the end of 1967 units under construction had risen to 103,000; the total number of starts during the year was 164,000. Although total mortgage approvals increased from the low 1966 level, the major part of the improvement was the result of increased lending by approved lenders under the National Housing Act and continued provision of funds by CMHC. In particular, as a result of changes in the Bank Act in May, chartered banks figured prominently in the mortgage market for the first time. Conventional mortgage lending, although up for the year, remained substantially below the 1965 level despite rises in interest rates during the year.

* Personal expenditure on consumer goods and services is a measure of all expenditures by Canadian residents, including those temporarily abroad. Since measures of the value of outlays on consumer goods and services in Canada are derived from sales made within the territorial boundaries of Canada, the values must be adjusted to exclude expenditures abroad by Canadian residents and to exclude outlays in Canada by non-residents. This adjustment is called *net expenditure abroad*. Net expenditure abroad is composed of outlays on both commodities and services. As it is impossible to determine these elements in the net figures, the whole adjustment has traditionally been included with services. The item is generally small and does not significantly distort period-to-period comparisons of either aggregates or individual series. However, with the exceptional influx of tourists in the second and third quarters of 1967, the adjustment to exclude purchases by non-residents has become large, distorting the statistical continuity of the non-durable and services aggregates and certain of their components.

Investment in non-farm business inventories showed an accumulation of \$189,000,000 in 1967, a sharp drop from the \$777,000,000 of the previous year. Manufacturing contributed about 20 p.c. of the total accumulation, entirely concentrated in the investment of non-durable-goods-producing industries which more than offset a noticeable liquidation in the stocks of durable goods; the stock-to-shipments ratio for the year as a whole was much above the average ratio of the previous year. Investment in wholesale trade contributed about 50 p.c. of the total accumulation and took place entirely in the stocks of durable goods, offsetting a slight liquidation in non-durable goods; the stock-to-sales ratio for the year was higher than in 1966. About 20 p.c. of the total increase in the investment of business inventories occurred in retail trade, mainly concentrated in durable goods with the exception of stocks of motor vehicle dealers which showed a moderate depletion; there was a small build-up in non-durable lines, with a noticeable accumulation in the stocks of food dealers offsetting a general liquidation in most other categories; the stock-to-sales ratio for the year was lower than in 1966.

Canada's exports of goods and services rose to \$14,600,000,000 in 1967, an increase of 11½ p.c. over 1966; imports of goods and services rose 6 p.c. Thus, the improvement in the deficit on international current account from \$1,200,000,000 to \$500,000,000 (on a national accounts basis) was one of the feature developments of the year. Improvement in the deficit was attributable to an increase in the balance on merchandise trade of \$256,000,000, dramatically reinforced by a contraction of the deficit on non-merchandise trade of \$402,000,000.

Merchandise exports, at \$11,400,000,000, were 10½ p.c. higher than in 1966. Domestic exports showed a gain of \$1,051,000,000 in United States markets, of which \$963,000,000 was in end products, particularly cars and trucks, engines and parts and aircraft engines and parts. A sharp drop in sales of wheat to eastern Europe and Asia, in particular to the Soviet Union and China, was offset by very large increases in exports to Japan, Italy and the Netherlands. Merchandise imports, at \$10,900,000,000, were about 8 p.c. higher than in 1966 and \$752,000,000 of the \$802,000,000 increase was attributable to United States suppliers. Increased imports of automotive products accounted for more than 70 p.c. of the rise and other important items were aircraft with engines and parts, and crude petroleum.

On the service account, receipts rose nearly 17½ p.c. and payments less than 2 p.c. The major factor was the reversal in the net tourist and travel account from a deficit of \$63,000,000 to a surplus of \$427,000,000, only the second surplus since 1950. The remarkable lift of Expo and other Centennial activities along with a small decline in the deficit in freight and shipping transactions offset a drop in gold production available for export, higher official contribution payments, and larger deficits for income, business and other governmental transactions.

The Government Sector.—Total revenue of all governments combined (excluding inter-governmental transfers) rose to \$21,300,000,000 in 1967, an increase of nearly 12 p.c. over 1966. Of this advance of \$2,265,000,000, \$167,000,000 was accounted for by higher revenues of the Canada and Quebec Pension Plans. Total expenditure rose somewhat more (\$2,456,000,000 or 13 p.c.), so that the over-all surplus on a national account basis declined from \$348,000,000 to \$157,000,000.

On the revenue side, direct taxes increased by nearly \$1,000,000,000 or 14 p.c. Personal direct tax, almost all income tax, increased rather more than this, while corporation tax revenue decreased slightly. The proportionately greater income of the provincial governments from these sources was the result of increased abatements to the provinces from the Federal Government. Part of the increase in personal direct taxes at the federal level can be attributed to the doubling of the maximum old age security tax on personal income imposed at the beginning of the year.

In indirect taxes the rise of \$761,000,000 or 9 p.c., went mainly to the provincial and municipal governments, with the Federal Government receiving only one sixth. At the provincial level, larger sales tax revenue accounted for most of the increase; higher rates were levied in Quebec, New Brunswick and Newfoundland and a sales tax was introduced in Manitoba. The only other large gain was in gasoline taxes. The rise in municipal indirect tax revenue resulted from an 11½-p.c. increase in property taxes. The smaller rise in federal indirect tax revenue came mainly from an increase of 1 p.c. in the sales tax rate, partially offset by the abolition of sales tax on production machinery and equipment and drugs during the year.

In expenditures, total outlays on goods and services rose by over \$1,000,000,000, each of the three levels of government increasing its spending by about the same amount. At each level, this was caused mainly by increases in wages and salaries, capital formation having risen more slowly than in the previous year. Transfer payments increased by \$1,300,000,000, with large increases in Old Age Security Fund payments resulting from the lower age limit and the introduction of the guaranteed minimum monthly income supplement to old age security recipients, and in hospital and education grants. Smaller increases occurred in employment benefits and workmen's compensation benefits.

With the inception of the Canada Assistance Plan and higher transfers under taxation agreements, transfers from the Federal Government to the provincial and municipal governments rose by \$330,000,000. Thus, with federal expenditures increasing by nearly 13 p.c. while revenues were rising by 8½ p.c., the federal surplus of \$164,000,000 in 1966 became a deficit of \$256,000,000 in 1967. At the provincial-municipal level, the deficit eased from \$535,000,000 in 1966 to \$473,000,000 in 1967.

Components of Income.—Labour income was more than 9 p.c. higher in 1967 than in 1966, mainly reflecting higher average earnings. Income in the service-producing sector advanced more rapidly than in the goods-producing sector. The 12-p.c. increase in the former, slightly higher than in 1966, accounted for almost three quarters of the increase in total wages and salaries compared with slightly more than half of the 1966 increase. The largest relative gains in wages and salaries were recorded in public utilities (15½ p.c.), service (13 p.c.) and transportation, storage and communication (12 p.c.). Increases in average weekly earnings were greater than in the previous year, offsetting a slightly reduced rate of increase in employment; this trend was common to most components. Government wages and salaries rose by almost 14 p.c.—provincial government payrolls by 20 p.c., municipal government payrolls by 12 p.c. and the Federal Government payroll by 10½ p.c.

In the goods-producing sector, wages and salaries increased by about 6 p.c., compared with 13½ p.c. in 1966. In the primary industries they went up 7 p.c., about the same as in the previous year, the rate of increase being lower in all components except mining where the rate went up despite lower average hours worked and a lower rate of increase in employment. Manufacturing wages and salaries advanced about 6 p.c. compared with 11½ p.c. in 1966; employment showed little change and average hours worked were lower but the increase in average hourly earnings was somewhat greater than in 1966. Wages and salaries in construction were about 4 p.c. higher than in the previous year, compared with increases of almost 25 p.c. in both 1965 and 1966. The slowdown was the result of declines in employment and in average weekly hours worked, although average hourly earnings increased at a slightly faster rate than in 1966.

Net corporation profits declined a further 2½ p.c. in 1967 following a 1-p.c. dip in 1966. These annual levels conceal some fluctuations within the two-year period. Following a rising trend in profits that came to a high point in the first quarter of 1966, three factors influenced the later generally declining movements: (1) the drop in profits in the third quarter of 1966 was reinforced by a number of strikes in the economy; (2) the rail subsidies

that are included in corporation profits were particularly high in the fourth quarter of 1966 and had the effect of bolstering the rise in that quarter; (3) fluctuations in the movements of quarterly capital consumption allowances over the two years influenced movements in net profits.

Net profits in 1967 were lower in the mining industry by 1 p.c., manufacturing by 4 p.c., and wholesale trade by 5 p.c. A 21-p.c. drop in transportation, storage and communication was related to a significant rise in capital consumption allowances, when a tax ruling introduced in the early part of the year permitted telephone companies to claim higher allowances than previously. Profits of the utility group expanded nearly 25 p.c. and retail trade, finance and service industries rose 6 p.c., 7 p.c. and 15 p.c., respectively. Within the manufacturing industry, profit changes in 1967 were varied, there being more declines than gains. The textile, wood, paper, electrical, non-metallic mineral, and chemical categories all experienced marked profit declines; those of the rubber, petroleum and coal, and printing and publishing groups progressed from their 1966 levels; and little change was noted in the food and beverage, and metal industry profits.

Rent, interest and miscellaneous investment income rose by nearly 13 p.c. in 1967 compared with about 9 p.c. in 1966. Government income for all levels combined was higher by \$336,000,000 against a rise of \$142,000,000 in 1966. About 40 p.c. of the increase in government investment income came from higher trading profits of government enterprises. This was mainly at the provincial level, with the trading profits of liquor commissions accounting for about half of the rise.

Accrued net income of farm operators from farm production fell by 23 p.c. from the exceptionally high level of the previous year. Predominant in the decline in value of grain production was a much smaller grain crop than the record crop of 1966; moreover, Canadian Wheat Board profits were considerably reduced, reflecting much lower exports in the third and fourth quarters. Slightly offsetting this movement were advances in livestock production and higher income from other farm products—mainly dairy products where subsidies were a factor, and tobacco. Operating expenses again recorded a moderate increase and contributed further to the decline in net income. Net income of farm operators from farm production, which is reflected in the personal account, declined by nearly 13 p.c. in 1967. The smaller decline in this component resulted from the record high final payments made by the Canadian Wheat Board in the first quarter.

Net income of non-farm unincorporated business rose to \$3,194,000,000, slightly more than 8 p.c. over the 1966 total. Most industries registered gains over 1966. The service industries alone accounted for just under half of the increase, a portion of which was due to Expo, while smaller gains were recorded in retail trade and construction.

Economic Activity in the First Nine Months of 1968

For the first three quarters of 1968, Canada's gross national product was 7.6 p.c. higher than in the same period of 1967, compared with a 6.8-p.c. gain for the full year 1967. In value terms, the advance was 4.4 p.c., well above the 2.8-p.c. increase of the previous year.

Continued buoyance in personal expenditure and intensified demand for new housing and merchandise exports were the salient features of the expansion. Personal outlays increased by 8½ p.c., paced by vigorous demand for durables, especially for new cars. Expenditure on new residential construction jumped by 20 p.c. and more than offset a 3-p.c. decline in outlays for plant and equipment. Merchandise exports rose by 19 p.c., almost twice the rate of advance of 1967; imports also increased but less rapidly, with the result that the merchandise surplus advanced to over \$1,000,000,000. Government expenditures also contributed to total demand but the 7-p.c. increase was appreciably lower than in the previous year; particularly notable was the slowdown at the federal level.

Among components of income, net corporation profits increased by 14½ p.c. following declines in both 1966 and 1967; gross profits rose by 8½ p.c. after only a slight advance in the previous year. Labour income increased by 8 p.c., slightly down from the 1967 rate. Employment increased by just over 1½ p.c. in the first nine months, about half as rapidly as in the previous year; the growth in the labour force also slowed but by a lesser amount, while the unemployment rate rose to 5.0 p.c. compared with 4.1 p.c. for 1967.

Section 2.—Industry Production Trends

Indexes of Real Domestic Product

The Dominion Bureau of Statistics in 1968 released a revised set of production data pertaining to the entire spectrum of Canadian industries. These data, in the form of volume of production indexes, are measures of value added for each industry expressed in the dollars of a base year. Technically, they are termed "indexes of real domestic product (RDP) at factor cost originating by industry".* The value added, or RDP, volume indexes can be regarded as an extension of the index of industrial production† to encompass the remainder of the economy. Concepts and basic methods used to construct both indexes are the same. Thus, industry production index coverage is extended from mining, manufacturing and electric power and gas utilities, for which volume indexes have been published since the 1920s, to include all other major industrial divisions. However, only the index of industrial production is published on a monthly basis; for the remaining industries only quarterly and annual indexes are currently being published. The RDP indexes can also be regarded as an elaboration of the supply side of the national income accounts.*

In measuring the output of a single product such as steel, it is normal to think in terms of tons of steel when the question of quantity arises. When measuring the combined production of steel and natural gas, there is an obvious need for a common denominator and it is appropriate to use the average unit prices of a certain time period (chosen as the base) to value the quantities produced before adding them together. The resultant quantity, volume or real output measure can be subsequently left in its constant or base period dollar form or it can be expressed in index number form. The latter is accomplished by dividing the constant dollar aggregate of the current period by the dollar aggregate for the base period and multiplying by 100. In constructing a quantity index for a combination of industries where the output of one industry becomes the input of another, the portion double-counted must be eliminated. This is accomplished by revaluing both intermediate input (materials, fuel, etc.) and total output in terms of the dollars of a common base year and subtracting the constant dollar value of the former from the latter to yield a constant dollar value added aggregate.* This aggregate is the quantity of volume measure represented by the indexes presented herein.

* *Indexes of Real Domestic Product by Industry, 1961 Base*, DBS Occasional Paper (Catalogue No. 61-506). For a detailed explanation of concepts, methods and limitations, see *Indexes of Real Domestic Product by Industry of Origin, 1935-61* (Catalogue No. 61-505). Current data on a quarterly or monthly basis are published in DBS monthly *Index of Industrial Production* (Catalogue No. 61-005).

† See *Revised Index of Industrial Production, 1935-57* (Catalogue No. 61-502) and the current monthly publication *Index of Industrial Production* (Catalogue No. 61-005).

The annual indexes are well suited for studies of production trends, growth rates and inter-industry comparisons, but the quarterly indexes provide a much better tool for the study of the cyclical behaviour of industries, short-term changes in production and, in fact, for most types of current analysis. Statistics computed for less than annual intervals, however, are frequently subject to strong seasonal influences, and variations in the number of working days during a quarter may cause differences in the levels of output between two quarters which otherwise would not exist. Accordingly, the quarterly real output indexes have been adjusted for both seasonal and calendar variation.

Factors Underlying Industrial Output Trends, 1946-67.—The early postwar period was marked by several major expansions. The first was based on satisfying the backlog of war-deferred investment and consumer demand and on supplying the needs of the war-devastated countries, especially for various materials. This was followed by some slowing down in production but the requirements of defence-supporting industries after the outbreak of the Korean hostilities and stockpiling requirements at home and abroad introduced a second expansionary period. The third was the investment boom of the mid-1950s during which output reached a new high level. These strong demand influences combined to make most of this period one of fairly rapid and sustained growth. During the late 1950s the rate of increase diminished, as external sources of supply for many commodities multiplied and as competition intensified. At the same time, there was an absence of strong stimulants to domestic demand, such as the deferred demand and the population growth of the preceding period. During the 1960s, however, the first waves of the postwar generation exercised a growing influence on the demand for goods and services and this proved to be one of the major stimuli to the current expansion which began early in 1961 and continued into 1966. Other notable features of the expansion were: the relatively slow growth of imports compared with previous expansion periods, particularly after the stabilization of the Canadian dollar and other government measures undertaken in mid-1962 (although some acceleration took place in imports of machinery and equipment during 1964 and 1965 in response to the increased investment in construction and plant and equipment); the increase in exports, particularly during the latter part of 1963 and early 1964 when large amounts of wheat were sold abroad; the above-average output of the mining and agriculture industries since 1962; and the substantial gains in the production of the iron and steel and motor vehicle and parts industries throughout most of the period.

Along with the increases in total final demand, there were shifts in the composition of demand, which affected the output of the various industries. Imports retained roughly the same relative share of the gross national product but the share of exports declined from 27.1 p.c. in 1946 to 23.5 p.c. in 1967, an indication of the growing importance of the domestic market as an outlet for the products of Canadian industry. Government expenditure and business gross fixed capital formation made considerable relative gains but personal expenditure on goods and services as a percentage of total expenditure declined from 67.8 p.c. in 1946 to 60.8 p.c. in 1967.

Even more remarkable than some of the demand-induced changes were the striking changes brought about by the technological discoveries and innovations that transformed whole production processes and opened up previously unknown areas in the fields of manufacturing, transportation and communication. Newer industries, such as air transport, assumed major importance in a comparatively short time; entirely new industries, such as gas pipelines, appeared; and a profusion of new products were created, such as the petrochemicals of the chemicals industry and the television and other electronic products of the telecommunication equipment industry. As was to be expected, the industries in a position to benefit from such innovations were among the most rapidly expanding in the economy, although the impact of the expansion spread through the entire economic system. The changes in production and demand also influenced the level of employment in the various industries; there was a considerable shift in employment during the postwar period from the goods-producing to the service-producing industries and most of the loss in the former took place in agriculture.

¹ No data are available prior to 1961 on a 1961 base due to a break in historical continuity resulting from the implementation of the 1960 standard industrial classification and the 1961 weight and reference base for the indexes.

Industrial Expansion, 1946-67.—Although all the major industry groups expanded during 1946-67, development was not uniform throughout the period. For example, there has been a marked and fairly general acceleration in output growth in Canada during the 1960s. Despite some deceleration in output during 1966 and 1967, total real domestic product grew at a rate of 5.9 p.c. from 1961, the beginning of the current cyclical expansion. In contrast, the average rate of growth in real domestic product for the 1946-61 period was 4.7 p.c. per annum. Three important types of factors affecting the expansionary paths of industries were in evidence at some point during the period. The first may be described as some special factor at work in a particular industry, the effects of which would be most noticeable in that industry—for example, the demand for uranium which had an important influence on the mining industry during the latter half of the 1950s, the opening up of new mineral resources such as the iron ore mines in Quebec-Labrador, and certain technological innovations such as the development of synthetic materials or television. The second type of factor is much more general in its effects and in its causes. Such factors as increased demand for consumer goods resulting from a rising standard of living and a growing population, shifts in world trading patterns or shortages causing increased demand for export goods, the surge of investment activity associated with replacement cycles, as well as attempts to broaden the base of economic activity through investment in research, social overhead capital, education, improved management

and marketing techniques, or a more efficient production process (or a confluence of all these factors) appear to lie at the root of such postwar expansions as the investment boom of the mid-1950s or the rapid expansion in production since 1961. The third type of factor would be some unique and far-reaching event, of which the Korean War might serve as a conspicuous example.

All three factors, jointly or in turn, have reacted on the various industries to result in the upswings in aggregate production. The percentage growth of each of the main industrial groups in the 1946-66 period was as follows:—

<i>Industry</i>	<i>Growth</i>	<i>Industry</i>	<i>Growth</i>
	p.c.		p.c.
Agriculture.....	1.7	Transportation, storage and communication.....	4.7
Forestry.....	2.3	Trade.....	4.6
Fishing and trapping.....	1.1	Finance, insurance and real estate.....	1
Mines (incl. milling), quarries and oil wells.....	8.7	Community, business and personal service.....	4.2
Manufacturing.....	5.1	Public administration and defence....	1
Construction.....	6.2		
Electric power, gas and water utilities	9.3	REAL DOMESTIC PRODUCT.....	4.7

¹ For these industries the 1946-61 and the 1961-67 periods are not considered sufficiently comparable to have been linked following conversion to the 1960 standard industrial classification and the 1961 weight and reference base—see *Indexes of Real Domestic Product by Industry, 1961 Base*, Appendix I (Catalogue No. 61-506). The 1961-67 growth rate for Finance, insurance and real estate was 3.9 p.c. and for Public administration and defence 2.2 p.c.; the 1946-61 rates were 5.0 p.c. and 4.6 p.c., respectively.

Foremost in growth was the electric power and gas utilities industry, followed by the mining and construction industries. All three were strongly affected by technological advances, new discoveries and a fairly well sustained demand for their products. The demand in mining frequently came from abroad, resulting in relatively high export sales and providing incentive for the opening up and developing of new mineral resource areas. Some slackening in construction activity was evident following the unusually high levels reached during the mid-1950s but since 1963 the swing has again been upward, although there was some flattening in the latter part of 1966.

Although over the period as a whole most of the other industry divisions (except agriculture, forestry and fishing and trapping) expanded at roughly the same average rate of between about 4 p.c. and 5 p.c., the manufacturing, trade, and transportation, storage and communication industry divisions, which together accounted for almost one half of the total output, also showed strikingly similar cyclical patterns. Within manufacturing it was the durables component that expanded particularly rapidly during the cyclical upturns and that benefited from the need for machinery and equipment in the periods of heavy investment and from increased consumer demand for such products as motor vehicles and electrical appliances during the current expansion. Non-durables maintained a fairly steady rate of expansion for most of the postwar period, largely in response to increased population and demand for industrial materials. A similar pattern was observable in trade, with retail trade exhibiting a relatively smooth expansionary trend.

The community, recreation, business and personal service industry division was relatively insensitive both to cyclical and irregular influences but, along with some other steadily expanding industries such as finance, insurance and real estate, non-durables and retail trade, it helped to sustain aggregate production and growth during periods of contraction and expansion. Although this division as a whole showed a less-than-average rate of growth for the 1946-67 period, some of its components, such as business services, education and hospitals and restaurants, hotels and motels, were among the most rapidly expanding

in the economy. During the 1960s, this resulted in a marked acceleration of the rate of expansion of the groups as a whole, i.e., from 3.8 p.c. in 1946-61 to 5.8 p.c. in 1961-67.

The rates of growth in the forestry, agriculture, and fishing and trapping divisions were below average and were subject to pronounced irregular fluctuations in output—forestry because of the nature of its production processes and also, to some extent, because of its sensitivity to changes in world demand and price; agriculture because of marked year-to-year differences in output more often caused by weather conditions and similar factors than by changes in prices and demand conditions; and fisheries because of its dependence on the vagaries of nature.

Production of Goods-Producing Industries

The data contained in the tables under this heading are published in the DBS report *Survey of Production*.^{*} The scope of the survey of production is limited to industries chiefly engaged in the production of goods and it measures production in current dollars. This is in contrast to the real domestic product series (p. 1098) which encompasses all industries and measures production in terms of the dollars of a base year.

Tables 13 and 14 give "census value added" production data, classified by province and industry, respectively. Census value added is derived by deducting the cost of materials from the gross value (exclusive of excise and other sales taxes) of shipments (adjusted for change in inventory of finished goods and goods-in-process) or revenue. The figures include interim classification and valuation changes in mining, manufacturing and forestry brought about by the adoption of the 1960 standard industrial classification of establishments. However, the three industry aggregates continue to consist of census value added accruing from their primary activity only.^{*} Standard industrial classification changes have not yet been implemented for other industries.

^{*}DBS Catalogue No. 61-202. See Appendix of the 1966 issue for census value added in mining, manufacturing and forestry on an all-activities basis.

Section 3.—Aggregate Productivity Trends

Increasing interest in questions of economic growth, cost-structure and international competitiveness, and in the relationships between output, employment, earnings and prices has focused attention on productivity as a framework within which such problems can usefully be discussed. Recognizing this interest, the Dominion Bureau of Statistics now publishes annual indexes of output per person employed and per man-hour in Canada covering the commercial industries as a whole, with separate detail for agriculture and the commercial non-agricultural industries, manufacturing and the residual commercial non-manufacturing industries. Similar indexes are also published for the total and non-agricultural goods-producing industries, and the commercial service-producing industries of the same aggregate.*

* See DBS Reference Paper *Indexes of Output per Person Employed and per Man-Hour in Canada, Commercial Non-agricultural Industries, 1947-63* (Catalogue No. 14-501) and *Aggregate Productivity Trends 1946-68* (Catalogue No. 14-201).

Although these measures relate output to a single input only, namely labour time, they do not measure the exclusive contribution of labour to output. Changes in indexes of output per unit of labour input reflect the combined influence of a number of separate but interrelated factors such as the amount and quality of capital equipment, the extent of utilization of available capacity, managerial efficiency and the impact of technological progress, as well as the skill and effort of the work force.

Sources of Data.—The output components of the various indexes of output per unit of labour input referred to here are the historical indexes of "real domestic product (RDP) by industry", described in Section 2, p. 1096. These indexes, which were developed within the conceptual framework of the national accounts and which measure in constant dollar terms the unduplicated contribution of each component industry to total output, are considered basically suitable for productivity measurement when matched with the corresponding input measures.

The major sources for the employment and man-hour indexes were the monthly labour force and employment surveys, and these were supplemented by data from such sources as the annual censuses of manufactures and mining and the decennial census of population. Since the data from these diverse sources varied considerably in their coverage, concepts and methods of compilation, care had to be exercised in their selection, adaptation and combination into aggregate measures of labour input which would be conceptually and statistically consistent, both internally and in relation to the output data. Labour force survey data were used for the paid worker estimates of agriculture and of fishing and trapping, while those for manufacturing and mining were based on adjusted annual census data. Estimates for most of the remaining industry divisions were derived from adjusted employment survey data. Estimates of other than paid workers (own-account workers, employers and unpaid family workers) were derived mainly from the labour force survey. The estimates of average hours worked, which were needed for the indexes of output per man-hour, were also based on labour force survey data, except in the case of manufacturing, where estimates of man-hours paid from the census of manufactures were adjusted to the man-hours worked concept.

Growth Rates.—Output per person employed in the commercial non-agricultural industries grew at an average annual rate of 2.7 p.c. between 1946 and 1968. Because of the decline in average hours worked per person, this was a lower rate of growth than that of output per man-hour which, during the same period, increased by 3.3 p.c. per annum. Corresponding figures for manufacturing were 3.7 p.c. and 4.0 p.c. and those for the residual non-manufacturing industries of the commercial non-agricultural sector were 2.3 p.c. and 2.9 p.c., respectively.

In agriculture, the average annual rates of growth of output per person employed and per man-hour between 1946 and 1968 were 5.4 p.c. and 5.7 p.c., respectively. However, in view of the difficulties of measuring the number and especially the man-hours of persons employed in agriculture, data presented for this industry division should be regarded as approximate. In the commercial industries as a whole, output per person employed increased between 1946 and 1968 at an average annual rate of 3.4 p.c., and output per man-hour increased by 4.1 p.c. per annum. Corresponding figures for the total goods-producing industries were 5.0 p.c. and 5.7 p.c., respectively, per annum; for the non-agricultural goods-producing industries, 4.7 p.c. and 4.6 p.c.; and for the commercial service-producing industries, 1.2 p.c. and 1.9 p.c.

Inter-industry Shift Effects.—In addition to measuring the changes in productivity within the component industries, the aggregate productivity indexes measure the effect of shifts in employment and production between industries having different levels of productivity. One of the most significant such shifts within the commercial industries of Canada

Molten brass flows into moulds in a new \$5,000,000 Brantford, Ont., plant which produces quality brass products using high-speed, automated, electronically controlled equipment.

A new million-ton-a-year potash mill near Lanigan, Sask., officially opened in late 1968, has a work force of about 325.

Wire being formed from copper rod at a new plant at St. Jérôme, Que., described as North America's most modern facility for the production of wire and cable; it will employ about 250 persons.

during the postwar years was from agriculture to the non-agricultural industries, where a higher level of output per unit of labour input prevails. The effect of this shift can be measured in various ways and a number of alternative calculations have been carried out for the 1946-65 annual publication,* all of which confirm, to a greater or lesser extent, that the decline in the relative importance of agriculture made a positive contribution to the total increase in output per person employed in the commercial industries during the postwar period.

* DBS Catalogue No. 14-201.

Section 4.—Canadian Balance of International Payments*

The regularly published statements of the Canadian balance of international payments indicate the nature and magnitude of Canada's transactions in goods and services and financial operations with the rest of the world. They show separately the balances on visible and invisible trade which comprise the current account, as well as the net movements of long-term and short-term capital, and the resulting changes in Canada's reserves consisting of the holdings of gold and foreign exchange, the net (International Monetary Fund) position and any 'swap' facilities with other countries.

In recent years Canada has consistently had deficits on the current account and surpluses on the capital account. During the past 10 years total deficits on current account amounting to \$9,395,000,000 were more than offset by total surpluses on capital account amounting to \$10,224,000,000. The outcome of this pattern has been an increase in Canada's reserves during the past 10 years (1958-67) of \$829,000,000.

Current Account Transactions.—Merchandise trade in 1967 produced a higher surplus for Canada than in the preceding two years and at \$481,000,000 was the third highest since 1960. During 1967 exports increased by over \$1,000,000,000 to \$11,387,000,000 and imports by about \$800,000 to \$10,906,000,000.

About \$740,000,000, or about 70 p.c. of the increase of \$1,061,000,000 in merchandise exports during 1967 arose from larger shipments of automotive products to the United States and other destinations abroad. Based on a comparison of 12-month totals of other commodity groups, exports of non-ferrous metals gained about \$200,000,000 in 1967. About half of this rise was attributable to copper alone; the prolonged strike in the copper industry in the United States was a factor in the increase. Shipments of aircraft, engines and parts rose nearly \$100,000,000 as also did natural gas, petroleum and products together. Aircraft parts and crude petroleum were particularly important. Industrial and agricultural machinery accounted for about another \$45,000,000 of the export rise. There were smaller but still important gains in the exports of barley, lumber, pulp, sulphur, communication equipment and firearms. Shipments of canned fish, whisky, tobacco, iron ores, chemicals, fertilizers and office machines increased moderately. Wheat shipments, on the other hand, fell nearly \$330,000,000 in 1967. Well over half of this decline occurred in shipments to the Soviet Union and another one third in the deliveries to Mainland China. Much smaller declines took place in shipments of meat, wheat flour, flaxseed, hides and skins, and uranium.

Merchandise imports rose \$804,000,000 to \$10,906,000,000 in 1967. About \$590,000,000 or more than 70 p.c. of this expansion applied to imports of automotive products. Imports of aircraft, engines and parts accounted for about \$134,000,000 of the increase. Crude petroleum imports were over \$55,000,000 higher. Less substantial imports included a wide range of commodities such as hardware products, communication equipment, electronic computers, laboratory equipment, photographic goods, books and a variety of food items and consumer goods. Imports of iron ores and concentrates declined about \$30,000,000 and of nickel and alloys nearly as much, from an unusually high level in 1966.

On the invisible trade side, which includes transactions associated with travel, freight and shipping, interest and dividends and other current payments and receipts, on which Canada consistently runs a deficit, there was in 1967 a net payment of \$843,000,000, the smallest deficit on this side of the current account since 1957. Receipts from invisible trade transactions in 1967 amounted to \$3,698,000,000 while total payments, including official contributions of \$181,000,000, amounted to \$4,541,000,000.

* More detailed information is given in DBS annual report *Canadian Balance of International Payments and International Investment Position* (Catalogue No. 67-201), in the *Quarterly Estimates of the Canadian Balance of International Payments* (Catalogue No. 67-001) and in the *Canadian Balance of International Payments: A Compendium of Statistics from 1948 to 1965* (Catalogue No. 67-505 Occasional).

The reduction of \$362,000,000 in the deficit on non-merchandise transactions was due primarily to the increase in travel receipts. From \$840,000,000 in 1966, the highest figure recorded up to that year since 1946, travel receipts by Canada rose by 55 p.c. to \$1,304,000,000. This phenomenal rise was attributable to Expo 67 and other Centennial Year activities. The greater part of this increase originated from expenditures in Canada of travellers from the United States. Travel expenditures abroad by Canadians fell slightly from \$900,000,000 in 1966 to \$877,000,000, as many Canadians stayed home in 1967 for the Centennial attractions.

The other major 'invisible' component on which a significant increase in receipts took place was the freight and shipping account. This item rose by \$87,000,000 to \$845,000,000, representing 23 p.c. of total invisible receipts amounting to \$3,698,000,000 in 1967. Payments, however, rose by \$61,000,000 to \$884,000,000, leading to a deficit on this item of \$39,000,000, that is, \$54,000,000 and \$26,000,000 less than the 1965 and 1966 deficits, respectively. Higher receipts and payments on this item in 1967 were the result of rising merchandise trade. Greatly lowered grain shipments, strikes in the transportation industry in Canada and abroad and the Middle East crisis had a mixed impact on these transactions.

The balance on inheritances and migrants' funds rose by 77 p.c. to \$124,000,000. This resulted from an increase of about 14 p.c. in the number of immigrants to approximately 223,000 (second only to 1957 in the postwar period) and from higher per capita funds brought in by immigrants arriving in 1967, offset by an increase of \$15,000,000 to an estimated total of \$213,000,000 in emigrants' funds. Receipts and payments of interest and dividends reflect Canada's past borrowing, lending and investment abroad. Receipts of interest and dividends in 1967 amounting to \$294,000,000 were the lowest since 1964. Dividend receipts by several Canadian companies on their direct investment abroad were significantly lower while a withholding tax adjustment relating to transfers in earlier years by a large oil company accounted for a further reduction in the total. Portfolio earnings abroad, however, were appreciably higher following continuing large purchases of United States securities by Canadian investors. Payments of interest and dividends abroad amounting to \$1,190,000,000 and representing 25 p.c. of total non-merchandise payments in 1967 increased in line with the upward trend evident in this series. Interest payments rose following large United States purchases of new corporate and provincial bond issues during 1966 and 1967. Moreover a substantial increase in the profits of unincorporated Canadian branches of United States companies largely offset the reduction in payments by Canadian subsidiaries to their United States parent companies. The deficit of \$896,000,000 on this particular item was equivalent to about $2\frac{1}{2}$ times the surplus on the rest of the current account in 1967.

The other major component of the current account, namely 'all other current receipts and payments' is composed of a number of items covering the public and private sectors of the economy. The transactions falling under this component are grouped under the following principal categories: government transactions, personal and institutional remittances, miscellaneous investment income and business services. Including official contributions, the deficit on this account rose by 18 p.c. to \$752,000,000. Canada's official economic aid in cash grants and donations of goods and services to developing countries abroad increased from \$166,000,000 in 1966 to \$181,000,000 in 1967, the highest recorded figure up to that year. A remission of the principal and interest on loans extended for purchasing Canadian wheat and flour constituted the major part of the rise in aid. Smaller increases took place in both bilateral and multilateral types of aid, including assistance to Commonwealth countries and independent French-speaking states in Africa as well as contributions to international agencies. The other element that contributed to the increased deficit was the extraordinary flow of personal and institutional remittances following the Middle East crisis in 1967. Net payments for business services continued to rise but were offset by reduced deficits on miscellaneous investment income and by increased expenditures by foreign participants at Expo 67.

With the improvement in both the merchandise and the invisible trade balances, the current account deficit was reduced to \$543,000,000 from over \$1,000,000,000 in each of the years 1965 and 1966. The 1967 deficit was the third lowest current account deficit since 1954.

The traditional triangular pattern of current international transactions between Canada, the United States and other countries remained unchanged in 1967. The deficit with the United States, which in 1967 amounted to \$1,379,000,000, was reduced by a surplus of \$836,000,000 on transactions with other countries. However, the improvement of about 32 p.c. in the deficit with the United States was accompanied by a reduction of about 4 p.c. in the surplus with the rest of the world.

¹ Includes all net exports of monetary gold.

Capital Movements.—Net capital inflows into Canada fell to \$561,000,000 in 1967 compared with \$803,000,000 in the preceding year. Capital movements in long-term forms led on balance to net inflows of \$1,339,000,000 while those in short-term forms produced an outflow of \$778,000,000. Although the capital influx contracted sharply between 1966 and 1967, the fall in the current account deficit to \$543,000,000 was even more dramatic so that the balance of current and capital account transactions produced an increase of \$18,000,000 in official monetary assets.

Categories of long-term transactions which led to the largest net inflows were, particularly, sales of new issues of Canadian securities followed by direct investment in Canada and long-term capital transactions *n.i.e.*, in which repayments under export credits programs and foreign bank loans to Canadian companies were prominent. The principal outflows arose from retirements of Canadian securities held abroad and Canadian net purchases of foreign securities. Government transactions associated with the level of official monetary assets fell to about \$60,000,000 in 1967 from \$175,000,000 in 1966. These transactions, to the extent that they involved repatriation of Government of Canada bonds, are included in the total of retirements of Canadian securities while purchases of outstanding United States dollar issues of the International Bank for Reconstruction and Development are reflected in the trading in outstanding foreign securities.

Capital movements in the short-term forms led to an outflow of \$778,000,000, some \$520,000,000 greater than in 1966. Among the larger changes were the fall in the outflow for the acquisition by Canadians of foreign currency bank deposits and other short-term funds abroad, the increase in the run-down of non-resident holdings of Canadian finance company paper and the reduction in the total of other new short-term liabilities to non-residents incurred by finance companies. The largest swing, however, was in all other transactions, which includes changes in loans and in accounts receivable and payable as well as the balancing item representing the difference between direct measurements of the current and capital accounts.

Canada's official holdings of gold and foreign exchange rose moderately during 1967 while Canada's net balance with the IMF fell, so that, on balance, Canada's net international monetary assets in these forms rose by \$18,000,000; in 1966, Canada's net international monetary assets in these forms were reduced by \$359,000,000. In addition, Canada's net balance or reserve position with the IMF amounted to \$433,000,000 (U.S.) at the end of the year, \$15,000,000 lower than at the beginning. The total represents the net resources made available by Canada to the IMF and may be drawn by Canada virtually automatically on statement of balance of payments need, as was done in the first quarter of 1968 to counteract a speculative attack on the Canadian dollar. Official holdings of gold and United States dollars, expressed in United States funds, totalled \$2,268,000,000 at the year end, a rise of \$32,000,000 in the year.

Section 5.—Canada's International Investment Position*

Canada's balance of international indebtedness reached a book value of over \$24,500,000,000 by the end of 1968, a sixfold increase over the past two decades. Long-term foreign investment in Canada was approaching \$36,500,000,000 and other claims of non-residents added about \$4,500,000,000 to Canada's liabilities. Canadian assets abroad had a total book value of \$16,500,000,000, including long-term investments amounting to about \$10,000,000,000.

The balance of international indebtedness is a phrase generally accepted in balance of payments terminology to include equity investments as well as contractual borrowings. Its size and character have a considerable influence on Canada's balance of payments. This is true not only through the servicing of capital involving interest, dividends and miscellaneous income payments, but also through the influence of foreign investment on the Canadian economy and on the shape and direction of its external demands.

Canada has been among the world's largest importers of private long-term capital. The very substantial capital formation which was a feature particularly of the 1950s was associated with an unprecedented growth in the country's external liabilities. These investments contributed to a rapid rate of growth in the Canadian economy, particularly in the exploitation of natural resources, and added significantly to Canadian production, employment and income. At the same time they added substantially to the continuing burden of Canada's external debt and to the proportion of Canadian industry controlled by non-residents.

Canada's gross external liabilities amounted to \$35,200,000,000 at the end of 1965; non-resident-owned long-term investments in Canada reached a book value of \$29,500,000,000 (in the two decades following World War II their value quadrupled). The part of these investments in enterprises controlled outside of Canada totalled \$17,200,000,000. There was a sharp expansion in direct investments in 1965 following the more moderate rates of growth recorded in recent years. Investments in other Canadian equities, although smaller, were also substantial, and there were periods in recent years of sharp increase in foreign holdings of Canadian bonds and debentures.

Investments of non-resident capital have been closely related to the high rate of growth in Canada and to the heavy demands placed on capital markets by this factor and by the financial needs of governments and municipalities. Large development projects have been initiated and financed by investors from other countries and the growth effects from this investment have, in turn, led to Canadian borrowing in capital markets outside Canada. While capital inflows have been the principal source of the increased indebtedness abroad, another substantial contributor has been the earnings from non-resident-controlled branches and subsidiaries which were retained in Canada. New resource industries depending to a large extent on non-resident financing include all branches of the petroleum industry, iron ore, potash and other mining, aluminum, nickel, pulp and paper, and chemical industries. In addition, secondary industry has also benefited from non-resident investment.

Canada's gross external assets totalled \$13,100,000,000 at the end of 1965 and government-owned assets made up a substantial part of that total. Canada's net balance of international indebtedness, including equity investments, at the same date was estimated at \$22,100,000,000, more than three quarters of which was incurred since 1950.

Foreign Investments in Canada.—Dependence upon external sources of capital for financing in periods of heavy investment activity has been characteristic of Canadian development. During the exceptional growth that occurred before World War I, non-resident investment was very high and the main source of that investment was London.

* This review covers Canada's international investment position in 1965, although a few estimated totals for 1968, available at the time of writing are included in the first paragraph and under the heading "Canada's Assets Abroad". An extended historical review appears in DBS report *Canada's International Investment Position, 1926 to 1954* (Catalogue No. 67-503) and more recent statistics in the annual report *Canadian Balance of International Payments and International Investment Position* (Catalogue No. 67-201). Additional detailed material will be found in the annual report under the Corporations and Labour Unions Returns Act.

However, during the first part of the inter-war period, the United States became the principal source of external capital and by 1926 the portion of Canada's international debt owned in that country exceeded that owned in Britain. With some interruption during the 1930s, United States investment in Canada continued to increase, particularly after 1947 when the period of intense activity in the petroleum industry got under way. Nearly half of the United States investment in Canada at the end of 1965 was accumulated since 1956. At \$23,305,000,000, United States investments in the later year continued to represent more than three quarters of all non-resident investments in Canada and made up over 80 p.c. of the increase since 1956. The main rise occurred in direct investments in companies controlled in the United States, which almost doubled in the 1956-65 period. In the same period, portfolio investments in Canada owned in the United States more than doubled, due mainly to large sales of new issues of securities made in that country.

British investments in Canada totalled \$3,498,000,000 at the end of 1965 and accounted for only about 12 p.c. of the total non-resident investments in Canada compared with 36 p.c. at the end of 1939 before most of the wartime repatriations. After reaching a low point in 1948, the value of British investments in Canada increased each year to 1962, declined slightly in 1963, partly as a result of Canadian repatriation of investments in railways and other utilities, and increased again in 1964 and 1965.

Investments of countries other than the United States and Britain reached a record total of \$2,704,000,000 at the end of 1965. Exceeding three times the 1955 figure, this represented a much higher rate of increase than had occurred in either United States or British investments, and large increases had taken place in portfolio holdings of securities as well as in direct investments. At about 9 p.c. of the total, compared with 6 p.c. in 1954, this group of countries, mostly in Western Europe, accounted for a slightly larger proportion of total foreign investments than in 1964. Over 90 p.c. of the direct investments, which totalled \$1,255,000,000 in 1965, came from Western Europe; about one quarter was of Netherlands origin, with Belgian, French, Swiss and German investments making up the next largest groups.

The degree of dependence upon non-resident capital for financing Canadian investment has been relatively much less in the postwar period than in the earlier periods of exceptional expansion, even though the rise in non-resident investments has been so great. Thus, from 1950 to 1953 the net use of foreign resources amounted to about one seventh and direct foreign financing to almost 30 p.c. of net capital formation in Canada. But from 1958 to 1961 when these ratios had increased considerably to 34 p.c. and 47 p.c., respectively, they were still less than the corresponding ratios in the 1929 to 1930 period when inter-war investment activity was at its highest point. In that shorter period more than one half of net capital formation was financed from outside of Canada, and in the period of heavy investment before World War I an even larger ratio of investment was financed by external capital. After 1961 these ratios declined somewhat; from 1962 to 1965 the net use of foreign resources comprised 19 p.c. of net capital formation in Canada and direct foreign financing 43 p.c. In considering these changes it should be noted that for a decade and a half, between 1934 and 1949, Canada was a net exporter of capital and that Canadian assets abroad have been rising over a long period.

It should also be noted that the above ratios relate to the place of non-resident investments in all spheres of development including those where Canadian sources of financing predominate such as in merchandising, agriculture, housing, public utilities and other forms of social capital. Thus, non-resident financing of manufacturing, petroleum and mining has been much higher than the over-all ratios indicate and has provided the major portion of the capital investment in this field in the period since 1948. The most recent comprehensive calculation of the ratios of non-resident ownership in Canadian manufacturing, mining and petroleum is for the year 1963 and it should be noted that subsequent changes may have increased non-resident ownership even more. In that year the Canadian manufacturing industry was 54 p.c. owned by non-residents but capital subject to foreign control was 60 p.c. These proportions compared with 47 p.c. and 51 p.c., respectively, as recently as the end of 1954. In the field of petroleum and natural gas, non-resident

¹ Excludes short-term receivables and payables.² Includes international investment agencies.³ Country distribution not available.⁴ Includes about \$900,000,000 of finance company obligations, some of which were in earlier years shown as long-term investments.⁵ Includes reserve against inactive assets.⁶ Excludes Government of Canada holdings of gold and foreign exchange.

ownership and control amounted to 64 p.c. and 74 p.c., respectively, at the end of 1963, whereas at the end of 1954 non-resident ownership and control had amounted to 60 p.c. and 69 p.c., respectively; in mining and smelting, non-resident ownership and control amounted to 62 p.c. and 59 p.c., respectively, compared with 53 p.c. and 51 p.c. in 1954. However, resident-owned Canadian capital continued to play a leading role in the financing of such areas of business as merchandising, railways and other public utilities. Hence,

non-resident ownership in a broad range of business activity, including manufacturing, petroleum, mining, merchandising and railways and utilities, rose only slightly from 32 p.c. in 1948 to 35 p.c. in 1963. But, in the same years, companies subject to non-resident control increased from 25 p.c. to 34 p.c. their share of the total even in this broad area of business, a trend also evident in many subdivisions of the manufacturing and extractive industries.

Another basis of judging the place of foreign-controlled business in Canadian industry is provided by a special study of production and employment in the larger Canadian manufacturing establishments controlled by non-residents. The enterprises having an investment in Canada of \$1,000,000 or more accounted for about 40 p.c. of Canadian manufacturing production in 1961 and 29 p.c. of employment in that field. About 33 p.c. of Canadian manufacturing production and 22 p.c. of employment originated with United States-controlled plants. These ratios in United States-controlled plants were somewhat higher than in 1953—the previous year for which a study of this kind was made. In some industries the proportions of production and employment in plants controlled by non-residents were much higher than this. Automobiles, for example, are produced mainly in United States-controlled plants, but this is exceptional. Other industries in which well over one half of the production is in non-resident-controlled firms include the smelting and refining of non-ferrous metals, petroleum refining, motor vehicle parts, aircraft and parts, and industrial chemicals. In several major industries like fruit and vegetable canning and preserving, and miscellaneous machinery and equipment manufacturing the distribution of control between Canadian and foreign-controlled companies is more even. In such industries as pulp, paper, and miscellaneous food manufacturing, the non-resident share is large although less than one half of the total.

There are, however, many industries where the largest part of production is in Canadian-controlled plants. Prominent among these are such important branches of industry as iron and steel mills, sawmills, feed manufacturing, clothing, and such divisions of the food and beverage group as bakeries and slaughtering and meat packing, pasteurizing and butter and cheese plants.

Canadian Assets Abroad.—Although there has been a great growth in non-resident investment in Canada and in the balance of indebtedness of other countries, it will be noted that Canadian assets abroad, shown in Tables 21, 24 and 25, have continued to rise in value. These now equal a larger proportion of liabilities abroad than was the case before World War II, but more than one quarter of the increase since then has been in government-owned assets such as the official reserves and the loans by the Canadian Government to other governments which were extended during the war and early postwar years. At the end of 1966 the government credits outstanding had a value of \$1,451,000,000 and at the end of 1967 official holdings of exchange and Canada's net IMF position amounted to

some \$2,926,000,000 in terms of Canadian dollars. Other official Canadian assets include Canada's subscriptions to the capital of the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation and the Asian Development Bank which, by March 1968, amounted to \$85,000,000, \$85,700,000, \$3,500,000 and \$5,400,000, respectively; these were partly offset by liabilities to these institutions.

The portion of the assets in private investments, particularly in the form of direct investments abroad by Canadian companies, is still small in relation to the corresponding non-resident stake in equities in Canada. At the end of 1966, Canadian direct investment abroad totalled \$3,737,000,000. Portfolio investment abroad by Canadians amounted to \$2,136,000,000 at the end of 1965. About two thirds of the privately owned investments were located in the United States. Direct investments in that country by Canadian businesses have grown rapidly and are found in many fields, among which the beverage and farm implement industries are particularly noteworthy.

24.—Canadian Long-Term Investments Abroad, 1959-66

NOTE.—Excludes investments of insurance companies and banks (held mainly against liabilities to non-residents), Canada's subscriptions to international investment agencies, and miscellaneous investments (Table 21). Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies are converted into Canadian dollars at current market rates.

Totals, 1965.....	3,495	1,836	300	1,495	7,126
1966					
United States.....	2,100	156	..
Britain.....	587	1,059	..
Other Commonwealth countries.....	505	27	..
Other foreign countries.....	565	209	..
Totals, 1966.....	3,737	1,451	..

Private investments in overseas countries are widely distributed. Somewhat more than one half of the total in 1966 were located in Commonwealth countries, with slightly more in Britain than in the remainder of the Commonwealth. Most of the direct investments in Britain were in industry, while in other Commonwealth countries investments in mining were of almost equal importance with those in industry. In foreign overseas countries the largest part was in the countries of Latin America where Canadian holdings in public utilities are substantial.

Section 6.—Government Economic Planning Agencies

Subsection 1.—The Economic Council of Canada

The Economic Council of Canada was established by Act of Parliament (SC 1963, c. 11) assented to on Aug. 2, 1963. The Council is an economic advisory body with broad terms of reference. The central feature of its duties is "to advise and recommend . . . how Canada can achieve the highest possible levels of employment and efficient production in order that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards; to recommend what government policies . . . will best help to realize the potentialities of growth of the economy; to consider means of strengthening and improving Canada's international financial and trade position; . . . to study how national economic policies can best foster the balanced economic development of all areas of Canada; . . .". Outside of its responsibilities to study and advise on the problems and potential of the Canadian economy, Sect. 11 of the Economic Council Act sets out certain additional duties of the Council, designed to promote productivity gains in all sectors of the economy.

In addition to the duties set out in Sects. 9 and 11 of the Economic Council Act, Parliament made provision for the Council to undertake special studies at the request of the Government in areas that fall within the purview of its general terms of reference. In its first five years, the Council has had two such References. In its first Reference, the Government asked the Economic Council to launch an examination into prices, costs, incomes and productivity and their relationship to sustained economic growth. The Council reported to the Government and to the Canadian public on this Reference in its *Third Annual Review*. A second Reference from the Government asked the Council: "In the light of the Government's long-term economic objectives, to study and advise regarding: (a) the interests of the consumer particularly as they relate to the functions of the Department of the Registrar General (now the Department of Consumer and Corporate Affairs); (b) combines, mergers, monopolies and restraint of trade; (c) patents, trade marks, copyrights and registered industrial designs." An interim report under Sect. (a) of this Reference was published in July 1967; an interim report under Sect. (b) will be released in the summer of 1969.

The Council has no operational responsibilities. It does not implement or administer any policies or programs nor does it have the authority to make research grants, although it may make contractual arrangements with persons other than its staff for the purpose of advising and assisting the Council in the performance of its duties.

The Council consists of up to 28 members appointed by the Governor in Council, including a chairman and two directors who serve full time in their professional capacity and up to 25 members who are selected from industry, labour, finance and commerce, agriculture and other primary industries, and the general public. The chairman and the directors (one of whom is elected as vice-chairman by the Council) are appointed for seven-year terms. The other members are appointed for three-year terms "after consultation with appropriate representative organizations" and are intended to reflect a very wide diversity of interests from the different private sectors of the economy and different regions of the country, but they sit on the Council as individuals and not as delegates of particular organizations or groups. The Council is therefore a mixed body rather than an expert professional body,

although it is served in its deliberations by an expert staff. There are no government members appointed to the Council. Under the Act, the chairman is the chief executive officer of the Council and has supervision over, and direction of, the work and staff of the Council.

The publications policy of the Economic Council is based on two provisions of the Act, one that requires the Council to publish annually a review of the medium- and long-term prospects and problems of the Canadian economy, and a second that empowers the Council to publish, as it sees fit, such studies and reports prepared for its use. These provisions enable the Council to carry out a most vital function, namely, the dissemination of information to the public as a means of stimulating informed appraisal and discussion of economic problems and policies.

The Council's publications* fall into three broad categories: (1) The Annual Reviews which summarize the results of the Council's studies and present its conclusions and recommendations (five of which have been issued to date); (2) Staff and Special Studies which provide more detailed statistical, technical, and analytical results of the various research projects; and (3) Conference papers and other reports.

In its *First Annual Review* the Council stated its underlying philosophy of approach in this way:—

We are concerned not with the question of inventing new forms of intervention, but rather with ordering and developing our policies and social programmes in a rational and coherent manner designed to accomplish consistently what the society has declared to be its economic and social goals. For this purpose it is essential to bring to bear the needs of the future on the decisions of today. This applies not only to decisions by governments but also to decisions in the private sector of the economy.

Canada's Economic Potential

The Canadian economy since the Second World War has encountered at one time or another inflation, higher unemployment, slow rates of economic growth, and even crises in the balance of international payments. This experience serves well to demonstrate that the real problem is not how to achieve one particular economic or social objective, but rather how to attain all of them—consistently—at the same time. This is another way of saying that the various goals are not always compatible with one another; there is always an over-riding requirement to reconcile conflicts.

Once there is general public agreement on the broad set of goals to be pursued, the next task is to define them quantitatively in accordance with Canadian circumstances and possibilities. This the Council has done, publishing "targets". These targets are not forecasts or prophecies but are intended to be measures of desirable performance of the economy—that is, concrete aims of public policy. These objectives or targets were first set out by the Council in its *First Annual Review*, were revised and updated in the *Fourth Annual Review*, and are in the process of being revised again for the *Sixth Annual Review*, to be published in September 1969.

* The *Reviews*, like all Council publications, are available from the Queen's Printer, Ottawa. They are: *First Annual Review: Economic Goals for Canada to 1970* (\$2.50, Catalogue No. EC21-1/1964); *Second Annual Review: Towards Sustained and Balanced Economic Growth* (\$2.75, EC21-1/1965); *Third Annual Review: Prices, Productivity and Employment* (\$2.75, EC21-1/1966); *Fourth Annual Review: The Canadian Economy from the 1960's to the 1970's* (\$2.75, EC21-1/1967); *Fifth Annual Review: The Challenge of Growth and Change* (\$2.75, EC21-1/1968).

Among other Council publications of more general interest are: *Business Cycles in Canada*, by Derek A. White (\$2.25, EC22-1/17); *Perspective on Canada's International Payments*, by David W. Slater (\$1.60, EC22-2/3); *Incomes Policies—Some Foreign Experiences and Their Relevance for Canada*, by David C. Smith (\$1.75, EC22-2/4); *Internal Migration in Canada, 1921-1961*, by Isabel B. Anderson (\$1.60, EC22-1/13); *Enrolment in Schools and Universities, 1951-52 to 1975-76*, by W. M. Illing and Z. Zsigmond (\$1.25, EC22-1/20); *Population, Family, Household and Labour Force Growth to 1980*, by W. M. Illing, et al. (\$1.00, EC22-1/19); *Canadian Policies for Rural Adjustment—A Study of the Economic Impact of ARDA, PFRA and MMRA*, by Helen Buckley and Eva Tihanyi (\$2.25, EC22-2/7); *National Conference on Labour-Management Relations, Ottawa, March 21-22, 1967* (\$2.00, EC22-3/67); *Interregional Disparities in Income*, by S. E. Chernick (\$1.75, EC22-1/14); *Scale and Specialization in Canadian Manufacturing*, by D. J. Daly, L. A. Keys, and F. J. Spence (\$1.75, EC22-1/21); *Canadian Income Levels and Growth: An International Perspective*, by Dorothy Walters (\$2.25, EC22-1/23); *Science, Technology and Innovation*, by Andrew H. Wilson (\$1.50, EC22-2/8); *Interim Report—Consumer Affairs and the Department of the Registrar General* (\$2.25, EC22-10/67); *Medium-Term Capital Investment Survey 1968*, by B. A. Keys, D. S. Rothwell, F. G. Thompson (available from the Economic Council of Canada); A complete list of Council publications is available from the Secretary, Economic Council of Canada, P.O. Box 527, Ottawa. Also available from the Secretary are the *Annual Reports of the Chairman*, which include the Act establishing the Council and the membership of the Council.

Full Employment.—The Council believes that, over the medium-term future, economic policies should be actively directed toward achieving 97 p.c. employment—that is, no more than 3 p.c. of the labour force unemployed. But this is not regarded by the Council as an ultimate or satisfactory goal for all time; as it has stated, “We would hope that with sustained improvement in our economic performance it may eventually become realistic to aim for an even better performance in the level of employment”. The Council also emphasized that the target rate is an average annual rate allowing for seasonal variation, and is a national average within which there will be some regional variation. Considering the rapid rate of increase in the numbers of people entering the labour force in Canada—close to 240,000 persons a year, on average, between 1965 and 1975—this goal would mean that the economy would have to grow fast enough to provide 2,400,000 new jobs over that ten-year period.

A High Rate of Economic Growth.—In calculating a potential rate of increase in total production (and thus incomes) the Council views economic growth as arising from: (1) increases in the *quantity* and *quality* of resources (for example, more manpower and capital, and higher levels of education and more efficient equipment); and (2) increases in productivity or in the efficiency with which men and capital are used and combined.

For the period to 1975, the Council has projected an average annual growth of 5.5 p.c. in the *volume* of production of all goods and services (*volume* in the sense that price increases are deducted from the value of production). Approximately two fifths of this gain in output would come from the employment increase, with a slight increase in the average educational level of the labour force. Another one fifth, roughly, would come from increased investment by government and industry. The remaining portion of the growth rate, around one third, would stem from productivity gains. The potential growth rate of 5.5 p.c. a year is high by both historical and international standards. It implies an increase in the total volume of output from \$66,000,000,000 in 1967 to about \$100,000,000,000 by 1975. This would mean an increase in the average standard of living in Canada—that is, total income divided by total population—of approximately one third. But if the economy fails for one reason or another to keep up to its potential, the loss would be great. For example, an average growth rate of 5 p.c. instead of the potential 5.5 p.c. over the 1967-75 period would mean a “loss” of more than \$3,000,000,000 in national income.

Reasonable Price Stability.—Price stability has been defined by the Council in the following terms:—

A satisfactory degree of price and cost stability would exist if, in the period to 1970, average annual increases in prices and costs could be held within the limits of the 1953-63 experience—for example, in this period, the average annual increases in consumer prices and in the prices of all goods and services produced in Canada were 1.4 p.c. and 2.0 p.c. respectively, but with moderate year-to-year variations around these rates. An important condition for the attainment of this goal will be the achievement and maintenance of a reasonable price stability abroad and especially in the United States.

There was an extended period of generally good performance on price and cost stability over the 1961-66 expansion. Only when the previous economic slack had disappeared and the economy approached close to potential output at a time of rapid expansion in final demand in late 1965 and early 1966, did price increases become persistent and pervasive. The GNP implicit price index rose at the rate of 4.6 p.c. between 1965 and 1966. During 1966, price and cost pressures eased.

In its projections to 1970, the Council assumed that the GNP price index would rise at an average annual rate of 2 p.c. The Council said it would regard this as consistent with the attainment of a satisfactory degree of price and cost stability over the medium-term future, at least under conditions of reasonable price stability abroad, particularly in the United States. Such an average rate of price increase would imply that some demand components—government expenditures, housing, and business investment in plant and

equipment—would rise at a somewhat faster rate than the total and that the rate of advance in consumer prices and in export and import prices would be somewhat less. The Council added:—

We recognize that the achievement of this degree of price and cost stability will be extraordinarily difficult under conditions of high demand and high employment, as has been amply demonstrated by developments of the past three years. However, we continue to regard it as one of the basic goals towards which Canadians should continue to strive in the conduct of their economic affairs, with particular emphasis on longer-range policies designed to deal with basic structural and regional problems—that is, policies which would facilitate the consistent achievement of both our employment and price goals.

A Viable Balance of Payments.—After careful reappraisal in 1967, the Council concluded that the balance-of-payments goal set out in 1964 was appropriately formulated in terms of a current account deficit (and accompanying net capital inflow) at potential input in 1970 in the order of \$1,500,000,000 to \$2,000,000,000 and that this goal is still relevant.

The current account deficit was \$1,100,000,000 in 1966. It is estimated that this deficit will widen somewhat over the 1966-70 period and that, at potential output in 1970, it could be in the neighbourhood of \$1,700,000,000. The total deficit will be accounted for entirely by the deficit on services, which is projected to rise from \$1,500,000,000 in 1966 to \$1,900,000,000 at potential output in 1970. A small surplus on merchandise trade would continue.

The current account deficit of \$1,700,000,000 at potential output in 1970 would represent about 2.2 p.c. of GNP, a smaller reliance on the net import of resources from abroad than in several past periods of strong economic growth. The equivalent net capital inflow would also be correspondingly small in relation to GNP and would represent a reduced reliance on net foreign capital inflows in relation both to the domestic investment and domestic savings, compared with most previous periods of strong Canadian economic growth. At potential output in 1970, net capital inflows would make up less than 10 p.c. of the estimated total demand for savings of \$18,100,000,000. However, the Council observed that the \$1,700,000,000 capital inflow would still be a very sizable requirement for external financing in circumstances of a prevailing world shortage of capital, uncertainties about moves to strengthen the international monetary system, and possibly continuing strains in the United States balance of payments. Thus, it would be inappropriate to assume that the external capital will always be easily available on the scale needed by Canada.

Equitable Distribution of Rising Incomes.—This is an extremely complex goal, defying simple formulation. The Council believes that much more information is needed about the distribution of income among individuals, families and various occupational groups. For example, why do some groups receive little benefit from the general rise in incomes and living standards? What elements lie behind the vicious circle of poverty that still traps far too many people? Although some of these problems may range far beyond the field of economics, the Council has said that these difficult matters will have to be understood and faced if appropriate policies are to be devised to achieve the goal of equitable distribution of rising incomes. To date, the Council's work in this area has been concentrated on two aspects of the fifth goal, namely regional disparities and poverty.

The problem of assuring an appropriate participation on the part of each region in the over-all process of national economic development has long been an elusive goal and a continuing concern of the people of Canada. The Council's analysis showed that over the past four decades there has been relatively little progress toward the achievement of a better balance in this respect. Despite various policies and programs, very wide disparities have continued to exist in average per capita income. Also, there have continued to be wide differences in the extent to which the human and material resources of each region have found opportunities for productive use. Although national prosperity has always

tended to have a favourable influence everywhere, rapid national growth has not by itself served to bring about any significant or lasting reduction in these large and stubborn differences.

Regional levels of personal income per capita (in current dollars) are shown for three selected groups of years in the following statement. Provinces are ranked in order of level of income in 1963 and the data are for three-year averages centred on the year shown.

<i>Province</i>	<i>1957</i>	<i>1947</i>	<i>1963</i>
	\$	\$	\$
Ontario.....	509	981	2,025
British Columbia (incl. the Yukon and Northwest Territories).....	535	980	1,966
Alberta.....	509	923	1,750
Saskatchewan.....	449	818	1,749
Manitoba.....	455	875	1,721
Quebec.....	378	709	1,521
Nova Scotia.....	299	676	1,302
New Brunswick.....	277	609	1,167
Prince Edward Island.....	248	477	1,115
Newfoundland.....	1,009
PROVINCIAL AVERAGE.....	407	783	1,532

The most striking features of the above comparisons are the substantial percentage differences in income levels between the highest and lowest province and the fact that the rankings of the provinces in terms of income levels have hardly changed over a period of almost 40 years.

In its *Fifth Annual Review*, the Council took a look at regional aspects of federal economic policies—the objects of such policy being to improve regional balances, that is, both the narrowing of interregional income disparities and the full and efficient use of available resources in each region. The case for regionally discriminating stabilization policies in Canada has come to rest largely on the persistence of higher unemployment levels in the lower-income regions at times when the national economic conditions, dominated as they are by more prosperous provinces, call for policies and restraint.

The Council suggested that in framing regionally oriented stabilization policy, the federal authorities would have to concentrate largely on fiscal rather than monetary policy, and especially on the expenditure side of the budget. It was observed that there was a strong tendency for per capita federal development expenditures to be highest in provinces with the lowest per capita incomes, thus contributing to a narrowing of existing income differences among the regions. The unavoidable impression that emerges from the Council's review of federal economic policies is that they have exerted a pervasive but inconsistent impact upon the various regional economies. On the basis of its analysis, the Council articulated the following guidelines for regional development policy: improving the utilization of manpower resources; raising the level of productivity within each region; assuming the adequate expansion of growth-related public services; and stimulating innovation, the application of new technology and the development of new viable lines of economic activity.

Like the objective of improved regional balance, the elimination of poverty is one aspect of the still broader goal of an equitable distribution of rising incomes. Poverty is a relative matter, and generally accepted conceptions of it vary through time and space. Poverty today is not the same as poverty in the Great Depression of the 1930s and the poverty today in Canada is not the same as poverty in the underdeveloped countries of Southeast Asia. In order to get a statistical grip on the problem of poverty, the Council agreed to define it as "an insufficient access to certain goods, services, and conditions of life which are available to everyone else and have come to be accepted as basic to a decent, minimum standard of living". Thus stated, the definition begs many questions, most of which could become the subject of a long and inconclusive debate. Rather than engage in such a debate, the Council proceeded directly to a statistical embodiment of the definition sufficiently simple that it could be appreciated and judged by a broad public in relation to personal, everyday economic experience.

On the basis of information regarding family-spending patterns, so-called "poverty lines" were traced for individuals and families of different sizes. A basic assumption for the main set of estimates was that any family or individual spending more than 70 p.c. of total income on food, clothing and shelter was in a low-income situation and likely to be suffering from poverty. These poverty lines were expressed in the *Fifth Review* in terms of 1961 dollars; adjusted to dollars of 1968 purchasing power, they come out at \$1,800 a year for a single person, \$3,000 for a family of two, \$3,600 for a family of three, \$4,200 for a family of four and \$4,800 for a family of five. Obviously, these are conservative cut-offs; living standards at or just above such levels would be modest indeed.

Using income data derived from the 1961 Census, it was possible to analyse some of the characteristics such as the age, sex and education of family heads; size of family, geographical region of residence, and place of residence (metropolitan, other urban or rural) of those falling below the poverty lines. As of 1961, some 916,000 non-farm families plus 416,000 individuals were living below these levels. The total number of persons involved was 4,200,000, including 1,700,000 children under 16 years of age. In all, they accounted for some 27 p.c. of the total non-farm population of Canada in that year.

Statistics cannot adequately describe poverty but, used with care, they are capable of furnishing important clues to types of policies likely to be effective against poverty.

It is evident from the incidence figures that income is more likely to be low when one or more of the following characteristics are present: (1) the head of the family has no formal education beyond elementary school; (2) the family lives in a rural area; (3) the family lives in the Atlantic Provinces; (4) the head of the family is not a member of the labour force; (5) no member of the family worked during the year; (6) the head of the family is 65 years of age or over; (7) the head of the family is a woman. From that list, it is all too easy to form a picture of poverty in Canada that consists of a relatively few stereotyped categories, but a more balanced picture of the total low-income population of Canada is necessary. In view of the following observations, it is therefore vital in framing policy not to be over-influenced by rates of incidence: (1) 62 p.c. of the low-income non-farm families in 1961 lived in urban areas and of this group more than half lived in metropolitan areas; (2) 83 p.c. of low-income non-farm families lived elsewhere than in the Atlantic Provinces—53 p.c. of them lived in Ontario and the Western Provinces; (3) 68 p.c. of the same group of families had heads who were in the labour force for at least part of the year; (4) 76 p.c. of the group had one or more earners in the family; (5) 77 p.c. of the family heads in the group were under 65 years of age; (6) 87 p.c. of families in the group were headed by men. It can thus be seen that a set of anti-poverty policies directed toward major groups or geographical areas showing a very high incidence of low incomes would almost certainly fail to deal adequately with poverty.

The Council called for a more concerted and purposeful attack on poverty in Canada. The challenge, in the short run, is to alleviate conditions which today thrust many Canadian families and individuals into involuntary poverty and hold them there. In the long run, the challenge is to prevent the development of these conditions.

Sources of Economic Growth

The Economic Council has emphasized repeatedly that productivity gains are the essence of economic growth, in the sense that they are the real source of improvement in the average living standards of people—that is, in average incomes. By productivity is meant the increase in the output of goods and services in relation to the resources required to produce them. Increases in productivity are generally traced to two basic kinds of influences:—

- (1) Improvements in the productive quality of the factors of production. (This would include rising levels of knowledge, education and skill in the labour force—including the managerial group—and better machinery and equipment, or higher quality natural resources.)
- (2) Improvements in the efficiency with which the productive factors are combined. (By this is meant, for example, a more efficient organization of the production process, increased specialization and larger scale or production, and shifts of manpower and capital from less-productive to more-productive lines of employment.)

The measurement and analysis of productivity still bristles with technical and conceptual difficulties. Further complications arise from the fact that the factors are frequently interrelated—advancing technology and better management and skills go hand in hand; increased scale and specialization require not only expanding markets but also flexibility and adjustability of economic resources. There is still much to learn about how these various factors act and interact, and it is extremely difficult to isolate the role and importance of any one of them. Despite these difficulties, the Council has devoted a large part of its research effort to these matters in the hope of improving public understanding of the real sources of growth in incomes and living standards.

Education and Economic Growth

The basic role of education as a factor contributing to economic growth and rising living standards was stressed in the Council's *First Annual Review*, especially in the discussion of Canada's vital need for creating and maintaining an adequate supply of professional, technical, managerial and other highly skilled manpower as a basis for future growth. The *Second Annual Review* attempted a closer examination of education as a factor in growth.

Scale and Specialization.—Whereas the over-all productivity in Canada has been estimated to be one fifth lower than in the United States, the Council in its *Fourth Annual Review* estimated that, in the manufacturing area alone, the productivity gap between the two countries appeared to be in the order of one third or more. This difference reflects in considerable part the way in which production is organized—diversification, mechanization, technology, efficient use of resources, management, morale, attitudes, etc. The measure should not be taken simply as a reflection on the energy, basic ability or enthusiasm of Canadians.

Many factors may influence the size of the productivity gap in manufacturing. One of these—but only one—is scale and specialization. The term “economies of scale” is rather loosely used and in some discussions seems to be used almost synonymously with “size of market”, “size of firm”, “size of plant” or “size of production runs”. The latter—the size of production runs and the degree of specialization or diversification of production—appears to be highly relevant. There is a general pattern of greater diversification of products and typically shorter production runs in Canadian plants. This involves frequent changes and interruptions in production and scheduling, and this in turn contributes to less-efficient use of both manpower and capital, and has a pervasive upward influence on all the basic categories of cost per unit of output. The Council believes that greater specialization would contribute to the lowering of costs of all major types—material, labour and overhead. It would make possible in many lines of production an increase in output with essentially the same quantity of labour and capital facilities. This would reduce labour and overhead costs per unit of output and permit similar economies in materials on the basis of comparable developments in firms supplying materials and components.

The Council observed that it is sometimes suggested that one route toward increased scale and specialization would be to facilitate intercompany agreements to permit more specialized patterns of production between firms and longer production runs within the plants of various firms. But the Council said it should be recognized that industrial rationalization may reduce competition within Canada, especially in circumstances in which trade barriers protect producers from external competition and in which there is already a relatively high degree of industrial concentration in many lines of Canadian manufacturing. The Council's conclusion:—

The route of tariff reduction for manufactured products is, in our judgment, the most promising of all routes towards increased specialization in Canada and the consequent narrowing of the existing gap in productivity in manufacturing between Canada and the United States. By ‘tariff reduction’ we mean negotiated reductions in both Canadian and foreign tariffs.

Science, Technology and the Economy

From the beginning of its work, the Council has been centrally concerned with problems associated with growth and change. Growth essentially involves change, and technological change has been, and will continue to be, an important factor in the longer-term growth and development of Canada. The Council has consistently emphasized the role of science and technology in the economy. In its *First Annual Review*, published in 1964, the Council concluded that, with respect to R & D activities, "the most urgent need for further rapid development pertains to universities and private industries". It was with this concern in mind that, in its first year, the Council set up an Advisory Committee on Industrial Research and Technology to consider the role of research and technology in Canadian economic growth. In December 1965, the Committee's recommendations concerning federal incentive programs to encourage research and development in Canadian industry were published by the Council.

In the Council's *Fifth Annual Review, The Challenge of Growth and Change*, a Chapter was devoted to "Science, Technology and the Economy". In this Chapter, the Council discussed certain economic aspects of science and technology—the relationships of technological change and innovation to economic growth, some of the determinants of technological advance, the management and diffusion of scientific and technical knowledge to facilitate better business performance, the underdeveloped state of the social sciences in Canada, and the problem of allocating resources to maximize the returns from investment in scientific and technological activities. A very brief summary of the recommendations contained in that Chapter are set out below. The Council recommended:—

- (1) that *innovation*—the crucial stages beyond R & D—be given greater recognition in "science policy";
- (2) that the capacity for Canadian business management to undertake successful innovation be strengthened;
- (3) that new and more effective means be developed to harness information on science, technology and innovation, both from abroad and from Canadian sources, in both the public and private sectors;
- (4) that Canada's indigenous scientific and technological effort be strengthened, particularly in industry;
- (5) that support for the social sciences be greatly increased, and that "science policy" should have regard to the need for more interrelated activities across the whole spectrum of research, including the natural sciences, the social sciences and the humanities.

The Changing Structure of the Economy

Much of the Council's analysis of economic growth in Canada has been cast in highly aggregative terms. However, studies of the patterns and sources of growth of individual sectors of the economy can provide significant additional knowledge about productivity growth and help to lay the basis for more carefully attuned economic policies. In its earlier *Reviews*, the Council has explored some of the changes in characteristics that have been associated with economic growth in Canada, including both regional growth and development, and development and implementation of rapid urban growth. The *Fifth Review* began to describe the patterns and sources of growth in major groups of industries.

In the past, Canadian economic analysis and policies have been largely centred on the performance of goods-producing industries, even though the service-producing industries have expanded greatly. At the end of the Second World War, 60 p.c. of Canada's labour force was employed in goods-producing industries and 40 p.c. in service industries. These proportions now have reversed. The proportion of total Canadian employment in the service industries is similar to that in the United States but considerably above that of the European countries.

Of the total employment increase of 2,500,000 in Canada from 1946 to 1966, some 2,100,000 of the new jobs were in the service industries. The most rapid employment increases have been in finance, insurance and real estate, and a group of industries that includes community, business and personal service, public administration and defence. Employment in trade also has risen rapidly.

One view that has been held by many is that the potential for Canada's growth is mainly to be found in its rich natural resources. Another view is that industrialization brings an enormous relative growth in manufacturing, including the processing of raw materials. The facts do not support such views; in most of the industrially advanced countries, whether or not they are rich in natural resources, it is the service industries that appear to be growing most rapidly.

Productivity in Agriculture

As part of the analysis of sources of growth of individual sectors, the Council devoted a Chapter in its *Fifth Review* to productivity in agriculture. This Chapter examined changes in the volume of production and in the resources and technology used in agriculture and assessed their impact on the productivity of the agricultural labour force. One hundred years ago, Canada's society was predominantly agricultural, and more than three quarters of its working force was engaged in farming. Today, Canada is predominantly urban, and more than 90 p.c. of total employment is in non-farm activities. Despite the massive reduction of agricultural employment, the volume of total agricultural production over the past two decades has increased by roughly 50 p.c. and the rate of increase of labour productivity in agriculture has been considerably greater than in other sectors of the economy. However, average farm incomes have remained significantly lower than average non-farm incomes.

After analysing the sources of growth in agricultural labour productivity as well as the levels of labour productivity in resource inputs and factors influencing crop and live-stock yield technology, the Council drew the following policy implications:—

- (1) *Education*: Better education is essential for those who wish to stay in farming and who need to adopt modern and efficient production techniques.
- (2) *Financial assistance for mobility*: Effective policies for adjustment, particularly in the form of financial assistance for retraining and out-movement.
- (3) *Financial assistance for both retirement and farm consolidation*: Financial assistance for retirement should enable older farmers to retire without undue hardship; at the same time, selective financial assistance should enable the younger farmers to continue farming and to expand their farms towards the achievement of more efficient operations through farm consolidation.
- (4) *Farm management assistance*: Management assistance by monthly computer analysis of farm business accounts at reasonable cost per farm and more readily available credit could greatly help to put farm operations on a sounder business footing.

The Urbanization of Canada

The urbanization of any nation is closely related to the structure and growth of its economy and to rising income levels. In Canada, almost three quarters of the population lives in cities and towns occupying less than a hundredth of the total area of the country. The Economic Council says this degree of urbanization will continue to increase. Between 1966 and 1980, Canada's urban population is projected to rise by almost 5,800,000 people to over 20,000,000. By 1980, about 81 p.c. of the total Canadian population (estimated to reach almost 25,000,000 by then) will be urban and some 60 p.c. will be concentrated in 29 large city complexes of 100,000 or over. The net population gain to these large cities between now and 1980 is expected to be 4,500,000—a number equal to the combined total for metro Toronto and metro Montreal in 1967. The population growth of these two large metro areas combined is expected to be 2,500,000 in the period to 1980, so that taken together they may well total 7,000,000. Metro Vancouver is expected to go substantially over 1,000,000. Thus, by 1980, one out of three Canadians will live in one of these three large centres. A second group of six cities in the 500,000-1,000,000 population range—Winnipeg, Ottawa, Edmonton, Calgary, Hamilton and Quebec City—will have a combined population of about 3,600,000 by 1980. By then Canada is also likely to have about 20 cities in the 100,000-500,000 range, with a combined population of close to

3,500,000. Almost half of these 20 will lie along or close to the St. Lawrence River and lower Great Lakes. Thus, with the larger centres, they will contribute to the formation of an urban system stretching over a distance of about 600 miles.

This increasing urbanization in Canada has important implications for housing, social capital, municipal expenditures, fiscal capacity, and the many problems of big-city life including traffic congestion, air and water pollution, protection from crime, requirements for schools and recreational services, etc. In the Economic Council's view, this challenge calls for new and imaginative public policies involving all three levels of government, and new priorities in the allocation of resources. The Council, in fact, detects an "urgent need to update attitudes and approaches to over-all urban development and to certain commitments to resolving the complex and growing problems generated by such development". It adds:—

It is understandable that traditions of deeply rooted attachment to the land and natural resources that have shaped our national identity should persist strongly in our national consciousness. But without attempting to decry these values in any way, it is clear that they are hardly adequate today. In the second century of Confederation, it is essential to recognize and accept the predominantly urban character of Canadian society and to adopt policy approaches capable of dealing with the many new, pressing and difficult challenges.

Transportation.—The number of cars and trucks in Canada could increase by 60 p.c. to almost 11,000,000 by 1980, or one vehicle for every 2.3 persons. Projections suggest that 20 p.c. of Canadian families will own at least two cars. Large public investments will be needed to prevent traffic congestion from becoming ever more serious. The investment in urban expressways, arterial thoroughfares, collectors and rapid transit between now and 1980 could well exceed \$4,000,000,000 for centres of 100,000 or over. In the Council's judgment, "the problem of providing adequate urban transportation today ranks in economic importance with that of developing the national transcontinental transport system in the past".

Housing.—To meet the housing demand implied by its projections of new family and household formation, the Economic Council estimates that Canada will need an average of some 190,000 new housing units a year between 1966 and 1970—a four-year total of over 750,000 new units, with a heavy volume of completions concentrated in the latter part of the period. This housing demand is expected to continue to rise during the 1970s, reaching about 1,100,000 units in the first half of the decade and 1,300,000 to 1,400,000 units in the second half.

By the late 1970s about 90 p.c. of this housing construction will be in the cities. Further, with the increasing concentration of population in the largest of these urban complexes, new housing construction will shift increasingly to the metro areas. From an estimated volume of 630,000 units required in cities of 100,000 or over in 1966-70, it is anticipated that there will be a rise to about 800,000 in the first half of the 1970s and to somewhat above 1,000,000 in the second half. This implies that by 1980 the annual new housing demands of our 29 largest urban complexes will be as great as the entire national demand in 1970. If recent trends continue, by 1980 upwards of two thirds of this new construction in the large cities will take the form of apartments and other forms of multiple housing such as row-housing, duplexes and so-called town houses.

These estimates of new housing construction make allowance for a rising rate of replacement demand on the assumption of vigorous programs of renewal and redevelopment in the decaying areas of the larger and older cities. The 1961 Census did not reveal an extreme proportion of dilapidated housing and, in fact, the incidence of dwellings "in need of major repair" is rather less pronounced in the larger areas than for the country as a whole. Nevertheless, it appears that perhaps as many as 1,000,000 Canadians were

housed as of 1967 in substandard dwellings of this kind, and that about one quarter of these were in the large cities. The Council observed:—

With further rapid urbanization, the economic and social costs of poor housing and urban decay are bound to mount sharply unless long-range rehabilitative and preventive measures can be substantially widened and improved. Any acceleration or urban renewal, however, will clearly intensify the already pressing need for a great expansion in public housing. It will be essential to assure alternative and appropriate accommodation for the increasing numbers of people who may be displaced as a consequence of renewal projects. Successful and consistent development in both areas appear certain to require more comprehensive financial participation in total costs on the part of the senior governments, together with increased initiative, experimentation and integration in over-all planning by civic administrations.

Water Supply and Pollution Problems.—With the continued high rate of urban growth, the problems of adequate water supply and the disposal of domestic and industrial wastes are certain to grow more serious. For example, as the urban centre becomes larger it tends to use more water per resident. The average daily intake of water in Canada's 18 largest cities now is around 125 gal. per resident. It appears that by 1980 average daily consumption per person will rise to roughly 200 gal. Thus, it is estimated that, over the next 15 years, the largest cities must increase their water-supply capacity by some 1,500,000,000 gal. daily.

After use, approximately 80 p.c. of the urban intake of water for domestic and industrial purposes is discharged into the sewerage system. It is estimated that in 1960 only about 9,000,000 Canadians, or 75 p.c. of the urban population, were served by a sewerage system. Thus, a large volume of water intake in Canada is returned to streams and lakes in the form of raw or imperfectly treated sewage. Even where sewerage systems and treatment facilities exist, the prevalence of combined storm and sanitary sewers in many of our larger and older cities causes a considerable leakage of raw sewage during high-runoff periods.

The growing requirements for municipal water and sanitary facilities over the next 15 years will be added to a significant backlog of facilities in many areas. Since the 1930s, the capacity of these municipal services has grown at an annual rate of approximately 6 p.c.—or twice as fast as the growth in the urban population over the same period. If this relationship continues to apply over the next 15 years when 6,000,000 persons will be added to the urban population, it is estimated that the facilities will have to be doubled at an investment averaging roughly \$130,000,000 a year.

Air pollution problems will also mount. The major source of air pollution is the combustion of fuels such as oil, coal, natural gas and gasoline. For example, when measured in terms of weight, it is estimated that for every 100 tons of motor fuel used in combustion, almost 60 tons of carbon monoxide, hydro carbons and nitrogen oxide are discharged into the atmosphere. With the number of vehicles and traffic density increasing rapidly over the next 15 years, the prospective increase in the volume of pollutants from this source alone is massive. In some areas this air pollution threatens to be a serious health hazard. Although the relationship between air pollution and morbidity is difficult to establish, it has been estimated that in Canada 600,000 working days are lost each year as a result of chronic bronchitis and emphysema, attributable to impurities in the air.

Much remains to be learned before realistic and commonly accepted standards of air and water pollution can be established to guide a rational management or control policy, the Economic Council reported. Nevertheless, the Council regards the adoption of a set of standards as an essential first step in defining the goals for a policy of water management or pollution control. This would imply the need for an extensive program of research that goes beyond the purely technical aspects to consider the social and economic implications of pollution as well.

Municipal Organization.—Although the 1961 Census showed Canada having only 18 metropolitan areas or large city complexes of 100,000 people or more, within these areas

there were some 260 separate municipal government jurisdictions, together with an unknown number of semi-independent, single-purpose special authorities such as school boards, water boards, transit and utility commissions, and sewerage districts. In the opinion of the Council, it is doubtful whether this multiplicity of independent municipal units within a single metro economy is or can be effective in coping with the range and multitude of urban problems. The Council called for rapid modernization of local government structures, powers and administration, with the clear aim of building a structure of local government whose physical area of responsibility, extent of authority and political and administrative machinery are all in line with the range and scope of the problems to be dealt with. In many cases this would mean larger area boundaries and in others it would require more effective arrangements for inter-municipal co-operation and co-ordination. In the field of area-wide structure, the Council suggested that only strong provincial leadership is likely to be effective in the face of the attachment of local interests to entrenched fragmentation.

Municipal Finance.—Many municipalities in Canada have been caught in a squeeze as their own revenue sources—mainly the property tax—have failed to keep up with their spending requirements. In 1953-63 these taxes rose one and one half times as fast as personal income. The need to make annual decisions about whether to raise tax rates or assessment has some clear advantages for budget restraint and is in the interest of municipal taxpayers, but in the view of the Council it may create some built-in discrimination against services performed at the municipal level no matter how important they may be in relation to growth or the general welfare. In the large urban areas the squeeze will become tighter over the period to 1980 unless action is taken. The Economic Council said in part:—

... there is now a widening gap between the expanding responsibilities and the revenues of the larger cities of the country. This is now a nation-wide problem, and it is clearly necessary either to shift further responsibilities and related costs to higher levels of government or to develop and support local revenue systems so that they are more closely related to both the benefits and burdens of an increasingly complex, urbanized society. In either case, the change can be accomplished only within a comprehensive fiscal planning framework covering all levels of government.

Subsection 2.—The Department of Regional Economic Expansion

Under the Government Organization Act, 1969 (SC 1968-69, c. 28), passed by the House of Commons on Mar. 24, a Department of Regional Economic Expansion was established, the function of which is to ensure that economic growth is dispersed widely enough across Canada to bring employment and earning opportunities in the slow-growth regions as close as possible to those in the other parts of the country, without interfering with a high over-all rate of national growth. The legislation authorizes the Department, in co-operation with provincial governments and other federal agencies, to prepare development plans and programs designed to meet the special needs of particular areas. Specifically, the Minister of Regional Economic Expansion is empowered to: (1) recommend the designation of "special areas" where employment opportunities are severely limited and special action can improve economic growth; (2) formulate and carry out, in co-operation with other federal agencies, development plans and programs for these special areas; (3) enter into agreements with the provinces for the joint carrying out of development plans and programs—such an agreement may provide for federal financial support of the province's effort in implementing the development plan; (4) provide loans or grants to a province to help it build up the economic infrastructure of a special area where this is essential to the implementation of a development plan; and (5) provide special incentives, beyond those available under other programs, to a commercial undertaking whose establishment, expansion or modernization is essential to the success of a development plan for a special area.

The main components of the new Department have existed within the framework of the Department of Forestry and Rural Development since July 12, 1968, but certain

organizational and financial changes have been made by the 1969 legislation. Since the powers of the Department are not confined to rural areas but otherwise parallel those of the former legislation on the Fund for Rural Economic Development, that legislation has been repealed and the Department's operations will be conducted on the basis of normal annual appropriations, not of special funds. The Area Development Agency, which has administered the Area Development Incentives program, is absorbed into the structure of the new Department but additional assistance will be available under this program if special circumstances make it necessary to help a commercial undertaking establish, expand or modernize in a special area. Other regional and area development programs and agencies for which the Department is now responsible are unaffected by the legislation, including the Prairie Farm Rehabilitation Act (PFRA), the Agricultural and Rural Development Act (ARDA), the Maritime Marshland Rehabilitation Act, and the Atlantic Provinces Power Development Act.

The legislation provides for the establishment of an Atlantic Development Council to replace the Atlantic Development Board. It will consist of 11 members appointed by the Federal Government in consultation with the provinces of the Atlantic region. The structure of the new Council parallels that of the Board but constitutes a return to the original concept of the Board which was created in 1962 as an advisory body. The Council will advise the Minister on the whole range of programs and policies for fostering economic expansion and social adjustment in the Atlantic region, as well as on the effects of particular programs or policies in achieving this basic objective. Following is an outline of the functions of the former Atlantic Development Board, together with a list of projects approved and cumulative expenditures up to Mar. 31, 1968.

It is the intention of the new Department to undertake an extensive review of all existing programs in order to fit them fully into a co-ordinated program of regional development in Canada.

The Atlantic Development Board.—As stated immediately above, under the legislation (SC 1963, c. 28) establishing the Department of Regional Economic Expansion, the Atlantic Development Board ceased to exist, being replaced by the Atlantic Development Council, an advisory body only.

The Atlantic Development Board was established by Act of Parliament in December 1962 (SC 1962-63, c. 10), which was amended in 1963 and 1966. The first amendment established an Atlantic Development Fund of \$100,000,000 and the second increased it to \$150,000,000. In addition, the Board received \$55,000,000 in special Parliamentary appropriations to assist the four provinces in trunk highway improvements on a cost-sharing basis; \$2,000,000 to assist the Government of Nova Scotia with the operation of the Sydney steel plant; and \$1,750,000 to provide special housing and mobility assistance to residents of Bell Island, Nfld.

Functions of the Board were basically twofold: to undertake programs and projects aimed at stimulating the economic growth of the Atlantic region; and to prepare in consultation with the Economic Council of Canada an economic development plan for the region. The Board's staff, located in Ottawa and numbering 32 professional and 35 supporting personnel at Mar. 31, 1968, reflected these functions; the Board itself consisted of 11 unpaid members resident in the Atlantic region. During its six years of operation, the Board committed approximately \$195,000,000 of which about \$135,000,000 had been spent when the Act was repealed. Most of the funds went toward improving the economic infrastructure of the region—making grants to the provinces for electric power development, sharing in the cost of building modern trunk highways, constructing industrial water systems, assisting in the development of industrial parks, contributing to the cost of facilities for postgraduate and industrial research, and providing other basic services to industry. The Board's planning function included the study of various sectors of the economy of the region in preparation for their integration into a single comprehensive plan. By Mar. 31, 1969, most of the basic research had been completed and several studies published. The Board's planning responsibilities were taken over by the new Department.

Projects approved and cumulative expenditure from the Atlantic Development Fund to Mar. 31, 1968 were:—

Subsection 3.—The Cape Breton Development Corporation

The Cape Breton Development Corporation was created by an Act of Parliament, assented to on July 7, 1967 (SC 1967-68, c. 6) and came into existence by proclamation on Oct. 1, 1967, as a proprietary Crown corporation. The Corporation was established to promote and assist the financing and development of industry on the Island and to provide employment outside the coal producing industry to broaden the base of the economy of the Island.

The Corporation has acquired the former interests of the major coal producer in the Sydney coalfield and, in accordance with its approved plan as required by Sect. 17 of the Act, is operating and reorganizing four mines with a view to the rationalization of coal production.

The Act provides for a board of directors, comprised of a chairman, a president and five other directors. Head office is located in Sydney, N.S. The Corporation now reports to Parliament through the Minister of Regional Economic Expansion. Its operations are financed by the Government of Canada with some assistance from the Government of Nova Scotia for industrial development projects. During 1968, approximately \$30,000,000 was expended for all purposes.

Subsection 4.—Provincial Government Economic Planning Agencies

In a number of provinces, economic planning agencies have been set up or are in the formative stage. Only those that are currently active are described here.

The Nova Scotia Voluntary Planning Organization

During late 1961 and early 1962, the Government of the Province of Nova Scotia concluded that, within its limitations as a provincial government and in keeping with democratic traditions, it could increase the rate of economic growth by undertaking an economic planning program of a voluntary nature. Legislation creating the Voluntary Planning Board was passed in March 1963 by a unanimous vote of the Legislature. The Act stipulates that the Board shall consist of a chairman and a vice-chairman, the number of additional members and their terms of office to be determined by Order in Council. The Act also provides for the appointment of Sector and Segment Committees chosen from appropriate occupations by the Lieutenant-Governor in Council. A Sector is defined as "a primary portion or division of the economy" and a Segment is "a part or sub-division of a sector".

The general function of the Board is to assist and advise the Minister in the development and implementation of measures to increase the rate of economic growth of the province by means of voluntary economic planning. The specific duties outlined in the Act are to:—

- (a) co-ordinate the plans of the various Sectors of the economy and, based on these plans, produce a plan for the whole economy of the province for recommendation to the Minister as one which the Government might adopt;
- (b) collect, collate and disseminate information relative to the economy of the province;
- (c) advise the Government on provincial economic matters;
- (d) watch the performance of the Sectors in carrying out their plans and stimulate and encourage the carrying out of such plans;
- (e) envisage further plans that should be made and provide for continuity of planning for the future, both short- and long-range; and
- (f) conduct or arrange to be conducted such studies and investigations as the Lieutenant-Governor in Council or the Minister requests.

In addition, the Board serves as a liaison between government and people in all economic endeavours.

The Board in 1966 published a comprehensive over-all plan for the Nova Scotia economy to 1968 which includes the aims of economic planning and objectives for the first planning period. In 1967 and 1968 it published an annual report and economic review which set out, to the extent possible, an assessment of the economy of the province in relation to the targets that were established in the over-all plan. Detailed Sector plans have been published for agriculture, forestry, tourism, transportation and communications, fisheries, mining and construction. A special study has been made for the service industries and other studies have been undertaken in conjunction with various Sector plans and the over-all plan, including the publication of an econometric model of Nova Scotia and a management education survey.

Quebec Planning Bureau

The Government of the Province of Quebec in July 1968 passed legislation to come into effect on Oct. 9 of the same year providing for the establishment of a Quebec Planning Bureau within the Department of the Executive Council. This Bureau is successor to the Quebec Economic Advisory Council which operated since 1960 as a transitional body pending the setting up of a planning system suited to the needs of the province.

The Bureau consists of a general manager and a secretary appointed by the Lieutenant-Governor in Council and such other functionaries and employees as are considered necessary. The functions of the Bureau are (1) to prepare plans, programs and projects for economic, social and territorial development with a view to better utilization of the economic and human resources of the province; (2) to obtain from government departments and bodies useful and necessary information respecting their policies, programs, projects and achievements; (3) to conduct or cause to be conducted the research, studies, inquiries and inventories required for its purposes and to co-ordinate such activities conducted by other government departments and bodies; and (4) to advise the government on policies and programs prepared by government departments and bodies and make recommendations respecting its own research activities.

An Interdepartmental Planning Commission and a Quebec Planning Council will act as advisers to the Bureau on matters submitted to them by that body.

The Ontario Economic Council

The Ontario Economic Council was formed initially by Order in Council on Feb. 1, 1962, and established by An Act to Establish the Ontario Economic Council, on May 30, 1968. The Council was conceived as a vehicle where representatives of agriculture, organized labour, commerce and industry, education, finance and of government could pool their knowledge and experience of economic affairs, commission research and formulate policy recommendations to the public and private sectors.

Nineteen Ontario citizens serve as members of the Council. Five of these represent a broad cross-section of business and industry; one each the financial community and the Consumers' Association of Canada; three, organized labour; three, agriculture; one, the provincial universities; and one, municipal government. One member comes from the senior ranks of the Ontario Civil Service. The remaining four are drawn from the Ontario Research Foundation, The Ontario Regional Development Council, The Hydro-Electric Power Commission of Ontario, and the Ontario Northland Railway. Each serves without compensation for a term of one, two or three years. The Council meets monthly in Toronto.

Essentially, the Council operates as an advisory body to the Government of Ontario. Some of its findings are reported directly to the government and other reports and recommendations are published and distributed widely. Recent reports cover the fields of transfer taxation, education, labour, skill-training and plant location. Also published annually is an index of research projects carried on within provincial government agencies and departments and certain industrial companies operating in Ontario.

The Council shares the view of the Government of Ontario that the economy of Ontario is not an entity separate from Canada. For this reason the Council does not undertake

separately for Ontario what the Economic Council of Canada has done and is doing for Canada as a whole. Projects are undertaken with the Economic Council of Canada on a co-operative basis and information is exchanged between the two Councils. Another way in which the Ontario Economic Council pursues its responsibilities is through the work of *ad hoc* committees which involve a broad cross-section of the Ontario community.

A small permanent Council staff undertakes direct assignments and superintends the design and administration of projects assigned to others. Close contact with government departments avoids unnecessary duplication of effort. Research facilities, academic personnel and graduate students in Ontario universities have been used for certain projects which have included the professional services of members of the departments of economics, political science, geography and business administration in provincial universities. From time to time the Council engages the professional services of private consulting firms.

The Manitoba Economic Consultative Board

The Manitoba Economic Consultative Board was established under the provisions of the Development Authority Act, 1963, and has been operative since the autumn of that year. It is composed of a chairman and 10 members appointed by the Lieutenant-Governor in Council and is representative of the leading elements of the labour and business community. Chairmen of the Manitoba Design Institute, the Manitoba Research Council and the Manitoba Export Corporation serve in an *ex officio* capacity. The Board obtains its funds from the Manitoba Government: its budget in 1967-68 was about \$130,000.

The Board was established as an advisory body to the Manitoba Development Authority, the economic planning and co-ordinating committee of the Executive Council. It is charged with examining Manitoba's long-term prospects for growth, a report on which is published annually and widely distributed. Its staff is involved in a continuing program of research into long-term economic problems.

Consultation with governments, management, agriculture and labour on obstacles to more rapid growth is an integral part of the Board's task. Thus, working with various management groups in the province, the provision of adequate management education programs was examined recently. This led to the formation of the Manitoba Institute of Management Inc., a non-profit private corporation representative of management, educators, labour and government, to provide broad community support for a greatly strengthened program of management education in the province.

Whenever possible the Board co-operates with other provincial councils and with the Economic Council of Canada. During the summer of 1967 the Board, in co-operation with the Dominion Bureau of Statistics, sponsored a national seminar on input-output analysis. During 1968, the Board published an input-output table of the Manitoba economy.

PART I.—BANKING AND OTHER COMMERCIAL FINANCE

Section 1.—Banking

Subsection 1.—The Bank of Canada*

Canada's central bank, the Bank of Canada, began operations on Mar. 11, 1935, under the terms of the Bank of Canada Act of 1934 which charged it with the responsibility for regulating "credit and currency in the best interests of the economic life of the nation", and conferred on it specific powers for discharging this responsibility. Through the exercise of these powers, the Bank broadly determines the combined total of the most common forms of Canadian money held by the community—chartered bank deposits and currency. The 1967 revision of the Bank of Canada Act contained a number of technical amendments designed to assist the Bank in discharging its responsibilities and account is taken of these changes in the following description of the Bank's operations.

The provisions of the Bank of Canada Act enable the central bank to determine the total amount of cash reserves available to the chartered banks as a group and thus to control the rate of expansion of the total assets and deposit liabilities of the banking system

* Revised (March 1969) by the Research Department of the Bank of Canada.

as a whole. The Bank Act, which regulates the operation of the chartered banks, requires that each chartered bank maintain a stipulated minimum average amount of cash reserves, calculated as a percentage of its Canadian dollar deposit liabilities, in the form of deposits at the Bank of Canada and holdings of Bank of Canada notes. (The minimum cash reserve requirement, which came into effect under the new legislation beginning Feb. 1, 1968, is 12 p.c. of demand deposits and 4 p.c. of other deposits.) The ability of the chartered banks as a group to expand their total assets and deposit liabilities is therefore limited by the total amount of cash reserves available. An increase in cash reserves will encourage the banks as a group to expand their total assets (which consist chiefly of loans and marketable securities) with a concomitant increase in their deposit liabilities; a decrease in cash reserves will bring about a decline in their total assets and deposit liabilities as they seek to restore their cash reserve ratios.

The chief method by which the Bank of Canada alters the level of cash reserves of the chartered banks, and through them the total of chartered bank deposits, is by purchases and sales of government securities. Payment by the central bank for the securities it purchases in the market adds to the cash reserves of the chartered banks as a group and puts them in a position to expand their assets and deposit liabilities. Conversely, payment to the central bank for securities it sells causes a reduction in the cash reserves of the chartered banks and requires them to reduce their holdings of assets and deposit liabilities.

The influence that the Bank of Canada exerts on credit conditions (i.e., on the interest cost and other terms of borrowing in financial markets) stems from its ability to limit the growth of bank credit and of the community's holdings of bank deposits and currency. The growth rate of the banking system is one of the factors exerting an important influence on the level of interest rates and other terms of access to credit prevailing in financial markets generally. Current credit conditions (and expectations about future trends in such conditions) in turn have an influence on business and household decisions to spend or to save. Many other factors also have an important effect on spending decisions, however, and the behaviour of the economy is subject as well to such influences as economic and financial developments abroad; the investment, price and wage policies of business firms in Canada; and the character of public policies at all levels of government with regard to expenditure and taxation. In using the powers at its disposal, the Bank attempts to help bring about credit conditions appropriate to both domestic and external conditions. Its operations must be based, not on any simple mechanical formula, but rather on continuous observation and appraisal of the constantly changing prospects for the economy as reflected in the complex pattern of economic and financial developments.

In a technical sense, the powers which the central bank possesses allow it to exert a strong influence over economic activity but, in practice, the range through which credit conditions can be permitted to vary is necessarily limited. Changes in credit conditions in Canada affect the position of some groups in the economy much more than that of others, and this uneven impact is bound to inhibit the central bank's operations. Furthermore, interest rates in Canada cannot change greatly in relation to those abroad without producing large capital movements which might complicate Canada's international payments position. These considerations suggest that monetary policy must be used in appropriate combination with other public economic policies in order to help achieve national economic goals.

Although the Bank of Canada has the power to determine the rate of growth of the combined total of currency and chartered bank deposits, it has no means of determining how much of this total is held in the form of currency and how much in the form of chartered bank deposits. This depends entirely on the preferences of the public, since bank deposits can be converted freely into notes and coin and back again.

Although the cash reserve system in Canada—which is similar to that in a number of other countries—enables the central bank to determine within broad limits the total amount of chartered bank assets and deposit liabilities, the Bank of Canada leaves the allocation of bank and other forms of credit to the private sector of the economy. Each

chartered bank is free to attempt to gain as large a share as possible of the total cash reserves available by competing for deposits and to decide what proportion of its funds to invest in particular kinds of securities and in loans to particular types of borrowers. The influence of the central bank—based in essence on its power to expand or contract chartered bank cash reserves through its market purchases or sales of securities—is both indirect and impersonal and is brought to bear on financial conditions generally through the chartered banks and the numerous inter-connected channels of the capital market.

The powers of the Bank are contained in the Bank of Canada Act, 1934 (RSC 1952, c. 13), revisions in which were made in 1936, 1938, 1954 and 1967. Some of these powers are outlined below.

The Bank may buy or sell securities issued or guaranteed by Canada or any province, short-term securities issued by Britain, treasury bills or other obligations of the United States and certain types of short-term commercial paper. The Industrial Development Bank Act authorizes the Bank to purchase securities issued by that institution. The Bank may buy or sell gold, silver, nickel and bronze coin, or any other coin, and gold and silver bullion as well as foreign exchange and may accept non-interest-bearing deposits from the Government of Canada, the government of any province, any chartered bank and any bank regulated by the Quebec Savings Bank Act. The Bank may open accounts in other central banks. It may accept deposits from other central banks, the International Monetary Fund, the International Bank for Reconstruction and Development, and any other official international financial organization, and it may pay interest on such deposits. The Bank does not accept deposits from individuals nor does it compete with the chartered banks in the commercial banking field. The Bank acts as the fiscal agent for the Government of Canada in the payment of interest and principal and generally in respect of the management of the public debt of Canada. The sole right to issue paper money for circulation in Canada is vested in the Bank.

The Bank of Canada may require the chartered banks to maintain, in addition to the legal minimum cash reserve requirement mentioned above, a secondary reserve which the Bank may vary within certain limits. The secondary reserve, which consists of cash reserves in excess of the minimum requirement, treasury bills and day-to-day loans to investment dealers, cannot be more than 6 p.c. of total deposits when first introduced nor can it exceed 12 p.c.; effective April 1968, the required level was 7 p.c. In the event the Bank wishes to introduce or increase the secondary reserve requirement, one month's notice to the chartered banks is required; the amount of any increase in the requirement cannot exceed 1 p.c. per month. In the case of a lowering of the secondary reserve requirement, however, the percentage change in any one month is not restricted.

The Bank of Canada may make loans or advances for periods not exceeding six months to chartered banks, or to banks to which the Quebec Savings Bank Act applies, on the pledge of certain classes of securities. Loans or advances may be made under certain conditions and for limited periods to the Government of Canada or of any province. The Bank of Canada is required to make public at all times the minimum rate at which it is prepared to make loans or advances; this rate is known as the Bank Rate. From Nov. 1, 1956 until June 24, 1962, the Bank Rate was established weekly at a fixed margin of $\frac{1}{4}$ of 1 p.c. above the latest weekly average tender rate for 91-day treasury bills. Since June 24, 1962, the Bank Rate has been fixed from time to time as follows:—

<i>Date of Change</i>	<i>Per Cent per Annum</i>	<i>Date of Change</i>	<i>Per Cent per Annum</i>
June 24, 1962.....	6.00	Apr. 7, 1967.....	4.50

Since June 24, 1962, the Money Market Rate—the rate at which the Bank of Canada is prepared to enter into purchase and resale agreements with money-market dealers—has been either $\frac{1}{2}$ of 1 p.c. above the average rate on 91-day treasury bills at the preceding weekly tender or the Bank Rate, whichever is lower.

The Bank of Canada is not required to maintain gold or foreign exchange reserves against its liabilities.

Prior to the 1967 amendment of the Bank of Canada Act, there existed some uncertainty about the exact relationship between the central bank and the Government. The changes in the Bank of Canada Act in 1967 were designed to clarify this matter. They provide for regular consultation between the Governor of the Bank and the Minister of Finance as well as for a formal procedure whereby, in the event of a disagreement between the Government and the Bank which cannot be resolved, the Government may, after further consultation has taken place, issue a directive to the Bank as to the monetary policy that it is to follow. Any such directive must be in writing, it must be in specific terms, and it must be applicable for a specified period. It must be published immediately in the *Canada Gazette* and tabled in Parliament. The amendment makes it clear that the Government must take the ultimate responsibility for monetary policy and it provides a mechanism for that purpose but the central bank is in no way relieved of its responsibility for monetary policy and its execution.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve Directors. The Governor and Deputy Governor are appointed for terms of seven years each by the Directors, with the approval of the Governor in Council. The Directors are appointed by the Minister of Finance, with the approval of the Governor in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board composed of the Governor, the Deputy Governor, two Directors and the Deputy Minister of Finance (who is without a vote); this Committee has the same powers as the Board except that its decisions must be submitted to the Board at its next meeting. In addition to the Deputy Governor who is a member of the Board, there may be one or more Deputy Governors appointed by the Board of Directors to perform such duties as are assigned by the Board.

The head office of the Bank is at Ottawa. It has agencies at Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown.

The Industrial Development Bank.—The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises.

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada and the Deputy Minister of Industry, Trade and Commerce. The authorized capital of the Bank is \$75,000,000 and it may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed ten times the aggregate of the Bank's paid-up capital and Reserve Fund.

The Bank may extend financial assistance to industrial enterprises in Canada which, by definition in the Act, include any industry, trade or other business undertaking of any kind. With respect to such enterprises, the Bank is empowered to lend money or guarantee loans and where an enterprise is a corporation the Bank may also enter into underwriting agreements with regard to any issue of stock, bonds or debentures; acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement; and acquire certificates issued by a trustee to finance the purchase of transportation equipment. The total amount of commitments of the Bank, in the form of loans, guarantees, etc., in excess of \$200,000 each, may not exceed \$200,000,000.

The Bank may accept any form of collateral security against its advances, including realty and chattel mortgages which constitute the usual kind of security taken. The Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of Incorporation provides that it should extend credit only when, in the Bank's opinion, credit or other financial resources would not otherwise be available on reasonable terms and conditions. Its lending takes the form of fixed-term capital loans rather than current operating loans. The Bank is specifically prohibited from engaging in the business of deposit banking. It has branch offices in the following cities: St. John's, Halifax, Saint John, Moncton, Rimouski, Quebec, Trois-Rivières, Montreal, Sherbrooke, Ottawa, Toronto, Hamilton, Waterloo, London, Windsor, Sudbury, Fort William, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Kelowna, Vancouver, Victoria and Prince George.

¹ Includes investments: the change in loans outstanding does not equal the difference between disbursements and repayments because of year-end accounting adjustments.

² Includes agreements of sale.

Subsection 2.—Currency

Note Circulation.—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50 and \$100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of \$1,000 to \$50,000 denomination that had previously been used as cash reserves. The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

3.—Bank of Canada Note Liabilities, as at Dec. 31, 1964-68

Coinage.*—Under an amendment to the Currency, Mint and Exchange Fund Act (RSC 1952, c. 315), assented to Mar. 7, 1968, gold coins may be issued in the denomination of twenty dollars (nine tenths fine or millesimal fineness 900): subsidiary coins in denominations of one dollar, 50 cents, 25 cents, 10 cents (five tenths fine or millesimal fineness 500, or pure nickel): pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in the event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins issued under the authority of Sect. 4 of the Currency, Mint and Exchange Fund Act for the payment of any amount: in the case of silver coins for the payment of an amount up to \$10; nickel coins for payment up to \$5; and bronze coins up to 25 cents.

* Revised by the Master of the Royal Canadian Mint, Ottawa.

5.—Canadian Coin in Circulation, as at Dec. 31, 1958-67

NOTE.—The figures shown are of net issues of coin. Figures from 1901 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

¹ Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been issued since 1944.

The Royal Canadian Mint.—The Ottawa Mint, established as a branch of the Royal Mint under the (Imperial) Coinage Act of 1870, was opened on Jan. 2, 1908. On Dec. 1, 1931, it became the Royal Canadian Mint and operated as a branch of the Department of Finance. Under the provisions of the Government Organization Act, 1969, the Mint was established as a Crown (agency) corporation, reporting to Parliament through the Minister of Supply and Services. The latter change was designed to provide for a more industrial type of organization and for flexibility in producing coins of Canada and other countries; buying, selling, melting, assaying and refining gold and precious metals; and producing medals, plaques and other devices.

The Master of the Mint is its chief executive officer and one of a Board of seven Directors appointed by the Governor in Council. The Master of the Mint is appointed to hold office during pleasure, the Chairman of the Board is appointed for a term of four years subject to re-appointment, and the other five Directors for terms of one to three years.

Financial and budgeting arrangements are similar to those of other Crown companies carrying on industrial or commercial operations. Loans are made from the Consolidated Revenue Fund for operating and capital expenses, with the total outstanding at any time limited to \$35,000,000. Provision is made for loans for temporary purposes and a reserve is established against losses. Operations are conducted with the aim of making a small profit.

Subsection 3.—The Chartered Banks

Canada's commercial banking system consists of nine privately owned banks. Eight have been in operation for many years and one commenced operations in July 1968. At the end of December 1968, these banks operated 5,956 banking offices in Canada and 236 abroad. Canadian chartered banks engage in a very wide range of activities; they accept various types of deposits from the public including accounts payable on demand, both chequing and non-chequing, notice deposits and fixed-term deposits. The banks, in addition to holding a portfolio of securities, make loans under a wide variety of conditions for commercial, industrial, agricultural and consumer purposes. They also deal in foreign exchange, receive and pay out bank notes, provide safekeeping facilities and perform a variety of other services. For the most part, these operations are carried out in Canada by the extensive network of bank branches. The head offices of the banks confine their activities largely to general administration and policy-making functions, the management of the banks' investment portfolio and related matters. A detailed account of the branch banking system in Canada is given in the 1967 Year Book, pp. 1126-1128.

All banks operating in Canada are chartered (i.e., licensed) by Parliament under the terms of the Bank Act. The Act regulates certain internal aspects of bank operations such as the auditing of accounts, the issuing of stock, the setting aside of reserves and similar matters. In addition, the Bank Act regulates the banks' relationship with the public, the Government and the Bank of Canada.

It has been the practice in Canada to revise the Bank Act at approximately ten-year intervals. The most recent revision was enacted by Parliament early in 1967 and came into effect on May 1 of that year. The remainder of this subsection deals with the principal changes incorporated in the new Bank Act.

Acceptance by the Government of some of the main recommendations of the Royal Commission on Banking and Finance for increased competition and flexibility in the Canadian banking system was reflected in various new Bank Act provisions. These imposed certain restrictions on corporate and other relationships between banks and other financial

institutions, while removing certain existing restrictions on the banks' operations which had placed them at some competitive disadvantage in recent years compared with their principal financial competitors.

In the past, various forms of intercorporate financial relationship between chartered banks and other financial enterprises had developed in Canada. In some instances this involved investment by banks in the shares of these enterprises, and vice versa; in others the relationship involved interlocking directorships. These practices are severely restricted under the terms of the new Bank Act, which limits bank ownership of any Canadian corporation to 10 p.c. of the voting shares and also provides that no more than one fifth of the directors of any company may become directors of a bank. In addition, after a two-year period a director of a trust or mortgage loan company which accepts deposits from the public may not be appointed or elected a director of a bank. In order to ensure that competition is not curtailed by agreements among the banks on interest rates to be paid on deposits or charged for loans, the new Bank Act prohibits the making of such agreements (except with the consent of the Minister of Finance). At the same time the provision that was formerly in the Bank Act limiting to 6 p.c. the interest rate which chartered banks could charge on loans, was abolished effective Jan. 1, 1968. Under the new Bank Act, the determination of interest rates on loans and deposits is left to market forces.

The new Bank Act also granted the banks new mortgage-lending powers. Banks may now charge current rates of interest on mortgage loans under the National Housing Act, and they may also make conventional residential mortgage loans for the first time. In the case of conventional residential mortgages, the amount of an individual mortgage cannot exceed 75 p.c. of the appraised value of the property. After 1973 the maximum amount of a bank's assets to be held in the form of conventional residential mortgages must not be more than 10 p.c. of the bank's Canadian dollar deposit liabilities plus debentures. In the interval, the percentage limitation will rise by 1 p.c. each fiscal year; it was 4 p.c. until Oct. 31, 1968 when it rose to 5 p.c. for the subsequent fiscal year and will so continue until the 10-p.c. maximum is reached.

The banks have also been given authority to issue their own debentures with an original term to maturity of at least five years; such securities are not subject to a reserve requirement and rank in priority after deposit liabilities. The amount of debentures that any bank may have outstanding is limited by restricting the increase per annum to 10 p.c. of the paid-up capital and rest fund and an upper limit of one half of the bank's paid-up capital and rest fund.

The amendments to the Bank Act in 1967 contained a number of revisions respecting the ownership of Canadian chartered banks. No individual or associated shareholders may vote more than 10 p.c. of a bank's total shares outstanding and, if more than 25 p.c. of a bank's shares are owned by non-residents, the total outstanding liabilities of the bank may not exceed twenty times its authorized capital stock.

The Bank Act also stipulates the minimum statutory cash reserve requirement that the chartered banks must observe. The minimum amount of Bank of Canada notes and deposits each bank must hold as cash reserves was changed in a series of monthly steps from 8 p.c. of all Canadian dollar deposits under the old Bank Act to 12 p.c. of demand deposits and 4 p.c. of other deposits as of February 1968. In addition, the Bank of Canada has been given stand-by powers to require the banks to hold a "secondary reserve" which would consist of cash in excess of their statutory requirements, holdings of treasury bills and day-to-day loans to investment dealers. When initially introduced, this secondary reserve cannot exceed 6 p.c. of a bank's deposit liabilities. Thereafter it may be increased in monthly steps of 1 p.c. to a maximum of 12 p.c. The Bank of Canada may reduce or remove such a secondary reserve at any time. Effective April 1968, the required level was 7 p.c.

Branches of Chartered Banks.—Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of branch banking offices. As a result of amalgamations, the number of banks declined from

34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bank—The Mercantile Bank of Canada—in 1953 brought the total to 11. Since then the amalgamation in 1955 of the Bank of Toronto and the Dominion Bank as The Toronto-Dominion Bank, the amalgamation of Barclays Bank (Canada) with the Imperial Bank of Canada in 1956 and the amalgamation of the Canadian Bank of Commerce and the Imperial Bank of Canada as the Canadian Imperial Bank of Commerce on June 1, 1961 reduced this number to eight. The Bank of British Columbia was granted a charter by Parliament in December 1966 and commenced operations in July 1968, increasing the number of chartered banks to nine. The number of branches of chartered banks in each province periodically from 1920 to 1968 is given in Table 8.

12.—Canadian Cash Reserves, 1959-68

NOTE.—Bank of Canada deposits are averages of the juridical days in the month shown; Bank of Canada notes and Canadian dollar deposits are averages of the four consecutive Wednesdays ending with the second last Wednesday in the previous month. Until June 1967 the required cash reserve ratio was 8 p.c. on both demand and notice deposits. For the next eight months the required minimum monthly average on demand deposits was increased by $\frac{1}{4}$ of 1 p.c. per month and that on notice deposits was decreased by $\frac{1}{4}$ of 1 p.c. Since February 1968 the required ratios have been 12 p.c. for demand deposits and 4 p.c. for notice deposits as prescribed under the Bank Act.

¹ Excluding realized profits and losses on securities held in investment account which are included in the item "Loss experience not included in other operating expenses". ² Includes provision for losses based on five-year average loss experience which in 1968 amounted to \$30,500,000 or 16 p.c. of related loans, and also includes taxes other than income taxes. ³ Before provision for income taxes and appropriations for losses other than those included in "Other operating expenses". ⁴ General and tax-paid appropriations for losses: net after any transfers out of accumulated appropriations for losses to undivided profits or retest account.

Cheque Payments.—Historical data on a monthly basis are available from 1924 on the amount of cheques charged to customer accounts at all chartered bank offices in 35 major clearing house centres. The value of payments rose steadily throughout the country from 1924 until 1929. From 1929 to 1932 the value declined sharply and then fluctuated within rather narrow limits until the outbreak of the Second World War, after which it increased steadily and rapidly. The value of cheques cashed in 35 clearing centres during 1967 reached a high of \$568,122,322,000, an increase of 8.9 p.c. over 1966. All five economic areas contributed to the increase, payments in the Prairie Provinces rising 10.3 p.c., Ontario 9.6 p.c., the Atlantic Provinces 9.5 p.c., British Columbia 8.5 p.c. and Quebec 7.3 p.c. Payments in the two leading centres also reached all-time highs, Toronto advancing 9.0 p.c. and Montreal 6.7 p.c. over the previous year.

Subsection 4.—Other Banking Institutions

In addition to the savings departments of the chartered banks and of trust and loan companies, there are provincial government savings banking institutions in Ontario and Alberta, as well as two important savings banks in the Province of Quebec—the Montreal City and District Savings Bank and La Banque d'Économie de Québec—established under federal legislation and reporting monthly to the Department of Finance. Co-operative credit unions also encourage savings among low-income classes and extend small loans to their members.

Province of Ontario Savings Office.—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 Session and the first branches were opened in March 1922. Interest at the rate of 5 p.c. per annum (as of April 1968), compounded half-yearly, is paid on accounts and deposits are repayable on demand. Total deposits as of Mar. 31, 1968 were \$96,600,000 and the number of depositors was approximately 92,000; 21 branches are in operation throughout the province.

Province of Alberta Treasury Branches.—Savings deposits are accepted at 65 Treasury Branches throughout the province. The total of such deposits at Mar. 31, 1968 was \$113,841,404, of which \$62,281,286 was payable on demand bearing interest at 4½ p.c. per annum, \$33,647,650 was in term savings for terms of one to six years bearing interest at 5½ p.c. to 6½ p.c. per annum depending on the term, and \$17,912,468 was in term deposit receipts for terms of from 30 days to 365 days bearing interest at rates comparable to those paid on the open market.

Province of Quebec Savings Banks.—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871, had, at Oct. 31, 1968, a paid-up capital and reserve of \$18,500,000, savings deposits of \$449,089,389, and total liabilities of \$483,452,234. Assets of a like amount included \$144,013,064 of federal, provincial, municipal and other securities.

La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by SC 1871, c. 7

had, at Oct. 31, 1968, savings deposits of \$60,885,354 and a paid-up capital and reserve of \$3,500,000. Total liabilities amounted to \$67,682,157 and total assets to a like amount.

Credit Unions.—The first credit union in Canada was founded in Lévis, Que., in 1900, its purposes being to promote thrift by encouraging saving and to provide loans to members who could not get credit elsewhere or could get it only at high interest rates. For many years growth was slow; in 1911, when the first figures were available, assets amounted to \$2,000,000 and by 1940 they were only \$20,000,000. However, since that time there has been a spectacular increase. Assets of the Quebec credit unions amounted to over \$1,000,000,000 at the end of 1964 and to over \$1,800,000,000 at the end of 1967. In other provinces, credit unions have not attained the same importance as they have in Quebec; the first credit union legislation was passed in Nova Scotia in 1932 followed by legislation in Manitoba and Saskatchewan in 1937 and in Ontario and British Columbia in 1938.

Credit unions are under provincial legislation, with almost all local offices in each province belonging to provincial central credit unions, either directly or through regional unions. There is a considerable difference between Quebec and the other provinces in the asset holding of credit unions; Quebec unions have a large proportion of their investments in the form of mortgages and government bonds while unions in the other provinces have a greater percentage in loans. Credit unions probably play their most important role in smaller communities where they may function to a large extent as local banks. The number of chartered credit unions in Canada at the end of 1967 was 4,911 of which 4,404 reported a total membership of 4,281,000 and assets of \$3,367,732,000. Quebec, with 2,418,339 members and assets of \$1,822,632,000, accounted for 54 p.c. of both total membership and total assets of all credit unions in Canada. Credit unions classified by bond of association on a percentage basis were: occupational 28, residential 58 and associational 14.

Canadian credit unions in the 1958-67 decade have continued the steady growth generally in evidence since credit unions were first organized in Quebec in the early part of the present century. Loans granted by credit unions increased by 8 p.c. in 1967 to reach \$1,323,076,000, being a 238-p.c. increase over the corresponding figure of \$391,000,000 in 1958. Assets at \$3,367,732,000 increased by 234 p.c. and savings at \$3,048,000,000 increased by 226 p.c. in the same comparison. Membership of 4,280,000 represented 21 p.c. of the total population, compared with 2,187,000 and 12.7 p.c., respectively, in 1958.

There were 28 central credit unions in 1967; these unions act as credit unions for the credit unions, mainly by accepting deposits of surplus funds from them and providing a source of funds for them to borrow when they cannot meet the demand for local loans. Most of the centrals also admit co-operatives as members. Total assets of the centrals increased by 13 p.c. to \$460,000,000 and loans to members increased 21 p.c. to \$329,000,000 over the previous year. The Canadian Co-operative Credit Society serves as a central credit union for the provincial centrals and large co-operatives all across Canada.

Section 2.—Other Commercial Finance

Subsection 1.—Trust and Mortgage Loan Companies

Trust and mortgage loan companies are registered with either the federal or provincial governments. They operate under the Loan and Trust Companies Acts (RSC 1952, c. 170 as amended in 1953, 1958, 1961 and 1964-65, and RSC 1952, c. 272 as amended in 1953, 1958, 1961 and 1964-65, respectively) or under corresponding provincial legislation.

The first mortgage loan companies were established in Ontario in the 1840s as co-operative associations to provide mortgage finance for their members. These associations evolved under legislation which was amended to give them permanent corporate status as mortgage-lending institutions. They obtained their funds principally by selling medium- and long-term debentures to the public but also had the power to open deposit accounts. Trust companies were first incorporated in Ontario in the 1880s. Although the trust company legislation prevented them from borrowing funds, they had the power to accept funds in guaranteed trust accounts and invest them in specified types of assets. This feature of trust company legislation is now general throughout Canada. The trust companies operate as financial intermediaries in the same way as mortgage loan companies, chartered banks or savings and other financial institutions and are the only corporations in Canada with power to act as trustees for property interests and to conduct other fiduciary business. In this capacity they act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents in the management of estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies, as transfer agents and registrars for stock and bond issues, as trustees for bond issues and, where so appointed, as authorized trustees in bankruptcies.

Trust and mortgage loan companies were established and grew rapidly under provincial legislation in the late nineteenth and early twentieth centuries. Some companies were chartered by special Acts of Parliament but it was not until 1914 that federal legislation was passed and the Federal Government began to regulate trust and loan companies registered under its Acts. In 1967 there were nine federal trust companies and 12 federal loan companies. The Superintendent of Insurance examines these companies and also, by arrangement with the provinces, trust and loan companies incorporated in Nova Scotia and trust companies incorporated in New Brunswick and Manitoba. Companies must be licensed by each province in which they wish to operate.

Although there are many differences among the various federal and provincial Acts, the broad lines of the legislation are common. In their intermediary business the companies have the powers mentioned above to borrow or, in the case of trust companies, accept funds in guaranteed accounts subject to maximum permitted ratios of these funds to shareholders' equity. The funds may be invested in specified assets which include first mortgages on real property, government securities and the bonds and equity of corporations having established earnings records and the companies may grant loans on the security of such bonds and stocks. Trust and loan companies are not required to hold specified cash reserves, as are the chartered and savings banks, but there are broadly defined "liquid asset" requirements in a number of the Acts.

The trust and mortgage loan companies have been substantial members of the Canadian financial system since their early years. In the 1920s they held about one half of the private mortgage business in Canada but their growth rate fell off sharply because of the impact of the depression of the 1930s and World War II on the mortgage business. In the years since the War the re-emergence of strong demands for mortgage financing and the willingness of many trust and loan companies to compete aggressively for funds have led to sustained rapid expansion.

According to DBS figures, mortgage loan companies had assets before investment in subsidiaries of \$2,762,364,000 at the end of 1968 compared with \$2,564,752,000 a year earlier. Their holdings of mortgages amounted to \$2,235,116,000 or 81 p.c. of total assets. To finance their investments, these companies had borrowed \$1,780,089,000 or 64 p.c. of their total funds by the sale of debentures and \$449,544,000 from deposit accounts.

At the end of 1968, company and guaranteed funds of trust companies in the DBS survey were \$4,971,582,000 compared with \$4,352,864,000 a year earlier, an increase of 14 p.c. Trust companies, while not specializing in mortgage financing to the same extent as loan companies, in recent years have been putting a high proportion of their funds into these investments with the result that mortgages were 55 p.c. of their assets at the end of 1968 compared with 48 p.c. five years earlier. The trust companies had \$3,207,119,000 of term certificates outstanding and \$1,223,976,000 deposit accounts in December 1968, accounting for 89 p.c. of total funds. About one half of the demand or savings deposits were in chequeable accounts. There is considerable variety among the trust companies and a few have developed a substantial short-term business, raising funds by issuing certificates for terms as short as thirty days and also operating as lenders in the money market. Nevertheless, it remains true that the main business of the trust companies in their intermediary role, as of the mortgage loan companies, is to channel savings into mortgages and other long-term investments. In addition, trust companies, as of Dec. 31, 1967, had \$14,386,000,000 under administration in estate, trust and agency accounts.

More complete and up-to-date financial information may be found in quarterly balance sheet statements published by the DBS and the Bank of Canada, the reports of the Superintendent of Insurance on Loan and Trust Companies and the reports of provincial supervisory authorities.

Subsection 2.—Licensed Small Loans Companies and Licensed Money-Lenders*

Small loans companies and money-lenders are subject to the Small Loans Act (RSC 1952, c. 251, as amended by SC 1956, c. 46). This Act, first passed in 1939, sets maximum charges on personal cash loans not in excess of \$1,500 and is administered by the Department of Insurance. Lenders not licensed under the Act may not charge more than 1 p.c. per month. Those wishing to make small loans at higher rates must be licensed each year by the Minister of Finance under the Small Loans Act. The Act allows maximum rates, including charges of every kind, of 2 p.c. per month on unpaid balances not exceeding \$300, 1 p.c. per month on the portion of unpaid balances exceeding \$300 but not exceeding \$1,000 and one half of 1 p.c. on any remainder of the balance exceeding \$1,000. Loans in excess of \$1,500 are not regulated and lenders operating entirely above this limit and the larger loans of licensed lenders are thus exempt from the Act. Nor does the Act regulate charges for the instalment financing of sales. Prior to Jan. 1, 1957, the Act applied only to loans of \$500 or less and the maximum rate was 2 p.c. per month.

At the end of 1967, there were five small loans companies and 71 money-lenders licensed under the Act. Small loans companies are incorporated by special Acts of the Parliament of Canada, the first of them commencing business in 1928; the money-lenders include provincially incorporated companies and a few partnerships and individuals. Many of the small loans companies and money-lenders are affiliated with other financial institutions, principally Canadian sales finance companies and United States finance or loan companies, and these subsidiary companies account for a high proportion of the total business of licensed lenders. The affiliations with sales finance companies reflect the close relation-

* Prepared by the Research Department of the Bank of Canada in co-operation with the Superintendent of Insurance for Canada.

ship between instalment financing and the consumer loan business. The Dominion Bureau of Statistics publishes quarterly balance sheets for sales finance and consumer loan companies as a whole and does not attempt to distinguish the two groups within the industry.*

The subsidiary small loans companies and money-lenders obtain most of their funds through their parent companies. A few of the larger companies have supplemented their bank loans by selling short-term paper in the market but the amount has been small compared with the short-term market borrowing of the sales finance companies. The smaller independent companies rely mainly on their shareholders and on borrowing from the chartered banks.

The annual figures of assets and liabilities given in Table 24 for 1964-67 are from the Department of Insurance report.*

24.—Assets and Liabilities of Small Loans Companies and Money-Lenders, 1964-67

Assets and Liabilities	1964	1965	1966	1967

Earned surplus	37,671,201	38,817,315	46,246,460	54,631,858
Other	45,079,198	54,853,220	66,802,483	79,740,140

There was little change in 1967 compared with 1966 in the amount of small loans business done by the combined companies. Small loans made to the public during the year numbered 1,470,272 as against 1,493,212 in 1966, a drop of about 1.5 p.c.; the amount of such loans increased from \$873,508,887 to \$877,197,604, about 0.4 p.c. The average small loan made was about \$597 in 1967 and \$585 in 1966. At the end of the year, small loans outstanding numbered 1,253,764 for an amount of \$635,822,356, or an average of \$507 per loan; comparable figures for 1966 were 1,287,748, \$647,887,121 and \$503, respectively.

Gross profits of small loans companies and money-lenders before income taxes and before taking into account any increase or decrease in reserves for bad debts increased from \$32,695,170 in 1966 (\$17,588,584 being the profit on small loans and \$15,106,586 the profit on business other than small loans) to \$34,767,811 in 1967 (\$15,493,481 being the profit on small loans and \$19,274,330 the profit on other business).

Subsection 3.—Foreign Exchange

The dollar, established officially as the currency of the united provinces of Canada on Jan. 1, 1858, and extended to cover the New Dominion by the Uniform Currency Act of 1870, was defined as 15/73 of the British gold sovereign.† That is, the par rate of exchange between the dollar and the pound sterling was fixed at \$4.866, making the Cana-

* See *Business Financial Statistics* (Catalogue No. 61-006). More complete data on the business of licensed lenders are given in the *Report of the Superintendent of Insurance for Canada on Small Loans Companies and Money-Lenders* for the year ended Dec. 31, 1967 (Catalogue No. In 3-4/1967).

† The gold sovereign remained the standard for the Canadian dollar until 1910 when the currency was defined in terms of fine gold, making it the exact gold equivalent of the United States dollar. Both British and United States gold coins were, however, legal tender in Canada for this whole period.

dian currency the equivalent of the United States dollar at parity. With minor variations between the import and export gold points representing the cost of shipping gold in either direction, the value of the pound sterling in Canada remained at this level until the outbreak of World War I. The United States dollar, on the other hand, was at a discount in terms of Canadian funds for the first eleven years after Confederation since it was not redeemable in gold from February 1862 to January 1879. On the basis of gold equivalents it would appear that the greatest monthly average discount on the United States dollar after Confederation was approximately 31 p.c., reached in August 1868. From 1879 to 1914 the dollars of the two countries remained at par, varying only within the gold points or under \$2 per thousand.

On the outbreak of World War I, Canada and Britain suspended the gold standard. For some weeks both the pound and the Canadian dollar rose to a premium in New York. Subsequently both fell back with the pound going to a slight discount. In January 1916 the pound was officially pegged at \$4.76 in American funds. This level was maintained with the help of funds realized by sales of United States securities owned by residents of Britain, by borrowing in the United States and, after the American entry into the War, by the United States Government financing Allied purchases in that country.

From 1915 to the end of 1917, fluctuations in the rate of exchange between the Canadian and United States dollars did not exceed 2 p.c. on either side of parity; the pound was stable in terms of United States dollars during this period. In 1918 the Canadian dollar began to weaken. After the pound was unpegged in 1919, the Canadian dollar declined further and in 1920 it fell to 82 cents in New York with sterling going as low as \$3.18.

By the latter half of 1922 the Canadian dollar had returned practically to par in New York. Despite some further weakness in sterling, the dollar remained close to that level during the next two years, averaging 98.04 and 98.73 cents in terms of the United States dollar in 1923 and 1924, respectively, and fluctuating between a discount of about 3.6 cents and a premium of approximately 0.4 cents. After Britain resumed gold payments in April 1925, the range of fluctuation of the Canadian dollar narrowed further. From Canada's return to the gold standard in the period July 1, 1926 to January 1929, the exchange rate remained within the gold points. The Canadian dollar then went to a slight discount in New York. With the exception of the period July to November 1930, when it went to a small premium in New York, the dollar remained below parity until Britain abandoned the gold standard in September 1931. After that month the pound sterling depreciated sharply and the Canadian dollar followed, reaching lows* in New York of 80.5 cents in December 1931 and 82.6 cents in April 1933.

Following the prohibition of gold exports in the latter month by the United States, the pound and the Canadian dollar strengthened rapidly in terms of American funds. By November 1933 both currencies had reached a premium in New York. Meanwhile, in a series of steps beginning with permitting the export of newly mined gold in August 1933, the United States moved toward resumption of the gold standard. As of Feb. 1, 1934, the United States Treasury undertook to buy all gold offered at \$35 per ounce. After that the exchange rate between the Canadian and United States dollars stabilized. Until the outbreak of war in 1939 much of the trading was conducted within one cent of parity although the Canadian dollar in New York did go as high as 103.6 cents (September 1934) and as low as 98.0 cents (September 1938).*

On the outbreak of World War II in September 1939, Britain and other sterling countries introduced foreign exchange control involving fixed buying and selling rates of \$4.02½ and \$4.03½, respectively, in terms of the United States dollar. The Canadian dollar in New York declined until Sept. 16, 1939, when the Government instituted foreign exchange control† in Canada and established fixed buying and selling rates of \$1.10 to \$1.11 for the

* Noon quotations. Daily highs and lows may have exceeded these rates.

† The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in the 1941 to 1952-53 editions of the Year Book.

U.S. dollar and \$4.43 to \$4.47 for sterling. As compared with previous months, the depreciation of the Canadian dollar in terms of United States funds was approximately half as great as that of the pound sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to \$1.10½ and \$4.45, respectively, the official rates for the Canadian dollar remained unchanged until July 5, 1946. At that time the rate on the U.S. dollar was restored to par, with buying and selling rates for that currency of \$1.00 to \$1.00½ and for sterling \$4.02 to \$4.04. These rates continued in effect until Sept. 19, 1949 when, following a 30.5-p.c. reduction by Britain in the value of sterling to \$2.80 U.S. (an action which was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of \$1.10 and \$1.10½ for United States funds. Sterling was quoted at \$3.07¼ and \$3.08¼ on the basis of the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates which had been in effect at varying levels since 1939 would be withdrawn effective Oct. 2, and that the rate would henceforth be determined in the market for foreign exchange. This policy was carried out within the framework of exchange control until Dec. 14, 1951, at which time the Foreign Exchange Control regulations were revoked by the Governor in Council, terminating the period of exchange control that had prevailed in Canada since 1939. The Foreign Exchange Control Act was repealed in 1952. On May 2, 1962, the Minister of Finance announced that the Canadian dollar was being stabilized at a fixed par value of 92½ cents in terms of United States currency. This action was taken with the concurrence of the International Monetary Fund and, in accordance with the Articles of Agreement of that organization, the Government of Canada undertook to maintain the Canadian exchange rate within a margin of 1 p.c. on either side of the established par value. The movements of the U.S. dollar in Canadian funds from January 1959 to December 1968 are shown in Table 25.

¹ On Oct. 1, 1959, \$62,500,000 representing the gold portion of Canada's increased quota was transferred to the International Monetary Fund.

² Includes the proceeds of a drawing equivalent to U.S. \$300,000,000 which was made from the International Monetary Fund in June 1962 and which was outstanding at year-end. The amount of Canada's net obligation to the International Monetary Fund was \$275,700,000 at Dec. 31, 1962 and \$196,000,000 at Dec. 31, 1963.

³ Canada's net creditor position with the International Monetary Fund was \$60,000,000 at Dec. 31, 1964, \$215,900,000 at Dec. 31, 1965, \$263,500,000 at Dec. 31, 1966, \$248,300,000 at Dec. 31, 1967 and \$21,200,000 at Dec. 31, 1968.

Subsection 4.—The Bond Market

Sales of Canadian Bonds.—Canadian borrowers, government and corporate, raised a net total of \$4,337,000,000 on the bond market in 1967. This is the largest amount in the five-year period shown in Table 27. Both national savings and business gross fixed capital formation showed little change from the level attained in 1966. A decrease in the value of physical change in inventories was balanced by the improvement in the current account with non-residents. Government deficits, and investment outlays of business greatly in excess of savings from retained earnings and depreciation, necessitated recourse to the bond market.

Increased expenditures of governments, including capital outlays, almost doubled the size of the combined deficit on a national accounts basis from that incurred by the sector in the previous year, exclusive of the transactions of the Canada Pension Plan and the Quebec Pension Plan. Excess funds from these pension plans were made available to the provinces through the Canada Pension Plan Investment Fund and the Quebec Deposit and Investment Fund. CPP series bonds purchased by the former fund in 1967 amounted to \$669,000,000, while the Quebec agency increased its investment portfolio by about \$164,000,000, mostly in bonds of the Province of Quebec, out of deposits of the Quebec Pension Plan. Rising capital investment projects of government business enterprises and higher provincial lending for industrial development, residential construction and farm credit necessitated additional borrowings, as did the assumption by some provinces of the financing of municipal activities.

The Government of Canada increased its bonds outstanding in 1967 by 4 p.c. or approximately \$300,000,000 each of treasury bills, marketable bonds and non-marketable bonds. Business borrowings were made mostly for capital investment, although holdings of liquid assets were also increased.

The trend toward higher interest rates continued from the spring of 1967. The long-term average yield on Government of Canada direct and guaranteed securities rose from 5.40 p.c. to 5.76 p.c. over the year. Short-term money market rates also rose but, since most of the rise took place in the last quarter, for most of 1967 there was a larger differential between short-term and long-term rates than had existed in 1966.

There was a net retirement of \$9,000,000 in finance and loan company short-term paper, while other short-term commercial paper increased by \$50,000,000. These changes compare with increases in 1966 of \$93,000,000 and \$31,000,000, respectively. Bank loans to business increased in 1967 as did net issues of corporate preferred and common stocks.

Bonds Outstanding.—Total government and business bonds outstanding at the end of 1967 amounted to \$56,449,000,000, an increase of 8 p.c. over 1966 and of 29 p.c. since 1963. In the 1963-67 period, the largest increase was one of 52 p.c. in the bonded debt of provincial governments. This increase includes issues held in the Canada Pension Plan Investment Fund and the Quebec Deposit and Investment Fund since the inception of the plans in 1966. Corporate bonds outstanding increased by 47 p.c. and municipal government bonds by 37 p.c. between 1963 and 1967. Except for institutional bonds, the rate of increase accelerated in the latter year.

27.—Canadian Bonds Outstanding as at Dec. 31, 1963-67, and Annual Changes in Bonds and in Short-Term Paper Outstanding

NOTE.—Federal, provincial and municipal bonds include direct and guaranteed issues; institutional bonds exclude bonds payable in Canadian dollars of the International Bank for Reconstruction and Development and certain foreign governments, amounting to \$63,000,000, \$65,000,000, \$84,000,000, \$102,000,000 and \$120,000,000 in the years 1963-67, respectively. Distribution of Bond Holdings.—Table 28 shows the estimated distribution as at Dec. 31, 1967 of government and corporate bonds among the major purchasers of securities. Governments and the financial institutions specified in the table held one half of the total; of the remainder, non-residents held 19 p.c. and all other residents held 30 p.c. Of the 30 p.c., however, 11 p.c. was made up of holdings by persons of Canada Savings Bonds. The largest identified holders of bonds were chartered banks with 10 p.c. of the total, life insurance companies with 9 p.c. and trustee pension plans with 8 p.c.

28.—Estimated Distribution of Bond Holdings, as at Dec. 31, 1967

NOTE.—Federal, provincial and municipal bonds include direct and guaranteed issues; "other" bonds include bonds of religious and other institutions; and a small amount of foreign bonds payable in Canadian dollars; short-term commercial borrowing is excluded. ¹ Held by the Canada Pension Plan Investment Fund.

² Includes Canada Savings Bonds of \$6,319,000,000. Corporations and other businesses, churches, charities and other associations were made eligible to purchase Canada Savings Bonds for the first time with the 1967-68 series.

PART II.—INSURANCE*

Section 1.—Life Insurance

Life insurance in force in Canada with companies registered by the Federal Government (exclusive of fraternal benefit societies) amounted to \$84,805,000,000 at the end of 1967, an increase of \$7,981,000,000 during the year. The ratio of gain in business in force, expressed as a percentage of the amount in force at the beginning of the same year, was 10.4 p.c. in 1967.

Subsection 2.—Operational Statistics for Life Insurance Transacted in Canada by Companies under Federal Registration

The amount of life insurance in force in Canada has shown an almost continuous advance year by year since the beginning of the record in 1869. The amount per capita of the estimated population has more than doubled since 1955.

The operations analysed in the tables of this Subsection, with the exception of Table 6, include only those of companies under federal registration and are exclusive of fraternal organizations and provincial licensees. However, companies under federal registration account for over 93 p.c. of the life insurance in force in Canada.

2.—Life Insurance Effected and in Force in Canada by Companies under Federal Registration, Decennially 1880-1960 and Annually 1961-67

NOTE.—Figures for 1880-1900 are given in the 1938 Year Book, p. 958; for 1901-39 in the 1942 edition, p. 855; for 1940-54 in the 1957-58 edition, p. 1168; and for 1955-59 in the 1967 edition, p. 1147. Statistics of fraternal society insurance, excluded here, are given at pp. 1175-1177.

Subsection 3.—Finances of Companies Transacting Life Insurance under Federal Registration

The financial statistics in Tables 7 and 8 relate only to life insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising outside of Canada as well as in Canada.

7.—Total Assets and Liabilities for Life Insurance of Canadian Companies under Federal Registration and Assets and Liabilities in Canada for Life Insurance of British and Foreign Companies under Federal Registration, 1965-67.

¹ Includes amounts written off shares purchased under mutualization plan.

Subsection 4.—Life Insurance in Canada Transacted by Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 9 gives statistics of life insurance in Canada transacted by fraternal benefit societies and Table 10 shows statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of

Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The first sections of Tables 9 and 10 relate to the Canadian societies registered by the federal Department of Insurance; there were 14 such societies at the end of 1967.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, although forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not been licensed previously by the provinces have since obtained federal authority to transact business. At the end of 1967 there were 34 foreign fraternal benefit societies federally registered to transact business in Canada, although two of these do not grant life insurance benefits.

**Subsection 5.—Life Insurance Effectuated and in Force Outside Canada by
Canadian Companies under Federal Registration**

In this Subsection, there are given for the years 1966 and 1967 summary statistics of insurance effectuated and insurance in force at the end of the year in currencies other than Canadian dollars, as written by Canadian companies under federal registration. The data given are in terms of Canadian dollars, the conversions from the various foreign currencies having been made at the book rates of exchange used by the various companies.

Canadian life insurance companies operating under federal registration at Dec. 31, 1967 had life insurance in force amounting to \$23,636,407,827 in countries outside Canada. Insurance in force in currencies other than Canadian dollars amounted to \$23,589,055,263; the difference between these figures is presumably the net amount of business in countries outside Canada transacted in Canadian currency. The business in force in Canada of Canadian companies registered by the Federal Government amounted to \$58,444,750,160

at Dec. 31, 1967, and the total business on the books of these companies, in and out of Canada, amounted to \$82,081,157,987. Thus, over 28 p.c. of the total business in force for Canadian companies registered by the Federal Government was in force in countries outside Canada. In connection with their business outside Canada, the Canadian life insurance companies registered by the Federal Government held, at the end of 1967, Commonwealth and foreign investments in the amount of \$4,140,410,815.

Approximately 73 p.c. of all business in force in currencies other than Canadian is in United States currency and 16 p.c. is in sterling. From a slightly different point of view, approximately 20 p.c. of this business in force is in currencies of Commonwealth countries other than Canada, and 80 p.c. in currencies of foreign countries.

11.—Life Insurance Effectuated and in Force for Canadian Companies (excluding Fraternal Societies) under Federal Registration, in Currencies other than Canadian Dollars, by Currency, 1966 and 1967.

Section 2.—Fire and Casualty Insurance

At the end of 1967 there were 253 companies registered by the Federal Government to transact fire insurance in Canada (83 Canadian, 62 British and 108 foreign). Of these companies, 245 (78 Canadian, 60 British and 107 foreign) were also registered to transact casualty insurance. In addition, 112 companies were registered by the Federal Government to transact casualty insurance but not fire insurance (30 Canadian, 7 British and 75 foreign). Of the companies registered to transact fire and/or casualty insurance, 88 were also registered to transact life insurance; 14 of these were registered for fire, life and casualty insurance and 74 for life and casualty but not fire insurance. It should be noted also that, in addition to the companies registered by the Federal Government to transact casualty insurance, there were 30 registered fraternal benefit societies transacting accident and sickness insurance, of which 28 also transacted life insurance.

The operations analysed in the tables of this Section, with the exception of Table 12, include only those companies under federal registration. As shown in Table 12, some fire and casualty insurance is transacted in Canada by companies that are provincially licensed only. These companies generally confine their operations to the province of incorporation and many of them are mutual organizations transacting only fire insurance on a county, municipal or parish basis. The table relates to insurance companies only; no data are included for fraternal benefit societies.

Subsection 2.—Fire Losses

The information in Tables 15 to 17, which deals with the loss of property and life caused by fire, has been summarized from the annual report *Fire Losses in Canada* prepared by the Dominion Fire Commissioner, Department of Public Works. Federal losses, not included in these figures, in 1966 amounted to \$5,894,495 from 1,642 fires; average federal losses for the period 1957-66 amounted to \$4,381,311 from an annual average of 2,033 fires.

15.—Statistics of Fire Losses, 1957-66

(Excludes forest fires and Federal Government property losses)

Subsection 4.—Finances of Companies Transacting Fire and Casualty Insurance under Federal Registration

The financial statistics of Tables 19 and 20 relate to fire and casualty insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.

19.—Total Assets and Liabilities for Fire and Casualty Insurance of Canadian Companies and Assets and Liabilities in Canada for Fire and Casualty Insurance of British and Foreign Companies under Federal Registration, 1965-67.

Section 3.—Government Insurance

Federal Government Insurance

In recent years, various insurance schemes have been adopted by the Federal Government or undertaken co-operatively by the federal and provincial governments. Information on unemployment insurance, hospital insurance, veterans insurance, export credits insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Deposit Insurance.—During 1967, deposit insurance became available through the formation, by SC 1967, c. 71, of the Canada Deposit Insurance Corporation. The Corporation was established to provide, for the benefit of persons having deposits with a member of the Corporation, insurance against the loss of deposits up to a maximum of \$20,000 for any one depositor.

Membership in the Deposit Insurance Corporation is obligatory for chartered banks, Quebec savings banks and those federally incorporated loan and trust companies that accept deposits from the public. Provincially incorporated loan and trust companies that accept deposits from the public are eligible to apply for membership if they have the consent of the province of incorporation.

The definition of deposits, as set out in the general by-law of the Corporation, might be summarized as money received by a member institution that is repayable on demand or notice and money that is repayable on a fixed date not more than five years after the date on which the money is received. Deposits not payable in Canada or in Canadian currency are not insured.

Provincial Government Insurance

Saskatchewan.—The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act, 1944, commenced business in May 1945. It deals in all types of insurance other than sickness and life. The aim of the legislation is to provide residents of the province with low-cost insurance designed for their particular needs. Rates are based on loss experience in Saskatchewan only and the surplus is invested, to the extent possible, within the province. Premium income for 1967 amounted to \$13,110,939 and earned surplus to \$726,034. The total amount made available to the Government Finance Office of the Province of Saskatchewan from 1945 to Dec. 31, 1967 was \$6,870,598. Assets at the latter date were \$30,723,065, of which \$15,400,000 was invested in bonds and debentures issued by the Province of Saskatchewan and by Saskatchewan schools, municipalities and hospitals. Independent insurance agents numbering 616 sell government insurance throughout the province.

The Automobile Accident Insurance Act, administered by the Saskatchewan Government Insurance Office on behalf of the provincial government, provides a comprehensive automobile accident insurance plan for the protection of the public in this province. Premiums paid by motorists create a fund from which benefits are paid in the event of death, injuries and damages sustained in automobile accidents. Any surplus over payments is used to increase benefits, reduce premiums, or absorb deficits in periods of high accident frequency. The surplus is not transferable to the general operations of the Saskatchewan Government Insurance Office, nor is any surplus credited to the provincial government. The plan provides for public liability insurance, with an inclusive limit of \$35,000 for bodily injury and property damage, as well as comprehensive and collision coverage subject to a \$200 deductible for private passenger cars. Rates vary from \$5 a year for older farm trucks to \$74 for late-model private passenger cars, and also vary for other types of motor vehicles depending on size and usage. From the inception of the Act in 1946 to Dec. 31, 1967, more than \$127,000,000 was paid in claims.

The Saskatchewan Government Insurance Office, under contract with the Saskatchewan Department of Natural Resources, offers insurance to farmers covering damage to unharvested crops by certain wildlife such as ducks, geese, sandhill cranes, deer, elk, bear and antelope.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from the Office Librarian, Saskatchewan Government Insurance Office, Regina, Sask.

Alberta.—Provincial government insurance in Alberta, coming within the purview of the Alberta Insurance Act, relates (1) to the Alberta General Insurance Company, in which the entire business of the fire branch of the Alberta Government Insurance Office was vested by the Legislature on Mar. 31, 1948, and (2) to the Life Insurance Company of Alberta, which was constituted on the same date to take over the life branch of the Alberta Government Insurance Office. Each company is administered by a separate board of directors. The Lieutenant-Governor in Council appoints the members to the respective boards but the charter of the Life Insurance Company of Alberta provides for the election of two policyholder directors. Although both companies are Crown corporations, they are not entitled to the usual immunities of the Crown, since they may sue and be sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding to insurance but the nature of the enabling legislation governing these plans emphasizes the fact that they do not constitute insurance. Because such exemptions are specifically provided by the insurance laws of the province, reference to these plans is necessary only to make it clear that they do not come within the scope of the Alberta Insurance Act. It should be noted that the Alberta Hail Insurance Act is administered by the Provincial Treasurer but none of the provisions of the Alberta Insurance Act apply to the Alberta Hail Insurance Board.

Further information on provincial insurance matters may be obtained from the Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

CHAPTER XXVI.—DEFENCE

CONSPECTUS

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

PART I.—THE CANADIAN FORCES AND DEFENCE RESEARCH*

Section 1.—The Department of National Defence

The control and management of all matters relating to national defence, the Canadian Armed Forces and the Defence Research Board are the responsibility of the Minister of National Defence; the duties and functions relating to civil emergency operations in peace and war have also been assigned to the Department of National Defence, with the Canadian Forces undertaking the role.

The Canadian Forces Reorganization Act, which came into force on Feb. 1, 1968, "unified" the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force into a single service called the Canadian Armed Forces.

Effective Aug. 1, 1964, the Headquarters of the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force were integrated to form a single Canadian Forces Headquarters (CFHQ) under a single Chief of Defence Staff. The role of CFHQ is to provide military advice to the Minister of National Defence and to control and administer the Canadian Forces. CFHQ is organized into four functional Branches headed by the Vice Chief of Defence Staff, the Chief of Personnel, the Chief of Technical Services and the Comptroller General, who are responsible for advising and supporting the Chief of Defence Staff in matters relating to their assigned spheres of activity. The Defence Research Board conducts research relating to the defence of Canada and also undertakes the development of or improvements in materiel.

The civilian administration of the Department is organized under the Deputy Minister and is constituted on a functional basis. The Deputy Minister, assisted by an Associate Deputy Minister, maintains a continuing review and control over the financial aspects of operational policy, logistics, and personnel and administration. Each of three Assistant Deputy Ministers administers a division of the Deputy Minister's Branch responsible for personnel, logistics and finance. Also responsible to the Deputy Minister are the Judge Advocate General, the Departmental Secretary and the Director General of Information Services.

*Prepared by the Directorate of Information Services, Department of National Defence, Ottawa.

The Defence Council meets at regular intervals to consider and advise on major policy matters. The Council consists of: the Minister of National Defence as Chairman; the Parliamentary Secretary to the Minister of National Defence; the Deputy Minister of National Defence, the Chief of Defence Staff, the Chairman of the Defence Research Board and the Vice Chief of Defence Staff as members; and a Secretary. The Branch Chiefs at CFIHQ and the Vice Chairman of the Defence Research Board are associate members.

Liaison in Other Countries

The Chief of Defence Staff, who is the Canadian military representative to the North Atlantic Treaty Organization, is responsible for advice on all NATO military matters and acts as a military adviser to the Government and to Canadian delegations to NATO.* For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains: (1) the Canadian Defence Liaison Staff London, representing the Canadian Armed Forces and the Defence Research Board in Britain, the Commander of which is the principal military adviser to the Canadian High Commissioner in London; (2) the Canadian Defence Liaison Staff Washington, representing the Canadian Armed Forces and the Defence Research Board in the United States, the Commander of which is the principal military adviser to the Canadian Ambassador in Washington, and is the Canadian National Liaison Representative to the Supreme Commander, Allied Command Atlantic (SACLANT) Headquarters; (3) in Brussels, a Canadian member of the NATO Military Committee in Permanent Session, a Military Adviser to the Canadian Permanent Representative to the North Atlantic Council and also a Canadian National Military Representative to SHAPE; and (4) Canadian Forces Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence, which provides advice on such matters to the respective governments.

Rates of Pay Issuable to Canadian Forces

The entire pay structure for comparable ranks in the former three services is on a uniform basis. Tables 1 and 2 contain the monthly rates of pay for officers and men, respectively, effective Oct. 1, 1968.

* Canada's contributions to NATO are outlined on p. 143.

¹ Incentive pay increases at rates that vary with length of service may be granted to a man when he has met pre-determined standards. ² Rate 5(B) applies to Corporals who are appointed to specific establishment positions that entail additional responsibility.

Allowances Issuable to Canadian Forces.—The following are the most common entitlements, aside from pay, for members of the regular Forces. Other entitlements related to special duties and to the Reserve Forces are not shown.

Aircrew Allowance.—Aircrew allowance in varying amounts may be paid to a member of aircrew, or an officer or man undergoing flying training to become a pilot, navigator or other member of aircrew if he is not already receiving the special rate of pay applicable to pilots or navigators.

Outfit Allowance and Clothing Upkeep Allowance.—Officers receive a single payment of \$150 on appointment and Chief Warrant Officers receive \$270. Men receive a free issue of clothing on joining and thereafter a monthly clothing upkeep allowance of \$7; Navy

Warrant Officers receive \$8. Women receive a free issue of clothing on joining with an underclothing allowance of \$15, and thereafter a monthly clothing allowance of \$8.

Foreign Allowances.—Officers and men posted for duty to a country outside of Canada are entitled to allowances to compensate for additional living expenses or hardships incurred; these vary with rank, appointment and location.

Isolation Allowance.—Isolation allowance, at rates which depend on the specific location, is paid to personnel serving at isolated posts in Canada.

Submarine Allowance.—An officer or man undergoing submarine training or filling an appointment in a submarine receives from \$45 to \$115 a month, depending on rank.

Parachutist Allowance.—An officer or man undergoing parachutist training or filling a designated position requiring parachute jumping and not entitled to Air Duty Allowance is paid Parachutist Allowance at the rate of \$60 a month.

Air Duty Allowance.—An officer or man, not entitled to Aircrew or Parachutist Allowance who is training in or employed in the duties of flight attendant, flight steward, technical crewman or transport operator (air) is paid Air Duty Allowance at the rate of \$45 a month.

Sea Duty Allowance.—An officer or man serving in a ship receives from \$15 to \$45 a month depending on rank.

Section 2.—The Command Structure of the Canadian Forces

The Canadian Forces are organized on a functional basis to reflect the major commitments assigned by the Government. Under this concept, all forces devoted to a primary mission are grouped under a single commander who is assigned sufficient resources to discharge his responsibilities. Specifically, the Canadian Forces are formed into a Canadian Forces Headquarters and eight major commands reporting to the Chief of the Defence Staff. Canadian Forces Headquarters, in addition to its headquarters function, is responsible for the logistic support of the Forces and, for this purpose, retains operational command of major logistic units. The roles of the Commands are:—

MOBILE COMMAND

The role of Mobile Command is: to provide military units suitably trained and equipped to support United Nations or other peacekeeping/peace-restoring operations; to provide ground forces, including tactical air support, for the protection of Canadian territory; and to maintain operational readiness of combat formations in Canada required for support of overseas commitments.

The Forces assigned include: four combat groups in Canada; the Canadian Airborne Regiment; the United Nations Force in Cyprus; two tactical fighter squadrons; one transport helicopter squadron; and one tactical transport squadron of fixed-wing aircraft. The combat groups are being reorganized to perform a wide variety of roles and will be provided with air-portable equipment.

4 Canadian Mechanized Brigade Group (4 CMBG) is the Canadian contribution to NATO ground forces in Europe. It contains a surface-to-surface missile (Honest John) battery in addition to the normal self-propelled field artillery regiment.

MARITIME COMMAND

All Canadian Maritime Forces, both sea and air, are under the command of the Commander Maritime Command whose Headquarters is in Halifax. The Deputy Commander is the Commander Maritime Forces Pacific with Headquarters in Esquimalt. The role of Maritime Command is to defend Canadian interests from assault by sea and to support NATO by assisting in conducting anti-submarine warfare in the Allied Command, Atlantic. The Commander Maritime Command is the NATO Commander of the Canadian Atlantic Sub-Area of the Western Atlantic Command, under the Supreme Commander, Allied Command Atlantic (SACLANT). An additional role is to provide any sea lift required by Mobile Command.

Available to the Maritime Command are one aircraft carrier, one operational support ship (with two more being commissioned in 1969), two escort maintenance ships, 22 escorts of destroyer type, four submarines and six minesweepers; 12 *Tracker* aircraft and six *Sea King* helicopters are carried in HMCS *Bonaventure*, nine destroyers can each take one *Sea King* and a further 12 *Trackers* operate from shore in conjunction with the main maritime patrol force of four squadrons equipped with *Argus* aircraft. Four further squadrons of aircraft provide training and communication facilities within the command.

1 AIR DIVISION

1 Air Division is the Canadian contribution to the strike/reconnaissance forces available to SACEUR. The Division is operationally responsible to 4 Allied Tactical Air Force (4 ATAF) and has six squadrons equipped with CF-104 *Starfighters* located at three airfields in Germany. It is proposed to concentrate these squadrons on two airfields by mid-1969 with the closing out of one of the bases.

AIR DEFENCE COMMAND

Air Defence Command participates with the United States in the air defence of North America, through NORAD. It has command of three interceptor squadrons, two SAM squadrons, one SAGE control centre and two transcontinental radar lines. Operational control is exercised by HQ NORAD.

AIR TRANSPORT COMMAND

The role of Air Transport Command is to provide air transport support to Canadian Forces everywhere, and to conduct search and rescue operations in the Eastern Search and Rescue Area (roughly, Ontario and Quebec). It has four squadrons operating short-range and long-range cargo- and troop-carrying aircraft as well as four transport and rescue squadrons.

TRAINING COMMAND

The role of Training Command is to provide individual training for the Forces and to conduct search and rescue operations within the Western Search and Rescue Area (roughly, Manitoba, Saskatchewan and Alberta). All former training units of the RCN, the Canadian Army and the RCAF where individual training is carried out have been placed under functional control of Training Command. The Canadian Military Colleges (Royal Military College, Royal Roads and Collège militaire royal de Saint-Jean), the Staff Colleges, and medical/dental training are under the direct control of Canadian Forces Headquarters (see pp. 1159-1197). Land/Air Warfare operational training and basic parachute training are the responsibility of Mobile Command. Basic fixed-wing and helicopter pilot training are a Training Command responsibility.

THE CANADIAN FORCES COMMUNICATIONS SYSTEM (CFCS)

The role of the CFCS is to provide fixed communications networks for the forces and to provide a national communications system for survival operations (civil defence). To carry out this role, CFCS commands all fixed communications installations within Canada.

THE RESERVE AND SURVIVAL ORGANIZATION

The command and administration of the Reserves and Cadets is the responsibility of the Deputy Chief of Reserves (Major-General) at CFHQ. The Naval Reserve reports to the Deputy Chief of Reserves through the Commander, Naval Reserve. The Militia and Cadets are commanded and administered through five Region Headquarters and seven District Headquarters that are organized on a geographical basis. The Air Reserve reports through the Commander, Mobile Command.

The role of the organization is to provide reserve forces-in-being to support the regular forces under their functional commanders; a training force to support the regular forces; aid to the civil power; emergency forces for civil emergency operations—peace and war; and provincial representation.

Administration of Military Bases in Canada

Staffs and services required below command headquarters level to administer and support units based in a particular locality have been organized on Canadian Forces bases. The primary role of each base is to provide base-level administration and supporting services to those units located on or near the base. Each base has been allocated to a functional commander, to whom the base commander reports. The base commander is provided with sufficient staff, with representation from the four functional branches, to command and administer the base.

Section 3.—Operations

Naval Forces

The Fleet.—As of December 1968, there were 30 ships in commission and nine in reserve. HMCS *Okanagan*, the third Oberon class submarine, joined the fleet in September and HMCS *Rainbow*, a Tench class submarine, in December. Trials with the hydrofoil *Beas d'Or* commenced in August and are scheduled to be completed in June 1969. Construction of the research vessel *Quest* was expected to be completed in May 1969 and construction of two operational support ships was progressing—*Protecteur* being scheduled for completion in June 1969 and *Preserveur* in November. Construction started on the first two of the four DDH 280s which are to be completed in 1971 and 1972. The *Terra Nova* was undergoing trials which will be completed in August 1969. The next ship conversion will commence in 1969 and the last two in 1970.

Operations in 1968.—The Navy participated in two major NATO exercises carried out in the North Atlantic. As well, units of the Navy were involved in combined Canadian-United States anti-submarine exercises adjacent to both East and West Coasts. In addition to these combined exercises, operational team training was carried out with ships, submarines and aircraft from Maritime Command in the waters off Bermuda. During the period from January to March, training exercises for all units were conducted off Puerto Rico in order to bring individual units up to an operational status. The Navy also supported two Mobile Command exercises held on the East Coast. In addition to operations and training, the Navy carried out goodwill visits to the United States, Britain, the Netherlands, Ireland, Denmark, Sweden, Japan, Mexico and some of the islands in the Pacific.

Land Forces

Operations in 1968.—In fulfilment of military obligations under the North Atlantic Treaty, Canada continued to provide ground forces for the defence of Western Europe. The 4th Canadian Mechanized Brigade Group, the major units of which were the Lord Strathcona's Horse (Royal Canadians), the 1st Regiment Royal Canadian Horse Artillery, No. 1 Surface-to-Surface Missile Battery, 2nd Battalion The Royal Canadian Regiment, 2nd Battalion Princess Patricia's Canadian Light Infantry, and 1st Battalion Royal 22^e Régiment, constituted the Land Forces contribution in NATO in the Federal Republic of Germany. The Headquarters of the Brigade is at Soest and the married quarters are located in the vicinity of Soest, Werl, Hemer and Iserlohn. Canada also provides two infantry battalions to the Allied Command Europe Mobile Force (Land Component). They are stationed in Canada but held in readiness for employment should the Mobile Force be activated.

The Canadian Forces continued to provide forces in support of United Nations operations as follows: (1) a force of 587 officers and men formed part of the UN Force in Cyprus; the Canadian contribution consisted of an infantry battalion on reduced establishment, a Canadian Contingent Headquarters and a Canadian element for the UN Headquarters; (2) some 40 officers and men were employed in UN missions in Palestine, Kashmir and Korea; and (3) a specially trained and equipped force, equivalent to an infantry battalion group, was maintained in Canada to provide a force for service in support of the UN in any part of the world on short notice.

In addition to its UN commitments, the Canadian Forces, as a result of Canadian participation in the International Commissions for Supervision and Control in Viet-Nam, Cambodia and Laos, continued to provide approximately 30 officers and men for truce supervisory duties in Indo-China. Two Land Force officers served on the International Observer Group in Nigeria. The Observer Group was invited by the Federal Government of Nigeria to observe the conduct of the federal armed forces involved in the internal conflict in that country.

Canadian Forces training teams are maintained in Ghana and Tanzania to assist in the training of the armed forces of those countries. A number of officers and other ranks from Ghana, Tanzania, Jamaica, Kenya, Nigeria (medical training only) and Zambia have received training in Canadian Forces schools.

Air Forces

Operations in 1968.—The Canadian Forces contribution to the air defence of North America during the year consisted of three CF-101B interceptor squadrons, two *Bomarc* surface-to-air missile squadrons and 27 radar sites. These forces, together with the Distant Early Warning Line (DEW), operated under the operational control of North American Air Defence Command (NORAD). No. 1 Air Division, Canada's NATO air contribution in Europe, operated with six squadrons of CF-104 aircraft. Four of these squadrons were employed in the strike/attack role and the other two were employed in the photo-reconnaissance role. Mobile Command's first CF-5 squadron was formed in 1968, operating initially with T-33 aircraft until receiving their first CF-5D late in the year.

Four land-based maritime squadrons were contributed to the Maritime Defence of North America; three of these based on the East Coast and one based on the West Coast are equipped with *Argus* aircraft, the largest and most modern anti-submarine aircraft in the world. A continuous program of aircraft modernization and re-equipping with improved anti-submarine devices was conducted throughout the year. The East and West Coast squadrons participated in a number of national, international and NATO anti-submarine exercises, and maintained daily patrols and surveillance of ocean areas adjacent to the Canadian coastlines.

Air Transport Command (ATC) continued to provide support to the Air Division and to the Army Brigade in Europe, using long-range *Yukon* and *Hercules* aircraft. A *Caribou* was maintained in India/Pakistan in support of UN MOGIP. In Canada, ATC airlifted Department of National Defence personnel and cargo from coast-to-coast and into the Arctic regions. *Hercules* aircraft were employed for paratroop training of the land forces, and T-33 aircraft carried out routine photographic missions for the Department. Search and rescue services were provided in the Canadian areas of responsibility. Throughout the year the Canadian Forces processed some 2,500 separate search and rescue incidents and flew more than 6,400 hours on this task.

Section 4.—Training

Recruit, basic trades training and most of advanced trades training in support of the Canadian Armed Forces takes place at schools under the supervision of Training Command. During 1968, 43,946 officers and men attended 1,905 serials of 597 different types of courses.

Combat Arms School, CFB Borden, Ont., conducts training for armoured and infantry of the Regular and Reserve forces from basic trades courses to advanced officer-level courses. Similar training for artillerymen and field engineers is conducted at CFB Shilo, Man., and CFB Chilliwack, B.C., respectively.

Recruit training takes place at CFB Cornwallis, N.S., for English-speaking personnel and CFB St. Jean, Que. for French-speaking personnel. The latter base also is the site of language training for French-speaking and English-speaking members of the Forces.

Support trades training is conducted at the School of Administration and Logistics, CFB Borden, and technical trades training is held at a number of locations throughout Canada. During 1969, technical training in the French language will begin at CFB St. Jean.

Flying training is generally based in the Prairie Provinces. During 1968, 360 pilots and radio navigators were granted "wing standard" and went on to further training in support of tactical air, air defence and long-range air transport operations.

Two Fleet schools, one at CFB Esquimalt, B.C., and the other at CFB Halifax, N.S., provide basic maritime trades training as well as training facilities for the operational warships on the West and East Coasts.

Canadian Military Colleges

The three Canadian Military Colleges are the Royal Military College of Canada, founded at Kingston, Ont., in 1876, Royal Roads, established in 1941 near Victoria, B.C., and Collège militaire royal de Saint-Jean, established at St. Jean, Que., primarily to meet the needs of French-speaking cadets. The Royal Military College and Royal Roads were constituted as Canadian Services Colleges in 1948 and Collège militaire royal de Saint-Jean was opened in 1952. In 1959, the Legislature of the Province of Ontario granted the Royal Military College a charter empowering it to grant degrees. In 1967 the Canadian Services Colleges were redesignated as the Canadian Military Colleges in keeping with unification of the Canadian Forces.

The role of the Colleges is to educate and train officer cadets for careers as commissioned officers in the Canadian Forces. Courses of instruction are designed to develop character and to provide a balanced liberal, scientific and military education leading to degrees in arts, commerce, science and engineering. The Royal Military College of Canada accepts senior matriculants and offers a four-year course. Royal Roads Military College accepts senior matriculants who, on successful completion of the second year, go to the Royal Military College of Canada for their third and fourth years. Collège militaire royal de Saint-Jean accepts junior matriculants who, after successfully completing the first three years, also proceed to the Royal Military College of Canada for their last two years.

To be eligible for admission to a College, candidates must be single, Canadian citizens and physically fit. Candidates must have reached their 16th but not their 21st birthday on the first day of January preceding entrance, with the exception of junior matriculation candidates for Collège militaire royal de Saint-Jean who must have reached their 16th but not their 20th birthday on the first day of January preceding entrance. On entry into one of the Colleges applicants are enrolled as Regular Force Officer Cadets in the Canadian Forces. Costs of tuition, uniforms, books, instruments and other fees are borne by the Department of National Defence. Officer Cadets receive a salary of \$187 a month and are charged \$86 a month for board and lodging. On successfully completing their academic and military training, officer cadets are granted permanent commissions in the Regular Force.

Most officer cadets entering the Military Colleges enrol under the Regular Officer Training Plan. Provision is made for the entry of a number of Dominion cadets. These are sons of persons who were killed, or died or are severely incapacitated as a result of service in a component of the Canadian Forces or the Canadian Merchant Marine during hostilities. Dominion cadets enter the Reserve Force and receive free tuition during the first academic year at a military college. A limited number of Reserve cadets who pay tuition and other fees during the duration of the course may also be admitted.

During the 1968-69 academic year, 1,152 officer cadets were enrolled at the Military Colleges: 556 of them at the Royal Military College, 219 at Royal Roads and 377 at Collège militaire royal de Saint-Jean.

Staff Training Colleges

The Canadian Land Forces Command and Staff College at Kingston, Ont., gives an 18-month course for the training of officers for staff appointments. Although most of the student body is composed of officers of the army element, officers from the other two elements and from the armies of other Commonwealth and NATO countries also attend. Instruction is based on the study of textbooks and reference material and involves lectures, demonstrations, and indoor and outdoor exercises. In addition to military subjects, the curriculum includes research and development, world affairs and lectures by prominent guest speakers.

The Canadian Forces College at Armour Heights, Toronto, consists of three colleges for the staff training of officers:—

Staff College.—Officers of Major rank take a 44-week course to prepare themselves for assumption of higher rank in the Canadian Armed Forces. Training emphasizes the logical and precise expression of ideas, staff and administrative procedures, scientific and technical developments and national and international current affairs. The syllabus is enhanced by a variety of expert military and civilian guest lecturers and by visits to Canadian and United States military and civilian establishments.

Staff School.—Officers of Captain and Lieutenant rank take a 14-week course to prepare themselves to assume junior staff and administrative positions in the Canadian Armed Forces. Training emphasizes military administrative procedures, the conduct of correspondence and civil and military organization. Students also study national and international current affairs.

Extension School.—Selected military and academic courses of study by correspondence are offered to all officers of the Canadian Armed Forces.

The National Defence College at Kingston, the senior defence college, provides an 11-month course of study covering the economic, political and military aspects of the defence of Canada. Senior officers and public servants from the Armed Forces and Federal Government departments attend, as well as representatives from industry. Lecturers are chosen from among the leaders in various fields in Canada and other countries. In addition, tours and visits to certain parts of Canada, the United States, Europe, Asia, Africa, Australia and Latin America familiarize students with conditions and influences in their own country and in other countries.

Section 5.—Reserves and Cadets

Reserves

The Naval Reserve.—Recruiting and training of officers and men of the Naval Reserve is conducted mainly through 16 Naval Reserve Units across Canada under the Commander, Naval Reserve, who is also the Director General Operations Maritime, located at Canadian Forces Headquarters, Ottawa. Naval Reserve Units are established at the following centres:—

St. John's, Nfld., HMCS *Cabot*
 Halifax, N.S., HMCS *Scotian*
 Saint John, N.B., HMCS *Brunswick*
 Quebec, Que., HMCS *Montcalm*
 Montreal, Que., HMCS *Donnacona*
 Toronto, Ont., HMCS *York*
 Ottawa, Ont., HMCS *Carleton*
 Kingston, Ont., HMCS *Cataraqui*

Hamilton, Ont., HMCS *Star*
 Windsor, Ont., HMCS *Hunter*
 Port Arthur, Ont., HMCS *Griffon*
 Winnipeg, Man., HMCS *Chippawa*
 Saskatoon, Sask., HMCS *Unicorn*
 Calgary, Alta., HMCS *Tecumseh*
 Vancouver, B.C., HMCS *Discovery*
 Esquimalt, B.C., HMCS *Malahat*

Naval Reserve Units, commanded by reserve officers, provide both basic and specialized training for officers and men of the Naval Reserve. Additional training is also conducted in Regular Force schools across the country and in HMC Ships.

The Militia.—Based largely upon the recommendations of the Ministerial Commission on the Reorganization of the Canadian Army Militia, many changes in its composition were implemented during the period November 1964 to March 1965. Subsequent to that time the roles, training standards and methods and emergency plans have also been revised. The Militia is now composed of 112 major units with an establishment of 300 or over and 53 minor units; the total establishment is 39,978.

Planning for the employment of the Militia in the event of an emergency is based on:
 (1) the Ready Reserve, individuals assigned to specified Regular Force positions;
 (2) the Canadian Regional Reserve, composed of individuals and units for the defence

of Canada, internal security and the Civil Emergency Operations Organization; and (3) the Mobile Command Reserve, comprising sub-units that will be required to reinforce or expand the field force. Personnel for the three categories are trained under the direction of Region and Unit Commanders during the winter months. This includes training of a general military nature and, in addition, that required for trades, specialties and rank progression. Further instruction of this nature is received during the summer at Regional Rank and Trades Schools. Also, a large number of courses are conducted at Regular Force Schools throughout the year. In addition, those personnel nominated as Ready Reservists are eligible to receive in-job training each year in the actual position in which they will be employed in an emergency. Similarly, the Mobile Command Reserve sub-units are trained at a special concentration each year and the Regional Reserve are trained collectively under Regional arrangements.

Air Reserve.—The active sub-components of the Primary Reserve of the Air Element are designated the Air Reserve, which is made up of six Reserve Flying Squadrons and four Reserve Support Squadrons. Montreal and Toronto each has two Flying Squadrons and one Reserve Support Squadron; Winnipeg and Edmonton each has a single Flying Squadron with a Reserve Support Squadron. The Reserve Support Squadrons are required to provide the necessary administrative support to the Flying Squadron to include all phases from recruiting to release procedures, except for operational control and flying training. All Air Reserve Squadrons are directly responsible to one of the two Tactical Air Wings situated at Petawawa, Ont., and Calgary, Alta., which in turn are responsible through 10 Tactical Air Group to the Commander of Mobile Command. All Flying Squadrons are equipped with the DHC-3 *Otter*. Their role is light tactical air transport support and reconnaissance for ground forces. They can be tasked as: (1) tactical air transport, including logistics support, air evacuation of casualties, communications and liaison; (2) airborne surveillance in support of ground forces in a permissive air environment; (3) aerial photography to provide the ground forces with a limited photographic capability that will supplement the reconnaissance provided by specialized tactical reconnaissance aircraft; (4) aerial, visual, photographic reconnaissance and radiation monitoring for civil emergency operations; (5) provision of a reserve of trained pilots who could be incorporated into the Mobile Command Flying Units if required.

Canadian Armed Forces Cadets

The object of the cadet movement in Canada is to provide the opportunity for young men, aged 13 to 18, to acquire the fundamentals of good citizenship and leadership. This is achieved by a combination of training at the local cadet units and at summer camps. In keeping with the unified concept of the Canadian Armed Forces, the Sea, Army and Air Cadet organizations have integrated the command and control functions of their respective organizations and adopted a common aim: "To develop in youth the attributes of good citizenship and leadership; to promote physical fitness; and to stimulate their interest in the Sea, Land and Air elements of the Canadian Forces". While cadet officers remain environmental, they are commissioned in the Cadet Instructor List which is a sub-component of the Canadian Forces Reserves.

Royal Canadian Sea Cadets.—Royal Canadian Sea Cadets, sponsored by the Navy League of Canada in partnership with the Canadian Forces, comprise 185 corps. These corps are supervised jointly by the local branches of the League and by naval officers in each of Canada's five military regions. Instruction at corps level is carried out by Cadet Instructor List Officers (Sea). Two training establishments, Cornwallis on the East Coast and Quadra on the West Coast, accommodate officers and cadets for two-week training periods in the summer. In addition, selected cadets receive a six-week training course at Canadian Forces bases. Sea experience is provided throughout the year in HMC Ships. As of Sept. 30, 1968, the strength of the corps was 1,031 officers and 11,352 cadets.

Royal Canadian Army Cadets.—Supervision of the organization and training of Army Cadets is carried out by the region and district Regular Force staff. The training and administration is the responsibility of officers of the Cadet Instructor List (Army), a sub-component of the Reserves and civilian instructors. As of Sept. 30, 1968, officers and civilian instructors numbered 2,264, and there were 52,806 cadets enrolled in 457 corps.

The International Exchange Visits Program provided Army Cadets the opportunity to visit and train abroad; 75 cadets to Jamaica, Barbados, Trinidad and Tobago, and Grenada; 16 cadets to the National Rifle Association matches at Bisley, England, and one officer and six cadets to the Outward Bound Course at Towyn, Wales. Cadets from the Caribbean countries trained at Aldershot, N.S., Valcartier, Que., and Ipperwash Beach, Ont. One officer and six cadets from Britain trained at the National Army Cadet Camp at Banff, Alta., and 14 British cadets participated in the Dominion of Canada Rifle Association matches at the Connaught Ranges near Ottawa.

In 1968, 3,852 cadets attended six-week trades and specialist courses at CFB Halifax, CFB Cornwallis and Camp Aldershot in Nova Scotia, CFB Valcartier in Quebec, CFB Borden, CFB London and Ipperwash Beach in Ontario, CFB Shilo in Manitoba, CFB Calgary in Alberta and CFB Esquimalt and Vernon in British Columbia; 3,413 cadets attended two-week cadet leader and special camps at Aldershot in Nova Scotia, CFB Valcartier and Montreal in Quebec, Ipperwash Beach, Sandstone Lake and Fairbanks Lake in Ontario, CFB Shilo in Manitoba, and Vernon and Albert Head in British Columbia; 220 master cadets attended the National Army Cadet Camp at Banff in Alberta for six weeks of training which included mountain marches, rock-climbing and survival.

Royal Canadian Air Cadets.—The Air Cadet movement operates on the basis of a partnership between the Air Cadet League of Canada, a voluntary civilian organization, and the Canadian Armed Forces. The League sponsors and administers Air Cadet activities while the Canadian Armed Forces provide training personnel, syllabi and equipment and also assist the League in organization and administration. The objectives of training are to encourage air cadets to develop the attributes of good citizenship, to stimulate in them an interest in aviation and space technology, and to help them develop a high standard of physical fitness, mental alertness and discipline. The authorized ceiling of cadet enrolment is 29,000; the strength at Oct. 1, 1968, was 28,518 cadets attached to 370 squadrons across Canada.

During the summer of 1968, camps were conducted at CFB Greenwood, N.S., St. Jean, Que., Trenton, Ont., and Penhold, Alta., attended by 6,480 cadets and 875 officers and instructors. A six-week senior leaders' course for 240 cadets and a six-week technical training course for 100 cadets were held at CFB Borden, Ont. A bush familiarization course, teaching the techniques of survival and ground search, was conducted at Namao, Alta., for 54 cadets. Under the International Exchange Visits Program for 1968, 62 air cadets were exchanged with Austria, Belgium, Britain, France, Israel, the Netherlands, Norway, Spain, Sweden, Switzerland, the United States and the Federal Republic of Germany.

About 225 senior air cadets receive flying training annually at flying clubs through Canadian Armed Forces sponsored scholarships; 98 additional scholarships were awarded by the Air Cadet League and other organizations in 1968.

Section 6.—The Defence Research Board

The Defence Research Board is the agency in the Department of National Defence responsible for scientific research. It was created in 1947 by an amendment to the National Defence Act. It provides, through the Chairman, scientific advice to the Minister of National Defence and scientific and technical assistance to the Canadian Armed Forces.

The Board consists of a full-time chairman and vice-chairman, five ex officio members and a varying number of members selected from universities and industry appointed by the Governor in Council. The ex officio members are the Deputy Minister of National Defence, the President of the National Research Council, the Chief of Defence Staff, the Vice Chief of Defence Staff and the Chief of Technical Services. The Chairman is the chief executive officer of the Board's research organization. He is a member of the Defence Council, which is the senior policy body of the Department of National Defence. The Vice-Chairman is an associate member.

The research organization consists of seven research establishments in which an intramural program of research specifically oriented toward military needs is carried out. The Board also conducts an extramural research program through grants in aid of research to universities. These investigations are usually basic in nature and seek to provide new knowledge in fields from which important military developments are likely to arise. Support is also provided to industry with the object of promoting and strengthening the research capability of Canada's defence industry. This is a program of applied research of defence interest. It is financed on a cost-sharing basis with industry with each (government and industry) providing 50 p.c. of the funds.

The Defence Research Board is active in international collaboration in defence science throughout the western world. A very active quadripartite organization with Britain, Australia and the United States has built up to ensure full utilization of defence scientific knowledge, resources and facilities of these countries. In addition, bilateral agreements with several NATO nations serve to enhance the interchange of defence scientific and technical knowledge in areas of mutual interest. The Board represents Canada on a number of specialist committees through which NATO's scientific endeavours are processed and co-ordinated. The Board also provides representation on the Commonwealth Defence Science Organization which fosters and promotes scientific exchange between the countries of the Commonwealth. It maintains liaison offices in Washington, London and Paris.

Research on maritime warfare problems, particularly those relating to submarine detection and tracking, is carried out at the Defence Research Establishment Atlantic and at the Defence Research Establishment Pacific. Research and development of weapons and defence against various weapons is undertaken in co-operation with the Armed Forces at several establishments, the largest of which is the Canadian Armament Research and Development Establishment. Its principal activities include studies of defence against missiles, studies of the properties and application of infrared and other detection devices, the development of rocket propellants, explosives and armament.

Defence communication studies are carried out by the Communications Research Centre (Department of Communications) on behalf of the Defence Research Board. Research on the defensive aspects of chemical, biological and atomic weapons is carried out at two Defence Research establishments—the Defence Research Establishment Ottawa, and the Defence Research Establishment Suffield at Ralston, Alta. The Defence Research Establishment Toronto is concerned with biosciences research, chiefly with raising the operating efficiency of men working in the military environment, including such subjects as human physiology, experimental psychology and research on clothing. The Defence Research Analysis Establishment provides scientific evaluation and analysis of present and future weapons systems, tactical doctrine and other aspects of military operations, and studies broad strategic problems.

Thus, the Board continues to support the fields of research which are of foremost interest to the Canadian Armed Forces and the program is under continuing review to ensure that cognizance is taken of all changes in emphasis in defence requirements. Close liaison is maintained between the Defence Research Board and other appropriate Departments to ensure that research and development activities are closely integrated with production.

PART II.—CIVIL EMERGENCY PLANNING (CANADA EMO)

The Emergency Measures Organization was established within the Privy Council Office by authority of a Cabinet directive on June 1, 1957 to develop an organization for the provision of government leadership, services and resource management in an emergency, as well as to provide a Canadian response to NATO civil emergency planning. On May 28, 1959, the Government placed the Emergency Measures Organization under the Prime Minister and defined the civil defence responsibilities of the National Defence, National Health and Welfare and Justice Departments. Under this Order, the Emergency Measures Organization assumed, in addition to its government and resource management planning, the responsibilities of the Civil Defence Branch which, in turn, ceased to exist. On June 27, 1963 (Order in Council PC 1963-993) the Emergency Measures Organization was transferred to the Minister of Defence Production and in 1965 (PC 1965-1041) the Civil Emergency Measures Planning Order was approved, which, in addition to defining the responsibilities of various departments, placed the organization under the Minister of Industry. The 1965 Order in Council was amended in 1968 (PC 1968-1302 and 1968-1508) transferring responsibility for civil emergency planning to the Minister of National Defence.

Under the Minister of National Defence, the Canada Emergency Measures Organization is the federal co-ordinating agency for all civil emergency planning. Its functions are to:—

- (1) develop policies and a program to ensure the continuity of government in an emergency;
- (2) co-ordinate civil emergency planning and training by departments, agencies and Crown corporations of the Government of Canada;
- (3) in conjunction with provincial authorities, develop policies and a program for the control of civil road transport resources in an emergency;
- (4) plan civil emergency measures in respect of matters that are not the responsibility of any department, agency or Crown corporation of the Government of Canada, or recommend to the Governor in Council the assignment of such responsibility to a minister;
- (5) provide assistance and guidance to provincial governments and municipalities in respect to the preparation of civil emergency measures in matters that are not the responsibility of any department, agency or Crown corporation of the Government of Canada;
- (6) with the concurrence of the Secretary of State for External Affairs, provide general liaison with other countries and with the North Atlantic Treaty Organization on matters relating to civil emergency measures; and
- (7) be responsible for the direction and administration of the Canadian Emergency Measures College at Arnprior, Ont.

The Civil Emergency Measures Planning Order also defines the civil emergency powers, duties and functions of the ministers of federal departments and agencies having immediate responsibilities in the event of a war emergency. Included in this category are the Departments of Agriculture, Communications, External Affairs, Finance, Forestry and Fisheries, Justice, Labour, Manpower and Immigration, National Defence, National Health and Welfare, Public Works, Solicitor General and Transport, and the Bank of Canada, the Canadian Broadcasting Corporation, the Central Mortgage and Housing Corporation and the Royal Canadian Mounted Police.

Organization

The general federal organization for civil emergency planning may be summarized as:—

- (1) a Cabinet Committee on External Policy and Defence;
- (2) the Canada Emergency Measures Organization, comprising the Director General and headquarters staff, the Regional Directors in each province, and the Canadian Emergency Measures College;
- (3) Federal Government departmental planning staffs; and
- (4) Federal Government organizations in the provinces.

Headquarters Organization.—The headquarters of the Canada EMO is located in Ottawa. The Director General reports to government through the Minister of National Defence. A regional office is located in the capital city of each province and for planning purposes each region corresponds to its respective provincial boundaries. Planning responsibility for the Yukon Territory and the District of Mackenzie and Western Arctic Islands of the Northwest Territories is carried out from offices in Edmonton, Alta.

Canada EMO has been organized into three major functional branches, each under a director: National Civil Emergency Measures Program Branch; Long Range Planning and Development Branch; and National Training and Exercises Branch. Within the National Civil Emergency Measures Program Branch are divisions responsible for planning and budgeting, program evaluation, continuity of government planning, public fallout protection planning, emergency public information planning, and road transport planning. The Long Range Planning and Policy Development Branch is comprised of divisions responsible for economic planning, operational concepts and procedures, physical protection planning, radiological, biological and chemical defence planning, organization system planning and international civil emergency planning. The National Training and Exercise Branch is responsible for training development, national exercise planning and supervision of the Canadian Emergency Measures College.

Federal Regional Directors in Provinces.—Regional Directors of Canada Emergency Measures Organization in each province (region) have been assigned the following responsibilities:—

- (1) to represent Canada EMO in the region for all civil emergency planning purposes;
- (2) to establish and maintain effective liaison with all federal departments and agencies, including the Armed Forces, and to co-ordinate emergency planning activities;
- (3) to establish and maintain effective liaison with the provincial government in the region, to assist in the development of provincial emergency plans, including those of local organizations, and to assist in the Canada EMO review of requests for financial aid from the province or municipalities within the region.

Provincial Government Civil Emergency Responsibilities

Provincial governments will make such preparations as are required to enable them to execute the following civil emergency powers, duties and functions in war:—

- (1) the development of policies and a program to ensure the continuity of provincial government in an emergency—including (a) the selection of government departments and agencies with immediate responsibilities in the saving of lives and the continuing function of essential services and the development of plans by the departments selected covering their emergency operations, (b) plans for the relocation of government, (c) the designation of officials for duty in an emergency, (d) plans for the manning of Regional Emergency Government Headquarters, Emergency Government Relocation Units and Zone Emergency Government Headquarters, and (e) the selection and storage of essential records;
- (2) the preservation of law and order, including control of traffic;
- (3) the organization and control of emergency welfare services including emergency clothing, lodging, feeding, registration and enquiry and personal services;
- (4) the organization and control of health and medical services, including hospitals and public health measures;
- (5) maintenance and repair of roads and road bridges;
- (6) co-ordination of municipal and other services for the maintenance and repair of water and sewage systems;
- (7) organizations and operation of firefighting services;
- (8) maintenance and repair of electrical and gas utilities;
- (9) organization and operation of radiological defence services;
- (10) communications as required from REGHQ to provincial government agencies and municipalities;
- (11) co-ordination and, as may be required, direction of the emergency operations of municipal governments;

- (12) assistance to the Department of National Defence in the conduct of survival operations in damaged areas;
- (13) in accordance with agreements reached with the federal departments and agencies concerned, (a) control of accommodation, control of engineering and construction resources, provision of emergency housing and arrangements for roads and road bridges, (b) control of road transport resources, and (c) maintenance of agricultural production and control of fisheries;
- (14) such other emergency functions as may be subsequently agreed upon between the federal and provincial governments.

In addition, provincial governments in peacetime will be responsible for:—

- (1) assigning to each municipal government its operational roles;
 - (2) providing assistance and guidance to municipal governments in respect of the preparation of municipal civil emergency plans for the continued operations of municipal government, survival of the public and the operation of municipal emergency services, including the organization and operation of such special emergency services as may be required, such as rescue, warden, emergency communications, emergency public information, radiological defence and emergency transportation;
 - (3) assistance and guidance to municipal governments in the training and exercising of regular municipal employees and volunteers as emergency workers;
 - (4) making such preparations or arrangements as are required to provide for the protection of the population of those parts of the province that are not administered by an incorporated municipal government.
-

PART I.— OFFICIAL SOURCES OF INFORMATION

Section 1.—Books About Canada

This basic list of books about Canada, contributed by the National Library, includes a selection of publications grouped alphabetically by author and arranged under the subject classifications of Biography, Country and People, Economics, External Relations, Government and Politics, History, Literature and the Arts, and General Reference Works. The selection represents many aspects of Canadian life, emphasizes the latest editions of books published within the past five years, and includes titles issued in either or both English and French, accompanied by the publisher's address.

It should be noted that, although this list is now an annual feature of the Year Book, it is not a cumulative presentation; it is limited to about 480 titles, necessitating the omission of some items that appeared the preceding year to permit the inclusion of others. For additional titles, the reader should consult the lists of books in earlier Year Books or one or more of the bibliographical collections listed below under the heading "General Reference Works", particularly the monthly or annual editions of *Canadiana* published by the National Library.

Biography

- BARRETTE, Antonio. *Mémoires*. T. 1. Montréal, Beauchemin, 1966. 448 p.
- BARRETTE, Antonio. *Memoirs*. Translated by Marc SORMONT. Montreal, Beauchemin, 1966. 354 p.
- BEAL, J. R. *The Pearson phenomenon*. Toronto, Longmans, 1964. 210 p.
- BEAL, J. R., et POLIQUIN, J.-M. *Les trois vies de Pearson*. Montréal, Éditions de l'Homme, 1968. 269 p.
- BÉCHARD, Henri. *L'héroïne indienne Kateri Tekakwitha*. Montréal, Fides, 1967. 200 p.
- BERGERON, Gérard. *Ne bougez plus! Portraits de 40 politiciens de Québec et d'Ottawa*. Montréal, Éditions du Jour, 1968. 223 p.
- Biographies canadiennes-françaises*. 20^e éd. Montréal, 1965. 1347 p.
- BOND, C. C. J. *Surveyors of Canada, 1867-1967*. Ottawa, Canadian Institute of Surveying, 1966. 154 p.
- CANADA. Department of Public Printing and Stationery. *The founders and the guardians; Fathers of Confederation, Governors-General, Prime Ministers*. Ottawa, Queen's Printer, 1968. 147 p.

- CANADA. Département des impressions et de la papeterie publiques. *Fondateurs et gardiens; Pères de la Confédération, Gouverneurs généraux, Premiers ministres.* Ottawa, Imprimeur de la Reine, 1968. 147 p.

Section 2.—Federal Government Information Services

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the ten-year and five-year censuses of Canada are planned and statistical information of all kinds—federal and provincial—is centralized. Certain areas of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, population and national defence are constitutionally federal affairs and on such subjects the respective departments at Ottawa are the proper sources of information with which to communicate. Other fields of effort

such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces and data may be obtained concerning the individual provincial efforts in these fields from the respective provincial government departments. However, certain federal departments are also concerned with specific aspects of these subjects and, as in the case of the Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole. The Government of Canada, while not administering the resources within the provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of livestock and the improvement of strains, on agricultural marketing and on crop yields are cases in point; in forestry, questions on forest research, forest fire protection and reforestation offer good examples.

Certain Federal Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Publicity Branch, Department of Industry, Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Radio-Television Commission; and the National Film Board. The Departments of Agriculture, Energy, Mines and Resources, Fisheries and Forestry, Indian Affairs and Northern Development and Labour, and such agencies as the National Museums of Canada, the National Library, and the National Research Council, while not thus classed, are interested in the dissemination of information to a greater extent than most of the remaining government departments, although several of the latter have publicity branches.

Thus, inquiries for information of a statistical nature should be forwarded to the Information Division, Dominion Bureau of Statistics, Ottawa. Inquiries to federal sources for information not of a statistical nature should be sent as a general rule to the individual departments and agencies of government which are listed, with their functions, in the Appendix to this publication. Inquiries relating to provincial efforts may be directed to the provincial government department concerned.

Section 3.—Sale of Official Publications

Under the provisions of the Public Printing and Stationery Act, the Queen's Printer, Ottawa, has charge of the sale of all official publications of Parliament and the Government of Canada that are issued to the public, as well as of the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statutory provisions to receive them. The regulations relating to the distribution and sale of government publications made in accordance with the provisions of Sect. 7 of the Public Printing and Stationery Act and Sect. 7(e) of the Financial Administration Act were brought up to date and approved by Treasury Board on Mar. 31, 1955.

In compliance with these regulations, the Queen's Printer issues the *Daily Checklist of Government Publications* which records for the information of the public service, libraries, etc., all Federal Government publications immediately upon release. Those authorized by law or regulation to receive free copies of government publications receive the *Daily Checklist* without charge; others desiring the service may purchase an annual subscription to be forwarded daily or in weekly batches as requested.

The Queen's Printer also issues the *Monthly Catalogue of Canadian Government Publications*, a comprehensive listing of all official publications, public documents and papers not of a confidential nature published at government expense, an *Annual Catalogue* (in

January. Listing all publications issued during the previous year, as well as sectional and annual price and selected titles bulletins advertising new government publications.

The Queen's Printer is the national sales agent in Canada for publications issued by the United Nations; the United Nations Educational, Scientific and Cultural Organization; the World Health Organization; the Food and Agriculture Organization; the Organization for Economic Cooperation and Development; the International Atomic Energy Agency; the International Civil Aviation Organization; the Council of Europe; the Commonwealth Economic Committee; the Organization of American States (Pan American Union); the General Agreement on Tariffs and Trade; the New Zealand Government; the International Labour Organization; the World Meteorological Organization; and the International Telecommunication Union.

Canadian government and international organizations publications may be obtained from the Canadian Government bookshops located in Halifax, Ottawa, Toronto, Montreal, Winnipeg and Vancouver (see imprint on the reverse side of the title page), or by mail from the Queen's Printer, Ottawa.

Dominion Bureau of Statistics Publications.—The Dominion Bureau of Statistics is the agent of the Queen's Printer with respect to the sale of DBS publications. The *Canada Year Book* and *Canadian Yearbook Canada* constitute authoritative compendiums of information on the institutions and economic and social development of Canada.

DBS publications are listed with their prices in the DBS section of the Queen's Printer's Catalogues of *Canadian Government Publications*. The *DBS Daily Bulletin* and *Weekly Bulletin*, prepared by the Information Division and available free of charge, are designed for newspaper editors wishing to keep closely informed on the full range of published material issued by the Bureau. Subscription orders for DBS publications or orders for single copies should be addressed to the Publications Distribution Unit, Dominion Bureau of Statistics, Ottawa, and should contain the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada; subscription order forms may be procured from the same source.

Provincial Government Publications.—Most provincial government publications may be obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:—

Newfoundland.....St. John's
 Prince Edward Island...Charlottetown
 Nova Scotia.....Halifax
 New Brunswick.....Fredericton
 Quebec.....Quebec

Ontario.....Toronto
 Manitoba.....Winnipeg
 Saskatchewan.....Regina
 Alberta.....Edmonton
 British Columbia.....Victoria

DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

NOTE.—In the "Federal Data" column, the major source of information on each subject is given first; other sources follow in alphabetical order, with the exception of the National Film Board and the Dominion Bureau of Statistics which appear at the end of each listing with which they are concerned, except where they are the major source.

PART II.—SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with one asterisk (*) are available in reprint form from the Information Division, Dominion Bureau of Statistics. Those marked with two asterisks are available from the source department.

PART IV.—ORDER OF CANADA AWARDS

In 1967, the Centennial of Confederation, there was established a system of honours and awards for Canada. On the recommendation of the Government, Her Majesty Queen Elizabeth the Second approved the issue of Letters Patent establishing a society of honour to be known as "The Order of Canada" for the purpose of according recognition to Canadian citizens and other persons for merit. The Order consists of three awards—the Companion of the Order of Canada, the Medal of Courage and the Medal of Service. The Chancellor and Principal Companion of the Order is the Governor General and recommendations for awards are made directly to the Governor General by an Advisory Council composed of the Chief Justice of Canada (Chairman), the Clerk of the Privy Council, the Under Secretary of State, the Chairman of the Canada Council, the President of the Royal Society of Canada and the President of the Association of Universities and Colleges of Canada. Companions of the Order are selected on the basis of "merit, especially service to Canada or to humanity at large" and the maximum number shall never exceed 150. The Medal of Courage is awarded for the performance of "an act of conspicuous courage in circumstances of great danger" and is not, of course, limited to a fixed maximum number. The Medal of Service is awarded for different categories of meritorious service from that for Companions and not more than 50 may be given in any one year.

On July 6, 1967, the Governor General, in his capacity as Chancellor and Principal Companion of the Order of Canada, appointed the following:—

To be Companions of the Order of Canada

Edgar Spinney ARCHIBALD, C.B.E.	Colonel Robert Samuel McLAUGHLIN, E.D., C.D.

Helen HOGG	

PART V.—FEDERAL LEGISLATION, 1968-69

Legislation passed in the First Session of the Twenty-eighth Parliament from the date of opening, Sept. 12, 1968, to Apr. 30, 1969, the date of going to press with this volume, is outlined in the following statement. Naturally in summarizing material of this kind it is not possible to convey the full implication of the legislation. The reader who is interested in any specific Act is referred to the *Statutes of Canada* in the given volume and chapter.

Legislation of the First Session of the Twenty-eighth Parliament,
Sept. 12, 1968 to Apr. 30, 1969*

Subject, Chapter and Date of Assent	Synopsis
17 ELIZ. II	
Agriculture— 1968	
6 Nov. 14	<i>An Act to amend the Farm Credit Act</i> broadens the classes of persons who may be eligible for loans under the Act; increases the amount of the capital of the Farm Credit Corporation; provides for flexibility in the fixing of interest rates on loans; and makes certain administrative changes.
7 Nov. 14	<i>An Act to amend the Farm Improvement Loans Act</i> extends the loan period by three years; provides for flexibility in establishment of interest rates on loans; increases the maximum amount of any loan and extends the purposes for which loans may be made; raises the aggregate total of guaranteed loans that may be made; increases the limit of federal liability in respect of loans made by individual lenders; and makes certain administrative changes.
8 Nov. 8	<i>An Act to amend the Prairie Grain Advance Payments Act</i> increases the maximum amount of advance payment that may be obtained by a producer during a crop year; doubles the rate at which advance payments are calculated; permits the calculation of advance payments on grain deliverable under unit quotas; and makes other related amendments.
1969	
16 Feb. 13	<i>An Act to amend the Prairie Grain Advance Payments Act</i> provides emergency advance payments to grain producers to meet the costs of drying damp or tough grain during the 1968-69 crop year.
24 Mar. 28	<i>An Act to amend the Animal Contagious Diseases Act</i> removes from the Act the specified compensation for horses and cattle slaughtered pursuant to the Act and permits such amounts to be prescribed by the Governor in Council; it also provides for appeal by owners of animals slaughtered where no compensation or less compensation than the maximum prescribed is awarded.
32 May 8	<i>Farm Machinery Syndicates Credit Act</i> broadens the purposes for which loans may be made and the terms under which they may be made; increases the maximum loan that may be made to one farm syndicate; extends the loan-terms.
34 May 8	<i>The Pesticide Residue Compensation Act</i> provides for compensation to be paid to farmers whose agricultural products are contaminated by pesticide residue and also for appeals from compensation awards.
35 May 8	<i>The Plant Quarantine Act</i> introduces inspection and treatment measures to prevent the introduction or spreading of pests injurious to plants and provides for compensation for matter destroyed or prohibited or restricted from sale and for appeals from compensation awards.
Finance— 1968	
7 Oct. 3	<i>Appropriation Act No. 3, 1968</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1969.
12 Dec. 19	<i>Appropriation Act No. 4, 1968</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1969.
1969	
23 Mar. 11	<i>Appropriation Act No. 1, 1969</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1969.
25 Mar. 28	<i>Appropriation Act No. 2, 1969</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1970.

*The First Session continued beyond this date.

**Legislation of the First Session of the Twenty-eighth Parliament,
Sept. 12, 1968 to Apr. 30, 1969—continued**

Subject, Chapter and Date of Assent	Synopsis
Finance—concl. 1969	
26 Mar. 28	<i>An Act to amend the Bretton Woods Agreement Act and the Currency, Mint and Exchange Fund Act</i> enables Canada to participate in a new arrangement in the International Monetary Fund to create new reserve assets to supplement gold and reserve currencies in the participating countries' foreign exchange reserves and effect certain administrative and operational changes in the structure of the Fund. The amendment to the Currency, Mint and Exchange Fund Act permits the Fund Account to receive, hold and sell the new reserve assets.
Fisheries— 1969	
20 Feb. 27	<i>An Act to amend the Fisheries Improvement Loans Act</i> increases the number of lending institutions; makes more flexible the fixing of the interest rate at which money may be made available to fishermen; and increases the federal liability in respect of loans made by individual lenders to encourage lending by small-volume lenders.
21 Feb. 27	<i>The Freshwater Fish Marketing Act</i> is an Act to regulate interprovincial and export trade in freshwater fish and to establish the Freshwater Fish Marketing Corporation for the purpose of marketing and trading in fish, fish products and by-products in and out of Canada.
Government— 1968	
2 Oct. 3	<i>An Act to amend the Publication of Statutes Act</i> authorizes the Governor in Council to prescribe the form to be used in the printing of the annual Statutes and the manner in which they are to be bound; the style shall correspond as closely as possible to that used for the Revised Statutes.
5 Oct. 31	<i>An Act to amend the Post Office Act</i> increases by one cent the postage rates for letters posted in Canada for delivery anywhere in Canada; provides an amended rate structure for newspapers and periodicals; provides for certain changes in connection with the administration of the Act, especially in relation to tenders and contracts; and provides for the discontinuance of the Post Office Savings Bank.
1969	
27 Mar. 28	<i>An Act to amend the Financial Administration Act</i> abolishes the office of Comptroller of the Treasury, the control functions of which are transferred to departments, making them fully responsible for their own financial management; transfers statutory responsibilities, other than those transferred to departments, to the Receiver General; and makes other changes in consequence thereof. Other amendments concern "public property" and the assignment of debts due the Crown under labour and material payment bonds.
28 Mar. 28	<i>The Government Organization Act, 1969</i> establishes new departments and agencies of government, abolishes or consolidates others, and re-arranges duties; the main purpose of the complex provisions of this Act is to eliminate duplication, to simplify administrative structures and to provide better service to the public.
29 Mar. 28	<i>The Statute Law (Superannuation) Amendment Act, 1969</i> is an Act to amend the Canadian Forces Superannuation Act, the Defence Services Pension Continuation Act, the Royal Canadian Mounted Police Superannuation Act, the Royal Canadian Mounted Police Pension Continuation Act and the Public Service Superannuation Act; the amendments deal mainly with administrative matters and removal of anomalies or inconsistencies, with some changes in benefits and increases in certain contribution rates.
Justice— 1968	
4 Oct. 23	<i>An Act to amend the Judges Act</i> provides salaries for three additional Ontario County Court judges and eleven additional Quebec Superior Court judges.
1969	
14 Feb. 13	<i>An Act to amend the Canada Evidence Act</i> modernizes the Act by facilitating the hearing of expert witnesses during trials; providing for more flexible cross-examination of the witnesses of one party; extending the definition of the word "bank" to financial institutions; revising the rules on hearsay; and providing a solution to the problems that formerly arose from the form recognized for receiving oaths or solemn declarations.
Revenue— 1968	
12 Dec. 19	<i>An Act to amend the Customs Tariff</i> gives effect to the Resolutions relating to the Customs Tariff tabled in the House of Commons on Oct. 22, 1968.

Legislation of the First Session of the Twenty-eighth Parliament,
Sept. 12, 1968 to Apr. 30, 1969—concluded

Synopsis

An Act to amend the Customs Act relates to the sale of abandoned goods; provides greater flexibility in the provisions governing the examination of imported goods at time of entry through Customs; and provides for refund of duty under certain circumstances.

An Act to amend the Income Tax Act and the Estate Tax Act revises the portions of these Acts relating to gifts.

The Anti-dumping Act provides for the imposition of duty on all goods entered into Canada which have been declared to have caused, are causing or are likely to cause material injury to the production in Canada of like goods; it also provides for the establishment of an Anti-dumping Tribunal as a court of record to investigate and report on charges of dumping.

An Act to amend the Export and Import Permits Act extends the duration of the Act for a further five years and adds the Canadian Dairy Commission to the Import Control Board under the Act to permit control of imports of any dairy products if necessary for the national interest.

An Act respecting the construction of a line of railway in the Province of Alberta by Canadian National Railway Company from the vicinity of Windfall on the Windfall Extension to the Soudo Subdivision of the Canadian National Railway in a westerly direction for a distance of approximately 51 miles to the Bigstone property of Pan American Petroleum Corporation and a connecting spur extending in a northerly direction for a distance of approximately 9 miles to the South Kaybob property of Hudson's Bay Oil & Gas Company Limited and its subsidiaries.

An Act to authorize the provision of moneys to meet certain capital expenditures of the Canadian National Railway Company for the period from the 1st day of January, 1968, to the 30th day of December, 1969, to be paid out of the moneys provided by Her Majesty in certain securities to be issued by the Canadian National Railway Company and by Air Canada.

An Act to amend the Aeronautics Act makes certain changes to improve the Act such as those relating to regulation of federal facilities and services; prohibiting or restricting navigation of aircraft over certain areas during certain periods of time; excluding hovercraft from the Act; permitting the issuance of temporary licences for commercial air services etc.

An Act to amend the Navigable Waters Protection Act brings the Act up to date, ensuring that navigable waters remain navigable for the larger ships and those of shallower draft which are in use today. Part I is concerned mainly with structures designed for specific purposes, Part II with underwater obstructions to navigation, and Part III with ferry cables and swinging bridges.

Miscellaneous—

The Precious Metals Marking Act concerns the marking of articles containing precious metals in accordance with quality standards provided in the regulations.

An Act to amend the Veterans' Loan Act provides for flexibility in establishing interest rates on loans and advances made to or in respect of veterans under the Act, and makes other changes in consequence thereof.

An Act to amend the Canadian Overseas Telecommunications Corporation Act removes certain limitations previously placed on the Directors, giving them greater powers and permitting more flexibility in the operations of the Corporation.

An Act to amend the Co-operative Credit Associations Act relaxes some of the restrictions previously included in the Act and grants some extensions of powers to the societies subject to it; the Canadian Co-operative Credit Society is enabled to carry out more fully the purposes originally intended for it and the provincial centrals are enabled to continue their sound and orderly development in the light of current conditions.

PART VI.—CANADIAN CHRONOLOGY

Events in the general chronology from 1497 to 1866 are given in the 1951 Year Book, pp. 46-49; from 1867 to 1953 in the 1954 Year Book, pp. 1259-1264; and annually from that year in successive editions. A reprint entitled *Canadian Chronology, 1497-1960* is also available from the Dominion Bureau of Statistics. The following listing covers the period Apr. 1, 1968 to Apr. 30, 1969 and it should be mentioned that certain of the dates given therein are approximate. The publication *Canadian News Facts*, Toronto, has been very valuable in the preparation of this chronology. References regarding changes in federal and provincial legislatures or ministries are not included but may be found in Chapter II on Constitution and Government or in the Appendix.

1968

April: *Apr. 2*, Mayor Drapeau of Montreal announced the creation of a lottery-like scheme of raising money for city financial purposes, the first such scheme to be initiated in Canada. *Apr. 3*, The Fred W. Tanner Lecture Award of the Chicago branch of the U.S. Institute of Food Technology awarded to Dr. Frederick S. Thatcher, Food and Drug Directorate, Department of National Health and Welfare, Ottawa, the first Canadian to be so honoured. Announcement of the Federal Government policy of selling in the free market the gold purchased by the Royal Canadian Mint from Canadian producers; first sale concluded June 6. *Apr. 4*, Death in Memphis, Tennessee, of Negro civil rights leader and Nobel Peace Prize winner Dr. Martin Luther King, Jr., from an assassin's bullet; riots erupted in many cities throughout the U.S. as a result. *Apr. 4-6*, National Liberal convention held in Ottawa; Hon. Pierre Elliott Trudeau elected leader, succeeding Rt. Hon. Lester B. Pearson; assumed office as Prime Minister *Apr. 20*. *Apr. 5*, The Cunard liner *Queen Elizabeth* sold to U.S. interests, to be moored in the Delaware River and used as a conference centre and airport hotel. Nancy Greene of Rossland, B.C., successfully defended her World Cup championship in women's international skiing for the second consecutive year. *Apr. 15*, The U.S.S.R. reported the successful link-up of two unmanned space ships. *Apr. 16*, Yvon Dupuis, former federal Cabinet Minister, acquitted in Montreal at a second trial on a charge of influence-peddling first laid in 1965. *Apr. 19*, Canadian-American expedition headed by Ralph Plaisted of St. Paul, Minnesota, reached the North Pole, travelling by snowmobile, the first surface-travelling party to do so since the 1909 Peary expedition. *Apr. 22*, The Logan Medal, top award of the Geological Association of Canada, awarded to Prof. John Tuzo Wilson for outstanding contributions as an earth scientist and teacher. Settlement reached in six-day strike of more than 11,400 workers against Ford Motor Co. of Canada Ltd.; wage parity with American Ford workers by 1970 and fringe benefits granted. *Apr. 23*, Dissolution of 27th Parliament; general election called for June 25. Dr. Robert Grierson, a United Church missionary, posthumously honoured in Toronto by the South Korean Government for his role in helping the country gain its independence; the Canadian Order of Merit was presented to his widow. *Apr. 24*, Death of John Ambrose O'Brien in Ottawa, one of the founders of the Montreal Canadiens in 1909 and of the National Hockey Association, forerunner of the National Hockey League. *Apr. 25*, Compilation of all rulings of the Speaker of the House of Commons for the past 100 years completed as a centennial project by Maxime Guitard, House of Commons Clerk of Committees. *Apr. 26*, The Federal Government announced a long-term interest-free loan for construction of a major electric transmission system in Ghana, Togo and Dahomey, the largest project undertaken

by Canada in its aid programs for Africa. *Apr. 27*, Arrests and counter demonstrations resulted from anti-Viet-Nam War protests in Toronto, Ottawa, Montreal and Edmonton.

May: Dean T. L. Jones, Ontario Veterinary College, University of Guelph, awarded the American Veterinary Medical Association award for 1968. Prof. James P. Kutney, University of British Columbia, awarded the 1968 prize of the Chemical Institute of Canada for distinguished work in organic or biochemistry. Don W. Thomson, Ottawa author and former civil servant, elected a fellow of the Royal Geographical Society of London. *May 2*, The 1967 Governor General's literary awards presented to Eli Mandel (poetry in English) and Alden Nowlan (poetry in English); Norah Storey (non-fiction in English); Jacques Godbout (fiction in French); Robert-Lionel Séguin (non-fiction in French); and Françoise Loranger (French theatre). Award of the 1967 Stephen Leacock Memorial Medal to Max Ferguson for his book *And Now, Here's Max*. *May 3*, The Canadian Ambassador to France delivered a note to the French Government in Paris, believed to be a low-key protest over the treatment of Quebec as an equal of the independent states at the international education conference held in Paris *Apr. 22-26*, which was attended by Quebec Education Minister Cardinal and bypassed relations with the Canadian Government. *May 7*, Death in Toronto of John McClelland, founder and former president of the publishing firm of McClelland and Stewart Ltd., at age 91. *May 9*, Appointment of the Rt. Hon. Lester B. Pearson as a professor of international affairs announced by Carleton University, Ottawa. *May 9-10*, President Habib Bourguiba of Tunisia on state visit to Ottawa. *May 11*, Six-mile extensions to the Toronto subway system began operations, bringing the total length to 21 miles. A strike by about 4,500 lumber workers in the British Columbia interior, begun Oct. 4, 1967, ended in acceptance of a contract including pay raises of 72 cents an hour. Montreal Canadiens won the Stanley Cup, symbol of hockey supremacy, over the St. Louis Blues, 4 games to 0. Lt-Col. J. W. Watson of Toronto, an Attaché at the Canadian Embassy in Moscow, and his wife injured when man-handled by U.S.S.R. security forces aboard a trans-Siberian train; left to return to Canada *May 24*; in retaliation, a military attaché at the Soviet Embassy in Ottawa was directed to leave Canada. *May 12*, Death of Blair Fraser, Ottawa editor of Maclean's Magazine and distinguished author and radio and television personality, by drowning while on a canoe trip in Algonquin Park. *May 13-24*, Federal Government announced loans from West German, United States and Italian sources to a total of \$262,400,000 (U.S.) to increase its cash reserves, permit repayment to the Federal Reserve Board and lengthen its foreign debt obligations. *May 14*, Canada's tallest building, the 56-storey Toronto-Dominion Centre in downtown Toronto, officially

opened. Death in Aylmer, Que., of Mrs. Arthur Dillon Croker Cummins, former Montreal lawyer, writer and lecturer who was a founder and first president of the Business and Professional Women's Club of Canada. *May 16*, Manitoba's \$1,500,000 centennial planetarium officially opened in Winnipeg. *May 17*, Opening of Man and His World on the site of Expo 67, Montreal. *May 18*, McIntosh, Saint John, N.B., appointed to the Board of Governors of St. Francis Xavier University at Antigonish, N.S., the first under-graduate of a Canadian university to be so appointed. *May 21*, Dr. C. J. Mackenzie, Chancellor of the University of Toronto and former president of the Atomic Energy Research Council and of Atomic Energy Ltd., named second recipient of the Bank Award for outstanding contribution to human welfare and common good. *May 22*, Report of the Royal Commission on the Development and Prospects of Newfoundland published Dec. 11, 1964, tabled in the House of Commons. *May 23*, The Rt. Hon. Lester B. Pearson received the BBC's highest honour, an invitation to deliver the annual Reith series of six 30-minute radio talks on the state of knowledge. *May 24*, The U.S. Embassy at Quebec City damaged by bomb explosion following peaceful demonstrations against the war in Viet-Nam. Construction of the \$66,200,000 Montreal headquarters building for the CBC, to be completed by *May 27*, Award of a National Film Institute franchise to Montreal announced; the franchise is now known as the Expos. *May 28*, The Governor General awarded the Massey Medal for Architecture awarded annually to former Governor General Vincent Massey by the Royal Architectural Institute of Canada in recognition of his distinguished service to architecture, the arts and to Canada. *May 30*, Greene, world champion skier, of Rossland, B.C., named "minister extraordinary" to the Columbia Government, the position to which he was appointed for his leadership in the field of tourist promotion. *June 1*, Senator Charles Gavan (Chubby) Power, after an unbroken parliamentary career since 1917, Mrs. Venetia Barrette, first winner of the \$100,000 grand prize in the "voluntary tax" scheme, named first Chairman of the Municipality of Ottawa-Carleton on Jan. 1, 1969. Mr. Justice John McKeown, former Court Judge in Yukon Territory, named Chairman of the newly created Manitoba Mediation Commission, for a seven years. *May 31*, Canada's first heart operation performed in Montreal Heart Dr. Pierre Grondin.

June 1, The Canadian Mission ship, *Lady Grenfell*, arrived in St. John's, Nfld., ending the Mission's 100th anniversary services to northern Newfoundland and Labrador begun in 1892. *June 1*, Death in Easton, Conn., of Helen Keller, internationally renowned author who overcame blindness to become an inspiration to the blind. *June 2*, Death in Ottawa of André Laurendeau, former chairman of the Royal Commission on Bilingualism and Biculturalism and Editor-in-Chief of the Montreal newspaper *Le Devoir*. *June 2*, Death at Resolute Bay, N.W.T., of Idlout, Eskimo leader and spokesman for his people; he was the central figure in the book *Land of the Long Day* and in a film of the same name, and was decorated by H.M. Queen Elizabeth II for his services as an Eskimo leader. *June 3*, The Federal Government announced the issuance of nickel coinage replacing the present silver coinage, to begin in August. *June 6*, Death in Los Angeles of Senator Robert F. Kennedy, brother of the late U.S.

President John F. Kennedy, from an assassin's bullet. *June 7*, The students' council at Simon Fraser University, after more than a week of demonstrations that forced the resignation of two presidents, voted to create a committee to work with a similar faculty committee to search for an acting president; Dr. Archibald MacPherson, Dean of Arts, given a vote of confidence June 11, and Dr. Kenneth Strand became Acting President Aug. 1, after acceding to student demands for greater voice in the government of the university. *June 8*, The home of Stephen Leacock near Orillia, Ont., officially marked as a national monument. *June 8*, Arrest in London, Eng., of James Earl Ray, suspect in the assassination of Dr. Martin Luther King, following investigation by RCMP that indicated he was travelling on a Canadian passport. *June 9*, Debate by leaders of Canadian political parties televised for the first time. *June 10*, Voters in Montreal's suburban St. Leonard elected members of the Catholic school commission pledged to force all children of non-English immigrants to attend French-language schools. *June 11*, Premier Johnson of Quebec stated that the provincial policies involving language and religion cannot be upset by local referendums or elections of school board officials; urged maintenance of the *status quo* until the provincial government announces its long-term policy for all Quebec schools. *June 12*, Report of the committee established June 10, 1965, to study the education system in Ontario, under the co-chairmanship of Mr. Justice Emmett Hall and Lloyd A. Dennis, tabled in the Legislature; recommendations included the abolition of grades, percentage marks, school subjects as now known, corporal punishment, and the organization of learning around general areas such as communications, environmental studies and the humanities. The General Assembly of the UN approved a draft treaty to ban the spread of nuclear weapons, regarded by its sponsors, Canada among them, as a major step toward world peace. *June 13*, Report of the Quebec La Haye Commission, established in 1963 to study all aspects of urbanization, made public; recommended re-organization of the municipal affairs department, appointment of an urban affairs expert and a five-year plan to deal with housing, studies on re-grouping of municipalities, etc. The Metropolitan Toronto and Region Transportation Study, prepared as a basis for a long-term transportation policy for the area around Toronto, bounded by Oshawa, Hamilton, Barrie and Guelph, completed; recommendations included the development of requirements to fill the needs of the population expected to double by the year 2000. *June 17*, Dr. W. Kaye Lamb, Dominion Archivist and National Librarian, presented with the Eastman Kodak Information Technology Award for outstanding contributions to advancement of the science of information technology, the first Canadian to be so honoured. *June 22*, Strike action begun in Toronto by 3,700 Metro outside workers including garbage collectors, and by 300 brewery workers; and in Montreal by 1,200 employees of the St. Lawrence Seaway Authority. *June 23*, Wage parity with U.S. auto workers assured workers at the American Motors Canada Ltd. plant at Brampton, Ont., under a 16-month contract. *June 24*, Sandra Post, Oakville, Ont., became the first rookie and first foreign player to win the U.S. Ladies' Professional Golf Association championship. Threatened locomotive firemen's strike averted by federal Labour Minister Pepin by order to reconvene the conciliation board; agreement reached providing for pay increase July 3. More than 290 persons were arrested and 130 injured, including 43 policemen, during St. Jean Baptiste Day riots in Montreal; 450 criminal charges laid against 210 demonstrators on June 25; CBC reporter Claude-Jean Devireux was suspended for his broadcasts on the affair, resulting in refusal of other CBC reporters to carry on and the consequent blackout of CBC French-language coverage of the federal election on June

25. June 25, Twenty-eighth General Election; Liberal government under Pierre Elliott Trudeau returned to office; party standing—155 Liberal, 72 Progressive Conservative, 22 New Democratic Party, 14 Ralliement Creditiste and 1 Independent.
June 28, Official opening of the 62-storey, 626-foot Husky Tower in downtown Calgary, claimed to be the tallest structure of its kind in North America.
June 29, Strike of 5,700 workers at Massey-Ferguson Industries Ltd. in Toronto and Brantford, begun Apr. 19, ended in acceptance of a three-year contract giving wage increases but not parity with U.S. counterparts.

July: Dr. C. J. Mackenzie, former President of the National Research Council and Atomic Energy of Canada Ltd., made an honorary member of the Institution of Civil Engineers, London, Eng.
July 1, On Parliament Hill, Governor General Michener unveiled a bronze statue of former Prime Minister W. L. Mackenzie King, the work of Quebec sculptor Raoul Hunter. The U.S. and the U.S.S.R. signed the nuclear non-proliferation treaty and agreed to open joint discussions on the limitations of offensive nuclear missiles and anti-missile systems; Canada signed the treaty in Moscow, London and Washington on July 22 and, on Jan. 8, 1969, was the sixth of the 80 countries concerned to ratify the agreement. A new long-distance telephone service was placed in operation connecting ships on the high seas and in coastal waters with the Canadian land network.
July 3, Sunday horse racing legalized in Ontario by the passing of a Bill in the Legislature.
July 4, Offices of the Canadian Consulate General in New York damaged by an explosion.
July 6, Legislation passed in Quebec authorized Sidbec, a provincial government agency, to develop an integrated steel enterprise and to purchase the outstanding shares of the Dominion Steel and Coal Corp. Ltd.; management of the latter corporation was taken over by Sidbec on Dec. 26, 1968. A \$10,000,000 damage suit brought in 1964 on behalf of eight thalidomide babies in Ontario settled out of court and money placed in trust for each of the children until reaching the age of 21.
July 9, NRC astronomers announced the first detection of radio signals from recently discovered X-ray stars, a discovery expected to give vital clues to the life and death processes of stars and the universe.
July 10, The Roman Catholic School Board of St. Leonard agreed to limited English-language instruction. Minimum wage increases announced in Quebec (to \$1.25 in the Montreal area and \$1.15 elsewhere) and in Saskatchewan (to \$1.05 in the cities and 95 cents in rural areas). The George Armstrong Peters prize from the University of Toronto awarded to Dr. Walter P. Bobechko, paediatric orthopaedic surgeon at the Hospital for Sick Children, for original research into the transplanting of cartilage from healthy joints to heal crippled knees or hips through delaying rejection of transplanted tissue.
July 11, Presidents of 40 universities met in Ottawa to discuss unrest on campuses across Canada.
July 13, The Rt. Hon. John G. Diefenbaker presided at the unveiling of a monument to Sir John A. Macdonald, Canada's first Prime Minister, at the Macdonald ancestral home in Sutherland City, Scotland.
July 14, Seaway workers ratified a compromise settlement giving them a 19-p.c. wage increase over three years, ending a 24-day strike that cost the Seaway Authority \$96,000 a day in lost tolls, the workers \$34,000 a day in lost wages and shipowners \$300,000 a day to maintain idle ships.
July 15, Announcement of retirement of the "Newfie Bullet", the slow train between St. John's and Fort aux Basques, Nfld., on Apr. 15, 1969, to be replaced by modern, air-conditioned buses.
July 16, Death in Ottawa of Norman A. Robertson, former Under Secretary of State, High Commissioner of Canada to Britain, Ambassador to the United States and chief negotiator for Canada

during tariff-cutting talks among the world's industrial nations at Geneva before heading a new School of Graduate Studies in International Affairs at Carleton University, Ottawa.
July 17, Rt. Hon. Lester B. Pearson elected President of the Institute for Strategic Studies, a London-based defence and disarmament research centre. The 27-day strike and lockout in Ontario's brewing industry ended; 2,700 workers accepted a contract involving increases in wages.
July 18, Official opening in Vancouver of the Bank of British Columbia, Canada's tenth federally chartered bank. The first volume of the report of the Royal Commission on Pilotage, appointed Nov. 2, 1962, released; recommendations include the establishment of a Crown corporation to organize and control the shipping function, and a complete overhaul in the organization and control of shipping pilots.
July 18 - Aug. 9, Nation-wide strike of 24,000 postal workers; mediation conducted by Judge René Lippé resulted in wage increases, an improved rate of progression to top salary level for clerks and letter carriers, improved overtime provisions and an additional two paid statutory holidays; in Montreal, mail service was further delayed until Aug. 13 when truck drivers under contract struck for pay lost during the 22-day postal strike.
July 20, A tornado at LaRivière, Man., caused an estimated \$1,000,000 damage.
July 22, Historic Basilica at St. Boniface, Man., gutted by \$2,500,000 fire which destroyed irreplaceable items representing early Western Canada history, only a week after celebrations commemorating the 150th anniversary of the founding of St. Boniface.
July 24, Finance Minister Benson announced extension of a series of guidelines to prevent U.S. capital passing through Canada to foreign countries, in effect since May 3, a further step in fulfilling an agreement made Mar. 7 when Canada was given exemption from U.S. restrictions on capital exports.
July 28, Death in Nanaimo of Colin Cameron, M.P. for Nanaimo-Cowichan-The Islands.
July 31, Wage increases offered to 800 United Auto Workers by Canadian Car Co. in Fort William, Ont., accepted by workers on strike since July 3.

August: Scientists of the Geological Survey discovered a new mineral near Montreal, named *veloganite* in honour of Sir William E. Logan, founder and first Director of the Geological Survey of Canada.
Aug. 1-8, Ninth annual Provincial Premiers' Conference held at Waskesiu, Sask., attended by Premiers of all provinces except Newfoundland, Quebec and British Columbia; a firmer approach to the subjects of education, health, pollution and urban growth was taken, and the Federal Government was requested to convene a federal-provincial conference to revise present financial agreements.
Aug. 2, Announcement of the establishment of a three-member "task force" to study amateur and professional sports development and assistance, and the role of the Federal Government in this area.
Aug. 3, Announcement of Federal Government plans to build a new international airport near Montreal and expand the Toronto International Airport at a cost of about \$600,000,000. In possibly the first operation of its kind, a surgical team headed by Dr. André Gilbert at Quebec, Que., successfully carried out a kneecap transplant.
Aug. 12, Death in Lunenburg, N.S., of Captain Angus Walters, renowned skipper of the racing fishing schooner *Bluenose*, at age 87.
Aug. 13, Inauguration by General Jean-V. Allard of the third link of the Canadian Switched Network telephone system at the \$2,000,000 communications complex at Smith Falls, Ont., extending the network previously in operation at Fredericton, N.B., and Sherbrooke, Que.; this system constitutes the greatest advance in telephone technology since the introduction of the dial telephone in the 1920s; its main use at present is in air defence.
Aug. 16, Transport

Minister Hellyer announced that, as the minister responsible for housing, he would head a task force to hold hearings in about 25 cities across Canada to seek solutions to the housing crisis. More stringent penalties against drinking drivers went into effect in 1968; penalties include automatic loss of licence for six months on a first conviction for drinking and driving and of one year for drunk driving. The stock of Air Canada extended by the acquisition of 40 p.c. of the stock of Air Jamaica Ltd.

Proclamation of Ontario's Moosonee Area Board Act transformed the mainly Indian community of 1,500 in James Bay into Canada's first northern municipality. Aug. 19,

B. Pearson appointed to head a bank international commission of experts to study and chart the future of economic aid to developing nations. A strike that threatened to shut down the planes was averted when a settlement gave wage increases and other benefits. Aug. 20, Announcement of the

Canadian Institute of Indian Studies to promote a better understanding of Indian life among Canada's academic community, known as The Shastri Indo-Canadian Institute in honour of the late Indian Prime Minister Lal Bahadur Shastri; head office to be at McGill University. Aug. 21, The Post Office Department announced the closing of the Post Office Savings Banks, a service initiated 100 years ago. Banking facilities were not available in the areas where Russian troops invaded Czechoslovakia.

Leaders, among them Alexander Shirov, denounced the act as a violation of the UN Charter. Death in the Guevreumont, well-known Canadian writer. Aug. 24, France exploded a hydrogen bomb at a test centre in the Pacific. Aug. 29, The Federal Government announced the cancellation, due to financial difficulties, of the \$22,000,000 project to build a new bridge in British Columbia.

Constructed in commemoration of the 1964 visit to Canada of H.M. Queen Elizabeth II. Robert Baird McClure, medical missionary, was the first layman Moderator of the United Church of Canada. World champion skier Nancy Greene became a member of the Sports Hall of Fame; also awarded the Lou Marsh Trophy as the best Canadian athlete of the year.

Prime Minister Trudeau announced the cancellation of the winter works program, begun in 1967 and costing about \$321,000,000 since then, with a view to introducing more productive programs. Aug. 31, Announcement of the formation of a five-man task force to study and report on federal information services at home and abroad.

The first International Conference of Ministers responsible for Social Welfare held in New York under UN auspices; 94 nations, including Canada, represented. Canadian photographer Robert R. Taylor's book *Japan in Color* selected from 26 countries as "the world's finest book" and awarded a gold medal by the International Book Fair at Leipzig, East Germany. Sept. 1, Strike of 2,000 employees begun May 3 at the Goodyear Tire and Rubber Co. of Canada plant in Toronto ended in a new three-year contract giving an increase of about \$1.05 an hour in wages as well as other benefits. Sept. 3, Postal rate increases announced by Postmaster General Kilbride, effective Nov. 1, 1969; the Bill received Royal Assent on Oct. 31. Sept. 5, Fifth Annual Review of the Economic Council of Canada made public, recommending comprehensive measures to eliminate poverty. Report of the Ontario Royal Commission of Inquiry into labour-management relations, established under Mr. Justice Ivan C. Rand in August 1966, released; it recommends that an 11-man tribunal with powers to control

picketing and terminate strikes be created, that the right of public employees to strike be denied, and that unions be made legal entities. Sept. 6, Swaziland became an independent nation, ending 350 years of the British Empire in Africa. Sept. 6-8, Prime Minister Hugh Shearer of Jamaica in Ottawa for talks with Canadian leaders. Sept. 8, Birthplace of Col. John McCrae, composer of *In Flanders Fields*, near Guelph, officially opened as a historic site. The first Czechoslovakian refugees from the Aug. 21 invasion of their country by Soviet troops arrived in Canada under a special four-month federal program during which time 10,000 to 11,000 Czechoslovakians came to Canada at a cost to the Federal Government of \$8,000,000 to \$10,000,000. Sept. 9, Canada Council Molson Prizes for outstanding achievement in the arts, social sciences and humanities for 1968 presented to Glen Gould, pianist, and Jean Le Moyne, writer. Dr. Patrick McTaggart-Cowan, former President of Simon Fraser University, appointed Principal Scientific Adviser to the Federal Cabinet. Sept. 11, An Exchequer Court judgment ruled the Federal Government wholly liable because of negligence for the collision of two freighters in the St. Lawrence River in which three persons were killed and a West German freighter sunk, and placed, for the first time, "an unqualified duty" on the Crown to ensure that navigational aids on Canadian waterways are fulfilling their intended purposes. An Air Canada plane on a flight from Moncton, N.B., was ordered to Cuba by Charles Lavern Beasley of Dallas, Texas, the first such incident in Canada; during refuelling he was arrested, and arraigned on eight charges; found guilty and sentenced Dec. 10 to six years in penitentiary. Sept. 11-12, Visit of Philippe Rossillon, a member of the staff of Premier Maurice Couve de Murville of France, to the Red River Valley French Canadian Cultural Association in Manitoba denounced by Prime Minister Trudeau who told the House of Commons that the Department of External Affairs had registered its disapproval with the French Ambassador to Canada; the visit was claimed to be unofficial. Sept. 12, The eight-week strike of Lakehead grain handlers ended in agreement on a wage increase of \$1.05 an hour over three years and arbitration of other issues. In a further development in the St. Leonard school dispute, thousands of English-speaking parents protested on Parliament Hill against the plans to give French-only instruction in the elementary schools. Sept. 15, Celebration of the Centennial of the Medical School of Dalhousie University, Halifax, N.S. Sept. 17, Dr. Bruce Chown of Winnipeg awarded the \$25,000 Gairdner Foundation Award of Merit in medical science for 1968 in recognition of his contributions to the knowledge of human blood groups. Sept. 18, The Halifax-based destroyer HMCS *Ottawa* became the first Canadian naval ship to have a predominantly French-speaking crew. Sept. 20, Death at Woodbridge, Ont., of J. Grant Glasco, formerly Chairman of the Royal Commission on Government Reorganization. Scientific research project involving the development of a \$150,000,000 intense neutron generator (ING) cancelled by the Federal Government in its effort to cut expenditures. Sept. 24, A judicial inquiry into the behaviour of Toronto Magistrates Frederick J. Bannon and George Gardhouse found the former unfit due to his association with a known ex-convict with whom he discussed cases coming up before the court, and the latter of indiscretion in similar matters. Sept. 25, Canada elected as one of the 17 Vice-Presidents of the 125-nation UN General Assembly. Sept. 25, The *Family Herald*, a weekly paper of specific interest to farmers, ceased publication after 99 years. Death in Manicouagan, Que., of Premier Daniel Johnson of Quebec; Jean-Jacques Bertrand chosen his successor on Oct. 2. Sept. 27, Premier E. C. Manning of Alberta announced his intention to retire after serving as Premier for 25 uninterrupted years.

Postmaster General Kierans announced the discontinuance of Saturday mail delivery and the closing of Post Offices on Saturday, effective Feb. 1, 1969. *Sept. 28*, The Dr. Gordon M. Shrum Powerhouse of the \$485,000,000 Peace River hydro-electric project formally opened by Premier Bennett at Hudson Hope, B.C. *Sept. 29*, A memorial to Richard Rowland Thompson, the only Canadian awarded the Queen's Scarf for bravery in the Boer War 1899-1902, unveiled at Chelsea, Que.

October: *Oct. 1*, Following a unique operation performed by a team headed by Dr. Fouad A. Hamdi, Chief of Neurosurgery at Royal Jubilee Hospital, Victoria, B.C., a patient left the hospital fitted with a stainless steel vertebra. *Oct. 2*, A statue of Louis Riel, a metis leader who was hanged for treason in 1885 when his rebellion on behalf of the French-speaking metis on the prairies failed, unveiled in Regina by Prime Minister Trudeau. *Oct. 3*, The Lord Melchett Medal and Scroll, the highest international award in its field, presented to Alex Ignatieff, Deputy Director of the Mines Branch, Department of Energy, Mines and Resources, by the British Institute of Fuel, for his outstanding work in the field of fuel science and technology, the first Canadian to have been so honoured. In an unprecedented policing move, the CRTC cancelled the licence of CJLS radio station in Yarmouth, N.S., because of violation of program standards. *Oct. 4*, Farmers from southern and southwestern Ontario demonstrated on Parliament Hill in protest against the decline in the price of corn and in support of further negotiations with the Federal Government. *Oct. 6*, Members of Parliament David MacDonald and Andrew Brevin reported their observations of starvation and destruction in Biafra, in sharp contrast to those reported by a military team of observers from various countries that did not support their findings; Canada later obtained permission from the Nigerian Government to fly relief supplies to Biafra for the International Red Cross. *Oct. 7*, Students occupied Lionel Groulx College in Ste. Thérèse, beginning a series of student occupations in other such institutions in Quebec in support of their demands for better preparation for the job market, for a second French-language university in Montreal and for a government program of economic planning to create more jobs; by *Oct. 28* all colleges were open, some under restrictions including shorter Christmas holidays and the abolition of student "study sessions" during class hours. *Oct. 9*, Canada reaffirmed its adherence to the principles of the UN Charter and announced an increase in its contribution to the UN development program from \$10,000,000 to \$12,500,000. Acadia University, Wolfville, N.S., announced the formation of a Canada-Commonwealth Caribbean Centre to act as a clearing house for West Indian information and for studying matters of interest to Canada and the Commonwealth Caribbean. *Oct. 11*, The U.S. State Department delivered to the Canadian Ambassador a cheque for \$52,100,000 in payment to British Columbia for flood-control benefits provided on the American portion of the Columbia River by the Arrow Lake dam, fully operational today. Death in Surrey, B.C., of Senator Thomas Reid. The Red River floodway project, constructed to avert flooding in the Winnipeg area, officially opened by Energy, Mines and Resources Minister Greene. *Oct. 11-15*, At a convention in Quebec, separatist organizations Mouvement pour la souveraineté nationale and the Ralliement national united to form one party, Le Parti Québécois, claiming a membership of 20,000. *Oct. 11-22*, U.S. spacecraft *Apollo 7*, carrying three astronauts, successfully carried out an 11-day, 163-orbit flight. *Oct. 14*, The CP-TCA No. 1112, the first aircraft owned by TCA, purchased for \$25,000 in October 1927, accepted by the Director

of the National Museum of Science and Technology, to be placed on permanent display. *Oct. 15*, Announcement in the House of Commons of the signing of a five-year agreement by Atomic Energy of Canada Ltd. and the Commissariat à l'Énergie Atomique of France to share nuclear data. Premier Bennett of British Columbia announced the repayment by the Province of Quebec of the \$100,000,000 loan advanced to that province by B.C. in September 1964. *Oct. 17*, The Ontario Government announced that the minimum wage in general industry would be raised to \$1.30 from \$1 an hour, and in the construction industry to \$1.55 from \$1.25, effective Jan. 1, 1969. *Oct. 18*, The Entomological Society of Canada Medal for 1968 awarded to Dr. William George Wellington of the Department of Zoology of the University of Toronto. *Oct. 22*, Canadian aircraft awaiting orders to fly relief supplies to Biafra received Nigerian clearance but not that of Biafra, or Equatorial Guinea. *Oct. 23*, Ontario Education Minister William Davis presented 40 specially bound volumes of historical biography to Edinburgh University in Edinburgh, Scotland, in commemoration of the 150th anniversary of the birth of Scottish-born journalist and statesman George Brown, who helped to promote Canadian Confederation. *Oct. 25*, Vancouver's \$32,000,000 International Airport terminal officially opened. *Oct. 26*, The \$3,500,000 Centennial Museum-MacMillan Planetarium complex officially opened in Vancouver. *Oct. 28*, At Olympic Games held in Mexico City, the Canadian equestrian team of Tom Gayford, Jim Day and Jim Elder won Canada's only gold medal; three silver medals, two by Elaine Tanner and one by Ralph Hutton, and a bronze medal by the women's swimming team in a free-style relay completed Canada's total. The unmanned Soviet space ship, *Soyuz 2*, landed in the U.S.S.R. after three days in space; its manned sister ship, *Soyuz 3*, continued in orbit for another day after manoeuvring experiments to investigate docking systems. *Oct. 30*, Demonstrations by taxi drivers against a limousine service's monopoly on passenger traffic from Montreal International Airport led to a clash with police. *Oct. 31*, U.S. President Johnson announced the cessation, effective Nov. 1, of all air, naval and artillery bombardment of North Viet-Nam in what he hoped would be "a major step toward a firm and honorable peace in southeast Asia".

November: Dr. John F. Booth, a pioneer in agricultural economics in Canada and organizer and Director of CDA's Economics Division 1929-60, elected a Fellow of the American Agricultural Economics Association, the first Canadian to be so honoured. *Nov. 1*, Report of the Royal Commission on Security, established Nov. 16, 1966, delivered to Prime Minister Trudeau; only the sections of the report not involving security to be made public. *Nov. 4*, Prime Minister Trudeau announced in the House of Commons that the Federal Government will get out of the Medicare program in five years, once it is well established—costs will be split with the provinces until 1972, then additional taxation powers turned over to the provinces together with full responsibility for the program. *Nov. 4-6*, Federal-provincial fiscal conference of finance and health ministers opened in Ottawa. *Nov. 6*, Richard Milhaus Nixon elected the 37th President of the United States. First clinical trial on a human being in an eye operation to implant a plastic cornea performed in Toronto. *Nov. 11*, Fiftieth anniversary of Armistice Day celebrated in Mons, Belgium, by Canadian World War I veterans. *Nov. 13*, Dagmar Langer of Toronto received the first Christina Centennial Scholarship founded at Expo 67 by Princess Christina of Sweden. Montreal's container terminal began operations, receiving European container-packed goods for shipment to inland centres. *Nov. 14*, John J. Deutsch,

President and Vice-Chancellor of Queen's University and former Chairman of the Economic Council of Canada, presented the Vanier Gold Medal of the Institute of Public Administration in 1968. Nov. 15, Canadian aid to Biafra came to a standstill following 11 successful trips by a C-130 plane; Prime Minister Trudeau announced abolition of immigration laws to allow Canadian citizens and institutions to adopt children orphaned in the civil war; reporters and cameramen banished from the war zone. Prime Minister Trudeau announced establishment of a fund for special projects to aid the leaders of opposition parties in their parliamentary duties—the leader of the Conservative party \$125,000 a year and the leaders of the New Democratic and Liberal parties \$35,000 each. Nov. 17, The unmanned spacecraft *Zond 6* successfully landed on the moon. The Canadian team of Al Rostron and George Knudson won the World Curling tournament in Rome, defeating 41 other teams; this was the first victory for Canada since this country donated the cup in 1914. Nov. 18, The CNR granted permission by Newfoundland's Board of Public Utilities Commission to operate a trans-island bus service between the passenger train "Newfie Bullet" and the ferry. Meeting in Bonn, Germany, of the Central Bank Governors of the Americas was headed by Canada's Finance Minister, and Bank of Canada Governor announced measures to restore equilibrium in the international monetary system threatened by massive speculative capital movements involving some European currencies. Louis Rasminsky, Governor of the Bank of Canada, awarded the 1968 outstanding achievement award of the Public Service of Canada. The Royal Agricultural Winter Fair closed its 100th season; Canada took seven of ten world cup championships, that for wheat won by Harold Hansen of Vulcan, Alta.; the Guinness Award to the 4H Club exhibitor of the grand champion baby-beef steer was won by John Curtis of Belwood, Ont. Three-day session of the administration building at the University of British Columbia, B.C., by students to demand changes in admission requirements and education finances, ended in police action; 114 students charged, 101 were fined, 13 were jailed and the remainder remanded Mar. 25, Canada Council Medals for outstanding cultural achievement awarded to Earle Browne and A. J. M. Smith, poets, Eric Arthur Blair, architect, Gabrielle Roy, novelist and Jacques Desjardins, painter. Nov. 26, Quebec Liquor Board employees, on strike since June 26, went back to work after voting to accept latest government offer. Nov. 27, The International Dance Competition in Paris, France, announced Gold Star award to the Royal Winnipeg Ballet as the best company in the festival and to Christine Scherer as prima ballerina, for best female dancer. Nov. 29, In the largest civil suit in the world and the longest civil suit in Canada, the Ontario Supreme Court ruled against the Texas Gulf Sulphur Co., New York, in a claim by Leitch Gold Mines Ltd. of Ontario for \$450,000,000 in damages for breach of contract in connection with the development of orebodies in the Timmins area of Ontario. Nov. 30, The Ottawa Rough Riders won the Grey Cup, defeating the Calgary Stampeders in Toronto by a score of 24-21.

December: Dec. 1, Minimum wage in Manitoba increased to \$1.25 an hour from \$1.20. Dec. 2, Prime Minister Trudeau announced in the House of Commons that the Federal Government has offered the coastal provinces a 9-p.c. administrative share of the 1,500,000-sq. mile Canadian continental shelf, retaining control of the area beyond the one-half-to-one-mile offshore line. To bring

educational equality to all Ontario children, the system of local school boards in effect for more than 100 years was replaced by a system of county boards; the reduction in number was 1,446 to 136. Dec. 3, A statement by the Secretary of State for External Affairs to the Standing Committee on External Affairs and National Defence on the NATO Ministerial meeting held in Brussels pointed out that, for the first time in the history of the alliance, the delegates had assembled in advanced session to deal specifically with the implications of a serious international development, namely, the Soviet invasion and occupation of Czechoslovakia. Defence Minister Cadieux announced acceleration of a program of modernization and "qualitative improvement" of Canadian land and sea forces committed to NATO. Dec. 6, Harry E. Strom elected leader of the Alberta Social Credit Party, succeeding Ernest C. Manning; sworn in as Premier of Alberta Dec. 12. Dec. 9, Second report of the Royal Commission on Bilingualism and Biculturalism tabled in the House of Commons; major recommendations were that all children in Canadian schools be required to study the second official language, and that the Federal Government make grants to the provinces so that this may be carried out. Transport Minister Hellyer announced that Air Canada is authorized to sell its Winnipeg overhaul base and move its operations to Montreal, a proposal that has been the subject of controversy among workers, politicians, unions and municipal officials of both cities for several years. Dec. 11, The Supreme Court of Canada restored a trial judge's finding that Premier W. A. C. Bennett of British Columbia was guilty of slander in remarks he made about a former provincial public servant, and restored an award of \$15,000 in damages to Mr. Jones. Dec. 13, Third and final reading given to a Bill in the Quebec Legislature abolishing the Legislative Council, effective Dec. 31; the name of the Legislative Assembly was changed to National Assembly of Quebec, and members are to be called Members of the Parliament of Quebec. Dec. 16, The City of Montreal and the Quebec Government each offered a \$10,000 reward "for information leading to the arrest and conviction" of bomb terrorists; 48 bombs were reported planted in the Montreal area during 1968 and no arrests made. Dec. 16-17, Letters exchanged between Canadian Finance Minister and the U.S. Treasury Secretary contained agreement that Canada was no longer bound by the upper limit of \$2,550,000,000 previously set on its foreign currency reserves but that the U.S. relied on continued Canadian co-operation with the U.S. measures to stem an excessive outflow of funds. Dec. 18, The Seaway International Bridge at Cornwall blocked by Indians from the nearby St. Regis Reserve in protest against the imposition of customs duties on purchases made in the United States where many of them work, claiming exemption under the Jay Treaty of 1794; 45 arrests were made. A study conducted for the Royal Commission on Farm Machinery criticised manufacturers and provincial governments for ignoring safety measures in the designing of tractors. British sculptor Henry Moore announced the donation of between 400 and 600 of his works to the Ontario Art Gallery in Toronto. Dec. 19, The CNR and CPR announced plans for a \$1,000,000,000, 15-year Toronto waterfront redevelopment plan, to create a central transportation, communication and residential area. Federal-provincial conference of finance ministers held in Ottawa. Dec. 20, A unique single bank-financing venture—the formation of a consortium of Canadian chartered banks to provide \$150,000,000 to assist in financing construction of the Churchill Falls power project in Labrador—announced by the Chairman of Churchill Falls (Labrador) Corp. Ltd. The House of Commons unanimously after long debate approved the bulk of a parliamentary reform Bill designed to speed the business of Parliament by reducing the time spent on debate in the House, giving more authority to committees in

studying the subject of debates now carried on in the House, abolishing the committee of ways and means, and other measures; Rule 16A, allowing the government house leader to set time limits on debate in advance, referred back to committee for further consideration. Death in Digby, N.S., of Senator Edouard J. Thériault. The second volume of the report of the Royal Commission on Pilotage recommended the operation of pilotage services on the West Coast as a public service and more clearly defined pilotage waters and more equitable rate structure. Dec. 21, Hervé Filion, Angers, Que., became the first harness driver in the world to win more than 400 races in one year. Dec. 21-27, First manned flight around the moon; U.S. astronauts Frank Borman, James Lovell and William Anders in *Apollo 8* orbited the moon 10 times during the 20-hour period Christmas Eve and Christmas Day, and made the first live telecasts to earth from manned craft. Dec. 27, George Ignatieff, Canadian Ambassador to the UN, appointed Canadian Envoy to the 18-Nation Committee on Disarmament in Geneva, succeeding Lt.-Gen. E. L. M. Burns. Dr. Norman Kenneth Hollenberg of Winnipeg and Dr. Roland James Baird of Toronto named the 1969 medallists in medicine and surgery, respectively, by the Royal College of Physicians and Surgeons of Canada. Dec. 28, An Israeli attack on the international airport at Beirut destroyed or damaged 13 aircraft, in retaliation to an attack on an Israeli jetliner at Athens Airport by two Arab commandos two days earlier in which one passenger was killed, resulted in strong protests by U.S., U.K., U.S.S.R., French and Canadian spokesmen. Dec. 30, Death in Norway of Trygve Lie, the first Secretary-General of the United Nations. In a year-end poll of women working in the newspaper, radio and television fields, Nancy Greene, already selected by sports editors as the top Canadian woman athlete for 1968, was chosen Canada's Woman of the Year. Acadia University announced the appointment of its first Chancellor, Col. the Hon. H. P. MacKeen, former Lieutenant-Governor of Nova Scotia. A report commissioned by the Department of Indian Affairs and Northern Development on the economic potential of the Yukon Territory was released; recommendations included the expenditure of \$1,400,000,000 on private and public development programs between 1969 and 1985, with particular emphasis on requirements of the mining industry and transportation and power facilities.

1969

January: Jan. 1, Annexation of five western suburbs increased the population of Halifax by 35,000 to 123,000 and its land area from 7 to roughly 24 square miles and extending it beyond its peninsular setting. Death in Toronto of Mrs. Wendy Lawrence, youngest daughter of Governor General and Mrs. Roland Michener, well-known writer and film critic. Jan. 2, Death in London, Ont., of Hon. Ivan C. Rand, C.C., a former Justice of the Supreme Court of Canada, originator of the Rand formula now in wide use in Canada and the United States as an answer to the union shop problem, and first Dean of the Law School at University of Western Ontario. Eaton's of Canada began a year-long celebration marking 100 years of department store business. Jan. 6, Report of a special committee on Ontario farm income released; recommendations included the formation of one general farm organization, establishment of a comprehensive food production and marketing system under the direction of a central agency, a central warehousing system to handle spare parts for farm machinery, broadening of educational programs with farmers in mind and an improvement in present leasing arrangements. Jan. 7, The \$29,000,000 Manitoba Hydro project that calls for raising Southern Indian Lake by 35 feet with the diversion of 80 p.c. of the Churchill

River waters strongly opposed by Indians and metis living in the area because of potential damage to the trapping and fishing industry in a meeting of more than 600 Indians and metis with Manitoba Natural Resources Minister. Jan. 7-10, Leaders of the 28 Commonwealth countries met in conference in London; discussion included the problems of Rhodesia and Red China. Jan. 8, The Ottawa Police Commission offered a \$5,000 reward for information leading to the arrest and conviction of those responsible for four mailbox bomb incidents in the city on December 31 and Jan. 2. Jan. 11, Death in Prince Albert, Sask., of Hon. W. F. A. Turgeon, C.C., Chief Justice of Saskatchewan, former Canadian diplomat and head of many royal commissions. Jan. 13, The Russian national hockey team cancelled its Canadian tour but later reversed the decision, playing the first game Jan. 19 and continuing the series to defeat the Canadian national team in all eight games played. Jan. 16, Energy, Mines and Resources Minister Greene announced that a Canadian research ship based on Dartmouth, N.S., will embark on a year-long expedition in November 1969, completely circumnavigating the Americas, and carrying scientists from government departments, universities and institutes who will conduct investigations ranging from marine biology to oceanographic circulation and the food potential of ocean waters. Jan. 16-17, Federal and provincial welfare ministers met in Ottawa and agreed on the setting up of committees to study ways of keeping control of rising social assistance costs and to look for ways to involve welfare recipients directly in the operation of welfare programs. Jan. 17, Georges Lemay, the first man wanted by the police to be recognized via Telstar satellite broadcast, sentenced to prison for eight years for organizing and participating in the 1961 bank vault robbery in Montreal. Three Soviet cosmonauts in *Soyuz 4* successfully performed the world's first manned docking in space and crew transfer with one cosmonaut in *Soyuz 5*. Jan. 22, Fines and damages totalling \$39,100 levied against the CNTU for violations of strike injunctions and mill damages and the signing of a wage agreement with Domet Pulp and Paper Products Ltd. at Windsor and East Angus, Que., ended the six-month strike by 1,200 Quebec paper mill employees. Jan. 23, Death in Toronto of Malcolm Wallace McCutcheon, former Senator and Cabinet Minister. Jan. 24, An agreement made between France and Quebec to study the development of a communications satellite system; criticism in the House of Commons because of federal jurisdiction in the communications satellite field and of Quebec's failure to inform the Federal Government in advance of its intentions. Jan. 29, Final report of the federal task force on housing established in September 1968 under Transport Minister Hellyer tabled in the House of Commons; major recommendations of the report include gradual abolition of down-payments on houses for middle- and lower-income groups, removal of sales tax on building materials for residential construction, direct loans to municipal or regional governments for the acquisition and servicing of land for urban growth, and a halt to construction of large public housing projects pending study to determine their economic and social worth. Canada's third space satellite, *ISIS A*, successfully launched from Vandenberg Air Force Base in California, supplemented by that sent back by *Alouettes I* and *II*, still in orbit, will make a significant contribution to knowledge of the upper atmosphere and solar-terrestrial relations. Jan. 29-Mar. 12, Student occupation of the computer centre in the new Sir George Williams University building in Montreal in protest over alleged racism erupted into violence by fire and other means, ending in the destruction of the computer and university records in damage estimated at \$2,000,000; charges of conspiracy to commit mischief and arson were laid against 90

adults and seven juveniles; all but nine were granted bail by February 20; parents of six of the seven juveniles arrested were each fined \$250 and severely reprimanded in Social Welfare Court. *Jan. 31*, The Council of the Northwest Territories announced the choice of its official banner from more than 3,000 entries—a flag with blue borders at each end and the N.W.T. coat of arms superimposed on a white middle section.

February: *Feb. 1*, Inauguration of a program of medical care for northwestern Ontario; doctors from the University of Toronto teaching hospitals alternate in spending short periods at the 70-bed Federal Government hospital at Sioux Lookout and 5 nursing stations in outlying communities with emphasis on child care. *Feb. 3*, A painting by Rex Woods of Toronto of the Fathers of Confederation, commissioned by the Confederation Life Association as a Centennial project to replace the original destroyed in the Parliament Hill fire of 1916, unveiled on Parliament Hill by House Speaker Lucien Lamoureux; it will be on permanent display in the National Library and Public Archives Building. *Feb. 5*, The two-week Winter Carnival at Quebec City opened; guest of honour was Princess Grace of Monaco. *Feb. 10*, A bomb explosion causing some damage and injury to one man took place near a Canadian Armed Forces building in Montreal. Canada's first conference on urban transportation held in Toronto; unified planning for transport and urban growth agreed upon, particularly in the Toronto, Montreal and Vancouver areas, but no unanimity reached as to financial responsibility. *Feb. 10-12*, Federal-provincial constitutional conference held in Ottawa; agreement reached to study further the matters of constitutional reform, recommendations of the Royal Commission on Bilingualism and Biculturalism, fiscal and other powers of both federal and provincial governments, shared-cost programs, regional economic disparities, Senate and judicial reform and the establishment of a Canadian capital region. *Feb. 11-Mar. 11*, Governor General and Mrs. Michener on tour of four Caribbean countries, the first officially designated state visit abroad by a Canadian Governor General. Explosion of a bomb outside a Montreal armory near Place Ville Marie injured a security guard and broke several hundred windows in the vicinity. *Feb. 13*, Damage estimated at \$500,000 was done to the Montreal and Canadian Stock Exchanges and 27 persons were injured by a bomb explosion; rewards for information leading to the arrest of those responsible total \$50,000. *Feb. 16-20*, Conference of French-speaking nations held in Naimey, Niger, to which Quebec and Canada received separate invitations despite agreement that a Canadian delegation would be headed by a federal official with assisting provincial representatives; several incidents related to this situation and action of a Quebec singer embarrassed the Niger Government. *Feb. 19*, Appointment of Judge René Lippé of Montreal as mediator in the 18-month-old dispute between 70,000 Quebec teachers and the school boards and provincial government approved by both sides; the province-wide rotating strike system ended with the commencement of negotiations. *Feb. 20*, Establishment of Hockey Canada, a non-profit corporation having as its goal the developing of a national team capable of bringing the world hockey title back to Canada, announced by Health Minister Munro; prominent business and sport executives, including Max Bell of Calgary, David Molson of Montreal and Stafford Smythe of Toronto, are on its board of directors. *Feb. 21*, A Royal Commission appointed by the British Columbia Government to investigate the affairs of the Commonwealth Trust group of companies; members of the Commission resigned on Mar. 17 claiming the Commonwealth problems had become a political issue and the subject of

debate in the Legislature. Mrs. Réjeane Laberge-Colas, a Montreal lawyer, became the first woman in Canada to be named to the bench of a Superior Court. *Feb. 22*, Bomb explosion at the Liberal Party social club in Montreal injured two persons. *Feb. 23*, The first scheduled Hovercraft service in Canada began with the inauguration of regular trips between Vancouver and Nanaimo on Vancouver Island. *Feb. 25*, Bomb explosion at the Queen's Printer store in Montreal; damage was light. *Feb. 26*, The City of Montreal announced acceptance of a federal-provincial formula to ensure the continuation of Man and His World for another year. *Feb. 27*, Death of Dr. Marius Barbeau, leading authority on the lore and songs of native Canadian peoples.

March: *Mar. 3-13*, U.S. spacecraft *Apollo 9*, carrying three astronauts, successfully completed the most dangerous and complex flight yet undertaken—ejecting a manned lunar module from the command ship, turning the command ship around and docking it with the module. *Mar. 4*, The RCMP announced replacement of last remaining dog teams by power toboggans; phasing out to be completed in 1970. *Mar. 5*, Prime Minister Trudeau announced the cancellation of plans to build the promised Causeway between Prince Edward Island and New Brunswick, because of cost; project replaced by improved ferry services and terminals, and a 15-year \$225,000,000 program designed to strengthen the Island's agriculture, tourist, fisheries and forest industries. *Mar. 6*, Papers and memorabilia of Sir Wilfrid Laurier, the first exhibit ever assembled, on display in the National Library and Archives Building, Ottawa. *Mar. 7*, Pierre-Paul Geoffroy of Berthier, Que., pleaded guilty to 129 charges of making and placing bombs, conspiracy and theft and possession of dynamite in connection with 31 recent terrorist bombings in the Montreal area; and admitted being a member of the terrorist Front de Libération Québécois (FLQ); sentenced Apr. 1 to life imprisonment. *Mar. 10*, James Earl Ray pleaded guilty in Memphis, Tenn., to first-degree murder charge for the assassination of Dr. Martin Luther King and sentenced to 99 years in prison. *Mar. 14*, U.S. President Nixon announced a plan to build anti-ballistic missile bases at points near the Canadian border. Canada's second satellite-tracking ground station officially opened in Mill Village, N.S., by Postmaster General Kierans; it is to be used for commercial communications traffic, permitting the first station, adjoining it, to revert to the experimental use for which it was designed. A report of the committee on religious education in Ontario public schools, established in 1966, tabled in the Legislature; recommendations included the elimination of religious indoctrination and the teaching of comparative religion and ethics and morality substituted. *Mar. 15-18*, The Rt. Hon. Lester B. Pearson made public his personal files recording his actions in the controversies over Rivard, Spencer and Munsinger during his term as Prime Minister in answer to charges by Peter C. Newman and former Secretary of State Judy LaMarsh in their books that he had sacrificed two of his Ministers of Justice, Cardin and Favreau, to protect himself. *Mar. 18*, Death in Ottawa of John Bracken, former President of the Manitoba Agricultural College, Premier of Manitoba 1922-43 and Leader of the Progressive Conservative Party 1942-43. *Mar. 19*, Premier Bertrand of Quebec announced that the proposed language rights Bill introduced in the Legislature Dec. 9, 1968, giving statutory right to English-language education allowing children to be taught in either French or English, would be permitted to die due to increasing confrontation between proponents of bilingualism and French unilingualism. *Mar. 22*, The Calgary team skipped by Ron Northcott won the world curling championship in Perth, Scotland. *Mar. 23*, Death in Montreal of Arthur Lismer,

prominent Canadian artist and teacher and a member of the famous Group of Seven. *Mar. 24*, Paul-Émile Cardinal Leger, former Roman Catholic Archbishop of Montreal, who resigned to work in African leper colonies, awarded the third \$50,000 Royal Bank award "for a life of devotion to the common man". *Mar. 24-25*, Prime Minister Trudeau visited Washington for discussions with President Nixon on matters of mutual concern. *Mar. 24-27*, The Canadian Agriculture Congress composed of 400 representatives from 132 organizations met in Ottawa to plan agricultural policies for the next decade. *Mar. 26*, The report of the federal task force inquiring into labour-management relations, headed by Dean H. D. Woods of McGill University, tabled in the House of Commons; recommends that a major overhaul be made of all labour legislation including creation of an independent commission to deal with public-interest disputes, that all workers be given the right to refuse to cross legal picket lines at the site of the dispute, and that all unions be made accountable in law for their action in the same way as corporations. *Mar. 27*, Transport Minister Hellyer announced Federal Government plans to build and complete by 1974 a new \$400,000,000 international airport at St. Jérôme, Que., 26 miles north of the centre of Montreal. Louis Marceau, a Quebec City lawyer, appointed Quebec's first ombudsman. *Mar. 28*, Death in Washington of former U.S. President Dwight D. Eisenhower, Commander of the Allied Forces during World War II. About 6,000 persons peacefully demonstrated in a march to McGill University in Montreal in support of their demand that the university be turned into a French institution; later, about 25 people were charged with disturbing the peace, carrying offensive weapons and assaulting policemen in the Montreal downtown area. Dr. Donald Putnam, geography professor at University of Toronto, presented the Massey Medal of the Royal Canadian Geographical Society for his work in land forms. Royal Assent given to the Government Organization Act, 1969 which establishes new departments and agencies of government, abolishes or consolidates others, and re-arranges duties; the main purpose of the provisions of this Act is to eliminate duplication, to simplify administrative structures and to provide better service to the public. *Mar. 30*, The Canadian hockey team was defeated 4-2 by the Russian national hockey team in Stockholm, Russia becoming the world hockey medallists for the seventh consecutive time and Canada coming fourth in the tournament. *Mar. 31*, Newfoundland celebrated the 20th anniversary of its joining Confederation. Saskatchewan adopted as its official flag a two-tone banner with a green upper half representing northern parklands, and a yellow lower half symbolizing the southern wheat fields; a prairie lily, the flower of the province, is at the left and the provincial emblem, a lion and three sheaves of wheat, in the upper right-hand corner; the design was chosen in a province-wide contest and accepted by the Legislature on a free-vote vote.

April: Three-mile causeway to the man-made island of Roberts Bank, south of Vancouver, officially opened; this is part of the deepsea port being developed to provide facilities for shipping coal from British Columbia and Alberta mines to Japan. *Apr. 1*, A law permitting civil marriages in Quebec province came into effect. *Apr. 2*, The Ontario government announced that all ores mined in the province must, after Jan. 1, 1970, be processed and treated in Canada. *Apr. 2-3*, The Rt. Hon. J. G. Gorton, Prime Minister of Australia, visited Ottawa. *Apr. 8*, A VIP railway car used for 70 years on the "Newfie Bullet"

donated to the National Museum of Science and Technology in Ottawa. The recently organized baseball team, the Montreal Expos, in their first game defeated the St. Louis Cardinals by a score of 11-10. *Apr. 9*, To prevent speculation, the Quebec Mining Explorations Co., a Quebec government company, prohibited the staking of mining claims on the site of the proposed new international airport at St. Scholastique. *Apr. 10*, Robert A. Farquharson, former managing editor of *The Globe and Mail*, and the late Lord Atholstan, founder of the *Montreal Star* 100 years ago, named to the Canadian News Hall of Fame. *Apr. 13*, The Greater Winnipeg Floodway, completed in 1967 to divert the overflow of the Red River around the City of Winnipeg, went into operation for the first time as the waters of the Red River rose. *Apr. 18-18*, Flooding of rivers in Manitoba and Saskatchewan, including the Qu'Appelle, Souris, Assiniboine, Whitemud and Red, created emergency conditions in some areas. *Apr. 17*, The Canadian Government purchased at auction for \$16,000 the 32-page account of the 1870 Rebellion by Louis Riel in his own handwriting. Dr. Sylvia Ostry appointed a Director of the Economic Council of Canada, the highest post ever held by a woman in government service. *Apr. 20*, Death in Toronto of Charles Leo Labine, who, with his brother Gilbert, in 1931 discovered and exploited Canada's first-known pitchblende deposit, later the Government's first source of uranium, on Great Bear Lake in the Northwest Territories. The 6,200 members of the International Association of Machinists and Aerospace Workers employed by Air Canada went on strike in support of wage parity with their counterparts in the U.S. involving a 20-p.c. increase in wages in a one-year contract; Air Canada grounded. *Apr. 21*, Winners of the Governor General's Literary Awards for 1968 announced: Leonard Cohen (poetry in English); Mordecai Richler (fiction in English); Alice Munro (fiction in English); Marie-Claire Blais (fiction in French); Fernand Dumont (non-fiction in French); and Hubert Aquin (fiction in French); the latter was declined. *Apr. 23*, Prime Minister Trudeau introduced in the House of Commons a motion for approval of its revised defence policy announced earlier this month involving a phased reduction of its NATO forces in Europe and giving greater priority to protection of Canadian sovereignty and to co-operation with the U.S. in the defence of North America. *Apr. 24*, Resignation of Transport Minister Hellyer as member of the Cabinet because of disagreement with Cabinet policy of giving priority to constitutional reform instead of to housing legislation. *Apr. 25*, The maximum amount that may be borrowed for a new house financed under the National Housing Act increased from \$18,000 to \$25,000 and on existing houses from \$10,000 to \$18,000; further amendments include provisions to increase the flow of mortgage funds from private lenders, to extend the maximum amortization from 35 to 40 years, to approve a form of mortgage with a five-year renewal and to reduce the rate of mortgage insurance fees by 50 p.c. *Apr. 28*, President Charles de Gaulle of France, repudiated in a national referendum, resigned. Believed to be the most severe penalties on charges of possession of marijuana for the purpose of trafficking, Donald MacRitchie Johnston and Sydney Durward Tremayne sentenced in Toronto to 14 years in penitentiary. H.M. Queen Elizabeth II presented with Burmese, a 7-year-old black mare that was the lead horse in the RCMP Musical Ride, by Solicitor General McIlraith and RCMP Commissioner F. A. Lindsay at Windsor Castle. *Apr. 30*, Award of the 1968 Stephen Leacock Memorial Medal to Stuart Trueman, Saint John, N.B., for his book *You're Only As Old As You Act*.

APPENDIX

CONSTITUTION AND GOVERNMENT

Certain information given in Chapter II on Constitution and Government (closed off Dec. 31, 1968) is updated in this Appendix to early May 1969. Appointments to the Queen's Privy Council for Canada, the Cabinet and the Senate, as well as the appointment of the Lieutenant-Governor of Newfoundland, from Dec. 31, 1968 to early April 1969 are included in the Register of Official Appointments at pp. 1261-1268.

PAGE 60

The provisions of the Government Organization Act, 1969 resulted in changes in the names of the portfolios held by certain Cabinet Ministers, which, on Apr. 30, 1969, were as follows:—

Hon. Edgar John BENSON.....	Minister of Finance
Hon. Jean-Luc PEPIN.....	Minister of Industry, Trade and Commerce
Hon. Jean MARCHAND.....	Minister of Regional Economic Expansion
Hon. Jack DAVIS.....	Minister of Fisheries and Forestry
Hon. Donald Campbell JAMIESON.....	Minister of Supply and Services and Receiver General

On Apr. 24, 1969, the Hon. Paul Theodore HELLYER resigned from the Cabinet and on May 5, 1969 the following changes were made: the Hon. Donald Campbell JAMIESON, Minister of Supply and Services and Receiver General, became Minister of Transport; the Hon. James Armstrong RICHARDSON, Minister without Portfolio, became Minister of Supply and Services and Receiver General; and the Hon. Robert Knight ANDRAS, Minister without Portfolio, became Minister in Charge of Housing.

PAGE 66

The Hon. Arthur L. BEAUBIEN, Senator for Manitoba, retired on Feb. 1, 1969.

PAGE 69

By-elections held between Dec. 31, 1968 and Apr. 30, 1969 were as follows:—

<u>Electoral District</u>	<u>Date of By-election</u>	<u>Member Elected</u>
Nanaimo-Cowichan-The Islands, B.C.....	Feb. 10, 1969	T. C. DOUGLAS
Comox-Alberni, B.C.....	Apr. 8, 1969	T. S. BARNETT

PAGES 108-111

Section 2 and Section 3 (part) of Part III of the Constitution and Government Chapter are here brought up to the date of Apr. 30, 1969.

Section 2.—Departments, Boards, Commissions, etc.

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

Although it is not possible, owing to the limitations of space, to enumerate in this Section the details of each service or the divisions or sections of all departments, the main branches are given along with those services that differ in some quality from the larger class of subjects handled by a department. The work of many of these departments and boards is given in detail in the Chapters of this volume. The Index will be useful in locating required information.

Department of Agriculture.—This Department was established in 1867 (SC 1868, c. 53) and undertakes work on all phases of agriculture. Research and experimentation are carried out by the Research Branch; the maintenance of standards and protection of products by the Production and Marketing Branch and the Health of Animals Branch; the Canada Grain Act, as it pertains to the inspection, weighing, storage and transportation of grain, is administered by the Board of Grain Commissioners; and farm income security and price stability are provided under the Crop Insurance Act, the Prairie Farm Assistance Act, the Canadian Dairy Commission Act, the Agricultural Stabilization Act and the Agricultural Products Board. The Agricultural Stabilization Board, the Farm Credit Corporation, the Board of Grain Commissioners, the Canadian Dairy Commission and the Canadian Livestock Feed Board report to Parliament through the Minister of Agriculture.

Anti-dumping Tribunal.—Under the Anti-dumping Act (SC 1968-69, c. 10) the Anti-dumping Tribunal is declared to be a court of record and makes formal inquiry into the impact of dumping on production in Canada. Within three months of a preliminary decision of the Deputy Minister of National Revenue, the Tribunal must make an order or finding on the question of injury, threat of injury or material retardation to production in Canada. Decisions of the Tribunal are final and conclusive. The Tribunal consists of a chairman and not more than four other members. Its offices are located in Ottawa and it may conduct hearings in other centres in Canada. The Tribunal reports to Parliament through the Minister of Finance.

Auditor General's Office.—This Office originated in 1878 (SC 1878, c. 7) and currently functions under the Financial Administration Act (RSC 1952, c. 116). The Auditor General is responsible for examining accounts relating to the Consolidated Revenue Fund and to public property, and for reporting annually to the House of Commons the results of his examinations. He also audits the accounts of various Crown corporations and other instrumentalities.

Board of Grain Commissioners.—Constituted in 1912 under the Canada Grain Act (RSC 1952, c. 25), the Board of Grain Commissioners for Canada provides general supervision over the physical handling of grain in Canada by licensing elevator operators, inspecting and weighing grain received at and shipped from terminal elevators, and other services. The Board, comprising a chief commissioner and two commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the *Canada Gazette* and reports to Parliament through the Minister of Agriculture.

Canadian International Development Agency.—As at Nov. 9, 1960, the operation and administration of Canada's external assistance programs became the responsibility of the External Aid Office, established by Order in Council, placing it in charge of a director general. In 1968 the name of the organization was changed to the Canadian International Development Agency (CIDA) and it was placed under the direction of a president. The Agency reports to Parliament through the Minister of External Affairs.

Canadian Penitentiary Service.—The Penitentiary Service operates under the Penitentiary Act (SC 1960-61, c. 53) and is under the jurisdiction of the Solicitor General of Canada. It is responsible for all federal penitentiary institutions and for the care and training of persons sentenced or committed thereto. The Commissioner of Penitentiaries, under the direction of the Solicitor General, has control and management of the Service and all matters connected therewith.

Canadian Pension Commission.—This Commission, established in 1933 by amendments to the Pension Act (RSC 1952, c. 207), replaced the Board of Pension Commissioners, the first organization created to deal solely with war pensions for service in Canada's Armed Forces. The Commission's main function is the administration of the Pension Act under which it adjudicates upon all claims for pension in respect of disability or death arising out of service in Canada's Armed Forces; and Parts I to X inclusive of the Civilian War Pensions and Allowances Act, which provide for the payment of pensions in respect of death or disability arising out of civilian service directly

related to the prosecution of World War II. It also adjudicates on claims for pension under various other measures; authorizes and pays monetary grants accompanying certain gallantry awards bestowed on members of the Armed Forces; and administers various trust funds established by private individuals for the benefit of veterans and their dependants. The Commission consists of eight to twelve commissioners and up to five *ad hoc* commissioners appointed by the Governor in Council. Its chairman has the rank of a Deputy Head of a department and the Commission reports to Parliament through the Minister of Veterans Affairs.

Canadian Radio-Television Commission.—This Commission, established under the provisions of the Broadcasting Act assented to Mar. 7, 1968, is given authority to regulate and supervise all aspects of the Canadian broadcasting system. The Executive Committee, after consultation with the part-time members in attendance at a meeting of the Commission, may issue broadcasting licences or renewal licences for such terms not exceeding five years and subject to such conditions related to the circumstances of the licensee as the Executive Committee deems appropriate for the implementation of the broadcasting policy enunciated in Sect. 2 of the Broadcasting Act. Under the same circumstances, the Executive Committee may, upon application by a licensee, amend any conditions of a broadcasting licence issued to him. Applications for licences to establish new broadcasting undertakings, for amendments to licences, for renewal licences, or for changes in the ownership or in the share structure of licensees are filed with the Secretary, Canadian Radio-Television Commission, Ottawa, Ont. A public hearing shall be held by the Commission in connection with the issue of a broadcasting licence, other than a licence to carry on a temporary network operation; or where the Commission or the Executive Committee has under consideration the revocation or suspension of a licence. A public hearing shall be held by the Commission, if the Executive Committee is satisfied that it would be in the public interest to hold such a hearing in connection with the amendment of a licence, the issue of a licence to carry on a temporary network operation or a complaint by a person with respect to any matter within the powers of the Commission. A public hearing shall be held by the Commission in connection with the renewal of a licence unless the Commission is satisfied that such a hearing is not required.

The Commission consists of five full-time members and ten part-time members. It reports to Parliament through the Secretary of State.

Canadian Transport Commission.—The Canadian Transport Commission created in 1967 by the National Transportation Act (SC 1967, c. 69) took over powers formerly vested in the Board of Transport Commissioners, the Air Transport Board and the Canadian Maritime Commission, giving it regulatory and judicial functions with respect to almost all aspects of railway, commercial air and merchant marine services. The Act also provides for the regulation of extra-provincial motor vehicle transport and commodity (solids) pipelines. The Commission is divided into five Committees for the purposes of performing its regulatory duties under the Act: (1) The Railway Transport Committee deals with location, construction and operation of lines and with rates and fares; it also deals with the regulation of express companies, and telegraph and telephone companies (except those provincially or municipally controlled), and the tolls of international bridges and tunnels. (2) The Air Transport Committee is responsible for the economic regulation of commercial air services provided by Canadian air carriers within Canada and abroad, and by foreign carriers operating into and out of Canada. (3) The Water Transport Committee has the function of making recommendations concerning domestic and international shipping policy and the merchant marine and of co-ordinating such policies with those applying to other modes of transport; it also administers the steamship subsidies voted by Parliament. (4) The Motor Vehicle Transport Committee is responsible for the regulation of commercial interprovincial and international motor vehicle transport. Prior to the passing of the National Transportation Act, regulation of all motor vehicle transport was carried out by the provinces. (5) The Commodity Pipeline Committee controls the licensing of interprovincial and international (solids) pipelines and the regulation of pipeline tolls. Regulation of oil and gas pipelines remains the duty of the National Energy Board.

The Canadian Transport Commission is also given the responsibility for conducting investigations and research and for making recommendations on economic policy in all transportation fields in so far as the Federal Government is concerned. The Commission reports to Parliament through the Minister of Transport.

Department of Communications.—The Department of Communications was established under Part II of the Government Organization Act, 1969 (SC 1968-69, c. 28), which received Royal Assent on Mar. 28, 1969. The duties and powers of the Minister cover all matters over which the Parliament of Canada has jurisdiction relating to telecommunications and the development and utilization generally of communication undertakings, facilities, systems and services for Canada. They include the planning and co-ordination of telecommunication services for departments and agencies of the Government of Canada, formerly under the jurisdiction of the Department of Transport, assistance to communications systems and facilities to adjust to changing domestic and international conditions, and the securing, by international regulation or otherwise, the rights of Canada in communications matters. The Minister of Communications is the Postmaster General and has the management and direction of the Post Office Department.

The Canadian Overseas Telecommunications Corporation reports to Parliament through the Minister of Communications.

Department of Consumer and Corporate Affairs.—Legislation to establish this Department (SC 1967-68, c. 16) received Royal Assent on Dec. 21, 1967. This statute transformed the former Department of the Registrar General of Canada into the new Department of Consumer and Corporate Affairs. The duties, powers and functions of the Minister extend to and include all matters over which the Parliament of Canada has jurisdiction, not by law assigned to any other department, branch or agency of the Government of Canada, relating to: consumer affairs; corporations and corporate securities; combines, mergers, monopolies and restraint of trade; bankruptcy and insolvency; and patents, copyrights and trade marks.

As Registrar General of Canada, the Minister of Consumer and Corporate Affairs is the custodian of the Great Seal of Canada, the Privy Seal of the Governor General, the Seal of the Administrator of Canada and the Seal of the Registrar General of Canada. He is also Custodian of Enemy Property. The Bureau of Consumer Affairs co-ordinates government activities in the field of consumer affairs.

The Restrictive Trade Practices Commission (Combines Investigation Act) is domiciled in the Department and reports directly to the Minister.

Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (SC 1918, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (RSC 1927, c. 190), was repealed and replaced by the Statistics Act (RSC 1952, c. 257); it was amended by SC 1952-53, c. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct regularly a census of population and agriculture of Canada as required under the Act.

The Bureau is a major publication agency of the Federal Government; its reports cover all aspects of the national economy. The administrative head of the Bureau is the Dominion Statistician who has the rank of a Deputy Head of a department and reports to Parliament through the Minister of Industry, Trade and Commerce.

Department of Energy, Mines and Resources.—The Department of Energy, Mines and Resources was created in 1966 by the Government Organization Act (SC 1966, c. 25). The Department, in addition to its administrative services, is organized into four groups: the *Mines and Geosciences Group* includes the Geological Survey of Canada, the Mines Branch, the Surveys and Mapping Branch and the Observatories Branch, all of which are engaged in research and the provision of information in their respective fields; the *Mineral Development Group* includes the Mineral Resources Branch, which gathers economic data for all minerals for use of government, industry and the public and conducts administrative functions of resource management, the Explosives Division which controls, under the provisions of the Explosives Act, the production and handling of explosives, and the Quebec Regional Office; the *Water Group* is concerned with all types of water matters including groundwater and oceanic investigations and surveys, water pollution, water power, water conservation and control, and federal-provincial and international studies and regulations; the *Energy Development Group* has broad responsibilities relating to the development of plans and policies for all forms of energy; the development of programs, legislation and agreements to implement those policies; the direction of studies relating to energy sources and requirements, and the co-ordination of policy advice. The Assistant Deputy Minister serves as adviser on over-all plans and policies relating to energy sources and requirements.

The following Crown corporations report to Parliament through the Minister of Energy, Mines and Resources: the National Energy Board, the Dominion Coal Board, Atomic Energy of Canada Limited, Eldorado Nuclear Limited, Eldorado Aviation Limited and the Atomic Energy Control Board. The International Boundary Commission and the Interprovincial Boundary Commissions also report to Parliament through the Minister.

Department of External Affairs.—This Department was established in 1909 by "An Act to create a Department of External Affairs" (RSC 1952, c. 68). Its main function is the protection and advancement of Canadian interests abroad. The Minister responsible for the Department is the Secretary of State for External Affairs. The senior permanent officer (Deputy Minister) of the Department, the Under-Secretary of State for External Affairs, is assisted by a Deputy Under-Secretary and by four Assistant Under-Secretaries and is advised by officers in charge of Branches, Offices and Divisions. The Heads of these units are each responsible for a part of the work of the Department and are assisted by Foreign Service Officers, Administrative Services Officers and specialists in various occupational groups, as well as by an administrative staff. Officers serving abroad are formally designated as High Commissioners, Ambassadors, Ministers, Counsellors, First Secretaries, Second Secretaries, Third Secretaries and Attachés at diplomatic posts and Consuls General, Consuls and Vice-Consuls at consular posts. Canada maintains approximately 135 diplomatic, consular and other missions, 47 of which are non-resident.

The work of the Department in Ottawa is performed by three Branches, two Offices and 19 Divisions. The three Branches are responsible respectively for Personnel, Finance and Administration and Communications and Information Systems. The two Offices are concerned with Political-Military Affairs and Economic Affairs. The Divisions are grouped into two categories: Area Divisions are African and Middle Eastern, Commonwealth, European, Far Eastern, Latin American,

and United States; Functional Divisions are Consular, Co-ordination, Cultural Affairs, Defence Liaison (2), Disarmament, Historical, Information, Legal, Passport, Press, Protocol, Relations entre Pays Francophones, and United Nations. In addition, there is an Inspection Service and a Central Planning Staff.

The International Joint Commission reports to the Secretary of State for External Affairs of Canada as well as to the Secretary of State of the United States. The Secretary of State for External Affairs reports to Parliament for the Canadian International Development Agency.

Department of Finance.—This Department was created by Act of Parliament in 1869 and now operates under the Financial Administration Act (RSC 1952, c. 116). The Department is responsible for the financial administration of Canada including the raising of money required for the various governmental activities by way of taxation or borrowing. The work of the Department is organized into the following Divisions: Tax Policy, Economic Development, Federal-Provincial Relations, Fiscal Policy, Pensions and Social Insurance, Resource Programmes, Municipal Grants, Economic Analysis, Government Finance and Capital Markets, Crown Corporations Financing, International Finance, Tariffs, International Economic Relations, and International Programmes. The Inspector General of Banks is a branch of the Department. The Tariff Board, the Bank of Canada and its subsidiary, the Industrial Development Bank, the Anti-dumping Tribunal, the Canada Deposit Insurance Corporation, and the Department of Insurance report to Parliament through the Minister of Finance who is also the spokesman in the Cabinet and the House of Commons for the Auditor General of Canada.

Department of Fisheries and Forestry.—Established by the Government Organization Act, 1969, the Department of Fisheries and Forestry administers all matters within federal jurisdiction relating to (1) sea coast and inland fisheries, and (2) the forest resources of Canada, except those assigned by law to any other federal department or agency.

Under the direction of the Minister of Fisheries and Forestry, the Department administers 16 Acts of Parliament; 14 relate to fisheries and two to forestry.

The Department has three principal components: the Fisheries Service, responsible for fisheries management and related activities; the Fisheries Research Board, responsible for fundamental fisheries research; and the Forestry Research Service, responsible for research related to forest management and forest products. A fourth component groups together common supporting services. The Fisheries Prices Support Board, a Crown corporation responsible for programs to stabilize returns to fishermen, reports to Parliament through the Minister of Fisheries and Forestry.

Responsibilities of the Fisheries Service are inherited from the Department of Fisheries established in 1930 to succeed what had been, since Confederation, a branch service. Fisheries are exclusively within federal jurisdiction but certain administrative authority has been delegated to provinces under varying arrangements. Field activities of the Service are administered through regional offices in St. John's, Nfld., Halifax, N.S., Quebec, Que., Winnipeg, Man., and Vancouver, B.C.

Principal responsibilities of the Fisheries Service include conservation and protection of fisheries through enforcement of laws and regulations, cultivation and development of fish stocks by scientific and technical means, inspection of fish products for quality control, encouragement of industrial development by technical and financial aid, economics research and intelligence services to industry and the public, and promotion of fisheries and fish products by information and consumer education programs. The Fisheries Service is represented on the following international commissions: Pacific Salmon Fisheries, Pacific Halibut, Northwest Atlantic Fisheries, North Pacific Fisheries, Whaling, Great Lakes Fishery, North Pacific Fur Seal, Atlantic Tuna, Inter-American Tropical Tuna, and the International Council for the Exploration of the Sea.

The Fisheries Research Board, in operation as such since 1937 but tracing its antecedents to 1898, conducts fundamental research on Canada's aquatic resources, their environment and their utilization. It originated as the Board of Management of the Canadian Marine Biological Station, and in 1912 became the Biological Board of Canada. The Board functions under the Fisheries Research Board Act of 1937 (amended in 1947 and 1952-53), and is headed by a full-time chairman and not more than 18 other members, mostly university scientists and industry representatives. The Board operates major research establishments in St. John's, Nfld., Halifax and Dartmouth, N.S., St. Andrew's, N.B., Ste. Anne de Bellevue, Que., Winnipeg, Man., and Vancouver and Nanaimo, B.C. Board scientists carry out research on distribution of fish stocks, biology and life history of fishes, marine mammals and other aquatic creatures and plants, oceanography, fishing techniques and on quality and nutritive value of fisheries products, with the principal objective of increasing the scope and value of Canadian fisheries.

The main functions of the Forestry Research Service include: (1) mandatory responsibility for the conduct of research relating to the protection, management, harvesting and utilization of the forest resources of Canada and the better utilization of forest products; (2) conducting economic studies relating to the forest resources, forest industries and marketing of forest products; (3) undertaking, promoting or recommending measures for the encouragement of public co-operation in the protection and wise use of the forest resources of Canada; (4) co-operating with provincial governments and others by means of special agreements on forestry matters; (5) provision of forest surveys and advice relating to the protection and management of federally administered forest lands;

(6) assuming responsibility for forest protection and management on federal lands at the request of the department or agency concerned; and (7) assisting external aid programs relating to forestry.

Forest management responsibilities of the Forestry Research Service are confined to its forest experiment stations and to providing information on forest inventory and management planning to other federal departments responsible for administration of forested lands.

Research programs in forestry are carried out in seven regional establishments, which are responsible for programs of forestry research, surveys, development projects and consultative and liaison services in their respective regions. These are multi-disciplinary units, having comprehensive forestry programs and impelling regional responsibilities, and are located at St. John's, Nfld., Fredericton, N.B., Ste. Foy, Que., Sault Ste. Marie, Ont., Winnipeg, Man., Calgary, Alta., and Victoria, B.C. Two Forest Products Laboratories, one at Ottawa and the other at Vancouver, are responsible for forest products research.

In addition, a number of institutes conduct research in restricted disciplinary fields, and have broad national responsibilities and functions but no specific regional responsibilities. These are the Insect Pathology Research Institute at Sault Ste. Marie, Ont., the Chemical Control Research Institute at Ottawa, the Forest Fire Research Institute at Ottawa, the Forest Management Institute at Ottawa, the Forest Ecology Institute at Ottawa, the Petawawa Forest Experiment Station at Chalk River, Ont., and the Forest Economics Research Institute at Ottawa.

Historic Sites and Monuments Board.—This Board was established in 1919 and amended to its present form in 1953 by an Act of Parliament (SC 1952-53, c. 39). It is an appointed body of 12 provincial and two federal officials which advises the Minister of Indian Affairs and Northern Development on matters of national historic importance with particular reference to commemoration or preservation.

Department of Indian Affairs and Northern Development.—The Department of Indian Affairs and Northern Development was established in June 1966 under the terms of the Government Organization Act (SC 1966, c. 25), superseding the Department of Northern Affairs and National Resources. In 1968, the Department was reorganized, creating, in addition to departmental support services and a Technical Services Branch, three distinct program areas: (1) the Social Affairs Program includes education, Indian trust administration and an Indian-Eskimo Bureau which provides a focal point for the federal administration for Indian and Eskimo affairs; (2) the Economic Development Program covers major resource development in the Canadian North, industrial development for Indians and Eskimos, land management of Indian reserves, wet-land acquisition, management of territorial resources along with economic research and advice; (3) the Conservation Program includes National Parks, Historic Sites and Parks and the Canadian Wildlife Service.

The Commissioner of the Northwest Territories and the Commissioner of Yukon Territory report to Parliament through the Minister of Indian Affairs and Northern Development. The Minister is also responsible to Parliament for the Northern Canada Power Commission, the National Battlefields Commission, the Historic Sites and Monuments Board of Canada and the Northern Transportation Company Limited. The Northern Scientific Adviser's Office acts in an advisory capacity to the Minister.

Department of Industry, Trade and Commerce.—The Department of Industry, Trade and Commerce was established under the Government Organization Act 1969 and is a result of a merger between the Department of Industry and the Department of Trade and Commerce.

Under the Act, the Minister of Industry, Trade and Commerce shall (1) promote the establishment, growth and efficiency of manufacturing, processing and tourist industries in Canada, contribute to the sound development and productivity of Canadian industry generally and foster the expansion of Canadian trade; (2) develop and carry out such programs and projects as may be appropriate to (a) assist manufacturing and processing industries to adapt to changes in technology and to changing conditions in domestic and export markets, (b) assist manufacturing and processing industries to develop their unrealized potential, to rationalize and restructure their productive facilities and corporate organizations and to cope with exceptional problems of adjustment, and (c) promote and assist product and process development and increased productivity, the greater use of research, the application of advanced technology and modern management techniques, the modernization of equipment, the utilization of improved industrial design and the development and application of sound industrial standards in Canada and in world trade; (3) improve the access of Canadian products, services and trade into external markets through trade negotiations and the promotion of trade relations with other countries and contribute to the improvement of world trading conditions; (4) promote the optimum development of Canadian export sales of all produce, products and services; (5) provide support services for industrial and trade development, including information, import analysis and traffic services; (6) analyse the implications for Canadian industry, trade and commerce and for tourism of government policies related thereto in order to contribute to the formulation and review of those policies; (7) compile and keep up to date detailed information in respect of manufacturing and processing industries in Canada and of trends and developments in Canada and abroad relating to Canadian industrial development and trade; and (8) promote the optimum development of income from tourism and compile and keep up to date detailed information in respect of the tourist industry and of trends and developments in Canada and abroad relating to tourism.

The Department is organized into five major functional groups: Trade and Industrial Policy; Office of Economics and Trade Analysis; Industry and Trade Development; Office of Tourism; and Administration. The Trade and Industrial Policy component comprises the Office of General Relations, the Office of Area Relations and the Office of Industrial Policy Adviser. The Office of Economics and Trade Analysis has the following Branches: General Analysis, Investment Analysis, Market Analysis, and Productivity. The Industry and Trade Development segment contains an Operations group composed of nine industry sector Branches (Chemicals; Electrical and Electronics; Agriculture, Fisheries and Food Products; Machinery; Materials; Apparel and Textiles; Mechanical Transport; Wood Products; Aerospace, Marine and Rail); an External Services group consisting of the International Defence Programs Branch and the Trade Commissioner Service which operates 74 trade offices in 51 countries; a Promotional Services group containing the Industry, Trade and Traffic Services Branch which operates seven Regional Offices in Canada, the Fairs and Missions Branch, the Publicity Branch and the Canadian Government Participation in the 1970 World Exposition (OSAKA 70) Japan; and the Office of Design Adviser and the Office of Scientific and Technological Adviser. The Office of Tourism includes the Travel Industry Branch and the Canadian Government Travel Bureau.

The Minister also reports to Parliament on behalf of the Dominion Bureau of Statistics, the Export Credits Insurance Corporation, the National Design Council, the Canadian Wheat Board and the Freshwater Fish Marketing Corporation.

Advisory Boards reporting to the Minister include the Adjustment Assistance Board, the Machinery and Equipment Advisory Board, the General Adjustment Assistance Board and the Pharmaceutical Industry Advisory Board.

Department of Insurance.—The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (RSC 1952, c. 70). Under the Superintendent of Insurance, who is the Deputy Head, the Department administers the statutes of Canada applicable to: insurance, loan and trust companies incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; co-operative credit societies registered under the Co-operative Credit Associations Act; pension plans organized and administered for the benefit of persons employed in connection with certain federal works, undertakings and businesses; and life insurance issued to certain members of the public service prior to May 1954.

Under the relevant provincial statutes, the Department examines trust companies incorporated in the Provinces of Manitoba and New Brunswick and loan and trust companies incorporated in the Province of Nova Scotia.

International Joint Commission.—This Commission was established under a Britain-United States treaty signed Jan. 11, 1909 and ratified by Canada in 1911. The Commission, composed of six members (three appointed by the President of the United States and three by the Government of Canada), is governed by five specific Articles of the Boundary Waters Treaty of 1909. The Commission's approval is required for any use, obstruction or diversion of boundary waters affecting the natural level or flow of boundary waters in the other country; and for any works in waters flowing from boundary waters or below the boundary in rivers flowing across the boundary which raise the natural level of waters on the other side of the boundary.

Problems arising along the common frontier are also referred to the Commission by either country for examination and report, such report to contain appropriate conclusions and recommendations. In addition, questions or matters of difference between the two countries may be referred to the Commission for decision, provided both countries consent.

The Commission reports to the Secretary of State for External Affairs of Canada and to the Secretary of State of the United States.

Department of Justice.—This Department, established by SC 1868, c. 39, now operates under authority of the Department of Justice Act (RSC 1952, c. 71 as amended by SC 1960, c. 4 and SC 1966, c. 25). The Minister of Justice is the official legal adviser of the Governor General and the legal member of the Queen's Privy Council for Canada. It is his duty to see that the administration of public affairs is in accordance with law, to superintend all matters connected with the administration of justice in Canada that are not within the jurisdiction of the provincial governments, to advise upon the legislation and proceedings of the provincial legislatures and generally to advise the Crown upon all matters of law referred to him by the Crown. The Minister of Justice is, *ex officio*, Her Majesty's Attorney General of Canada. In this capacity it is his duty to advise the heads of the departments of the Government of Canada upon all matters of law connected with such departments, to settle and approve all instruments issued under the Great Seal of Canada, and to regulate and conduct all litigation for or against the Crown in the right of Canada.

Department of Labour.—The Department of Labour was established in 1900 by Act of Parliament (SC 1900, c. 24) and now operates under authority of the Department of Labour Act (RSC 1952, c. 72). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of

fair wages and hours of labour: female employee equal pay; government annuities; government employee compensation; merchant seamen compensation; safety in employment and hours of work, minimum wages, annual vacations and holidays with pay. It promotes joint consultation with industry through labour-management committees and operates a Women's Bureau. The Department publishes the *Labour Gazette* and other publications, as well as general information on labour-management, employment, manpower and related subjects.

The Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization. The Unemployment Insurance Commission and the Canada Labour Relations Board report to Parliament through the Minister of Labour. The Canada Labour Relations Board administers certain provisions of the Industrial Relations and Disputes Investigation Act.

Library of Parliament.—The Library of Parliament as such was established in 1871 (SC 1871, c. 21) although it existed earlier. It currently functions under RSC 1952, c. 166 and SC 1955, c. 35. The Library of Parliament keeps all books, maps and other articles that are in the joint possession of the Senate and the House of Commons. The Parliamentary Librarian is also responsible for the House of Commons Reading Room. Persons entitled to borrow books from the Library of Parliament are the Governor General, Members of the Privy Council, Members of the Senate and the House of Commons, Officers of the two Houses, Justices of the Supreme Court of Canada and the Exchequer Court, and members of the Press Gallery. In addition, books are lent to other libraries and government agencies and reference service is given to scholars. A special research branch serves Parliamentarians only. The Parliamentary Librarian has the rank of a Deputy Head of a department and is responsible for the control and management of the Library under the Speaker of the Senate and the Speaker of the House of Commons assisted by a Joint Committee appointed by the two Houses.

Department of Manpower and Immigration.—This Department was constituted in January 1966 by the Government Organization Act (RSC 1966, c. 25), which was proclaimed effective on Oct. 1, 1966, under the Minister of Manpower and Immigration. It is composed of two operational divisions and four support services.

The Canada Immigration Division administers the Immigration Act and Regulations and is responsible for the selection and examination abroad of immigrants and their movement to Canada, and for the exclusion or deportation of undesirables. The Canada Manpower Division is responsible for the counselling and effective placement of workers, the recruitment and placement of workers to meet industry's requirements, the occupational training of adults, manpower mobility, community adjustment of migrants and immigrants and the rehabilitation of vocationally handicapped workers.

The Department also has a service which provides research and develops and evaluates programs for the two main operating divisions. Other support services are Financial and Management, Personnel, and Information.

Until Oct. 1, 1966, the Canada Immigration Division was part of the Department of Citizenship and Immigration which was renamed the Department of Manpower and Immigration; the majority of the other components of the department were, prior to Oct. 1, 1966, under the jurisdiction of the Department of Labour.

Department of National Defence.—The Department of National Defence and the Canadian Forces operate under the National Defence Act (RSC 1952, c. 184); the Canadian Forces are administered by the Minister of National Defence. Since August 1964, when a single Chief of Defence Staff was appointed, the reorganization of the Canadian Forces Headquarters, the command structure and the consolidation of the Canadian Forces Bases has been proceeding. In June 1965, a plan was announced to reduce the previous major commands in Canada to six: Maritime, Mobile, Air Transport, Air Defence, Training and Materiel. Subsequent to this announcement, a decision was made to amalgamate Materiel Command Headquarters with that of the Chief of Technical Services, Canadian Forces Headquarters and to re-assign the former Materiel Command units to the remaining five functional commands. The Act to reorganize the Canadian Forces was proclaimed on Feb. 1, 1968 and the forces were thereby unified.

The Defence Research Board, created in 1947 to carry out research relating to national defence and to advise the Minister on all relevant matters of a scientific or technical nature, functions under the National Defence Act. The Crown corporation, Defence Construction (1951) Limited, reports to Parliament through the Minister of National Defence. The Emergency Measures Organization (EMO) reports to the Minister of National Defence through the Deputy Minister.

National Energy Board.—This Board was established under the National Energy Board Act, 1959 for the broad purpose of assuring the best use of energy resources in Canada. The Board, composed of five members, is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipelines, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The Board is also required to study and keep under review all matters relating to energy under the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary and advisable on the subject. The Board reports to Parliament through the Minister of Energy, Mines and Resources.

National Film Board.—The National Film Board, established in 1939, operates under the National Film Act (RSC 1952, c. 185) which provides for a Board of Governors of nine members—a Government Film Commissioner, appointed by the Governor in Council, who is chairman of the Board, three members from the Public Service of Canada and five members from outside the Public Service. The Board reports to Parliament through the Secretary of State. The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and, in particular, films “designed to interpret Canada to Canadians and to other nations”.

Department of National Health and Welfare.—This Department was established in October 1944 under authority of the Department of National Health and Welfare Act (RSC 1952, c. 74). The original Department of Health formed in 1919 later became part of the Department of Pensions and National Health, which was replaced in 1944 by the Department of National Health and Welfare and the Department of Veterans Affairs.

The Department, headed by the Minister of National Health and Welfare, is administered by two Deputy Ministers. It is composed of: the Research and Statistics Directorate and General Counsel; the Administration Branch; and seven other Branches—Health Services, Health Insurance and Resources, Medical Services, Food and Drug, Income Security, Welfare Assistance and Services and Special Programmes. The health Branches come under the Deputy Minister of National Health who also carries responsibility arising out of Canada's role in the international health field. The welfare Branches are the responsibility of the Deputy Minister of National Welfare.

The Department has charge of matters relating to the promotion and preservation of the health, social security and social welfare of the people of Canada over which the Parliament of Canada has jurisdiction. Its functions include investigation and research into public health and welfare; inspection and medical care of immigrants and seamen and medical services for and in conjunction with the Canadian Coast Guard Service; supervision of health facilities on all forms of transportation; enforcement of regulations of the International Joint Commission relating to health; promotion and conservation of the health of Federal Government employees; collection, publication and distribution of information relating to health, sanitation and social and industrial conditions affecting the health of Canadians; and co-operation with provincial authorities with co-ordination of efforts directed toward the preservation and improvement of public health and toward the provision of social security and welfare for the people of Canada.

The programs developed to enable the Department to carry out its responsibilities include: the National Grant Program under which grants are made available to the provinces for the development and extension of health services; federal emergency health and welfare services; assistance and consultation services to the provinces, upon request, respecting blindness control, child and maternal health, environmental health, mental health, dental health, nursing, medical rehabilitation, bacteriology, virology, parasitology and clinical chemistry, zoonoses, nutrition and health facilities design; a drug adverse reaction reporting program, and a central clearing house for the Canadian Poison Control Centres; health, medical and hospital services to the Indians and Eskimos across Canada and to other elements of the population in the Yukon and Northwest Territories; government employee health services; and a system of grants to the provinces for professional welfare training, welfare research and general welfare services. The Department also acts as co-ordinator of the international welfare activities in which Canada is engaged.

The Medical Research Council reports to Parliament through the Minister of National Health and Welfare.

National Library.—The National Library came formally into existence on Jan. 1, 1953, with the proclamation of the National Library Act (RSC 1952, c. 330). It publishes *Canadiana*, a monthly catalogue of new publications relating to Canada, with an annual cumulation. The Library also publishes other bibliographies. Its Reference Division maintains the *National Union Catalogue*, which embodies the author catalogues of the major libraries in the ten provinces and is thus a key to the book collections of the whole country. The Library's own bookstock now totals about 400,000 volumes. The National Librarian reports to Parliament through the Secretary of State.

National Parole Board.—The establishment of the National Parole Board, which was formed in January 1959, is authorized by the Parole Act (SC 1953, c. 38) by which it is given absolute jurisdiction over all matters of parole, except that in respect of commuted death sentences it may only recommend rather than approve parole. It is composed of a chairman and four members appointed by Order in Council for a ten-year period. The Board reports to Parliament through the Solicitor General of Canada.

Department of National Revenue.—From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of Customs and Excise and, under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Customs and Excise Division of the Department is responsible for the assessment and collection of customs and excise duties as well as of sales and excise taxes. The Taxation Division is responsible for the assessment and collection of income taxes, gift tax, old age security tax, Part I of the Canada Pension Plan, and estate taxes for Canada and all provinces, with certain exceptions, through its 29 district taxation offices and its Taxation Data Centre.

The Minister of National Revenue is responsible to Parliament for the Tax Appeal Board.

Office of the Chief Electoral Officer.—This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (RSC 1960, c. 39, and amendments thereto), and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Territories Council and of the Yukon Territory Council. In addition, it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer is responsible directly to Parliament, the Secretary of State acting as spokesman for him in the Cabinet and the House of Commons.

Office of the Representation Commissioner.—This office was established in 1963 under the provisions of the Representation Commissioner Act (SC 1963, c. 40). The Representation Commissioner is responsible for preparing maps showing the distribution of population in each province and setting out alternative proposals respecting the boundaries of electoral districts in each province. It is also the Representation Commissioner's continuing responsibility to discharge his several duties pursuant to the provisions of the Canada Elections Act. The Secretary of State acts as spokesman for the Office in the Cabinet and the House of Commons.

Privy Council Office.—For administrative purposes, the Privy Council Office is regarded as a Department of Government under the Prime Minister. The Clerk of the Privy Council, under whose direction its functions are carried out, is considered as a Deputy Head and takes precedence among the chief officers of the Public Service. The authority of the Privy Council Office is to be found in Sects. 11 and 130 of the British North America Act, 1867, which constituted a Council to aid and advise in the government of Canada to be styled the Queen's Privy Council for Canada. In 1940, upon the wartime development of Cabinet committees and the consequent need for orderly secretarial procedures such as agenda, explanatory memoranda and minutes, the Principal Secretary in the Prime Minister's Office was designated Clerk of the Privy Council and First Secretary to the Cabinet. Since 1946, the Privy Council Office has been further reorganized, developed and enlarged and certain administrative functions of the Privy Council Office and the Prime Minister's Office have been closely integrated in the interests of efficiency and economy.

The organization of the Privy Council Office at present consists primarily of the Cabinet Secretariat with the following divisions reporting to the Clerk of the Privy Council and Secretary to the Cabinet: Deputy Secretary to the Cabinet (Operations); Deputy Secretary to the Cabinet (Plans); Co-ordinator of Federal-Provincial Relations; and Director of the Science Secretariat. Within the Privy Council Office, submissions to the Governor in Council are received, draft orders and regulations prepared, approved Orders are circulated and, in addition, the duties of editing, registering and publishing the federal statutory regulations in Part II of the *Canada Gazette* are carried out. The various secretaries deal with secretarial work for the Cabinet and for Cabinet Committees and interdepartmental committees. This involves the preparation and circulation of agenda and necessary documents to Ministers and recording and circulating decisions; liaison with departments and agencies of the government; and the preparation of material for the Prime Minister.

The Office of the Prime Minister is organized as a Secretariat associated with the Privy Council Office and includes members of the Prime Minister's personal staff responsible for general secretarial duties, the drafting of letters, the arrangement of appointments to interview the Prime Minister or for his public appearances or for the release of his statements on matters of public interest, and assisting the Prime Minister in his parliamentary duties.

Public Archives.—The Public Archives was founded in 1872 and is administered under the Public Archives Act (RSC 1952, c. 222) by the Dominion Archivist who has the rank of a Deputy Minister and reports to Parliament through the Secretary of State. Its purpose is to assemble and make available to the public a comprehensive collection of historical source material relating to the history of Canada. Major emphasis is placed on official records of the Government and the personal papers of political leaders and other prominent figures. These are supplemented by copies of many records in the British and French archives that relate to Canada, a fine map collection, a historical library, and many prints, paintings and photographs. The Archives operates a large Records Centre in Ottawa which provides accommodation for departmental records that are seldom used and also serves as a sorting centre, preserving papers of long-term interest from obsolete files and marking useless material for destruction. Regional centres are located in Toronto and Montreal. The Archives also operates the Government's Central Microfilm Unit, which is housed in the new National Library and Archives Building.

Under the terms of the Laurier House Act (RSC 1952, c. 163) the Public Archives is responsible for the administration of Laurier House as a museum.

Public Service Commission.—Arrangements were made for civil service appointments under the first Civil Service Act of 1868 but the first Civil Service Commission was created only in 1908. This established the beginnings of the merit system which is today the cornerstone of personnel administration in the Public Service. The Act of 1918 gave the Commission authority to control recruitment, selection, appointment, classification and organization and to recommend rates of pay. The next Civil Service Act, passed in 1961, strengthened the principles of the merit system, clarified the Commission's role in other areas of personnel administration, and gave the staff associations the right to be consulted on matters about remuneration and conditions of employment.

The Public Service Employment Act which came into force on Mar. 13, 1967, redefined the Commission's role as the central staffing agency and extended its authority to the Public Service, covering certain groups of employees exempt from the previous Acts. The Public Service is specified in Schedule A of the Public Service Staff Relations Act. It does not include Crown corporations, such as the Canadian Broadcasting Corporation, the Central Mortgage and Housing Corporation, the Canadian National Railways and Air Canada. The new Act also reaffirms the merit principle, at the same time permitting delegation of the Commission's authority, although not its responsibility, to Parliament. Under the Act, the Commission was relieved of responsibility for recommending rates of pay and conditions of service to the Government, for classification, and for consultation with staff associations on matters that are now the subject of collective bargaining.

The Public Service Commission reports to Parliament through the Secretary of State.

Department of Public Works.—The Department was constituted in 1867 and operates under the legislative authority of the Public Works Act of Parliament. It is responsible for the management and direction of the public works of Canada and, except as specifically provided in other Acts, attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and protection work. Federal Government interest in the Trans-Canada Highway and the Northwest Highway System is also handled by the Department. The Department has six Regional Offices—one each at Halifax, Montreal, Ottawa, Toronto, Edmonton and Vancouver—and District Offices at other key points across the country are also maintained. Departmental organization includes the following Directorates: Planning and Operations Branch, Design, Administrative Services, Financial Services, Personnel Administration, Information Services, Fire Prevention and Legal Services. The Canadian Government Exhibition Commission was transferred in 1968 to the Department of Public Works from the (then) Department of Trade and Commerce.

Department of Regional Economic Expansion.—This Department was established under the Government Organization Act, 1969 (SC 1968-69, c. 28) which received Royal Assent on Mar. 28, 1969. Its function is to ensure that economic growth is dispersed widely enough across Canada to bring employment and earning opportunities in the slow-growth regions as close as possible to those in the other parts of the country, without interfering with a high over-all rate of national growth. The legislation authorizes the Department, in co-operation with provincial governments and other federal agencies, to prepare development plans and programs designed to meet the special needs of particular areas. The main components of the Department previously existed within the framework of the Department of Forestry and Rural Development but certain financial changes were made by the 1969 legislation; the Department's operations are to be conducted on the basis of annual Parliamentary appropriations. The functions of the Area Development Agency, formerly under the Minister of Industry, have been absorbed into the new Department which has also become responsible for programs under the Prairie Farm Rehabilitation Act (PFRA), the Agricultural and Rural Development Act (ARDA), the Maritime Marshlands Rehabilitation Act and the Atlantic Provinces Power Development Act. An Atlantic Development Council has been established to advise the Minister on the whole range of programs and policies for fostering economic expansion and social adjustment in the Atlantic region; this Council replaced the Atlantic Development Board, a Crown corporation that previously administered a fund to defray the expenses of planning and of projects initiated for the stimulating of growth in that area.

The Minister of Regional Economic Expansion reports to Parliament for the Cape Breton Development Corporation and the National Capital Commission.

Royal Canadian Mounted Police.—The Royal Canadian Mounted Police, a civil force maintained by the Federal Government, was organized in 1873 as the North-West Mounted Police. It now operates under the Royal Canadian Mounted Police Act, 1959 and is responsible for enforcing federal laws throughout Canada. By agreement with the governments of eight provinces (all provinces except Ontario and Quebec) it is also responsible for enforcing provincial laws within those provinces and for policing many district municipalities, cities and towns. A Commissioner, appointed by the Governor in Council, has the control and management of the Force and of all matters connected therewith; he functions under the direction of the Solicitor General of Canada.

Department of the Secretary of State.—The duties, powers and functions of the Secretary of State of Canada extend to and include all matters over which the Parliament of Canada has jurisdiction, not by law assigned to any other department, branch or agency of the Government of Canada, relating to: citizenship; elections; State ceremonial, the conduct of State correspondence

and the custody of State records and documents; the encouragement of the literary, visual and performing arts, learning and cultural activities; and libraries, archives, historical resources, museums, galleries, theatres, films and broadcasting.

The responsibilities of the Department of the Secretary of State include those pertaining to the administration of the following branches: Citizenship; Citizenship Registration; Education Support; State Protocol; and Translation Bureau.

The Secretary of State reports to Parliament for the Canadian Film Development Corporation, the National Arts Centre Corporation, the National Film Board, the National Library, the Public Archives and the National Museums of Canada. He is spokesman in the Cabinet and the House of Commons for the Canada Council, the Canadian Broadcasting Corporation, the Canadian Radio-Television Commission, the Company of Young Canadians, the Public Service Commission, the Office of the Chief Electoral Officer, the Office of the Representation Commissioner, and the Secretariat on Bilingualism.

Department of the Solicitor General.—Before 1936, the Office of the Solicitor General was either a Cabinet post or a Ministerial post outside the Cabinet. From 1936 to 1945 the position did not exist, the duties of the Office being wholly absorbed by the Attorney General of Canada. The Solicitor General Act, 1945 (RSC 1952, c. 253) re-established the Solicitor General as a Cabinet officer and provided that "...The Solicitor General shall assist the Minister of Justice in the Counsel work of the Department of Justice, and shall be charged with such other duties as are at any time assigned to him by the Governor-in-Council". This legislation was repealed by the Government Organization Act, 1966 (SC 1966, c. 25), which created a new Department of the Solicitor General and assigned to the Solicitor General of Canada responsibility for the Royal Canadian Mounted Police and the Canadian Penitentiary Service. The Solicitor General also reports to Parliament for the National Parole Board, which is an independent agency. With this new legislation, the Solicitor General of Canada becomes the Cabinet Minister with primary responsibility in the fields of correction and law enforcement.

Department of Supply and Services.—The Department of Supply and Services was established Apr. 1, 1969, by the Government Organization Act, 1969. The Department provides most of the common services, except accommodation, legal services and telecommunications, required by the departments and agencies of the Federal Government. Its creation marks the acceptance of many of the recommendations of the Royal Commission on Government Organization.

The Supply component of the Department is responsible for the following for all Federal Government departments and many Crown corporations: (1) the purchase of goods and services; (2) the provision of goods and related services with the exception of those essential for the conduct of military operations; and (3) the provision of printing and publishing services. The Supply component also acts as the purchasing agent for the purchase of Canadian goods and services required by our allies and other countries.

The Services component, on behalf of the Minister of Supply and Services who is also the Receiver General for Canada, provides payment or cheque issue services to all departments of Government, and also maintains the fiscal accounts of Canada and prepares the public accounts. In addition, the Services component provides departments and agencies of the Government of Canada with a broad range of consulting, data-processing and auditing services on request and a number of operational services through the provision of accounting statement preparation services, pay, superannuation and other employee benefit plan administrative services.

Tariff Board.—Constituted in 1931, the Board derives its duties and powers from three statutes: the Tariff Board Act (RSC 1952, c. 261, as amended); the Customs Act (RSC 1952, c. 53, as amended); and the Excise Tax Act (RSC 1952, c. 100, as amended).

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada, are subject to or exempt from customs duties or excise taxes. Reports of the Board are tabled in Parliament by the Minister of Finance. It is also the duty of the Board to hold an inquiry under Sect. 14 of the Customs Tariff and to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board acts as a court to hear appeals from rulings of the Department of National Revenue, Customs and Excise Division, in respect of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive but the Acts contain provisions for appeal on questions of law to the Exchequer Court of Canada.

Tax Appeal Board.—The Tax Appeal Board (created in 1946 as the Income Tax Appeal Board) now operates under the Income Tax Act (RSC 1952, c. 148, as amended). The Board is declared by statute to be a court of record and has jurisdiction to hear and determine appeals by taxpayers against their assessment under the Income Tax Act and also appeals under the Estate Tax Act. An appeal lies from the Board to the Exchequer Court of Canada and a further appeal from that

court to the Supreme Court of Canada. The Board consists of a chairman, an assistant chairman and four other members. Its offices are located at Ottawa and it hears appeals at the principal centres throughout Canada approximately twice a year and at the main centres, such as Montreal and Toronto, six times a year. The Board is under the jurisdiction of the Minister of National Revenue but is independent of the Department of National Revenue.

Department of Transport.—The Department was created on Nov. 2, 1936 from the former Departments of Marine and of Railways and Canals, and the Civil Aviation Branch of the Department of National Defence (RSC 1952, c. 79).

The work of the Department consists of two main Services—Marine and Air. Marine Service operations include aids to navigation, nautical and pilotage services, marine agencies, secondary canals, steamship inspection, the Canadian Coast Guard, and direct supervision over 300 public harbours; 11 other harbours come under the supervision of the Department but are administered by commissions. Air Services cover the operation of the Civil Aviation, Airports and Field Operations, Construction Engineering and Architectural, and Meteorological Branches.

The Minister of Transport is responsible to Parliament for the following boards, commissions and Crown companies: Air Canada, the Canadian Transport Commission, the National Harbours Board, the St. Lawrence Seaway Authority and the Canadian National Railways.

Treasury Board.—The Treasury Board was first established as a committee of the Queen's Privy Council for Canada by Order in Council PC 3 of July 2, 1867, and was made a statutory committee in 1869. The Minister of Finance was appointed Chairman of the Board, with four other Privy Councillors to be designated as members by the Governor in Council. The Secretary of the Board and the members of his staff were personnel employed by the Department of Finance.

By the Government Organization Act, 1966 (SC 1966, c. 25) the Board Secretariat was established as a separate department of government with its own Minister, the President of the Treasury Board. The Board itself was increased to six members: the President, five Privy Councillors and, ex officio, the Minister of Finance.

Amendments to the Financial Administration Act (RSC 1952, c. 116), passed in 1966, defined more clearly the Treasury Board's responsibilities as the central management agency of government. These responsibilities include expenditure control, including allocation of resources among departments and agencies of government; the management of the personnel function in the Public Service; and the improvement in the efficiency of management and administration in the Public Service.

The staff of the Treasury Board is divided into three Branches: the Management Improvement Branch provides the leadership and stimulus to improve management and administrative performance within departments and agencies of the Federal Government; the Personnel Policy Branch is responsible for the classification of positions, the rates of pay, conditions of employment and for representing the Government in collective bargaining with bargaining agents representing employees in the Public Service; and the Program Branch is responsible for such matters as the financial management functions of short- and long-range expenditure forecasting, program analysis, expenditure control and estimates preparation.

Department of Veterans Affairs.—This Department, established in 1944 (RSC 1952, c. 80), is concerned exclusively with the welfare of veterans and with the dependants of veterans and of those who died on active service. The Department provides treatment services (hospital, medical, dental and prosthetic), welfare services, education assistance, life insurance, and land settlement and home construction assistance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Canadian Pension Commission established by the Pension Act (RSC 1952, c. 207), and the War Veterans Allowance Board established by the War Veterans Allowance Act (RSC 1952, c. 340) also report to Parliament through the Minister of Veterans Affairs.

The Department has treatment institutions and facilities in a number of urban centres. It also maintains, in large cities across Canada, administrative offices, which are shared with the Canadian Pension Commission and the War Veterans Allowance Board, and an office in London, England.

War Veterans Allowance Board.—This Board, established under the authority of the War Veterans Allowance Act, 1930 (RSC 1952, c. 340, as amended) is a quasi-judicial body consisting of ten members including a chairman and a deputy-chairman, appointed by the Governor in Council. The Board administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act. It reports to Parliament through the Minister of Veterans Affairs. Its functions include the responsibility of ensuring that the 19 District Authorities, located in various regions throughout Canada, interpret the legislation in a fair, reasonable and equitable manner. It is also an appeal body which may consider the appeal of an appellant against the decision of a District Authority.

Section 3.—Crown Corporations

The functions of the various Crown corporations are given briefly in the following paragraphs. For a number of them, further details are included in the Chapters dealing with the subjects concerned (see Index).

Agricultural Stabilization Board.—The Board was established in 1958 (SC 1957-58, c. 22) to administer the provisions of the Agricultural Stabilization Act. The Board reports to Parliament through the Minister of Agriculture and routine administrative matters are handled through departmental channels.

Air Canada.—Formerly Trans-Canada Air Lines, the Corporation was incorporated by Act of Parliament in 1937 to provide a publicly owned air transportation service, with powers to carry on its business throughout Canada and outside of Canada. Air Canada now maintains passenger, mail and commodity traffic services over nation-wide routes and also services to the United States, England, Scotland, Ireland, France, Switzerland, West Germany, Austria, Denmark, the U.S.S.R., Bermuda, the Bahamas, Jamaica, Antigua, Barbados and Trinidad. Air Canada is responsible to Parliament through the Minister of Transport.

Atomic Energy Control Board.—By Act of Parliament (RSC 1952, c. 11) proclaimed October 1946, the regulation and control of atomic energy in Canada was placed under the Atomic Energy Control Board. The Board reports to Parliament through the Minister of Energy, Mines and Resources.

Atomic Energy of Canada Limited.—This Crown company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (RSC 1952, c. 11) to take over from the National Research Council on Apr. 1, 1952 the operation of the Chalk River project. The main activities of the company are (a) the development of economic nuclear power, (b) scientific research and development in the atomic energy field, (c) the operation of nuclear reactors and (d) the production of radioactive isotopes and associated equipment such as Cobalt-60 beam therapy units for the treatment of cancer. The company reports to Parliament through the Minister of Energy, Mines and Resources.

Bank of Canada.—Legislation of 1934 (RSC 1952, c. 13, as amended by RSC 1952, c. 315; SC 1953-54, c. 33; and 1966-67, c. 88) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a governor, a deputy governor and 12 directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance and is governed by its own Act of incorporation. (See footnote, p. 109.)

The Canada Council.—Established by Order in Council dated Apr. 15, 1957, this corporation, composed of a chairman, a vice-chairman and 19 other members, a director and an associate director, operates under the terms of the Canada Council Act, assented to Mar. 28, 1957. The function of the Council is to encourage the arts, humanities and social sciences in Canada, mainly through a broad program of fellowships and grants. Its principal sources of income are an annual grant of the Canadian Government, which amounted to \$20,580,000 for the year ending Mar. 31, 1968, and an Endowment Fund, originally of \$50,000,000, which has an annual yield of approximately \$3,500,000. In the making, managing and disposing of investments under the Act, the Council has the advice of an Investment Committee of five, including the chairman and another member of the Council. The proceedings of the Council are reported each year to Parliament through the Secretary of State. (See footnote, p. 109.)

Canada Deposit Insurance Corporation.—The Corporation was established by legislation (SC 1966-67, c. 70), which received Royal Assent on Feb. 17, 1967. It is empowered to insure Canadian currency deposits other than those of Canada, up to \$20,000 per person, in banks, federally incorporated trust and loan companies that accept deposits from the public, and in similar provincially incorporated institutions that are authorized by their provincial governments to apply for such insurance. The Corporation is also empowered to act as a lender of last resort for member institutions. The Board of the Corporation comprises a chairman, appointed by the Governor in Council, and four other directors who hold the positions of Governor of the Bank of Canada, Deputy Minister of Finance, Superintendent of Insurance and Inspector General of Banks.

Canadian Arsenals Limited.—This company was established under the Companies Act by Letters Patent dated Sept. 20, 1945, and is subject to the Government Companies Operation Act (RSC 152, c. 133) and certain provisions of the Financial Administration Act (RSC 1952, c. 116). The company was set up to take over and operate Crown-owned plants and equipment. It has

extensive facilities for the manufacture of small arms and ammunition components as well as for the filling and assembly of artillery ammunition, mines, bombs, grenades, rockets and other specialties up to torpedo warheads. The Head Office of the Company is in Ottawa, the Small Arms Division is at Long Branch, Ont., and the Filling Division at St. Paul l'Ermite, Que. The company reports to Parliament through the Minister of Supply and Services.

Canadian Broadcasting Corporation.—The CBC functions under the Broadcasting Act, 1968, which continues the Corporation as a Crown agency charged with the operation of a national broadcasting service. It has authority among other things to maintain and operate broadcasting undertakings and to originate and secure programs from within or outside Canada. Its radio and television services are financed through Parliamentary grants, supplemented by revenues from commercial operations. The Corporation reports to Parliament through the Secretary of State.

The Corporation consists of a president and 14 other directors appointed by the Governor in Council. The President is appointed for a term not exceeding seven years and is eligible for reappointment. Directors are appointed for periods not exceeding five years and may serve two consecutive terms. The President is the chief executive officer of the Corporation. The Executive Vice-President is responsible to the President for the management of broadcasting operations in accordance with policies prescribed by the Corporation.

The Corporation's Head Office is situated in Ottawa. The production centre for English Networks is located in Toronto and for French Networks in Montreal. The main regional production centres are in St. John's for Newfoundland, Halifax for the Maritimes, Ottawa for the Ottawa Area, Winnipeg for the Prairies, and Vancouver for British Columbia. Headquarters for the Northern and Armed Forces Services is in Ottawa. The operational centre for the CBC International Service is in Montreal.

Canadian Commercial Corporation.—Established in 1946 by Act of Parliament, the Canadian Commercial Corporation is wholly owned by the Government of Canada. Initially it assumed the undertakings of the then Canadian Export Board covering procurement in Canada of goods and services on behalf of foreign governments and United Nations relief agencies. In 1947 responsibility for procurement of the requirements of the Department of National Defence was transferred from the Department of Reconstruction and Supply to the Corporation which fulfilled these additional functions until the formation of the Department of Defence Production in 1951. In 1963 the staff of the Corporation was integrated with that of the Department of Defence Production, now the Department of Supply and Services, which provides all the management and services required by the Corporation.

The Corporation continues to act primarily as the Canadian Government contracting and procurement agency on behalf of foreign countries desirous of purchasing defence or other supplies and services from Canada on a government-to-government basis. It reports to Parliament through the Minister of Supply and Services.

Canadian Dairy Commission.—This Commission, which reports to Parliament through the Minister of Agriculture, was established on Dec. 2, 1966 (SC 1966, c. 34) to provide efficient producers of milk and cream with the opportunity of obtaining a fair return for their labour and investment and to provide consumers of dairy products with a continuous and adequate supply of dairy products of high quality. The Commission has three members appointed by the Governor in Council and operates with the advisory assistance of a nine-member Consultative Committee appointed by the Minister.

Canadian Film Development Corporation.—This Corporation, established by Act of Parliament in March 1967 (SC 1966-67, c. 78) has the function of fostering and promoting the development of a feature film industry in Canada through investment in productions, loans to producers, grants to film-makers and film technicians, and advice and assistance in distribution and administrative matters. It works in co-operation with other federal departments and agencies and with provincial departments and agencies having like interests and finances its operations from a film development advance account in the Consolidated Revenue Fund. The Corporation has six members appointed by the Governor in Council for terms, initially, of from three to five years and reports to Parliament through the Secretary of State.

Canadian Livestock Feed Board.—The Canadian Livestock Feed Board is a Crown corporation established pursuant to the Livestock Feed Assistance Act (SC 1966, c. 52). The objects of the corporation are to ensure that sufficient feed grain and storage for feed grain is available to meet the needs of livestock feeders and to ensure reasonable stability and fair equalization of feed grain prices in Eastern Canada and in British Columbia. Its powers include authority to make payments related to the cost of feed grain storage and transportation costs to attain its objectives. It may also buy, transport, store and sell feed grains in Eastern Canada and British Columbia when authorized by the Governor in Council.

The Board consists of a chairman, a vice-chairman and two members, and it reports to Parliament through the Minister of Agriculture. There is also an Advisory Committee made up of seven members.

Canadian National Railways.—The Canadian National Railway Company was incorporated (SC 1919, c. 13) to operate and manage a national system of railways, including the Canadian Northern Railway System, the Canadian Government Railways and all lines entrusted to it by Order in Council. In 1923 the Grand Trunk Railway Company of Canada was amalgamated with the Canadian National Railway Company and since 1923 a number of railway lines acquired by the Government have been entrusted to the Company for operation and management, including the Newfoundland Railway and steamship services in 1949, the Temiscouata Railway in 1950, and the Hudson Bay Railway and the Northwest Communication System in 1958. The Canadian National Railways Act, 1919 was repealed in 1955 and the Canadian National Railways Act (SC 1955, c. 29) substituted therefor.

The Canadian National Railway Company is controlled by a chairman and board of directors appointed by the Governor in Council, who report to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.—This Crown company was created on Dec. 10, 1949 by Act of Parliament (RSC 1952, c. 42) to acquire for public operation external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Communications.

Canadian Patents and Development Limited.—This Crown corporation was set up in 1947 pursuant to authority granted in an amendment to the Research Council Act passed in 1946. The purpose of the company, which is a subsidiary to the National Research Council, is to patent and licence new products and processes that come out of NRC research, research of other government departments and agencies, and research of Canadian universities. Proposals for patents are assessed with regard to originality, existence of similar patented products or processes, commercial appeal, humanitarian or scientific value, and cost of developing, promoting and marketing. CPDL initiates and finances the development of many inventions to a stage where it is economically possible for private industry to carry them through to production and sale, thus bridging the gap between research and industry. Profits from inventions are used to sponsor less profitable but often more beneficial inventions, such as highly specialized surgical or scientific instruments.

The company reports to Parliament through a designated Minister, at present the President of the Treasury Board who is also Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Canadian Wheat Board.—The Board was incorporated in 1935 under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board was not originally authorized to buy grain other than wheat but, since Aug. 1, 1949, it may also buy oats and barley if authorized to do so by Regulation approved by the Governor in Council. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board is governed by its own Act of incorporation (see footnote, p. 109). It reports to Parliament through the Minister of Industry, Trade and Commerce.

Cape Breton Development Corporation.—By agreement between the Governments of Canada and Nova Scotia, this Crown Corporation was established by Act of Parliament (SC 1967, c. 6), assented to on July 7, 1967. Its functions are first to acquire the interests of the major coal producer in the Sydney coalfield and then to reorganize and operate the mines with a view to the rationalization of coal production therefrom and the progressive withdrawal of the Corporation from such production in accordance with a plan to be submitted for the approval of the Governor in Council within one year. The plan should take into account progress in providing employment outside the coal-producing industry and in broadening the base of the Island's economy.

The Corporation consists of a Board of Directors comprised of a chairman and a president appointed by the Governor in Council after consultation with the Lieutenant-Governor in Council of Nova Scotia, and five other directors, two of whom are appointed on the recommendation of the Lieutenant-Governor in Council of Nova Scotia. The Corporation is responsible to Parliament through the Minister of Regional Economic Expansion.

Central Mortgage and Housing Corporation.—This Corporation was incorporated by Act of Parliament (RSC 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (SC 1953-54, c. 23, as amended), the Corporation insures mortgage loans made by approved lenders and makes direct loans for new and existing homeownership housing, new rental housing and existing home-ownership and rental housing in designated urban renewal areas; guarantees home improvement loans made by banks; undertakes subsidized rental housing projects and land assembly developments under federal-provincial arrangements; offers loans and subsidies for public housing projects; makes loans for land assembly projects to be

used for public housing; makes loans to non-profit housing companies for low-rental housing projects; makes loans for students' housing projects and to provinces and municipalities for sewage treatment projects designed to eliminate water and soil pollution; makes contributions and loans to provinces and municipalities for urban renewal operations; conducts housing research; encourages urban planning and owns and manages rental housing units including those built for war workers and veterans. The Corporation arranges for and supervises construction of housing projects on behalf of the Department of National Defence and other government departments and agencies. The Corporation is responsible to Parliament through a Minister without Portfolio in charge of Housing.

Company of Young Canadians.—The Act establishing this corporation (SC 1966, c. 36) was assented to on July 11, 1966. The corporation consists of a Council of the Company and persons who are volunteer-members. The Council has 15 members, 10 of whom are elected by the volunteer-members and five of whom are appointed by the Governor in Council. Term of office for both elected and appointed members is three years. The Act provides for the establishment of an Interim Council of not more than 20 members to hold office until the members of the Council are elected or appointed. The objects of the Company are to support, encourage and develop programs for social, economic and community development in Canada or abroad through voluntary service. The corporation reports to Parliament through the Secretary of State.

Crown Assets Disposal Corporation.—This Corporation was established in 1944 as the War Assets Corporation under the Surplus Crown Assets Act (RSC 1952, c. 260) and is subject to the Financial Administration Act (RSC 1952, c. 116). It replaced the War Assets Corporation Limited which had been incorporated in 1943 and its name was changed to Crown Assets Disposal Corporation in 1949. The Corporation is responsible for the sale of Federal Government surplus real estate and commodities located in Canada and at Canadian Government establishments throughout the world. It also acts as agent on behalf of foreign governments in selling their surplus assets located in Canada and has reciprocal agreements with a number of European countries for marketing Canadian surplus assets located in their respective countries. The Corporation is responsible to Parliament through the Minister of Supply and Services.

Defence Construction (1951) Limited.—Defence Construction (1951) Limited, reporting to the Minister of National Defence, is the Crown agency that procures for the Department of National Defence the construction and repair of buildings, structures and engineering works and professional engineering and architectural services.

The forerunner of the present company, Defence Construction Limited, began its operation in November 1950 as a Crown agency responsible for awarding and supervising defence construction projects. Defence Construction (1951) Limited, incorporated July 12, 1951, under authority of the Defence Production Act, took over the responsibilities of the former agency. The company reported to the Minister of Trade and Commerce until Apr. 1, 1951, and from that date until Apr. 22, 1965 it reported to the Minister of Defence Production; it is now under the control and supervision of the Minister of National Defence.

The company's prime responsibility in carrying out all new construction and repair and renovation projects (except work under \$10,000 which is contracted for by the Department of National Defence via the Department of Supply and Services) includes: participation in preparation of design; calling and reviewing of tenders; award and administration of contracts; supervision of construction work; and certification of progress claims for work completed. Activities cover four distinct spheres: defence projects in Canada for the Department of National Defence; all defence projects in Europe for the Department of National Defence under the North Atlantic Treaty Organization Agreement; defence construction for the United States Government in Canada; and, by arrangement, acting as the contract agents or technical advisers on the rendering of assistance to other federal departments and agencies.

In addition to the head office located at Ottawa, branch offices are maintained at Halifax, Montreal, Toronto, Winnipeg and Vancouver in Canada and in Lahar, Germany.

Director of Soldier Settlement and Director of the Veterans' Land Act.—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in each capacity is legally a corporation sole. For administrative purposes, however, the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

Dominion Coal Board.—The Board, established as a department in 1947 by the Dominion Coal Board Act (RSC 1952, c. 86), has the responsibility of studying and recommending to the Government policies concerning the production, import, distribution and use of coal. The Chairman has the status of a Deputy Minister and the Board reports to Parliament through the Minister of Energy, Mines and Resources. The Board administers transportation and other subventions relating to coal and also administers loans authorized under the Coal Production Assistance Act (RSC 1952, c. 173, as amended).

Eastern Rockies Forest Conservation Board.—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the

Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that portion of the eastern slope of the Rocky Mountains which gives rise to the major tributaries of the Saskatchewan River. Its function is to determine the policy necessary to obtain the greatest possible flow of water in the Saskatchewan River system. The planning of programs of forest use and conservation is a joint duty of the Board and the provincial Forest Service; the administration of the conservation area is a function of the province. In April 1962, a Technical Co-ordinating Committee for Watershed Research was established to undertake study of the related needs defined by the Board. The Committee's programs, undertaken by seven co-operating agencies of the Federal and Alberta Governments, are co-ordinated by an officer of the federal Department of Fisheries and Forestry.

Funds for capital expenditures during the first seven years of the agreement were provided by the Federal Government with maintenance expenditures being paid by the Province of Alberta. In 1955 the province undertook the responsibility of financing both capital improvements and maintenance work. Currently, one member of the three-man Board is appointed by the Federal Government and the province has the right to appoint two members. The choice of one of the three members as Board chairman is vested in the province. The Board reports to Parliament through the Minister of Fisheries and Forestry. (See footnote, p. 109).

Economic Council of Canada.—This corporation, established under legislation passed on Aug. 2 1963 (SC 1963, c. 11), consists of a full-time chairman and two full-time directors appointed for a term not to exceed seven years and not more than 25 additional members to serve part-time and without remuneration. The Council is to be as representative as possible of labour, agriculture and primary industries, secondary industry and commerce, and the general public. Its functions are to advise and recommend measures that will achieve in Canada the highest possible levels of employment and efficient production so that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards; to carry on the duties of the former National Productivity Council which were to promote and expedite continuing improvement in productive efficiency in the various aspects of Canadian economic activity; and to publish an annual review of medium- and long-term economic prospects and problems. The Council reports to Parliament through the Prime Minister.

Eldorado Aviation Limited.—This company was incorporated Apr. 23, 1953 to carry air traffic, both passenger and freight, for Eldorado Mining and Refining Limited and its wholly owned subsidiary, Northern Transportation Company Limited. It reports to Parliament through the Minister of Energy, Mines and Resources.

Eldorado Nuclear Limited.—Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the date was omitted in June 1952 and the name changed in 1968), the company's business is the mining and refining of uranium and the production of nuclear fuels in Canada. The company has also entered into contracts for the purchase of uranium concentrates from private producers in Canada. It reports to Parliament through the Minister of Energy, Mines and Resources.

Export Credits Insurance Corporation.—This Corporation commenced operations in 1945 under the Export Credits Insurance Act, 1944 (RSC 1952, c. 105, as amended) and is administered by a Board of Directors (including the Deputy Minister of Industry, Trade and Commerce and the Deputy Minister of Finance) with the advice of an Advisory Council. Its function is to insure Canadian exporters against non-payment by foreign buyers arising out of credit and political risks involved in foreign trade. The Corporation is also authorized to provide financing in respect of an export transaction involving extended credit terms. It reports to Parliament through the Minister of Industry, Trade and Commerce.

Farm Credit Corporation.—This Corporation was established on Oct. 5, 1959 (SC 1959, c. 43) for the purpose of providing for the extension of long-term mortgage credit to farmers. The Corporation also administers the Farm Machinery Syndicates Credit Act and is responsible to Parliament through the Minister of Agriculture.

Fisheries Prices Support Board.—The Board was set up under the Fisheries Prices Support Act of 1944 (RSC 1952, c. 120) to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and Forestry and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry. The Board has authority to buy fishery products and to sell or otherwise dispose of them or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

Freshwater Fish Marketing Corporation.—This Corporation was established under the Freshwater Fish Marketing Act (SC 1968-69, c. 21) which received Royal Assent on Feb. 27, 1969, and given the function of marketing and trading in fish, fish products and fish by-products in and out of Canada with the objective of ensuring more orderly marketing for the benefit of the whole fishery and achieving higher and more stable prices for the catch. The Corporation receives a grant for initial operating and establishment expenses but will conduct its operations on a self-sustaining basis without Parliamentary appropriations; it will be financed by bank loans with gov-

ernment guarantee of repayment or by direct loans. The Corporation consists of a Board of Directors composed of a chairman, a president, one director for each participating province and four other directors appointed by the Governor in Council for a term not exceeding five years. The Corporation reports to Parliament through the Minister of Industry, Trade and Commerce.

Industrial Development Bank.—The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to provide loans to industrial enterprises where financing is not available through recognized lending organizations. (See footnote, p. 109.)

Medical Research Council.—Established in November 1960, this Council operates as a virtually autonomous agency. It is composed of a chairman, a secretary and 21 members who serve for a three-year term, renewable once. The primary aim of the Council is the development of medical research and the support of medical research workers in the university centres of Canada. It reports to Parliament through the Minister of National Health and Welfare.

National Arts Centre Corporation.—The Act establishing this Corporation (SC 1966, c. 48) was assented to July 15, 1966. The Corporation consists of a Board of Trustees composed of a chairman, a vice-chairman, the Mayors of Ottawa and Hull, the Director of the Canada Council, the President of the Canadian Broadcasting Corporation, the Government Film Commissioner and nine other members appointed by the Governor in Council for terms not exceeding three years, except for the first appointees whose terms range from two to four years. The objects of the Corporation are to operate and maintain the National Arts Centre, to develop the performing arts in the National Capital Region and to assist the Canada Council in the development of the performing arts elsewhere in Canada. The Corporation reports to Parliament through the Secretary of State.

National Battlefields Commission.—This Commission was established by Act of Parliament in 1908 to preserve the Historic Battlefields at Quebec City. The Commission is composed of nine members, seven appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by annual appropriations of the Federal Government and is responsible to Parliament through the Minister of Indian Affairs and Northern Development.

National Capital Commission.—This Commission is a Crown agency created by the National Capital Act (SC 1958, c. 37), proclaimed Feb. 6, 1959. It is the lineal descendant of the Federal District Commission. The Commission is served by a full-time paid chairman and comprises a total of 20 members representative of the ten provinces of Canada. Its work force fluctuates between 600 and 850, depending on the season.

Co-ordination and development of public lands in the National Capital Region are undertaken by direct planning and construction by the Commission's staff; by co-operation with municipalities; by provision of planning aid or financial assistance in municipal projects; and by advising the Department of Public Works on the siting and appearance of all Federal Government buildings in the 1,800-sq. mile National Capital Region. The Commission reports to Parliament through the Minister of Regional Economic Expansion.

National Gallery of Canada.—The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquess of Lorne, then Governor General, had recommended and assisted the founding of the Academy. One of the three tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. By Act of Parliament in 1913, re-enacted in 1951, the National Gallery was placed under the management of a Board of Trustees appointed by the Governor General in Council and operated under the National Gallery Act (RSC 1952, c. 186). In 1968 the National Gallery became a component part of the National Museums of Canada which are governed by a Board of Trustees responsible to Parliament through the Secretary of State.

The first charge of the National Gallery is the development, care and display of the national art collections and the encouragement of the interest of the Canadian public in the fine arts. Its services to the public include a large reference library on the history of art and related subjects; Education and Publications Extension Divisions through which travelling exhibitions, lectures and the showing of art films, and guided tours of the Gallery at Ottawa are conducted; the production of art publications and reproductions; and a National Conservation Research Laboratory.

National Harbours Board.—The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at the harbours of St. John's, Nfld.; Halifax, N.S.; Saint John, N.B.; Chicoutimi, Quebec, Trois-Rivières and Montreal, Que.; Vancouver, B.C.; and Churchill, Man.; the Jacques Cartier and Champlain Bridges at Montreal, Que.; and the grain elevators at Prescott and Port Colborne, Ont. The Board reports to Parliament through the Minister of Transport.

National Research Council of Canada.—This is an agency of the Canadian Government established in 1916 to promote scientific and industrial research. The Council operates science and engineering laboratories in Ottawa, Halifax and Saskatoon; gives direct financial support to research carried out in Canadian university and industrial laboratories; sponsors Associate Com-

mittees co-ordinating research on specific problems of national interest; and develops and maintains the nation's primary physical standards. Other activities include the provision of free technical information to manufacturing concerns; the publication of research journals; and representation of Canada in International Scientific Unions. Patentable inventions developed in the Council's laboratories are made available for manufacture through a subsidiary company, Canadian Patents and Development Limited (see p. 1300). The National Research Council consists of a president, three vice-presidents, and 17 members representing Canadian universities, industry and labour. The Council is incorporated under the Research Council Act (RSC 1952, c. 239, as amended), and reports to Parliament through a designated Minister, at present the President of the Treasury Board, who is also Chairman of the Privy Council Committee on Scientific and Industrial Research.

Northern Canada Power Commission.—The Commission was established by Act of Parliament in 1948 (RSC 1952, c. 196) to provide power to points in the Northwest Territories where a need developed and where power could be supplied on a self-sustaining basis; the Act was amended in 1950 to give the Commission authority to provide similar services in the Yukon Territory. The name of the Commission (formerly the Northwest Territories Power Commission) was changed in 1956. It is composed of the Deputy Minister of Indian Affairs and Northern Development, who is chairman, and two members appointed by the Governor in Council and reports to Parliament through the Minister of Indian Affairs and Northern Development.

The Commission operates three hydro-electric plants in the Northwest Territories (two on the Snare River near Yellowknife and one on the Taltson River near Fort Smith) and two hydro plants in the Yukon Territory (one on the Yukon River at Whitehorse and the other on the Mayo River near Mayo). Diesel-electric plants and distribution systems are operated at Fort Smith, Fort Simpson, Fort Resolution and Cambridge Bay, N.W.T., at Dawson, Y.T. and at Field, B.C.; diesel-electric power and central heating plants at Inuvik and Frobisher Bay, N.W.T., and at Moose Factory, Ont.; and water supply and sewerage systems at Inuvik and Moose Factory. The Commission also operates in the Northwest Territories, on behalf of the Department, diesel-electric plants at Fort McPherson and Aklavik, and heating plants and domestic water supply and sewerage systems at Fort McPherson and Fort Simpson.

Northern Transportation Company Limited.—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a Company chartered under an Alberta statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed and western Arctic. The Company is responsible to Parliament through the Minister of Indian Affairs and Northern Development.

Polymer Corporation Limited.—This Corporation was incorporated in 1942 by Letters Patent and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and the Financial Administration Act (RSC 1952, c. 116.) Its head office and main plant are located at Sarnia, Ont., where it produces synthetic rubbers, latices, resins and related products. A subsidiary operation for the production of butyl is located in Belgium, and another subsidiary in France is responsible for production of general purpose and specialty rubbers for the European market. An international marketing subsidiary is located in Switzerland. The Company reports to Parliament through the Minister of Supply and Services.

Royal Canadian Mint.—The Royal Canadian Mint has been in operation since 1908. It was first established as a branch of the Royal Mint under the (Imperial) Coinage Act of 1870, and opened on Jan. 2, 1908. On Dec. 1, 1931, it became the Royal Canadian Mint and operated as a branch of the Department of Finance. In 1969, under the Government Organization Act (SC 1968-69, c. 27), the Mint became a Crown agency corporation, reporting to Parliament through the Minister of Supply and Services.

The latter change was made to provide for a more industrial type of organization and for flexibility in producing coins of Canada and other countries; buying, selling, melting, assaying and refining gold and other precious metals; and producing medals, plaques and other devices. The Mint has a seven-man Board of Directors appointed by the Governor in Council—the Master of the Mint who is its chief executive officer appointed to serve during pleasure, the Chairman who is appointed for a four-year period subject to re-appointment, and five other Directors, two from inside and three from outside the Public Service, who are appointed for terms of one to three years. The Mint now operates basically as a manufacturing enterprise, with the object of making a small profit. Financial requirements are provided through loans from the Consolidated Revenue Fund.

Science Council of Canada.—The Act establishing the Science Council of Canada (SC 1966, c. 19) received assent on May 12, 1966. The Council consists of 25 members each having a specialized interest in science or technology and four associate members chosen from among officers or employees of the Federal Government. Members hold office for not more than three years and associate members hold office during pleasure. All are appointed by the Governor in Council. The

duties of the Science Council are to assess in a comprehensive manner Canada's scientific and technological resources, requirements and potentialities and to make recommendations thereon. The Council reports to Parliament through the Prime Minister.

St. Lawrence Seaway Authority.—The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (RSC 1952, c. 242) and came into force by proclamation on July 1, 1954. The Authority was incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Crown corporation, Seaway International Bridge Corporation Limited, is subsidiary to the St. Lawrence Seaway Authority. The Authority is composed of a president, a vice president and a member, and reports to Parliament through the Minister of Transport.

Unemployment Insurance Commission.—The Commission was established under the provisions of the Unemployment Insurance Act, 1940, now the Unemployment Insurance Act, 1955 (SC 1955, c. 50). It is responsible for the administration of the Unemployment Insurance Act and for such other duties and responsibilities as the Governor in Council, on the recommendations of the Minister of Labour, requires. Its general functions are to provide for the compulsory insurance of employed persons with certain exceptions and, subject to regulations, to provide such persons with weekly payments for limited periods if they become unemployed.

The Commission has three commissioners, one of whom is the chief commissioner, and operates at three levels—a head office in Ottawa, five regional offices, and a number of area offices across the country. It reports to Parliament through the Minister of Labour.

INDEX

NOTE.—This Index does not include references to Special Articles published in previous editions of the Year Book. These are listed at pp. 1257-1261.
